Manufactures and Employees.—Talbot & Co., meal and feed, 4 hands; Eckstein & Ross, planing mill, 14; J. W. Pond & Co., flour, etc., 3; P. Ft. W. & C. R. R. Co., railroad repairs, 156; N. Burch Plow Works, plows, 8.—State Report

1887. Population in 1880, 2,848.

New Washington village had in 1880 675 inhabitants, and Leesville Cross Roads 213.

CUYAHOGA.

CUYAHOGA was formed from Geauga county, June 7, 1807, and organized in May, 1810. The name was derived from the river, and is said to signify, in the Indian language, "crooked," a term significant of the river, which is very winding, and has its sources farther north than its mouth. The surface is level or gently undulating. Near the lake the soil is sandy, elsewhere generally a clayey loam. The valleys of the streams are highly productive in corn and oats; in other parts the principal crops are wheat, barley and hay. The county produces a great variety and amount of excellent fruit; also cheese, butter, etc. Excellent grindstone quarries are worked, and grindstones largely exported. The sandstone from these quarries is a great article of commerce.

Area, 470 square miles. In 1885 the acres cultivated were 100,462; pasture, 73,790; woodland, 24,634; lying waste, 8,937; produced in wheat, 184,680 bushels; oats, 550,108; corn, 360,664; apples, 297,497; butter, 847,183 pounds; cheese, 46,397; milk, 3,598,729 quarts; cows, 12,486; pounds of grapes, 3,290,363, being more than double that of any other county. School census 1886 74,027; teachers, 932. It has 395 miles of railroad track.

Population in 1840 was 26,512; in 1860, 77,139; in 1870, 130,564; in 1880,

194,735, of whom 101,980 were Ohio-born; 4,728 Pennsylvania; 10,059 New York; 27,051 born in the German Empire; 13,203 in Ireland; 10,839 in England and Wales; 4,884 British America; 1,705 Scotland; 506 France; 248 Sweden and Norway.

As early as 1755 there was a French station within the present limits of Cuyahoga. On Lewis Evans' map of the middle British colonies, published that year, there is

marked upon the west bank of the Cuyahoga, the words "French house," which was doubtless the station of a French trader. The ruins of a house, supposed to be those of the one alluded to, have been discovered on Foot's farm, in Brooklyn township, about five miles from the mouth of the Cuyahoga. The small engraving annexed is from the map of Evans, and delineates the geography as in the original.

In 1786 the Moravian missionary, Zeisberger, with his Indian converts, left Detroit, and arrived at the mouth of the Cuyahoga in a vessel called the Mackinaw. From thence they proceeded up the river about ten miles from the site of

Cleveland, and settled in an abandoned village of the Ottawas, within the present limits of Independence, which they called *Pilgerruh*, i. e., *Pilgrim's Rest*. Their stay was brief, for in the April following they left for Huron river, and settled near the site of Milan, Erie county, at a locality they named *New Salem*.

The British, who, after the Revolutionary war, refused to yield possession of the lake countrywest of the Cuyahoga, occupied to its shores until 1790. Their traders had a house in Ohio City, north of the Detroit road on the point of the hill near the river, when the surveyors first arrived here in 1796. From an early day Washington, Jefferson and other leading Virginia statesmen regarded the mouth of the Cuyahoga as an important commercial position.

The First Permanent Settlement within the limits of Cuyahoga was made at CLEVELAND in the autumn of 1796. On the 4th of July previous, the first surveying party of the Reserve landed at Conneaut. In September and October the corps laid out the city, which was named in honor of the land company's agent, Gen. Moses Cleveland. By the 18th of October, the surveyors quitted the place, leaving Mr. Job V. Stiles and his family and Mr. Edward Paine, who were the only persons that passed the winter of 1796–97 within the limits of the town. Their lonely residence was a log-cabin, which stood near the site of the Commercial bank. The nearest white settlement west was at the mouth of the Raisin; south or east at Fort M'Intosh, at the mouth of Big Beaver; and northeast at Conneaut. Those families that wintered at Conneaut suffered severely from want of food.

The Surveying Party, on reaching the Reserve the succeeding season, again made Cleveland their headquarters. Early this season, Elijah Gunn and Judge Kingsbury removed here from Conneaut with their families, and in the fall the latter removed to Newburg, where he still (1846) resides at an

advanced age. The little colony was increased also by the arrival of Major Lorenzo Carter and Ezekiel Hawley with their families

and Ezekiel Hawley, with their families.

Trials and Suffering.—In 1798 Rodolphus Edwards and Nathaniel Doane, with their families, settled in Cleveland. To faintly show the difficulty of travelling at that time, it is stated that Mr. Doane was ninety-two days on his journey from Chatham, Conn. In the latter part of the summer and in the fall, every person in the town was sick, either with the bilious fever or with the fever and ague. Mr. Doane's family consisted of nine persons; the only one of them having sufficient strength to take care of them and bring a pail of water was Seth Doane, then a lad of thirteen years of age, and even he had daily attacks of the fever and ague. Such was the severity of the bilious fever at that time, that a person having only daily attacks of fever and ague was deemed lucky. There was much suffering from the want of food, particularly that proper for the sick. The only way this family was supplied, for two months or more, was through the exertions of this boy, who daily, after having an attack of the ague, went to Judge Kingsbury's, in Newburg—five miles distant—got a peck of

Drawn by Henry Howe in 1846.

VALLEY OF THE CUYAHOGA AT CLEVELAND.

[The view shows in the distance Lake Erie. The valley is now for miles filled with manufacturing establishments—a scene of busy industry. The viaduct now spans the valley in the middle background from plateau to plateau, 3,211 feet in length, 68 feet high and 64 feet wide.]

THE SUPERIOR STREET VIADUCT AT CLEVELAND.

[This great arched viaduct of Berea stone and iron was completed in 1878 and at a cost of \$2,225,000. fen years later, in 1888, through the enterprise of Mr. J. M. Curtis, was completed at an expense of about \$1,000,000 the Central Viaduct. It is built of iron on the Cantilever principle, and crosses the Cuyahoga about a mile above the other and also Walworth Run Valley, the combined length 5,229 feet, and height above the Cuyahoga 101 feet.]

Drawn by Henry Howe, 1846.

SUPERIOR STREET, CLEVELAND.

[This ever-increasing busy thoroughfare preserves some of its original features. The Weddell House and its contemplative eagle still remain. The venerable bird of never-lifting wing has there rested forty-two years from that hour since he could glance down upon him who pens these lines, sketching the scene, scated in a chair with urchins curious clustered close around. Solitary philosophic observer upon things below, looking for greater wonders and ready to hail the good time coming.]

corn, mashed it in a handmill, waited until a second attack of the ague was over, and then started on his return. There was at one time a space of several days when he was too ill to make the trip, during which turnips comprised about all the vegetables the family had. Fortunately, Major Carter having only the fever and ague, was enabled, through the aid of his hounds and trusty rifle, to procure abundance of venison and other wild game. His family being somewhat acclimated, suffered less than that of Mr. Doane. situation can scarcely be conceived of at the present day. Destitute of a physician, and with a few medicines, necessity taught them to use such means as nature had placed within their reach. For calomel they substituted pills from the extract of the bark of the butternut and in lieu of quinine used dogwood

and cherry bark.

In November, four men who had so far recovered as to have ague attacks no oftener than once in two or three days, started in the only boat for Walnut creek, Pa., to obtain a winter's supply of flour for the colony. When below Euclid creek a storm arose, drove them ashore, stove their boat in pieces and it was with difficulty they saved their lives and regained the city. During the winter and summer following, the colony had no flour except that ground in hand or coffee mills, which, for want of proper means to separate from the bran, was made into a bread similar to that of Graham's. In this summer the Connecticut land company opened the first road on the Reserve, which commenced about ten miles from the lake on the Pennsylvania line and extended to Cleveland. In January, 1799, Mr. Doane moved to Doane's Corners, and from that time until April, 1800-a space of fifteen months—Major Carter's was the only white family in Cleveland. During the spring of 1799, Wheeler W. Williams, from Norwich, Conn., and Major Wyatt erected a small grist and a saw mill at the falls, on the site of Newburg, which being the first mill on the Reserve, spread joy among the pioneers. short time prior to this, each house in Cleveland had its own hand grist mill in the chimney corner, which is thus described by one of the early settlers: "The stones were of the common grindstone grit and about four inches thick and twenty in diameter. The runner was turned by hand, with a pole set in the top of it near the verge. The upper end of the pole went into another hole inserted into a board, and nailed on the under side of the joist, immediately over the hole in the verge of the runner. One person turned the stone and another fed the corn into the eye with his hands. It was very hard work to grind, and the operators alternately changed places."

Celebrating Independence Day.—In 1800

Celebrating Independence Day.—In ·1800 several settlers came, among whom were David Clark and Major Amos Spafford, and from this time the town slowly progressed. The first ball in Cleveland was on the 4th of July, 1801, and was held at Major Carter's log-cabin, on the side hill; John and Benjamin Wood and R. H Blinn, managers, and

Major Samuel Jones, musician and master of ceremonies. The company consisted of about thirty of both sexes. Mr. Jones' proficiency on the violin won him great favor. Notwithstanding the dancers had a rough puncheon floor, and no better beverage to enliven their spirits than whiskey sweetened with maple sugar, yet it is doubtful if the anniversary of American independence was ever celebrated in Cleveland by a more joyful and harmonious company than those who danced the scamper-down, double-shuffle, western-swing and half-moon forty-six years ago in the log-cabin of Major Carter.

Major Carter and the Indians.—The In-

dians were accustomed, at this period, to meet every autumn at Cleveland in great numbers and pile up their canoes at the mouth of the Cuyahoga. From thence they scattered into the interior, and passed the winter in hunting. In the spring they returned, disposed of their furs to traders, and, launching their bark canoes upon the lake, returned to their towns, in the region of the Sandusky and Maumee, where they remained until the succeeding autumn, to raise their crops of corn and potatoes. In this connection we give an incident showing the fear-lessness and intrepidity of Major Lorenzo Carter, a native of Rutland, Vt., and a thorough pioneer, whose rough exterior covered a warm heart. Some time in the spring of 1799 the Chippewas and Ottawas, to the number of several hundred, having disposed of their furs, determined to have one of their drinking frolics at their camp, on the west bank of the Cuyahoga. As a precautionary measure, they gave up their tomahawks and other deadly weapons to their squaws to secrete, so that, in the height of their frenzy, they need not harm each other. They then sent to the Major for whiskey, from time to time, as they wanted it; and in proportion as they became intoxicated, he weakened it with water. After a while it resulted in the Indians becoming partially sober from drinking freely of diluted liquor. Perceiving the trick, they became much enraged. Nine of them came on to the Major's, swearing vengeance on him and family. Carter being apprised of their design, and knowing they were partially intoxicated, felt himself to be fully their match, although possessing but poor weapons of defence. Stationing himself behind his cabin door with a fire poker, he successively knocked down three or four as they attempted to enter, and then, leaping over their prostrate bodies, furiously attacked those on the outside and drove them to their canoes. Soon after a deputation of squaws came over to make peace with the Major, when, arming himself, he fearlessly repaired to their camp alone and settled the difficulty. Such eventually became his influence over the indians that they regarded him as a magician, and many of them were made to believe that he could shoot them with a rifle and not break their skins.

The First Militia Muster in Cuyahoga county was held on the 16th of June, 1806,

at Doane's Corners. Nathaniel Doane was captain; Sylvanus Burke, lieutenant; and Samuel Jones, ensign, with about fifty privates. The surveying party being at Cleveland, and many strangers, this event attracted much attention. Never had so many whites been collected together in this vicinity as on this occasion. The military marched and countermarched to the lively roll of the drum of Joseph Burke, who had been drum major in the Revolution, and the soul-stirring strains of the fife of Lewis Dill. "Yankee Doodle," "Hail Columbia," and "Who's Afeared" were among the tunes that aroused the martial spirit of many a gallant heart, as he wielded, perhaps, some ancient relic of the Revolution upon his shoulder. Sad Incidents.—Early in the spring pre-

vious a small boat, containing a Mr. Hunter, wife and child, a colored man named Ben, and a small colored boy, who were moving to Cleveland, was overtaken on the lake by a squall of wind and driven ashore east of Rocky river. The bluff being perpendicular, they were unable to ascend. They, however, climbed up the rocks as far as possible—the surge constantly beating over them—with the vain hope that the storm would subside; but on Saturday it increased, and during Sunday Mrs. Hunter expired, the children having died previously. On Monday Mr. Hunter expired. Black Ben held out until Tuesday, when, the storm subsiding, some French traders, going in a vessel from Cleveland to Detroit, discovered him, took him aboard and returned with him to Cleveland. Thus, for three days and four nights had he been without sleep or food, and with little clothing, exposed to the continued surge, and holding on for life to some small bushes in the crevices of the rocks. Ben was treated with great kindness by Major Carter, in whose family he remained an invalid over a year.

Early the second spring succeeding a similar incident occurred near the same place. Stephen Gilbert, Joseph Plumb, Adolphus Spafford and Mr. Gilmore started on a fishing expedition for Maumee river in a Canadian batteau. They had aboard some goods and provisions, sent by Major Perry to his son Nathan, at Black river, and a hired woman, named Mary, as a passenger to that place. A Mr. White, of Newburg, and two sons of Mr. Plumb, not arriving in time, started by land for the mouth of Black river, intending to overtake the boat at that point. Pursuing the Indian trail on the bank of the lake, they discovered, when about half way, the wreck of the boat on the beach, by the rocky shore, about sixty feet below them, in what is now Dover, and near it, Mr. Plumb, seriously injured and suffering with cold. From him they learned that a squall of wind had upset their boat when about a mile from shore, and that all but him had drowned.

They were all good swimmers but Plumb, who luckily got astraddle of the boat after it had upset and floated ashore. The others made for the shore, Gilbert telling his companions to divest themselves of their clothing as much as possible: but all their efforts failed. The coldness of the water chilled them so that they could not swim. Having learned the circumstances from Mr. Plumb, they made every effort to reach him, but were prevented by the steepness of the rocks. Mr. White and one of Mr. Plumb's sons hastened to Black river, to procure means of relief, leaving the other son to comfort his father. After they left he climbed up an iron-wood sapling, which bent with his weight, and dropping about thirty feet perpendicular, joined his parent. In the night Quintus F. Atkins and Nathan Perry returned with White and recovered Mr. Plumb by hauling him up the bank with a rope, by the light of a torch. This was no easy task for men worn down by fatigue, Mr. Plumb's weight being 220 pounds. The corpses of Gilmore and Spafford were afterwards found and buried at Cleveland; that of the colored woman was discovered and interred at Black river. This was a melancholy event to the colony. Of the eighteen deaths that had taken place among the inhabitants of Cleveland from the first settlement in 1796, a period of twelve years, eleven had been by drowning. During this time the nearest settled physicians were at Hudson, twenty-four,

and Austinburg, fifty miles.

Hanging of O'Mic.—On the 26th of June, 1812, an Indian, named O'Mic, was hung for murder, at Cleveland, on the public square. Fearing an attempt at rescue on the part of the Indians, a large number of armed citizens from this and the adjoining counties assembled. At the hour of execution he objected to going upon the scaffold; this difficulty was removed by the promise of a pint of whiskey, which he swallowed, and then took his departure for the land of spirits. In 1813 Cleveland became a depot of supplies and rendezvous for troops engaged in the war. A small stockade was erected at the foot of Ontario street, on the lake bank, and a permanent garrison stationed here, under Major (afterwards General) Jessup, of the United

States army.

The Return of Peace was celebrated by libations of whiskey and the roar of artillery. One worthy, known as "Uncle Abram," was much elevated on the occasion. He carried the powder in an open tin pail upon his arm, while another, to touch off the gun, carried a stick with fire at the end, kept alive by swinging it through the air. Amid the general excitement a spark found its way to Uncle Abram's powder about the time the gun was discharged, and his body was seen to rise twenty feet in the air and return by its own gravity to the earth, blackened and destitute of clothing. He was dead, if his own vociferations were to be believed; but they were not, and he soon recovered from his wounds.

canal, 139 miles northeast from Columbus, 255 from Cincinnati, 130 from Pittsburg, 190 from Buffalo, 650 from New York, and 130 from Detroit. It was incorporated as a village in 1814 and as a city in 1836. Excepting a small portion of it on the river, it is situated on a gravelly plain elevated about 100 feet above the lake, of which it has a most commanding prospect. Some of the common streets are 100 feet wide, and the principal business one, Main street, has the extraordinary width of 132 feet. It is one of the most beautiful towns in the Union, and much taste is displayed in the private dwellings and disposition of shrubbery. "The location is dry and healthy, and the view of the meanderings of the Cuyahoga river and of the steamboats and shipping in the port, and leaving or entering it, and of the numerous vessels on the lake under sail, presents a prospect exceedingly interesting from the high shore of the lake.

Near the centre of the place is a public square of ten acres, divided into four parts by intersecting streets, neatly enclosed and shaded with trees. The court

house and one or two churches front on this square.

The harbor of Cleveland is one of the best on Lake Erie. It is formed by the mouth of the Cuyahoga river and improved by a pier on each side, extending 425 yards into the lake, 200 feet apart, and faced with substantial stone masonry. Cleveland is the great mart of the greatest grain-growing State in the Union, and it is the Ohio and Erie canals that have made it such, though it exports much by way of the Welland canal to Canada. It has a ready connection with Pittsburg through the Pennsylvania and Ohio canal, which extends from the Ohio canal at Akron to Beaver creek, which enters the Ohio below Pittsburg. The natural advantages of this place are unsurpassed in the West, to which it has a large access by the lakes and the Ohio canal. But the Erie canal constitutes the principal source of its vast advantages; without that great work, it would have remained in its former insignificance." The construction of two contemplated railroads, the first connecting Cleveland with Wellsville, on the Ohio, and the last with Columbus, will add much to the business facilities of the place.

The government of the city is vested in a mayor and council, which consists of three members from each of the three wards into which the city is divided, and also an alderman from each ward. The following is a list of the mayors of the city since its organization, with the time of their election: John W. Willey, 1836 and 1837; Joshua Mills, 1838 and 1839; Nicholas Dockstader, 1840; John W. Allen, 1841; Joshua Mills, 1842; Nelson Hayward, 1843; Samuel Starkweather, 1844 and 1845; George Hoadley, 1846, and J. A. Harris, 1847.

The Cleveland medical college, although established but four or five years, is in a very flourishing condition, and has gained so much in public estimation, as to be equalled in patronage by only one or two similar institutions in the West. It has seven professors, and all the necessary apparatus and facilities for instruction.

In 1837 the government purchased nine acres on the height overlooking the lake, for the purpose of erecting a marine hospital; up to the present time, but little more than the foundation has been laid. It is to be of Ionic architecture,

of hewn stone, and will combine convenience and beauty.

Cleveland has a large number of mercantile and mechanical establishments; 4 banks, 3 daily, 6 weekly, and 1 semi-monthly newspaper, and 21 religious societies, viz.: 3 Episcopal, 2 Presbyterian, 1 Methodist Episcopal, 1 Baptist, 1 Catholic, 1 Bethel, 1 Wesleyan Methodist, 1 German Evangelical Protestant, 1 German Mission Society of the Protestant Episcopal Church, 1 German Evangelical Lutheran, 1 Evangelical Association of North America, 1 Associate Presbyterian, 1 Seceder, 1 Disciples, 1 Jewish, 1 Universalist, and 2 Second Advent. The business of the port of Cleveland, both by canal and lake, is very heavy, and constantly increasing. The number of arrivals by lake, in 1845, was 2,136; of these, 927 were steamers. The tonnage then owned at this port amounted to 13,493, and number of vessels of all kinds, 85. The total value of the imports and exports by the lake was over \$9,000,000.

The population of Cleveland, on the east side of the Cuyahoga, was, in the year 1796, 3; 1798, 16; 1825, 500; 1831, 1,100; 1835, 5,080; 1840, 6,071; and 1846, 10,135. Of the last, 6,780 were natives of the United States; 1,472 of Germany; 808 of England; 632 of Ireland; 144 of Canada; 97 of the Isle of Man, and 96 of Scotland.

OHIO CITY (united to Cleveland in 1854) is beautifully situated on a commanding eminence on the west side of the Cuyahoga, opposite Cleveland. It was incorporated as a city, March 3, 1836, and its government vested in a mayor and council. The city is divided into three wards, and is well laid out and built. There are three churches, viz.: 1 Presbyterian, 1 Methodist Episcopal, and 1 Episcopalian—the last of which is a Gothic structure of great beauty. The population of Ohio City, in 1840, was 1,577, and in 1845, 2,462.—Old Edition.

Cleveland is on the line of seven railroads, viz.: C. & C.; C. C. & C.; C. C. C. C. & I.; L. S. & M. S.; N. Y. C. & St. L.; N. Y. L. E. & W.; Penn. Co.; V.: in a direct line about 600 miles from New York and 450 from Chicago. County officers in 1888: Probate Judge, Henry Clay White; Auditor, William H. Brew; Clerk, Levi E. Meacham; Prosecuting Attorney, Alexander Haddon;

MEDICAL COLLEGE IN 1846,

Recorder, Alfred T. Anderson; Sheriff, Erasmus D. Sawyer; Surveyor, James F. Brown; Treasurer, David W. Kimberly; Commissioners, Alfred A. Jerome, George A. Schlattereck, Wilbur Bently.

The following newspapers are published in Cleveland: Evening News and Herald, Leader and Morning Herald, Republican, daily, Leader Printing Company, publishers; Plain-Dealer, Democratic, morning and

evening daily, Plain-Dealer Publishing Company, editors and publishers; Anzeiger, German Independent Republican, William Kauffman, editor, Anzeiger Publishing Company, publishers; Wächter am Erie, German Democratic, daily, Wächter am Erie Publishing Company, editors and publishers; Press, Independent daily. In addition to the above dailies are 48 weekly, bi-monthly and monthly journals, devoted to commerce, agriculture, religion, science, history, temperance, society, etc. Of these, 9 are printed in German, 2 Bohemian, and one devoted to the interests of the colored race. The official organ of the Brotherhood of Locomotive Engineers is also published here.

Banks.—Broadway Savings and Loan Company, Joseph Turney, president, O. M. Stafford, treasurer; Citizens' Savings and Loan Association, J. H. Wade, president, W. S. Jones, treasurer; Cleveland National Bank, S. S. Warner, president, P. M. Spencer, cashier; Commercial National Bank, Dan. P. Eells, president, David Z. Norton, cashier; East End Savings Bank Company, J. H. McBride, president, Charles A. Post, treasurer; Euclid Avenue National Bank, John L. Woods, president, Solon L. Severance, cashier; First National Bank, James Barnett, president, H. S. Whittlesey, cashier; Mercantile National Bank, Truman P. Handy, president, Charles L. Murfey, cashier; National Bank of Commerce, J.

H. Wade, president, F. E. Rittman, cashier; Ohio National Bank, John McClymonds, president, Henry C. Ellison, cashier; National City Bank, W. P. Southworth, president, J. F. Whitelaw, cashier; People's Savings and Loan Association, Robert R. Rhodes, president, A. L. Withington, treasurer; Savings and Trust Company, C. G. King, president, H. R. Newcomb, treasurer; Society for Savings, S. H. Mather, president, M. T. Herrick, treasurer; South Cleveland Banking Company, Joseph Turney, president, James Walker, treasurer; Union National Bank, M. A. Hanna, president, E. H. Bourne, cashier; West Side Banking Company, Lee McBride, president, Thomas M. Irvine, cashier; Crumb & Baslington, E. B. Hale & Co., W. J. Hayes & Sons, Lamprecht Bros. & Co., Charles H. Potter & Co., Henry Wick & Co., Cleveland Clearing House Association, Truman P. Handy, president, A. H. Wick, secretary.

Colleges and Scientific Institutions.—The Adelbert College of the Western Reserve University; Case School of Applied Sciences; Kirtland Society of Natural Sciences; Western Reserve and Northern Ohio Historical Society; Medical Department of Western Reserve University; Medical Department University of

Wooster: Homeopathic College.

Charitable Institutions.—City Infirmary; Charity Hospital; City Hospital; Hospital for Women; Asylum for Insane; Homeopathic Hospital; House of Maternity; St. Alexis Hospital; University Hospital; Protestant Orphan Asylum; Children's Home; House of the Good Shepherd; Little Sisters of the Poor.

Public Libraries.—Cleveland, 51,000 volumes; Case, 21,000 volumes; Law, 9,000 volumes.

Cleveland has in all 186 churches and missions. These are divided into many denominations, as 26 Roman Catholic, 14 Baptist, 4 Disciples, 15 Congregational, 9 Evangelical Association, 2 Evangelical, 1 Independent, 11 Evangelical Lutheran, 7 Evangelical Reformed, 1 Free Methodist, 1 Friends, 9 Hebrew, 21 Methodist Episcopal, 11 Presbyterian, 2 United Presbyterian, 14 Protestant Episcopal, 4 Reformed Dutch, 1 Spiritualist, 1 Swedenborgian, 1 Unitarian, 3 United Brethren, 1 Wesleyan Methodist, 1 Seventh Day Advent, 1 Church of God, 1 Floating Bethel, etc., etc. These are conducted by various nationalities: English, German, Hebrew, Welsh, Poles, Hungarian, Bohemian, Scandinavian, Italian, etc.

Manufactures and Employees.—The manufactures of Cleveland are immense. Henry Dorn, Chief State Inspector of Workshops and Factories, in his report for 1887 gave a list of 462 establishments. Of these, one hundred and thirty-eight employed 50 hands or over; eighty-one, 100 hands or over; thirty-two, 200 hands or over; eleven, 400 hands or over; six, 600 hands and over, of which one was the Standard Oil Company with 2,000 hands, and the other the Cleveland Rolling Mill with 4,150 hands, but which at times exceeds 5,000 hands.

We annex a list of those with 100 hands or over, eighty-one in number:

American Wire Co., 465; Prospect Machine Co., engines and machinery, 220; Lake Erie Iron Co., forging bolts and nuts, 250; Cleveland Hardware Co., carriage hardware, 178; H. P. Nail Co., wire and wire nails, 505; Cleveland City Forge, iron forgings, 425; Britton Iron and Steel Co., iron and steel plate, 215; Buckeye Bridge and Boiler Works, boilers and bridges, 106; Ohio Steel Works, steel, 625; King Iron Bridge Manufacturing Co., bridges, roofs, etc., 225; T. H. Brooks & Co., iron founders, 108; Cleveland and Pittsburg R. R. Co., car repairs, 125; Lake Shore Foundry Co., iron castings, 281; Lake Shore R. R. Car Shops, railroad repairs, 150; Standard Tobacco and Cigar Co., tobacco and cigars, 260; A. W. Sampliner, cloaks, 235; D. Lake Commerce.—According to the Marine Record of Cleveland, the total number of hulls and tonnage on the lakes at the close of 1887 was 3,537 vessels with

a total tonnage of 905,277 tons.

The custom house report for the same year showed imports of the value of \$43,884,336, exports, \$34,988,095. Of the imports, iron ore leads, being valued \$16,351,126; lumber, \$9,945,040; merchandise, \$12,701,200; copper, \$627,000. Of the exports, merchandise, \$12,531,200; coal, \$3,540,011; iron (bar, etc.), \$1,277,950; coal oil, 591,964. Vessels built at the port of Cleveland in 1887—tonnage, 19,000 tons.

The item, export of coal oil, only indicates the little that goes by vessels up the lakes in the sailing season, and in no sense indicates the magnitude of the oil refin-

ing industry of Cleveland—the largest in the world.

The population of Cleveland in the year 1840 was 6,071; in 1880, 160,146; estimated 1888, 220,000. School census in 1886, 61,654; Burk A. Hinsdale, superintendent.

The following clear, concise outline sketch of Cleveland, its past and present, was written for this work by D. W. Manchester, Secretary of the Western Reserve Historical Society.

Cleveland stands on a broad plateau elevated about eighty feet above the surface of the lake and it is intersected by the Cuyahoga river, some five miles of which

is broad, deep, and navigable for the largest steamers and sailing craft.

In the remote cycles of geological times this elevated plain was the bottom of the lake, which in the course of countless ages has receded to its present level, evidenced by a series of ridges parallel therewith, many miles in length, and extending back several miles to rocky elevations which were its original and primeval shores in the day when these northern waters met and mingled with those of the Gulf of Mexico.

The great plateau was formed during the glacial period and is more than 200

feet in depth to the underlying rocky foundation. It is composed of alternate strata of Devonian shale, marl, clay, gravel, sand and alluvium, the disintegration of Arctic mountains of rocks, intermingled with boulders of various magnitudes

and ancient driftwood, which grew in a once northern tropical climate.

In the sandy and alluvium strata of the cycles are found the bones of many animals, characteristic of the drift period, and notably the tusks and grinders of the elephant, and the skeleton entire of both the elephant and mastodon of gigantic proportions, discovered in the sliding banks of the lake, river or ravines and sometimes in excavating cellars. It was, moreover, the home, the cultivated field, the garden and the grave of the northern colony of that prehistoric people the remains of whose wonderful earthwork have given them the designation of Mound-builders. Then came the red man, known to the white man for nearly 400 years as the Indian, but bringing with him neither knowledge nor tradition concerning the preceding race, or of their mighty works which are an astonishment unto this day.

From 1535 to 1760, two hundred and twenty-five years, the region of the lakes and the territory north of the Ohio river to the Mississippi river, discovered and traversed by the Jesuit missionaries and fur traders, was under the dominion of the king of France, and was designated on the maps as New France, all of which by the fate of war and treaties of peace passed to the English in 1760. During that long period the land was occupied by the native races. There were two powerful empires of the aborigines, the East comprising the confederated Six Nations, and the West, of which, as late as 1763, Pontiac was the Napoleon, and the Cuyahoga river was the boundary line of the two empires on the southerly side of Lake Erie. More than two hundred years ago, on the banks of this boundary stream, Christianity was taught the wild man by the French missionaries, and letters were written to Madame Maintenon, the wife of Louis XIV., now extant in the archives of France, descriptive of the Indians, the lands, the forests and the rivers on the southerly border of Lake Erie, and containing the first description or mention on paper of the wonderful falls over which is discharged the blue waters of the magnificent chain of American lakes. When the English came into possession this part of Ohio became a province of Quebec. Immediately following the Revolution New York and Virginia ceded to the general government all right to this territory based on expressions in the early colonial charters signifying the extension of the grant to the mythical South sea on the west.

In 1786 Connecticut ceded her claim likewise to the United States, retaining,

however, so much thereof as is now known as the Western Reserve.

In July, 1787, the Congress of the Confederation of States passed an act organizing the Northwest Territory, and the spring following the first white settlement was made at the mouth of the Muskingum, on the Ohio river, and in 1789 the first Congress under the Federal Constitution gave the Territory a permanent status among the States of the Republic. Indian wars succeeded, General St. Clair's army was defeated; but in 1794 Mad Anthony Wayne, at the head of a well-appointed army, subdued the numerous hostile tribes.

Connecticut, in 1792, gave 500,000 acres of the west end of the "Reserve" for the benefit of her citizens who had suffered by the spoliations of the British, since

known as the "Fire Lands."

In 1795 Connecticut sold the remainder of the Reserve lands east of the Cuyahoga river, a little more than 3,000,000 acres, to a syndicate of her citizens, who organized themselves into an association under the name of the Connecticut Land Company, the interests of the company being managed by seven directors.

General Moses Cleaveland, a lawyer of Canterbury, Windham county, Conn., was appointed general agent of the company. In the spring of 1796 a large surveying party was organized, of which General Cleaveland was appointed superintendent. On the 4th of July of that year the party arrived on the territory of the Reserve. It having been determined by the company to lay out a capital town on an eligible site, the high and beautiful plateau at the mouth of the Cuya-

hoga, on the east side thereof, was selected, and here in September, 1796, the then future city was surveyed, mapped, and named in honor of their chief by his associates. He was emphatically a gentleman of fine acquirements, polished manners and unquestioned integrity. When the surveying party returned to their homes in the East, only three white persons were left on the Reserve—Job Stiles and his wife and Joseph Landon. The last named soon left and was succeeded by Edward Paine, afterwards General Paine of Painesville, who boarded with the Stiles, and was an Indian trader.

General Cleaveland never afterwards returned to the infant settlement, but died at his native home in 1806, too soon to see the wonderful growth of the city to

which he gave his name.

The year 1797 brought James Kingsbury and his family to Cleveland. He was born in Connecticut, but came to the Reserve from Alsted, New Hampshire. Also Lorenzo Carter and Ezekiel Hawley, his brother-in-law, with their families. This year occurred the birth of the first white child, that of Mr. Stiles. Eldridge, one of the old surveying party, coming back to the settlement, died and was buried in the first selected cemetery, long since abandoned, now in the heart of the busy city. The first wedding was that of Chloe Inches, a servant in the family of Mayor Carter, who married a Canadian, Mr. Clement, by the Rev. Seth Hart, who had been of the surveying party. In 1799 Rodolphus Edwards and Nathaniel Doan came to the then city on paper. There were a few other names which might be mentioned as being on the ground during the year above mentioned, but Carter, Kingsbury, Edwards and Doane were the real primeval pioneers, whose names are best known to the present generation as men of generous spirit, great endurance and noble deeds, the advance guard of civilization prior to the year 1800.

In 1801 Šamuel Huntington, a nephew of Gov. Huntington, of Connecticut, a lawyer of the age of about thirty-five years, settled in Cleveland. He was a member of the first Constitutional Convention, the first State Senator of the county, then Trumbull, presided over that body, was appointed Judge of the Supreme Court in 1803, and elected Governor in 1808. He resided in a block

house on Superior street, near where now stands the American House.

Cuyahoga county was created in 1810, Cleveland being the county-seat. The first Court of Record was held in a frame building on the north side of Superior street, June 5, 1810, Judge Ruggles presiding. John Walworth was Clerk of the Court and S. S. Baldwin the Sheriff. In 1812 the first court-house, of logs, was erected on the public square, and in the same year the first execution occurred, that of Omic, the Indian, being hanged for the murder of two white men near Sandusky.

Cleveland was granted a village charter at the winter legislative session of 1814–15. The next year "The Commercial Bank of Lake Erie" was established,

with Leonard Case as president.

The Episcopal church was established in 1817, and ten years later was erected

its house of worship, corner of St. Clair and Seneca streets.

In 1827 the Ohio canal was completed as far south as Akron, and in 1832 it was in operation from Lake Erie to the Ohio river, resulting in advancing the commercial prosperity of Cleveland and a rapid increase of population. In immediate connection with this great public work was the improvement of the harbor, for which Congress had made an appropriation of \$5,000. Small as the appropriation seems now, it sufficed, by honest management and the volunteer help of citizens, to cut a new channel for the river a few rods east of its natural bed and outlet into the lake and the building of piers.

In the same year of 1827 the Presbyterian congregation was incorporated. The society had been in existence since 1820, having been organized in the old log court-house with fourteen members, and in 1834 the first stone church on the north side of the public square was dedicated. It was burnt in 1858, and the

present noble structure immediately arose from its ashes. The Methodist Conference, in 1830, established a station here, Rev. Plimpton holding the charge. In 1833 the First Baptist Society was organized with twenty-seven members, and erected a church edifice of brick on the corner of Seneca and Champlain streets, which remains there yet, although long since abandoned for religious purposes for a more pleasant locality and a more elegant structure. The pioneer Roman Catholic church came in 1835 and built a house of worship in the valley on Columbus The same year the Bethel was built on Water street for the use of sailors; and in 1839 the Hebrew congregation established their first synagogue, and built soon after a fine brick edifice on Eagle street. In less than fifty years all these religious societies, denominations, churches and synagogues have flourished and multiplied in numbers and increased in wealth and influence, and all have been blessed with the happiness resulting from the consciousness that each institution has been guided and instructed by its respective rector, minister, priest and rabbi, ever earnest and faithful in his clerical ministrations, and not a few of whom have been pre-eminent for scholarly attainments and elegance of discourse.

As early as 1786 there was a trading-post at the mouth of the Cuyahoga river to facilitate the transshipment of flour and bacon brought overland from Pittsburg, destined thence by water to the military post at Detroit, being the first lake traffic at this point. The commercial marine of the lakes, now surpassing that of the Mediterranean, had its genesis in the "Griffin," a vessel of sixty tons, built on the Niagara river above the Falls, by La Salle, for exploring service, and sailed on its mission of discovery August 7, 1678. The first vessel launched at Cleveland was a sloop of thirty tons, built in 1808 by the famous pioneer, Lorenzo Carter, and named the "Zepher." From the "Griffin" and the "Zepher" to the year 1887 the lake marine has developed into the enormous proportion of 3,502 vessels of all classes—steamers and sail-craft—with a total tonnage of 905,277.57 tons, according to the excellent authority of the editor of the *Marine Record*, of Cleveland.

For nearly twenty years ferocious wild beasts of the dense forests in and surrounding Cleveland annoyed and terrified the inhabitants. Bears entered their gardens and dwellings even in the daytime, and at night invaded the barnyards and pigsties, killing and carrying off young porkers, calves, and sheep; and wolves beset the night traveller on streets and avenues now lined with costly residences and palatial mansions.

In 1820 a stage line was established between Cleveland and Columbus, and coaches were run to Norwalk; soon thereafter to Pittsburg and Buffalo. For thirty years this system of passenger travel flourished in all gayety, splendor, and excitement along the several routes, enlivening villages and awakening lone hamlets

Cleveland was during that period a noted centre of the stage lines between the East and the West and South, until that system of travel was superseded by the railway system, about 1850, when the blast from the bugle and the crack of the stage-driver's whip was no more heard along the turnpike on the high and dry parallel ridges and ancient shores of Lake Erie.

The first railway charter was that of the Cleveland, Columbus and Cincinnati, followed soon by the Cleveland and Pittsburg, Cleveland and Toledo, and the Cleveland and Ashtabula, or Lake Shore, connecting with the New York Central and New York and Erie. Thus, as early as 1852, a complete line was in operation from the sea-coast to Chicago, and even to Rock Island, on the Mississippi river. This last great modern system of travel and transport had the immediate effect of sweeping from the chain of lakes, as it had the stages from the land, the line of splendid side-wheel steamers and floating palaces that for many years had plied between Buffalo and Chicago, each crowded with hundreds of passengers.

The railroads changed the order of business at Cleveland, and for a brief season the lake commerce at this port presented a gloomy aspect, and total ruin of the marine industry was prophesied. Fortunately, however, the Cleveland and Mahoning Valley railroad was soon completed, extending into the great coal-fields, and opening up a new territory to trade, and laying the foundation and stimulating manufacturing enterprises, resulting eventually in the creation here of an industrial and producing centre now pre-eminent among the cities of the lakes. Two other railroads within the last decade have been added to the railway system: the Valley railroad, along a portion of the line of the Ohio canal, and the Connotton Valley railroad, both leading into the great southern and eastern coal belt.

THE PERRY STATUE, MONUMENTAL PARK.

With these facilities and the simultaneous opening up of the vast iron and copper regions of Lake Superior, the wonderful and almost mysterious alliance of coal and iron and fire along the banks of the lake and river, within the limits of Cleveland, has resulted in vast iron furnaces, rolling mills, and many branches incident thereto, such as wire mills, nuts and bolts, screws, shovels, engines, and machinery, together with every conceivable branch of manufacturing industry, from the great tube and exquisitely adjustable mechanism of the Lick telescope to a shingle-nail. Here coal and iron meet, and in their resulting industries.

The central lowlands and broad meadows on either side of the wide navigable river for a distance of several miles are the sites of hundreds of great manufacturing plants, whose lofty smokestacks give daily and often nightly evidence of perpetual industry, while the broad and elevated plateaus for five miles distant on both sides are densely covered with mercantile houses, public buildings, mansions of the millionaires, and the more modest but goodly homes of 300,000 people.

Cleveland's municipal existence dates from 1836, with John W. Willey, an eminent lawyer, as its first mayor. At that date the west side of the river constituted Ohio City, but, in 1854, it was united with Cleveland, and William B. Castle was the first mayor after the union, the population being at the following census (1860) 44,000. The city had already been lighted with gas.

The first great public enterprise after the union was in supplying the city with water pumped from a great distance from the lake shore to a reservoir on the most el vated land, the height thereof being artificially increased about a hundred feet,

and from thence distributed, and from time to time since extended until nearly every street, house, and building enjoys the blessing of pure lake water, bountifully

supplied.

In the possession of parks and public grounds the city is pre-eminently fortunate. In addition to the central park of ten acres laid out by the original survey, and since the erection of the statue of Commodore Perry, in 1860, called Monumental Park, Lake View Park has been created along the sloping bluff from Seneca street east to Erie street, and is adorned and embellished in the best style of the landscape-gardener's art. The Circle is a finely ornamented

GARFIELD'S MONUMENT, LAKE VIEW CEMETERY.

ground on Franklin avenue, west side, from which radiates several streets. It has a central rock structure in primitive style; moss and vine, covered with water jets, rivulets, and drinking fountains—a delightful summer evening resort. Wade Park came to the city already laid out and adorned through the munificence of Mr. J. H. Wade, of electrical fame. It has an area of some sixty-five acres of ravine and upland level, traversed by a bountiful and ever-living stream of pure water, fed by the not far distant hills; is shaded with abundant trees and profuse with native and cultivated shrubbery, and is almost limitless in its extent of walks and drives.

SOUTH SIDE PARK is a fine, level piece of land, covered with native trees, but recently purchased by the city, and not yet developed and beautified to its utmost

possibilities. It is, however, destined to delight the eye and grace the south side of the municipality.

One hundred years has sufficed to populate a dozen or more municipal cemeteries, such as Erie, Woodlawn, Monroe, and the consecrated grounds of the Catholic church, all well kept.

Modern culture and taste, accompanied by individual and associated wealth, has largely removed the native dread of death, inspired by the lonely and neglected "graveyard" of primitive times, in the establishment independent of municipal authority, and often remote from cities, of cheerful and ornate cemetery grounds.

LAKE VIEW and RIVERSIDE represent the results of the wealth, forethought, and taste of J. H. Wade and J. M. Curtiss and their associates in the two enterprises. The first of these cities of the dead overlooks the lake and comprises a tract of upwards of three hundred acres of wooded hill and dale, of oak and other forest trees. The second overlooks the broad meadows and the winding river.

It has a little over one hundred acres, with many richly wooded ravines, brooks, and springs utilized in fountains and ponds. It has romantic and shady drives through its numerous dells, aggregating more than five miles, and is one of the most attractive and beautiful resorts of the city's rural suburbs.

While hardly two decades have elapsed since Lake View and Riverside opened their portals, yet the vast number of elaborate monuments and tombs in every conceivable style of monumental art from the monoliths of the Pharaohs and the mausoleums of the Cæsars to modern days, indicates the mighty annual increase of the silent inhabitants of these beautiful cities of the dead.

In pursuance of the terms of annexation several swing bridges were built over the river, and in 1878 the great arched VIADUCT of stone and iron was completed, spanning the wide valley from plateau to plateau, 3,211 feet in length, 68 feet high, and 64 feet wide, and costing \$2,225,000. It has double street railway tracks, carriage ways, and walks on both sides.

THE BRUSH ELECTRIC LIGHT COMPANY'S WORKS.

There is now (1888) in process of construction by the government a harbor of refuge, to enable vessels to enter the port with safety. The anchorage room within the enclosure of the extended breakwater is ample for the entire marine of the lakes, and the water is deep enough to float the largest lake vessels. Estimated cost \$2,000,000.

Among the number of manufacturing industries it should be remembered that here is the corporation and plant of the Standard Oil Company, whose operations are world-wide, and whose dealings surpass in millions any other known institution in America or Europe. Here also is the Brush Electric Light Company, with its vast manufacturing plant and machinery, and the home of the famous inventor.

Of the dead, who by their life-deeds and testamentary provisions are canonized as noble benefactors, and as such held in reverent and honored memory, allusion must be here made to William and Leonard Case, Joseph Perkins, Henry Chisholm, and Amasa Stone.

Of the many persons of great wealth still living, of whose noble and generous deeds it would be pleasant to here record, it would seem invidious to discriminate where space is not adequate to mention all. Suffice it to say, the millionaires of

Cleveland are recognized as among its liberal public benefactors.

In addition to its excellent common school system and academical institutions, there may be now reckoned among the literary and scientific advantages of Cleveland, the Adelbert College; the Case School of Applied Science, at the head of which is Professor John N. Stockwell, well known to the savants of Europe as an Astronomical Mathematician; the Western Reserve Historical Society and Museum, organized in 1867, by Col. Charles Whittlesey, its president from the first until his death in October, 1886; and Judge Charles C. Baldwin, its present president; the Kirtland Society of Natural Science, named in honor of the late Professor Jared P. Kirtland, who in his lifetime was called the "Agassiz of the West;" the Case Library; the Cleveland Public Library, and three medical colleges. An opera house and five theatres furnish adequate entertainment.

Eight street railroads furnish ample facilities for local passenger transport from the centre to any part of the city, and even into the rural regions beyond its

corporate limits.

Hotel accommodations are among the advantages of the city. There are probably more than twenty, all good, but of the famous old ones recently enlarged and refurnished may be noted the Weddell, American, and Forest City; while of the great modern structures, the Stillman and the Hollenden are unsurpassed.

The summer temperature of Cleveland is delightful. The fresh cool air from the lake prevails throughout the heated term, and the evenings and nights are always pleasantly cool, making the city a delightful refuge from the sultry heat of the inland cities, and thousands from all parts of the country sojourn in the beautiful city during the summer.

BIOGRAPHICAL SKETCHES.

Cleveland has been strong from the beginning in its leading minds in every department of utility. A few representative characters are here brought under notice. First in order comes Gen. Moses Cleaveland, its founder. The name is Saxon, and the family, before the Norman conquest, occupied an extensive landed estate in Yorkshire that was marked by open fissures, called by the Saxons as "clefts," or "cleves," hence the name, which has been variously spelled—Cleffland, Cliffland, Cleiveland, Cleveland and Cleaveland, which is the way General Moses spelled it, and the place was so spelled until the Cleveland Advertiser was issued in 1830, when the editor, finding the type of his headline too large to extend across his page, dropped the first "a" and made it Cleveland.

All family names in the lapse of time, as is known to every genealogist, have undergone changes, and some so radical that many readers hereof would not know his own could he see it as written by his ancestors in the dim remote. A bit of humor will do no harm just here, the mention of a hypothetical change of a name, that of General Cornwallis, made by a colored man in the long ago, who said, "In de American Rebolution, Gin'ral Washington he shell all de corn ob Gin'ral Corn-

wallis and make Gin'ral Cobwallis."

General Moses Cleaveland was born in Canterbury, Conn., in 1754, graduated at Yale College in 1777, studied and practiced law in his native town. In 1779 he was appointed by Congress captain of a company of sappers and miners in the army of the United States. He was subsequently a member of the Connecticut Legislature and appointed a brigadier-general in the State militia—a position in that day deemed as one of distinguished honor. He was also Grand Master of the Masonic Fraternity of the State. He married Esther Champion in 1794, by whom he had four children.

It is said that when he founded the city he

predicted the time would come when it would have as many people as Old Windham, in Connecticut, which was then about 1,500. After laying out the city he returned to Canterbury, where he died in 1806 aged fifty-three years. He was a large, dignified man, of swarthy complexion, of sedate aspect, and

GENERAL MOSES CLEAVELAND.

often taken for a clergyman. He was very kindly in his nature and of excellent judg-

On the 23d of July, 1888, being the anniversary of the arrival of Gen. Cleaveland, a fine bronze statue to his memory was unveiled on the public square. It had been erected through the efforts of Mr. Harvey Rice, the venerable president of the Early Settlers' Association, who has done so much for educational and patriotic purposes in a life now prolonged to eighty-nine years.

The work is a circular pedestal of polished granite $7\frac{1}{2}$ feet high, surmounted by a life-like statue of the general, $7\frac{3}{4}$ feet high, weighing 1,450 pounds, U. S. standard bronze, cut in one piece, representing him in the character of a surveyor in the field, with a Jacob's staff in his right hand and an old-time compass clasped in the elbow of his left arm. On its base is the inscription, "General Moses Cleaveland, Founder of the City, 1796."

JARED POTTER KIRTLAND was born in

Wallingford, Conn., in 1793, and died in Cleveland in 1877, aged eighty-four years. He graduated at the Yale Medical School, and at the age of thirty emigrated to Poland, Ohio, where he practiced his profession and, as before, devoted his leisure to natural science. When a mere youth at school he had become an expert in the cultivation of fruits and flowers, made his first attempt of new varieties of fruit, and managed a large plantation of white mulberry trees for the rearing of silk worms.

After coming to Ohio he served three terms in the State Legislature, from 1837 to 1842 was medical professor at Willoughby, in 1837 was assistant on the first geological survey of Ohio and made a report on its zoology. About 1840 he removed to Rockport, just west of and near Cleveland, and became one of the founders of the Cleveland Medical College. In the civil war he was examining surgeon for recruits and devoted his pay to the Soldiers' Aid Society. He made many investigations in many departments of natural

history which were published in scientific

In 1845 he was one of the founders of the Cleveland Academy of Natural Science, which in 1865 became the Kirtland Society of Natural History, and to which he gave his rich collection of specimens. He was a man of great learning and personal magnetism and more than any one of his day was his influence in improving agriculture and horticulture and diffusing a love of natural history throughout the entire Northwest.

DR. KIRTLAND.

Writes Col. Chas. Whittlesey: "As a naturalist he was self-educated. Nature had formed him mentally and physically for that mission. In 1829, while studying the unios or fresh water mussels, he discovered that authors and teachers of conchology had made nearly double the number of species which are warrentable. Names had been given to species to what is only a difference of form, due to males and females of the same species. This conclusion was announced in "Silliman's Journal of Science."

"The fraternity of naturalists in the United States and Europe were astonished because of the value of the discovery and the source from whence it came. There were hundreds and probably thousands of profes-

sors who had observed the unios and enjoyed the pleasure of inventing new names for the varieties. A practicing physician in the backwoods of Ohno had shattered the entire nomenclature of the naides. At the Cincinnati meeting of the American Association in 1852, Professor Kirtland produced specimens of unios of both sexes, from their conception through all stages to the perfect animal and its shell. Agassiz was present and sustained his views and said they were likewise sustained by the most eminent naturalists of Europe. It is difficult in a brief paper like this to do justice to the life and character of a man who lived so long laboring incessantly regardless of personal comfort, and did so much to extend the dominion of absolute

knowledge. Like Cuvier, Agassiz and Tyndall, his work has shown that theory and discussion do not settle anything worthy of a place in science, that it is only those who base their conclusions on observed nature whose reputations become permanent.

In person Dr. Kirtland was a large man, with a great heart and lungs and an untiring worker, to whom time was more precious than gold. One who knew him well said of him he possessed more good and useful traits of character than any person he ever knew—so unselfish, social, kind to all—beloved by both old and young he seemed to be happiest when making others happy. He cultivated the taste for the beautiful by distributing freely, at times almost robbing himself of rare fruit or costly plants to distribute to his neighbors. He was a hearty and sincere believer in the Christian religion, but adopting no particular religious creed. When near death he wrote: "My family all attention. Every day growing weaker. The great change must soon occur. On the mercies of a kind Providence who created me, who has sustained and helped me through a long life, I rely with a firm faith and hope. We know I rely with a firm faith and hope. We know not what is beyond the grave. Vast multitudes have gone there before us. Love to all. Farewell.

REUBEN WOOD, Governor of Ohio from 1851 to 1853, was born at Royalton, Vermont, in 1793, and died in 1864, at his farm

GOVERNOR REUBEN WOOD.

in Rockport. When the war of 1812 broke out he was temporarily living with an uncle in Canada, where he was studying the classics and reading law. He was subjected to military service against his own country. To this he would not submit, and, though placed under guard, succeeded at the hazard of his life in effecting an escape in a small boat across the entire width of Lake Ontario to Sackett's Harbor. He then worked on the home farm to aid his widowed mother and studied law. In 1818 he emigrated to Cleveland and engaged in the practice of his profession. He was three times elected to the State Senate; in 1830 was elected. President-Judge of the Third Judicial District; in 1833 became Judge of the Supreme Court by the unanimous vote of the Legislature; in 1841 he was re-elected by the same vote, and for three years was the Chief-Justice. He was elected Governor Chief-Justice. by the Democratic party in 1850 by a majority of 11,000, and re-elected under the new Constitution in 1851 by a majority of 26,000. He resigned to accept the position of consul at Valparaiso, Chili, and later became minister.

The climate proved too delicious; it seldom or never rained, little else than a continuous calm and sunshine, while humanity there in its stagnation of indolence and ignorance offered nothing to interest him. In his quick disgust he was stricken with nostalgia as bad as any of our poor soldier boys in the war time, resigned, and came home that he might once again be a sharer in the activities of a wonderfully progressive intellectual people, and again enjoy the sight of a wild, howling storm on Lake Erie. Thus it was that he, whom in the political parlance of the day was called all through Ohio from his great height and residence "the tall chief of the Cuyahogas," returned home to pass the remainder of his days on his noble farm, "Evergreen Place," on the margin of the beautiful lake he loved so

Harvey Rice, from whose article in the "Magazine of Western History" we take some of the facts in this personal sketch and in the two next to follow, writes of him: "Governor Wood was one of nature's noblemen, large-hearted and generous to a fault. Nature gave him a slim tall figure over six feet in height and replete with brains

and mother wit.

He was quick in his perceptions, an excellent classical scholar, a man of the people and honored by the people. He possessed tact and shrewdness; his statesmanship exhibited to a high degree wisdom and forecast, while on the bench his decisions showed a profound knowledge of law, and crowned his life-work as one of the ablest jurists of the State.

And Judge Thurman, on "Lawyers' Day" Ohio Centennial, Columbus, Wednesday, September 19, 1888, after speaking of the greatness of Thomas Ewing, thus expressed himself of Governor Wood: "And that unsurpassed nisi prius Judge Reuben Wood, who never left a jury when he charged it, but who was clear-headed and brainy, and

always to the point.

SHERLOCK JAMES ANDREWS, the son of a physician, was born in Wallingford, Conn., in 1801, graduated at Union College, for a time was assistant of Prof. Silliman at Yale, came to Cleveland in 1825, and was one of the long noted law firm of Andrews, Foot & Hoyt. In 1840 he was elected to Congress, in 1848 was elected Judge of the Superior Court of Cleveland; was a member of the State Constitutional Convention, and died in 1880. He was one of the leaders of the Ohio bar—a man of pure principles and noble aspirations. Learned in the law and of persuasive and somewhat impassioned eloquence he was noted for good sense and an electric wit that would convulse alike the court and audience. A brother, also eminent in his profession, John W. Andrews, settled in Columbus, where he yet resides, and in his advanced age is an honored member of the "State Board of Charities."

Rufus P. Ranney is of Scotch descent. He was born in Blanford, Mass., in 1813, and when a lad of eleven years came with his parents to Freedom, Portage county. He chopped wood at twenty-five cents a cord, and so earned money with which to enter Western Reserve College. Without graduating he travelled on foot to Jefferson, Ashtabula county, carrying all his worldly goods on his back with a single exception—an extra shirt that went into his hat. He then entered the law office of Giddings & Wade. When Mr. Giddings was elected to Congress, he formed a partnership with Mr. Wade. At the age of thirty-two he opened a law office at Warren. He was twice put in nomination by the Democratic party for Congress. In 1851 he was a member of the Constitutional Convention, and, although a young man, was regarded as its Hercules. He has been twice a Judge of the Supreme Bench, and was once the Democratic candidate for Governor against Mr. Dennison just before the war, and when that ensued made speeches to secure enlistments.

As a lawyer he stands with scarcely an equal in the State. Harvey Rice wrote of him: "Judge Ranney is not only born a logician, but has so improved nature's gifts as to become a most learned if not matchless reasoner. His mental powers are gigantic. In a great case, knarled and knotted as it may be, he always proves himself equal to its clear exposition and logical solution. And yet he is modest even to timidity. His presence is dignified, and he is a man who has ripened into a noble manhood."

Henry Chisholm, who was the founder and President of the Cleveland Rolling Mill Company, the largest establishment of the kind in the world, was born in Lochgelly. Fifeshire, Scotland, in 1822. He was by trade a carpenter, and when twenty years old landed at Montreal an almost penniless youth. He became a master-builder, worked for a time on the Cleveland breakwater, and in 1857 founded, at Newburg, the iron manufacturing firm of Chisholm, Jones & Co., from which beginning arose "the great establishment, the Cleveland Rolling Mill Company, which is the pride of Cleveland and one of the marvels of modern times;" employing in all 8,000 workmen. His brother, three years younger, WILLIAM CHISHOLM, the inventor, joined him in

1857, and later engaged in the manufacture of spikes, bolts, and horse-shoes, and after demonstrating by experiments the practicability of the manufacture of screws from Bessemer steel, in 1871 organized the Union Steel Company of Cleveland. He afterwards devised new methods and machinery for manufacturing steel-shovels, spades and scoops, and established a factory for the new industry. In 1882 he began to make steamengines of a new model, adapted for hoisting and pumping, and transmitters for carrying coal and ore between vessels and railroad cars.

CHARLES FRANCIS BRUSH, electric inventor, was born in Euclid, Cuyahoga

CHAS. F. BRUSH, ELECTRICIAN.

county, in 1840, the son of a farmer, and was educated at the University of Michigan. When a mere youth of fifteen he constructed microscopes and telescopes for himself and companions, and devised a plan for turning on gas in street-lamps and lighting and then extinguishing it. After returning from college he fitted up a laboratory and obtained a fine reputation as an analytical chemist.

In 1875 he turned his attention to electric lighting. "The probability of producing a dynamo machine that could produce the proper amount and kind of electrical current for operating several lamps was submitted to him, and in less than two months a machine was built so perfect and complete that for ten years it has continued in regular use without change. A lamp that then could work successfully on a circuit with a large number of other lamps, so that all would burn uniformly, was then necessary, and this he produced in a few weeks. These two inventions were successfully introduced in the United States during 1876. Since then he has produced more than fifty patents, twothirds of which are sources of revenue. They relate principally to details of his two leading inventions—the dynamo and the lamp—and to methods of their production. All of his patents, present and future, are the property of the Electric Brush Company of Cleveland, and his foreign patents are owned by the Anglo-American Brush Electric Light of London. Pecuniary rewards and honors have been awarded him; the French government decorated him "Chevalier of the Legion of Honor." Mr. Brush is of commanding presence, uncommonly fine physique, and his residence is one of the palatial mansions for which Euclid Avenue is famed. He is yet a hard worker, his mind absorbed in invention and discovery. Such men are benefactors beyond the power of

expression JOHN HENRY DEVEREUX, who died in Cleveland in 1886, at the age of fifty-four years, was one of the most efficient railroad managers and foremost railroad men in the country. He was born in Boston, and when sixteen years of age came to Northern Ohio, and eventually served as construction engineer on several railroads. When the civil war arose he was in Tennessee occupying a very prominent position in his profession, when he offered his services to the government and became Superintendent of the Military Railroads in Virginia. Here the executive capacity he displayed in bringing order out of confusion, overcoming apparently insurmountable obstacles to move the armies and supply transportation, was the wonder and admiration of the highest officers of the government. In 1864 he re-turned to Cleveland, and in succession became President of the C. C. C. & I., the A. & G. W. and of the I. & St. L. By his personal courage in 1877 he prevented 800 of his men from joining in the railroad riots.

The name LEONARD CASE, father and son, each thus named alike, will long recall pleasant associations with Cleveland people. The elder, who died here in 1864, at the age of eighty, was a native of Pennsylvania. He came to Cleveland from Warren, Trumbull county, in 1816, and followed the business of a lawyer, banker, and land agent. He took a warm interest in the progress of Cleveland; is said to have begun the work of planting the trees whose luxuriant foliage now so pleasantly adorns the "Forest City." He was the president of the village, the first county auditor, a great friend of the canals, and one of the projectors of the first railroad—the C. C. & C. With the great growth of ais fortunes he enlarged his benefactions. His son, lately also deceased, inheriting his father's disposition and fortune, made a crowning gift of the Case Building, valued at \$300,000, to the Cleveland Library Association, a gift seldom equalled in the annals of private munificence.

EDWIN COWLES, one of the veteran editors and printers of Ohio, is of Puritan stock, born of Connecticut parents, in 1825, in Austinburg, Ashtabula county. He learned the printing business in the office of the Cleveland *Herald*, now the *Leader*, of which he is the editor. In the winter of 1854–55 he was one of those who, in the editorial room of his

paper, took the initiatory steps for the formation of the Republican party of Ohio, which was a consolidation of the Free Soil, Know-Nothing, and Whig parties, into one great party.

EDWIN COWLES.

In 1861 he first suggested in his paper the nomination by the Republican party of David Tod, a war-Democrat, to unite all the loyal elements in the cause of the Union; and, in 1863, in like manner suggested that of John Brough, both of which were acted upon, and with most excellent results. Immediately after the Union defeat at Bull Run he wrote an editorial headed, "Now is the Time to Abolish Slavery!" Strong in his feelings, fearless, outspoken, and an untiring worker, he has been a living, aggressive force in Cleveland.

In 1870, perceiving the great peril to life from the various railroad crossings in the valley of the Cuyahoga, between the heights of the east and west sides of Cleveland, he conceived the idea of a high bridge, or viaduct as it is generally called, to span the valley and Cuyahoga river, connecting the two hill-tops, thus avoiding going up and down hill and crossing the "valley of death." He wrote an elaborate editorial favoring the city's building the viaduct. His suggestion met with fierce opposition from the other city papers, it being considered by them utopian and unnecessary; but it was submitted to the popular vote, and carried by an immense majority. This great work, costing nearly \$3,000,000, is one of the wonders of Cleveland.

"Mr. Cowles' success in life has been attained under extraordinary disadvantages. From his birth he was affected with a defect in hearing, which caused so peculiar an impediment of speech that no parallel case was to be found on record. Until he was twenty-three years of age the peculiarity of this impediment was not discovered. At that age

Prof. Kennedy, a distinguished elocutionist, became interested in his case, and, after a thorough examination, it was found that he never heard the hissing sound of the human voice, and consequently had never made that sound. Many of the consonants sounded alike to him. He never heard the notes of the seventh octave of the piano or organ, never heard the upper notes of a violin, the fife in martial music, never heard a bird sing, and has always supposed that the music of the birds was a poetical fiction. This discovery of his physical defect enabled him to act accordingly. After much time spent in practising under Prof. Kennedy's tuition, he was enabled to learn arbitrarily how to make the hissing sound, but he never hears the sound himself, although he could hear ordi-

nary low-toned conversation."

HENRY B. PAYNE, a Senator from Ohio in the National Congress, was born in 1810, in Hamilton, New York, of Connecticut stock; graduated at Hamilton college, and came to the then village of Cleveland in 1833, and soon entered upon the practice of the law. In 1851 he was the first president of the Cleveland and Columbus railroad, its inception and construction having been mainly due to his efforts in conjunction with Alfred Kelly and Richard Hilliard. He was early interested in manufacturing enterprises, having been at one time director and stockholder in some eighteen different corporations. In 1851 he was the Democratic candidate for the United States Senate in opposition to Benjamin F. Wade, and defeated by only one ma-In the war period he made speeches advocating enlistments. In 1874 he was elected to Congress, and during the exciting contest in the winter of 1876-77 over the election of President, he was chairman of the committee chosen by the House to unite with one from the Senate in devising a method for settling the difficulty, which resulted in the celebrated Electoral Commission. In 1875 he was prominently mentioned as the probable Democratic nominee for President. a lawyer Mr. Payne is distinguished for fidelity, thoroughness, and forensic ability; and as a man, for public spirit, coolness of temper, suavity, and genial humor, combined with firmness and strength of will.

JOSEPH PERKINS was born in Warren, Trumbull county, Ohio, July 5, 1819, and died at Saratoga Springs, N. Y., August 26, 1885. He was a son of General Simon Perkins, one of the earliest and most active pioneers of Ohio, who was extensively engaged in land transactions, and from whom he in-

herited a large estate.

At the age of twenty Joseph Perkins graduated from Marietta College. He then returned to Warren, and, after settling his father's estate, removed to Cleveland in 1852, where the remainder of his life was spent.

He was largely interested in banking, and as a business man showed great financial and executive abilities. The "Historical and Biographical Cyclopedia of Ohio," from which we extract this sketch, says of him: "His personal honesty was such that he won the unquestioned trust of every one with whom he came in contact, and in the course of a long life that covered many large transactions,

JOSEPH PERKINS.

involved great sums of money, and touched on many personal interests, no one ever suspected him of a dishonest act or assigned to him a base motive. His character shone through all his deeds as the pure crystal." It is not as a business man that Mr. Perkins is best known, but through his great philanthropy and boundless generosity, his active interest and labor in public and private charities, which were not confined within the limits of his own city or State lines, but extended to many institutions in the South as well as the North.

Mr. Perkins' most prominent public work was through his connection with the Ohio Board of State Charities. It is but to repeat the language of all cognizant with the facts to say that his was the master-hand that shaped the work of that Board from the beginning. He was appointed by Governor Cox, in 1867, on the formation of the Board, and, by successive reappointments, continued a member until his death. On the occasion of the first meeting, he became impressed with the deplorable condition of many of the

He gave the matter not only time and thought, but at his own expense travelled all over the Eastern States, inspecting a large number of penal and reformatory institutions, and giving the matter a close and intelligent study. He was an investigator and a philosopher as well, and, on seeing a defect, could not only discover its cause, but work intelligently toward a remedy. He modeled a plan which was accepted by the Board and made its own, and that has become known and copied the country over as the "jail system" of the Board of State Charities of Ohio. What he aimed to achieve was a

county jails.

model jail, in which prisoners could be held secure and not herded together. This much accomplished, Mr. Perkins next turned his attention to the infirmary system of the State, and made visits to many places, and learned much that showed the need of some direct and practical reform. This he suggested in a plan somewhat similar to the one mentioned above, modified to the needs of the class for which it was intended.

One thing Mr. Perkins learned in these investigations, and that he strongly insisted upon in all his official relations and personal discussions with executive officials, and that was that the less restraint placed upon the insane and the more air and outdoor work given them, the better for their physical health and chances of recovery. His infirmary plan has become a model for the country, and the best buildings erected anywhere have been in accordance with its specifications. Always a believer in the theory that crime or want should be prevented where possible, he was ever a strong and earnest friend to any measure suggested in aid of the children. His next step was the making of a plan for a Children's Home, to which he gave the greatest care and attention, and which expert testimony and practical experience have united in showing to be as nearly perfect as anything of the kind can be.

In all these labors, and in the many other things he was enabled to do through his connection with this Board, Mr. Perkins kept himself in the background, and gave to the Board and not himself the credit of his thought and labor, while the expenses of his various missions never became a charge upon the State fund, but were met by him personally. His official associates appreciated his value to the causes they all held so dear, and in a fitting memorial to his honor declared that "Traces of his long and valuable service are seen in the annual reports of the Board; and the plans and estimates for jails and infirmaries therein published, and which we regard as the best in the world, are mainly his work, and were gotten up entirely at his expense."

Another of Cleveland's philanthropic characters was Mrs. Rebecca Elliott Cromwell Rouse, so well known for her self-sacrificing devotion to the soldiers of the North during the civil war. She was born in Salem, Mass., October 30, 1799. Her childhood was spent in affluence, her education liberal, and her mind cultured by years of travel in many lands. At the age of eighteen she married Benjamin Rouse; in 1825 removed to New York city, and five years later, with her husband, left her Eastern home to engage in missionary work on the

Western Reserve.

Mrs. Rouse is called "the mother of the Baptist churches and founder of the Woman's Christian work in Cleveland." She was the organizing spirit and the president of the Martha Washington Society of 1842, the outgrowth of which was the Protestant Orphar Asylum, the oldest of the Protestant

benevolent institutions of Cleveland, of which Mrs. Rouse was for years the managing director.

Many there are "who shall rise up and

MRS. ROUSE.

call her blessed." Not a few of these are the Ohio boys in blue, during the war of the rebellion. They never will forget the continued self-sacrificing labor this great-hearted woman gave for five years, when she was instrumental in collecting and distributing over \$2,000,000 worth of hospital supplies for the gallant sick and wounded lying in military hospitals. The call to arms was sounded on the 15th of April, 1861. Five days later the "Soldiers' Aid Society of Cleveland, Ohio," was formed, and it has the honor, the great and lasting honor, of being the first society of women that met and organized for the noble work of bearing a people's love to the people's army. As president of this famous society, Mrs. Rouse became widely known and much beloved. Fragile and delicate in person, it was astonishing the amount of labor she performed. To her wise administration of its affairs was largely due the success of an enterprise which achieved a national reputation.

Mrs. Rouse has recently passed away after a life nobly spent in ameliorating human woe. Self-sacrifice brought her peace and happi ness, although the labor was great and the

body and mind oft weary.

John Brough, the last of the three "War Governors of Ohio," as he, Messrs. Tod, and Dennison were termed from having been State executives during the civil war, was born in Marietta in 1811, and died in Cleveland in 1865, in the midst of labors, worn out by his excessive application in the service of his State and country. He was the son of an Englishman who came over in 1806 with Blennerhasset, and his mother was a Pennsylvania lady; it was from her he inherited his strong traits of character. He was bred a printer, and to enjoy the benefit of a course of study in Athens College entered a printing

office in Athens. In 1831 he was editor and proprietor of a Democratic paper at Marietta—the Gazette; in 1833, with his brother Charles, he purchased and published the Lancaster Eagle, which gained great influence as a Democratic organ. In 1839 he was elected State auditor.

"He entered upon the duties of his office at a time when the whole country still felt the effects of the panic of 1837, and when the State of Ohio was peculiarly burdened with liabilities for which there appeared to be no adequate relief. Mr. Brough devoted himself to reconstructing the whole financial system of Ohio, and retired from office, in 1846, with a high reputation as a public officer. In partnership with his brother Charles he undertook the management of the Cincinnati Enquirer, which was soon one of the most powerful Democratic journals in the West. At the same time he opened a law office in Cincinnati. Personally Mr. Brough took an active part in politics, and became the most popular Democratic orator in the State. He retired from active political life in 1848, and in 1853 was elected president of the Madison and Indianapolis railway, then one of the great lines of the West. He removed his residence to Cleveland, and, when the civil war began, in 1861, he was urged to become a candidate of the Republican Union party for governor. This honor he declined, although his position as a "war-Democrat" was always distinctly understood. The canvass of 1863 was held under very different conditions. The civil war was at its height, a large proportion of the loyal voters were in the army, and Southern sympathizers, led by Clement L. Vallandigham, were openly defi-Vallandigham was arrested for disloyal utterances, tried by court-martial, and banished from the United States. He was sent within the Confederate lines, and subsequently received the regular Democratic nomination for governor of Ohio. There was apparently some danger that he would actually be elected by the "peace" faction of the party. At this crisis Mr. Brough made a speech at Marietta, declaring slavery destroyed by the act of rebellion, and earnestly appealing to all patriots, of whatever previous political affiliations, to unite against the Southern rebels. He was immediately put before the people by the Republican Union party as a candidate for governor, and the majority that elected him (101,099) was the largest ever given for a governor in any State up to that time. In the discharge of his duties as chief magistrate he was laborious, far-sighted, clear in his convictions of duty, firm in their maintenance, and fearless in their execution. He was distinctly the "War Governor of Ohio."

Whitelaw Reid says of him: "Gov. Brough was impetuous, strong-willed, indifferent to personal considerations, often regardless of men's feelings, always disposed to try them by a standard of integrity to which the world is not accustomed. His administration was constantly embroiled; now with

the Sanitary Commission, then with the officers in the field, again with the surgeons. But every struggle was begun and ended in the interest of the private soldiers as against the tyranny or neglect of their superiors; in the interest of subordinate officers as against those who sought to keep them down; in the interest of the men who fought as against those who shirked; in the interest of the maimed as against the sound; in the interest of their families as against all other expenditures. Never was a knight of the old chivalry more unselfishly loyal to the defence of the defenceless.

Brough was a statesman. His views of public policy were broad and catholic, and his course was governed by what seemed to be the best interests of the people, without regard to party expediency or personal advance-He was honest and incorruptible, rigidly just and plain, even to bluntness. He had not a particle of dissimulation. People thought him ill-natured, rude, and hard-hearted. He was not; he was simply a plain, honest, straightforward man, devoted He had not the suaviter in to business. modo. This was perhaps unfortunate for himself, but the public interests suffered nothing thereby. He was, moreover, a kindhearted man, easily affected by the sufferings of others, and ready to relieve suffering when he found the genuine article. He, perhaps, mistrusted more than some men, but when he was convinced he did not measure his gifts. He was a good judge of character. looked a man through and through at first sight. Hence no one hated a rogue more than he; and, on the other hand, no one had a warmer appreciation of a man of good principles. He was a devoted friend.

As a public speaker Brough had few superiors. His style was clear, fluent, and logical, while at times he was impassioned and eloquent. When the famous joint campaign was being made between Corwin and Shannon for governor the Democratic leaders found it expedient to withdraw Shannon and substitute Brough, in order that they might not utterly fail in the canvass. Corwin and Brough were warm friends, and none of Brough's partisans ever had a higher admiration for his genius than had Corwin.

In 1832 Mr. Brough married Miss Achsah P. Pruden, of Athens, Ohio. She died September 8, 1838, in the twenty-fifth year of her age. In 1843 he married at Lewiston, Pa., Miss Caroline A. Nelson, of Columbus, Ohio, by whom he had two sons and two daughters. Both of the sons have died. So soon as Gov. Brough became aware of the dangerous nature of his disease he made his will, and talked freely to his wife, children, and friends. He sought full preparation for death. Though not a member of a church, nor during the last ten years of his life an active attendant at any place of worship, he stated very calmly, yet with deep feeling, that he was, and always had been, a firm believer in the doctrines of Christianity; that he had full faith and hope in Jesus Christ, and

through him hoped for eternal life. He remarked that he had never been a demonstrative man, but his faith had, nevertheless,

been firmly and deeply grounded."

JOHN D. ROCKEFELLER, president of the
Standard Oil Company, at Cleveland, Ohio, was born, the son of a physician, July 8, 1839, in Central New York. In 1853 he removed to Cleveland. In the spring of 1858 he formed a partnership with M. B. Clark in the produce commission business, and the firm having in 1862 become interested in the refining of petroleum, Mr. Rockefeller's energies became so interested that, in 1865, he sold out his share in the commission business and gave his entire attention to the refining of petroleum. He established the firm of Rockefeller & Andrews, and from this beginning the Standard Oil Company was developed. This company was organized in 1870 with a capital of a million dollars. From the "Biographical Cyclopædia" of Ohio we take the following account of the gigantic interests controlled by this concern.

"Large tracts of land were purchased and fine warehouses erected for the storage of petroleum; a considerable number of iron cars were procured, and the business of transporting oil entered upon; interests were purchased in oil pipes in the producing regions, so that the company and its associates controlled about 200 miles of oil pipes and several hundred thousand barrels of oil tankage. Works were erected for the manufacture of barrels, paints, and glue, and everything used in the manufacture or shipment of oil. The works had a capacity of distilling 29,000 barrels of crude oil per day, and from 3,500 to 4,000 men were employed in the various departments. The cooperage factory, the largest in the world, turned out 9,000 barrels a day, which consumed over 200,000 staves and headings, the product of from fifteen to twenty acres of selected oak. When it is remembered that it was formerly the full labor of one man to manufacture three or four barrels daily, the magnitude of this accessory to the business can be realized. Only about forty per cent. of the company's business was done in Cleveland, the remainder being widely diffused over the country, stimulating industry and traffic wherever it was established; but, the business originating in Cleveland, the managers felt a pride in keeping a large proportion of it in that city.

With the exception, perhaps, of the combined iron industries of the city, the oil refining interests, almost entirely owned by the Standard Oil Company, made larger additions to the wealth and growth of Cleveland than did any other one branch of trade or manufacture. The greater part of the product was shipped to Europe, and the market for it was found in all parts of that continent and the British Islands; in fact, all over the world. Every part of the United States was supplied from the main distilling point (Cleveland), and the company virtually controlled the oil market of this continent, and, in fact, of the world. Besides the president, the principal

active members of the company were William Rockefeller, vice-president; H. M. Flagler, secretary; Col. O. H. Payne, treasurer, and S. Andrews, superintendent, who had charge of the manufacturing. The success of the company was largely due to the energy, foresight, and unremitting labors of its founder and president."

The great responsibilities and labor of such immense enterprises as have engaged the attention of Mr. Rockefeller have prevented his taking a leading part in public life. He has, however, always given freely to all patriotic, benevolent and religious purposes, and many a worthy cause owes success to the private and unostentatious aid from him. The city of Cleveland owes much to him, not alone from the indirect benefit derived from the immense industries he controlled, but also from improvements in real estate within its limits.

He is a member of the Second Baptist church, with which he has been connected for about twenty years—two years as a scholar, twelve or thirteen years as a teacher, and the remainder as superintendent of its Sabbath and Mission schools--and he has made liberal donations to its fund, as he did also to the Baptist college at Granville.

He is essentially a man of progress, and the rare success which has attended him through life is attributable to his enterprising, ambitious spirit, the confidence his integrity and ability inspired in others, a power of concentrating his mind and energies in a special, well-chosen channel, and a systematic, judiciously economical method of engineering and managing great projects. Foremost among those who gave him timely assistance and aid in his early struggles he ever cherished the memory of T. P. Handy, Esq., who has ever been a great power, a promoter of whatever appertained to the moral and material interests of the city. In 1864 Mr. Rockefeller married Miss Laura C. Spelman, of Cleveland.

AMASA STONE was born in Charlton, Massachusetts, April 27, 1818, and died in Cleveland, May 11, 1883. He was a man of remarkable activity of body and mind; we look over the record of his life with a sense of astonishment that one man could have directed and completed so many large enterprises.

His youth was spent in assisting his father on the New England farm, and in gaining his education at intervals between the farmwork. At the age of seventeen he left the farm and with an elder brother was engaged in the trade of building at Worcester. In 1839 he was associated with his brother-inlaw, Mr. Howe, inventor of the famous "Howe Truss Bridge," and a year or two later he and Mr. Azariah Boody purchased Mr. Howe's patent for the New England States and formed a company for their construction. He made important improvements in the Howe bridge, and while yet a young man became one of the most eminent constructors of railroads and railroad bridges in New England.

In 1845 he assumed the duties of superintendent of the New Haven, Hartford & Springfield railroad, but shortly resigned to devote his entire time to bridge and railroad

construction.

One of his enterprises, which at that day was considered a marvel of dispatch, was the reconstruction in forty days of a bridge on the New Haven, Hartford & Springfield road over the Connecticut river at Enfield Falls, which had been carried away by a storm.

Shortly after this Mr. Stone dissolved the partnership with Mr. Boody and formed another with Mr. D. L. Harris for Massachusetts, Rhode Island and Connecticut, and still another with Mr. Stillman Witt and Mr. Frederick Harbach for the construction of the Cleveland, Columbus & Cincinnati road, from Cleveland to Columbus. The enterprise was carried through so satisfactorily to the owners of the road, that on its completion Mr. Stone was offered and accepted the superintendency and in 1850 made his home at Cleveland.

Immediately thereafter he engaged in the construction of a railroad from Cleveland to Erie, which was successfully accomplished, and he was also offered the superintendence of this road, being for some years superintendent of both roads, as well as a director in

the companies which owned them.

From a sketch in the "Magazine of Western History" we quote the following: "He was for a long time president of the Cleveland, Painesville & Ashtabula railroad, and in 1858, in company with his partner and lifelong friend, Stillman Witt, he contracted to build the Chicago & Milwaukee railroad, of which he became and remained for many years a prominent director. He was also a director of the Jamestown & Franklin and of the Tuscarawas Valley, now the Cleveland, Lorain & Wheeling railroad and of several

He was not only one of the most successful railway contractors and administrators in the United States, but there was not a single department of financial or industrial enterprise in which he did not seem to bear a conspicuous and useful part. He was one of the leading bankers of the State of Ohio—a director in the Merchants' Bank, the Bank of Commerce, the Second National Bank, the Commercial National Bank and the Cleveland Banking Company, all of the city of Cleveland. He was the president of the Toledo branch of the State Bank of Ohio, and president of the Mercer Iron and Coal Company. He also gave financial aid and wise and sagacious counsel to many manufacturing enterprises. He constructed iron mills, woollen mills, car works and other manufacturing establishments. He designed and built the Union Passenger Depot at Cleveland. He was, we believe, the first man to design and build pivot bridges of long span, and he was constantly introducing important improvements in the construction of railway cars, locomotives, and all the appliances of the great transportation system of the country. During the war for the Union Mr. Stone was an ardent and active supporter of the administration of Mr. Lincoln, of whom he was a trusted friend and counsellor. The President frequently sent for him to come to Washington to advise him in the most important problems of supply and transportation of the army. He tendered him an appointment as brigadier-general, for the purpose of superintending the construction of a military railway from Kentucky to Knoxville, Tennessee, a project which was, on Mr. Stone's project advice, afterwards relinquished by the government.

Soon after the war closed he met with a great misfortune in the death of his only son, Adelbert Barnes Stone, who was drowned while bathing in the Connecticut river, being at the time a student in Yale college.

In 1873, at the earnest solicitation of Commodore Vanderbilt and other large stockholders of the Lake Shore road, he assumed charge of that road as managing director, but two years afterwards resigned it, and from that time onward steadily declined any position involving great labor or responsibility. He had for many years been planning in his mind a series of important benefactions to the city of Cleveland, and he now devoted his leisure to carrying them successively into effect. He first built and endowed the Home for Aged Women on Kennard street, a beautiful and estimable charity, by means of which ladies stricken in years and misfortune find a peaceful refuge for their age. His next work was the construction and presentation to the Children's Aid Society of the commodious stone edifice on Detroit street, as a place of shelter and instruction for destitute children gathered up by that admirable institution from the streets and saved from lives of vice and ignorance to be placed in respectable Christian homes. When this work was completed he made ready in his mind for the greatest and most important of his benefac-tions. On condition that the Western Reserve college at Hudson should remove to Cleveland and assume in its classical department the name of his lost and lamented son, he endowed it with the munificent sum of half a million dollars, which at his desire after his death was increased by his family to the amount of six hundred thousand dollars. In each of these cases he gave not merely his money, but his constant labor and supervision in all the details of construction and administration. He gave of himself as liberally as of his means.

He had a mind remarkable for its grasp both of great and minute matters. In discussing the construction of a railroad he could compute, without putting pencil to paper, the probable expenses of engineering and equipment, amounting to millions; and he was equally ready in the smallest things. . .

He remained to the end of his days one of the simplest and most unassuming of men. This does not mean that there was anything of diffidence or distrust in his nature; on the contrary, he was perfectly aware of his own powers and confident in the exercise of them. But he never lost the inherent American democracy of his character; the puddler from the rolling mill, the brakeman of the railroad was always as sure of a courteous and considerate hearing from him as a senator or a millionaire. There was no man in the country great enough to daunt him, and none so simple as to receive from him the treatment of an inferior. He was a man extraordinarily clean in heart, in hand and in lips."

JEPHTHA H. Wade was born in Seneca county, N. Y., August 11, 1811, the son of a surveyor and civil engineer. He early gave evidence of great mechanical and inventive ability, combined with great executive capacity. Before arriving at the age of twentyone he was the owner of a large sash and blind factory. He studied portrait-painting under Randall Palmer, a celebrated artist, and achieved considerable reputation as an artist, and when about thirty years of age became interested in the discovery of Daguerre. Being then located at Adrian, Mich., he procured a camera and took the first daguerreotype ever made west of New York; but about this time the invention of telegraphy attracted his attention, and he opened and equipped the Jackson office, along the Michigan Central line, the first road built west of Buffalo.

Later he entered into the construction of telegraph lines in Ohio and other Western States, which were known as Wade's lines. He made many important telegraphic inventions and improvements, among which was Wade's insulator. He was also the first to enclose a sub-marine cable in iron armor, on a line across the Mississippi river at St. Louis. This was a very important invention, as, through it, the crossing of oceans and large bodies of water was made practicable.

The numerous rival telegraph companies which had sprung up in the West were engaged in a ruinous competition when a consolidation was effected under the name of the Western Union Telegraph Company, with Mr. Wade as general manager.

Largely through Mr. Wade's efforts the construction of a trans-continental line was commenced under his superintendence in the spring of 1861, and through his efficient management, in October of the same year communication opened. In California he consolidated the competing lines and was made the first president of the Pacific Telegraph Company, which was in turn consolidated with the Western Union Company and Mr Wade made president of the entire consolidation, a position which he filled until 1867, when he retired from active business life on account of ill health. His retirement, however, did not preclude his engaging in an advisory capacity in many large enterprises. He is a leading director in several factories, banks, railroads and other institutions.

His great interest and enterprise in the development of the city of Cleveland has resulted in great benefit to that city, he having opened and improved many streets and localities and originated the Lake View Cem-

etery association, with its more than 300 acres of tastefully arranged grounds. At great expense he beautified an extensive tract of land adjoining Euclid avenue, known as Wade Park, and opened it to the enjoyment of the public. He also built for the Cleveland Protestant Children's Home a fine large fire-proof building, with accommodations for from 100 to 150 children.

Mr. Wade's life has been one of great benefit and usefulness to his fellow-men, not only in his private and public charities, but in opening up new avenues of industry, thus contributing to the wealth and comfort of the

community at large.

Colonel Charles Whittlesey was born in Southington, Conn., October 4, 1808. His father, Asaph Whittlesey, wife and two children, started in the spring of 1813 for Tallmadge, Portage county. The wilderness was full of perils from savage men and beasts and the journey a long and hard one with many incidents of trial so that one, with many incidents of trial, so that their destination was not reached until July. His father having settled at Tallmadge, Charles spent his summers in work on the farm and winters at school. Tallmadge was settled by a colony of New England Congregationalists, and the religious austerity and strict morality of the inhabitants had much influence upon the mind of Charles, who had inherited from his father a vigorous mind and great energy and from his mother studious habits and literary tastes. midst the severe surroundings of the early pioneer days, he learned to realize at an early age the earnestness of life and the vast possibilities of this new country. He saw Ohio develop from a wilderness to a wonderfully productive and intelligent commonwealth of more than 3,000,000 inhabitants.

In 1827 he entered West Point, graduating therefrom in 1831, when he became brevet second-lieutenant in the Sixth United States

Infantry

Later he exchanged with a brother officer into the Fifth United States Infantry, with headquarters at Mackinaw, and started in November on a vessel through the lakes, reaching his post after a voyage of much hardship and suffering from the severity of the weather. Here he was assigned to the company of Capt. Martin Scott, the famous shot and hunter.

At the close of the Black Hawk war Lieut. Whittlesey resigned from the army and opened a law office in Cleveland, and in connection with his law practice was occupied as part owner and co-editor of the Whig and Herald until 1837, when he was appointed assistant geologist of the Ohio Survey. This was disbanded in 1839 through lack of appropriations to carry on the work, but not before great and permanent good had been done in disclosing the mineral wealth of the State, thus laying the foundation for immense manufacturing industries.

During this survey Col. Whittlesey had become much interested in the geology and ancient earthworks of the State, and after its disbandment induced Mr. Joseph Sullivant, a wealthy gentleman of Columbus, much interested in archæology, to furnish means for continuing investigation into the works of the Mound Builders, with a view to a joint publication.

During the years 1839 and 1840, under this arrangement, he examined nearly all the remaining earthworks then discovered, but nothing was done toward publication of the results until some years later, when much of the material gathered was used in the publication by the Smithsonian Institute of the great work of Squier & Davis. The first

volume of that work says:

"Among the most zealous investigators in the field of American antiquarian research is Charles Whittlesey, Esq., of Cleveland, for-merly topographical engineer of Ohio. His surveys and observations, carried on for many years and over a wide field, have been both numerous and accurate, and are among the most valuable in all respects of any hitherto made. Although Mr. Whittlesey, in conjunction with Joseph Sullivant, Esq., of Columbus, originally contemplated a joint work in which the results of his investigations should be embodied, he has, nevertheless, with a liberality which will be not less appreciated by the public than by the authors, contributed to this memoir about twenty plans of ancient works which, with the accompanying explanations and general observations, will be found embodied in the following pages.

It is to be hoped the public may be put in possession of the entire results of Mr. Whittlesey's labor, which could not fail of adding greatly to our stock of knowledge on this in-teresting subject."

Among other discoveries of Mr. Whittlesey in connection with the ancient earthworks of Ohio was that the Mound Builders were two different races of people, the "long-headed and short-headed," so called from the

shape of their skulls.

In 1844 Mr. Whittlesey made an agricultural survey of Hamilton county. That year a great excitement was created by the explorations and reports of Dr. Houghton in the copper mines of Michigan. Companies were organized for their development and from Point Keweenaw to the Montreal river the forests swarmed with adventurers as eager and hopeful as those of California in 1848. Iron ore was beneath their notice.

A company was organized in Detroit in 1845 and Mr. Whittlesey appointed geologist. In August they launched their boat and pulled away for Copper harbor, and thence to the region between Portage lake and the Ontonagon river, where the Algon-quin and Douglass Houghton mines were opened. The party narrowly escaped drown-

ing the night they landed.

Col. Whittlesey has given an interesting account of their adventures in an article entitled "Two Months in the Copper Regions," published in the National Magazine of New York city.

In 1847 he was employed by the United States government to make a geological survey of the land about Lake Superior and the Upper Mississippi river. His survey was of very great value and gave proofs of great scientific ability and judgment. He was afterwards engaged by the State of Wisconsin to make a survey of that State, which work was uncompleted when the war of the rebellion broke out.

Upon his return to Cleveland, Col. Whittlesey became identified with a local military organization which was tendered to Gen. Scott early in the year 1861. On April 17, 1861, he became assistant quartermaster general upon the Governor's staff, and he was immediately sent to the field in Western Virginia, where he served during the three months' term as State military engineer with the Ohio troops. He re-entered the three years' service as colonel of the Twentieth regiment Ohio volunteers. He was detailed as chief engineer of the department of Ohio, and at the battle of Shiloh on the second day of the fight was placed in the command of the third brigade of Gen. Wallace's division, and was specially commended for bravery. Soon after this engagement he resigned from the army. Gen. Grant endorsed his applica-tion: "We cannot afford to lose so good an officer." The following letter written soon after his decease shows in what estimation he was held by his army associates.

"CINCINNATI, O., Nov. 10, 1886.

"DEAR MRS. WHITTLESEY: Your noble husband has got release from the pains and ills that made life a burden. His active life was a lesson to us how to live. His latter years showed us how to endure. To all of us in the Twentieth regiment he seemed a father. I do not know any other colonel that was so revered by his regiment. Since the war he has constantly surprised me with his incessant literary and scientific activity. Always his character was an example and an ways me incitement. "Very truly yours, "M. F. Force."

After retiring from the army Col. Whittle sey again turned his attention to explorations in the Lake Superior and Upper Mississippi river basins, and "new additions to the mineral wealth of the country were the result of

his surveys and researches."
In 1867 Col. Whittlesey organized the Western Reserve Historical Society, and was its president until his death, which occurred in 1866. The latter years of Col. Whittlesey's life were full of ceaseless activity and research in scientific and historical fields. His published literary works were very numerous, commencing in 1833 and ending with his death; they number one hundred and ninety-

one books and pamphlets.

"His contributions to literature," said the New York Herald, "have attracted wide attention among the scientific men of Europe and America!" and adds, "he was largely

Moin

OHIO'S THREE WAR GOVERNORS.

instrumental in discovering and causing the development of the great iron and copper regions of Lake Superior.

Judge Baldwin, from whose sketch of Col. Whittlesey in the "Magazine of Western History" we take most of the facts given in

this sketch, says:

As an American archæologist Col. Whittlesey was very learned and thorough. He had in Ohio the advantage of surveying its wonderful works at an early date. He had, too, that cool poise and self-possession that prevented his enthusiasm from coloring his judgment. He completely avoided errors into which a large share of archæologists fall. The scanty information as to the past and its romantic interest lead to easy but dangerous theories, and even suffers the practice of many impositions. He was of late years of great service in exposing frauds, and thereby helped the science to a healthy tone. It may be well enough to say that in one of his tracts he exposed, on what was apparently the best evidence, the supposed falsity of the Cincinnati tablet, so called. Its authenticity was defended by Mr. Robert Clarke, of Cincinnati, successfully and convincingly to Col. Whittlesey himself. I was with the colonel when he first heard of the successful defence, and with a mutual friend who thought he might be chagrined, but he was so much more interested in the truth for its own sake than in his relations to it that he appeared much pleased with the result.

"He impressed his associates as being full of learning, not from books but nevertheless of all around—the roads, the fields, the sky, men, animals or plants. Charming it was to be with him in excursions; that was really life and elevated the mind and heart.

He was a profoundly religious man, never ostentatiously so, but to him religion and science were twin and inseparable companions. They were in his life and thought, and he wished to and did live to express in print his sense that the God of science was the God of religion, and that the "Maker had not lost power over the thing made."

Some literary characters of national reputation have been identified with Cleveland. Early among American humorists was Charles F. Browne, "Artemus Ward." His wit first scintillated here and later came in to brighten some of the dark days of Abraham Lincoln; and JOHN HAY has his home here, the author of "Castilian Days" and "Little Breeches," and whose writings upon Mr. Lincoln are of such prime value as to give him an enduring reputation. The city was the girlhood and early womanhood home of Constance Fennimore Woolson, who wrote "East Angels" and "Anne," and likewise is the birth-place and early home of another female writer of children's books and pleasing verses, Sarah Woolsey, under the pen-name of Susan Coolidge; and then a third, Mrs. Sarah Knowles Bolton, who although not Ohio-born is Ohio-living.

TRAVELLING NOIES.

When I first knew Cleveland, now about half a century ago, it was a small place with only a few thousand people. Even then it had a distinction of being an attractive spot from the beauty of its situation and adornments of trees and shrubbery and was called "the Forest City." The people of the town largely lived in small houses, but many of these were pretty, simple cottages, showing refinement from their social porches and surroundings of flowers and shrubbery.

The city had a grand start from the character of its human stock. Indeed, I think the historian Bancroft somewhere has said, speaking of the entire Western Reserve, that the average grade of intelligence in its population exceeded that of any other equal era of

people on the globe.

Euclid avenue, too, was acquiring a reputation for beauty. One residence upon it, that of Judge Thomas H. Kelly, Gen. Harrison said was the handsomest in Ohio. It is yet a fine home-like domicile, but cannot compare with the palatial mansions now there.

But magnificent as these are, there is standing to-day upon this avenue one little cottage that, to my eye, is more attractive than them all, and because it had long been the home of the late Charles Whittlesey, the most learned of Ohio's historians; the most original, philosophic and varied in his investigations, alike in the realms of science and

of events.

The Whittlesey home-place is about three miles from the centre, a white cottage, standing a few rods back from the avenue, partially hid by evergreens. As I approached it on this tour to make a call upon my old friend, whom I had not seen in many years, I was surprised at the discovery at the pathside of what seemed to me an original sort of door-plate. It was a small white boulder, dotted with red spots-jasper. The front side was polished, and on it was carved CHARLES WHITTLESEY. It was a block of breccia, conglomerated quartz and jasper, the natural home of which was the north shore of Lake Superior. Only four such have been found in Ohio, brought here in the ice age, though common in Michigan. identical block was procured by Mr. Whittlesey and shipped from the north shore of Lake Huron.

My visit was on a bright summer after-on. I found "the Colonel," as everybody noon. I found "the Colonel," as everybody called him, not in his cottage, but in his garden, and the way I went thither was interesting-in at the front door and then out at the back door, through the little low rooms, filled with the books and utilities of the old student and scientist, life-long loves and companions, silent teachers of God, man

and the universe.

In the garden, in the rear of a little old brown barn, old soldier-like, I found him, with his tent spread and in solitude. He was seated on a camp-stool at the tent door, the sun pouring full in his face, the afternoon

sun of July 3, 1886. As I approached he did not at first hear my footsteps; he was gazing into vacancy, his mind evidently far away amid scenes of a long, eventful life; at times, perhaps, on the far-away wilderness with savages, away back in the forties, surveying in the wintry snows of the Lake Superior country, or on the battle-field of Shiloh, or, perhaps, to his still earlier experiences when a boy, when this century was young, he was beginning life in a cabin among the struggling pioneers of Portage county.

Yes, gazing into vacancy from the tent door, a rather small, aged man, a blonde, and bald and evidently an invalid. He wore a dressing-gown, and, as I later saw, when he moved it was slowly, painfully, in bent atti-

tude and leaning on a cane.

Around him strewed on the boarded tent were a few books, a map or two and relics of by-gone days; the old military suit he wore in the Black Hawk war in 1832, when he was one of Uncle Sam's lieutenants of infantry, a stiff, black hat, bell-crowned, with a receptacle for a pompon, ancient sword with curving blade, an old-fashioned military coat with rear appendage of hanging flaps. He had saved it so long (for fifty-four years) that I fancied the moths must have owed him a grudge.

The Colonel had heard I was coming and sent word he wanted to see me. I got an honest greeting. There was no gush about him. He was one of the most plain, simple of men, a terse talker, giving out nuggets of facts—so terse that if perchance a listener let his mind go a wool gathering for a second and lost two or three words he would be clear

broken up.

• He told me that was the fourth summer in which he had passed several hours daily in his tent. This was to take sun baths, from which he thought then for the first time he was experiencing a decided benefit. Asking what was his special ailment he replied: "I have five chronic complaints, and all in full blast." When asked why soldiers did not take cold in tents he answered: "Because the temperature is always even. Indoors we cannot avoid uneven temperatures and in changing from tent life to house life one is apt to take cold."

No intelligent man could long listen to Mr. Whittlesey without feeling his intellect stimulated, and valuable facts were being poured in for storage. His conversation, too, was enlivened by little flashes of grim humor, which he gave forth apparently unconscious, with a fixed, sedate expression. And if you then smiled he gave no answering smile, and you would be apt to think you had not heard

him aright.

The learned man had helped me on my first edition; had contributed an article on the geology of the State. The science was then new and the article is now obsolete. He wanted to help me on this edition, and wrote for it "The Pioneer Engineers of Ohio."

There is another article also in this book

by him, "Sources of Ohio's Strength," but of the great characters therein portrayed no one had greater breadth of knowledge, not one so varied knowledge, not one a finer intellect, not one was more worthy of the respect and veneration of the people of the commonwealth than Charles Whittlesey. And it is a singular gratification to me that he of all others of the many who contributed papers to my first edition should have contributed to this edition. And he was the only one of them all who was living and could do so.

After this and another interview I saw him no more. His work was finished. He passed away in the autumn, and the white boulder with blushing spots that adorned the front yard of the cottage is also gone and now rests over his burial spot in peaceful Woodlawn. With a sense of profound gratitude I pen this tribute not only to one of Ohio's great men, but to one of the nation's

great men.

Much gratification was derived this time in Cleveland by a call upon Mr. John A. Foote, an old lawyer, an octogenarian, of whom I had all my life heard but never met until now. He was a brother of Admiral Foote and son of that Governor Foote of Connecticut who, when in the United States Senate, introduced a resolution, historically known as "Foote's resolution," which led to the famous debate between Daniel Webster and Mr. Hayne, of South Carolina.

Mr. Foote first came here from Cheshire, Connecticut, in the summer of 1833, and was for years a member of the eminent law firm of Andrews, Foote & Hoyt. He was born in 1803 on the site of the Tontine Hotel in New Haven, Connecticut, but his home at the time of leaving was in Cheshire. The town was overwhelmingly Democratic, and he was a Whig, but as the State Legislature was in session but for a few weeks his townsmen irrespective of politics, "in town meeting duly assembled," gave him and a Mr. Edward A. Cornwall, prior to their departure for the distant wilds of Ohio, as a parting compliment, the privilege of representing them in that body. So they went down to Hartford and passed a few weeks pleasantly among the "Shad Eaters," as, in the humorous parlance of the time, the members were called, from the fact that they met in May, the season of shad-catching in the Connect-

The year 1883 came around when Foote and Cornwall, after a lapse thus of fifty years, in company visited the Legislature of Connecticut at Hartford and were received with great eclat. The House passed some complimentary resolutions, signed by the speaker and clerk, expressive of their high gratification. These Mr. Foote with commendable pride pointed out to me framed on his parlor wall, and we copied the last:

"That we congratulate them on their being able to round out a half century of lives alike honorable to themselves and useful to their fellow-citizens with this pleasing inci-

dent which we believe to be without a parallel in the history of American legislative bodies.

"CHAS. H. PINE, Speaker.
"DONALD S. PERKINS, Clerk.
"Passed February 22, 1883, Washington's birthday."

Mr. Foote told me that what struck him as the most notable thing on his arrival in Cleveland in the summer of 1833 was the caving in of the lake shore by the encroachments of the waves upon the sands of the bank. Whole acres disappeared in a single season, so that in time the town site seemed doomed to disappear. They had continually to move buildings away from the remorseless waters.

Mr. Charles Whittlesey then devised the plan of driving piles along the lake shore,

and it was a perfect success.

Mr. Foote is a neighbor of the highly esteemed and widely known Harvey Rice, whom I found also a fine specimen of happy old age. He was then eighty-six years old, tall, erect, his powers well preserved and able to read and write without glasses.

Berea is on the C. C. C. & I. and L. S. & M. S. R. R., 12 miles southwest of Cleveland. It is the seat of Baldwin University and the German Wallace College. Natural gas is used to some extent. Newspapers: Advertiser, Republican, E. D. Peebles, editor and manager; Grit, S. S. Brown, publisher. Churches: 1 Methodist Episcopal, 1 Congregational, 1 Episcopal and 2 Catholic. Bank of Berea, Thos. Churchward, president, A. H. Pomeroy, cashier.

Industries.—The Berea stone quarries are renowned throughout the whole country for superior quality and inexhaustible supply. Population in 1880,

1,682. School census in 1886, 558; J. W. Bowles, superintendent.

At an early day there was in the village a peculiar industry to be established in what was then almost in the woods; this was the "globe factory" of Josiah Holbrook for the manufacture of globes and various kinds of school apparatus. At one time he employed about a dozen men and did a large business. The factory remained until about 1852.

Berea, as has been mentioned, has long been famous for its manufacture of grindstones, and many before the invention of the "Baldwin blower" died of what was called "grindstone consumption," their lungs being found after death to be filled with the fine, flour-like dust with which the air was impregnated. The disease is now unknown. We visited the spot at that period and watched the interesting process of turning out grindstones. In conversation with one of the workmen he complained to us with a sigh, as though it was hard work to breathe, of the continuous oppressive feeling he had at his chest from the fine powder which was steadily accumulating and filling up his lungs, and there was no remedy. It was a horrible necessity, working for bread while every hour of industry was but the taking in of more dust for a suffocating death.

The following article upon the Berea Sandstone industry has been contributed

for these pages by Mr. E. D. Peebles, editor at Berea.

Berea Sandstone, the economic value of which is now well known all over the country, lies in a stratum about sixty feet in thickness, under the drift clay and shales that are found everywhere in Northern Ohio. The stone has no surface exposure, excepting where cut through by water courses. In color it is a grayish white, free from pebbles and bedded in layers varying in thickness from six inches to ten feet. These layers usually have a good bed-seam, so that they can be quarried separately and with regard to the use for which they are especially adapted. The best sheets are reserved for grindstones, which require a smooth, even texture, neither too soft or too hard, free from cracks, flaws or hard spots and must split well; other grades are used for building purposes, flagging, etc. The Berea rock is especially fine

for grindstones, while its beauty and durability for architectural purposes is unsurpassed.

This rock has been worked for more than forty years. The early pioneers were not slow to discover that a grindstone worked out of Berea stone was an indispensable article to every well-regulated farm, household or workshop.

The demand for it became so urgent that John Baldwin, foreseeing its value as an article of commercial industry, devoted his

energies to its development.

Mr. Baldwin came from Connecticut, and was in every way suited for the grand work of a pioneer. He was possessed of keen sagacity, downright honesty, strict economy coupled with a generosity that at times was almost a fault, indomitable perseverance

that knew no defeat, and a Christianity whose mantle was charity. He was the founder of Baldwin University, located at Berea.

When Baldwin first gave his attention to Berea stone grindstones were cut out by hand,

but he conceived the idea of turning them. Having no shaft or mandle suitable for such work, he made a model of basswood, and one moonlight night placed it on his shoulder and walked to Cleveland (distant fourteen

VIEW AT THE QUARRIES, BEREA.

miles) to have one made, and with but slight improvement this model is in use at the present time.

In former times much of the rock was wasted in quarrying and cutting, but little sawing being done. Now nearly all the cutting is by steam-power, and about twenty gangs of the most improved saws are kept at work in season night and day. The quarries are below drainage and steam pumps are constantly at work pumping out water.

Some idea of the proportions of this industry can be formed by the statement that of the 3,000 inhabitants of Berea, three-fourths get their living directly or indirectly from the quarries; from nine to twelve thousand cars are annually loaded with stone taken from the quarries, and if placed in a continuous line would make a train fifty miles long.

Great improvements have been made in the preparation of the stone for the market. Formerly the grindstones were sent to the consumer hung on a crude home-made shaft and frame, which was placed under the apple tree on the farm. And the farmer boy of the past can well remember how he used to suffer while turning that stone, eagerly watching to see if the hand-blistering, back-breaking job was not most done. Now they are mounted on frames with friction-rollers so that a child can turn them without fatigue, or they can be need with a treedle.

or they can be used with a treadle.

The stone business of Northern Ohio is an immense industry, employing millions of capital and thousands of laborers; now under one management, that of the Cleveland Stone Company, with headquarters at Cleveland. It includes the quarries at Berea, North Amherst, Columbia, West View, Olmstead and La Grange. The Garfield monument and the Cleveland viaduct are built of Berea stone; on the latter were used over two millions of cubic feet. From the quarries of the Cleveland Stone Company have been built some of the noblest public buildings of the Western States and Canada, as the Masonic Temple and Central High School, Cleveland; Parliament Buildings, Ottawa; University Building, Toronto; Palmer House, Chicago; Michigan State Capitol, Lansing; Chamber of Commerce Building, Milwaukee; Government Court House and Post Office, Columbus, etc.

CHAGRIN FALLS, about 17 miles southeast of Cleveland and south of Lake Erie, is on the C. F. & S. R. R. It is in the township of Chagrin Falls, one of the smallest townships in the State. The Chagrin river at this point has a fall of 150 feet, giving water-power to the manufacturing interests of the village. Newspaper: *Exponent*, J. J. Stranahan, editor and publisher. Churches: 1 Methodist Episcopal, 1 Congregational and 1 Disciple. Bank: Rodgers & Harper.

Industries.—Paper, flour and grocer sacks, iron, wooden-ware handles, carriages, canvas-boats, etc. Population in 1880, 1,211. School census in 1886, 346; C. W. Randall, superintendent.

The view of Chagrin Falls was drawn and engraved for the first edition in

CHAGRIN FALLS IN 1846.

1846 by Mr. Jehu Brainard, of Cleveland, who made and presented it to us to memorialize himself in the work. His picture has the newness, the crudity in appearance which the village at the time presented. It looked to us then as though it had just emerged from the woods; its people were full of the fire of a good beginning, and fancying that some day theirs would be a great place. Among their congratulations were the facts that they had a daily stage to Cleveland and that the Cleveland and Pittsburg stages ran through their town.

The name of Chagrin was originally applied to the river, then to the present village of Willoughby, and later to the town with the adjunct of the word "Falls." Crisfield Johnson, in his excellent "History of Cuyahoga County," issued in 1879, says: "The name of the river Chagrin is undoubtedly derived from the old Indian word 'Shagrin,' which is to be found applied to it on maps issued before the Revolution. 'Shagrin' is supposed to mean 'clear,' but this is not so certain." On Evans's map, published in 1755, the river is called "Elk." Harvey Rice, in his sketch of Moses Cleaveland, states that he with his surveying party on the 4th of July, 1796, landed at Conneaut and celebrated Independence Day, and then in the course of two weeks he "left Conneaut in company with a select few of his staff and coasted along the southeastern shore of Lake Erie until he came to the mouth of a river which he took to be the Cuyahoga. He ascended the stream for some distance, amid many embarrassments arising from the sand bars and fallen trees, when he discovered his mistake and found it was a shallow stream and not noted on his map. This perplexity and delay so chagrined him that he named it the *Chagrin*, a designation by which it is still known."

We here introduce an incident in the life of a pioneer woman who until near the time of the issue of our original edition was living in this vicinity.

A Plucky Pioneer Woman.—Joel Thorp, with his wife Sarah, moved with an ox team, in May, '99, from North Haven, Connecticut, to Millsford, in Ashtabula county, and were the first settlers in that region. They soon had a small clearing on and about an old beaver dam, which was very rich and mellow. Towards the first of June, the family being short of provisions, Mr. Thorp started off

alone to procure some through the wilderness, with no guide but a pocket compass, to the nearest settlement, about 20 miles distant, in Pennsylvania. His family, consisting of Mrs. Thorp and three children, the oldest child, Basil, being but eight years of age, were before his return reduced to extremities for the want of food. They were compelled, in a measure, to dig for and subsist on roots, which

yielded but little nourishment. The children in vain asked food, promising to be satisfied with the least possible portion. The boy, Basil, remembered to have seen some kernels of corn in a crack of one of the logs of the cabin, and passed hours in an unsuccessful search for them.

Mrs. Thorp emptied the straw out of her bed and picked it over to obtain the little wheat it contained, which she boiled and gave to her children. Her husband, it seems, had taught her to shoot at a mark, in which she acquired great skill. When all her means for procuring food were exhausted, she saw, as she stood in her cabin door, a wild turkey flying near. She took down her husband's rifle, and, on looking for ammunition, was surprised to find only sufficient for a small charge. Carefully cleaning the barrel, so as not to lose any by its sticking to the sides as it went down, she set some apart for priming and loaded the piece with the remainder, and started in pursuit of the turkey, reflecting

that on her success depended the lives of herself and children. Under the excitement of her feelings she came near defeating her object, by frightening the turkey, which flew a short distance and again alighted in a potato patch. Upon this, she returned to the house and waited until the fowl had begun to wallow in the loose earth. On her second approach, she acted with great caution and coolness, creeping slyly on her hands and knees from log to log until she had gained the last ob-struction between herself and the desired object. It was now a trying moment, and a crowd of emotions passed through her mind as she lifted the rifle to a level with her eye. She fired; the result was fortunate: the turkey was killed and herself and family preserved from death by her skill. Mrs. Thorp married three times. Her first husband was killed in Canada, in the war of 1812; her second was supposed to have been murdered. Her last husband's name was Gordiner. She died in Orange, in this county, Nov. 1, 1846.

Collinwood is 7 miles northeast of Cleveland, on Lake Erie. Its inhabitants are mostly employees of the L. S. & M. S. R. R., it being the terminus of two divisions of that road and location of large freight yards. Churches: 1 Congregationalist and 1 Christian. Population in 1880, 792. School census in 1886, 436; T. W. Byrns, superintendent.

NEWBURGH, a suburb of and part of the corporate city of Cleveland, connected with it by four railroads and a street car line. It is about five miles from Cleveland centre. Newspaper: South Cleveland Advocate, Republican, H. H. Nelson, editor and proprietor. Churches: 1 Episcopal, 1 English and 1 Welsh Baptist, 1 English and 1 Welsh Methodist Episcopal, 2 Presbyterian, 1 Welsh Congregational, 1 Disciple, and 1 Catholic. A State hospital for the insane is located here.

BROOKLYN, a suburb of Cleveland, is about 5 miles south of Cleveland Centre, on the Cuyahoga river, and Valley Railroad. Calvin College is located here. Newspaper: *Cuyahogan*, Republican, C. F. Beachler, editor and proprietor. Churches: 1 Congregational, 1 Methodist Episcopal. Population in 1880, 1,295.

School census in 1886, 801; A. G. Comings, superintendent.

The following is a list of villages in this county not previously mentioned, with their populations in 1880: Bedford, a place noted for its chair manufactories, 766; West Cleveland, 1,781; East Cleveland, 2,876; Glenville, 797; Independence, 262; Olmstead Falls, 404; and Euclid, 699. The first frame meeting-house with a spire built on the Reserve was erected in 1817, at Euclid. The township of Euclid was settled by the surveyors under General Cleaveland; in 1798 Joseph Burke and family, and in 1801 Timothy Doane and family, settled in Euclid.

DARKE.

DARKE COUNTY was formed from Miami county, January 3, 1809, and organized in March, 1817. The surface is generally level, and it has some prairie land. It is well timbered with oak, poplar, walnut, blue ash, sugar maple, hickory, elm, and beach, and the soil is exceedingly fertile. It is a granary of corn, oats, and wheat—the yield immense and the quality excellent—and it is a first-class agricultural county, a large proportion of the land being a deep black soil and apparently inexhaustible. Area unusually large—600 square miles. In 1885 the acres cultivated were 214,522; in pasture, 23,247; woodland, 72,333; lying waste, 7,207; produced in wheat, 996,331 bushels; oats, 472,201; corn, 3,066,476; broom brush, 36,545 pounds; tobacco, 3,152,425; butter, 867,560; flax, 91,457; potatoes, 215,809 bushels; sorghum, 49,559, largest in the State; eggs, 867,493 dozen; horses owned, 13,548; cattle, 25,517; hogs, 36,977. School census 1886, 13,881; teachers, 255. It has 158 miles of railroad.

Population in 1820 was 3,717; in 1840, 13,145; 1860, 26,009; 1880, 40,496, of whom 33,062 were Ohio-born, 1,846 Pennsylvanians, and 1,208 in Germany.

Gen. William Darke, from whom this county derived its name, was born in Pennsylvania, in 1736, and removed at the age of five years with his parents to near Shepherdstown, Va. He was with the Virginia provincials at Braddock's defeat, taken prisoner in the Revolutionary war, at Germantown, commanded as colonel two Virginia regiments at the siege of York, was a member of the Virginia Conven-

tion of '88, and was repeatedly a member of the Legislature of that ancient commonwealth. He distinguished himself at St. Clair's defeat, and died Nov. 20, 1801. Gen. Darke was by profession a farmer. He possessed a herculean frame, rough manners, a strong but uncultivated mind, and a frank and fearless disposition.

This county is of considerable historic interest. The defeat of St. Clair, November 4, 1791, took place just over its northwestern border, near the Indiana line, on the site of the village of Fort Recovery. Under the head of Mercer county, a very full account of this event is given, with individual narratives and incidents.

On his march north from Cincinnati St. Clair built a fort five miles south of the present site of Greenville, which he named Fort Jefferson. His army left on the 24th of October, and continued their toilsome march northward through the wilderness, which in less than two weeks was brought to its disastrous close.

In the summer of the next year a large body of Indians surrounded this fort. Before they

were discovered, a party of them secreted themselves in some underbrush and behind some bogs near the fort. Knowing that Capt. Shaylor, the commandant, was passionately fond of hunting, they imitated the noise of turkeys. The captain, not dreaming of a decoy, hastened out with his son, fully expecting to return loaded with game. As they approached near the place the savages rose, fired, and his son, a promising lad, fell. The

captain turning, fled to the garrison. The Indians pursued closely, calculating either to take him prisoner or enter the sally-gate with him in case it were opened for his admission.

They were, however, disappointed, though at his heels; he entered, and the gate was closed the instant he reached it. In his retreat he was badly wounded by an arrow in his back.

GREENVILLE IN 1846.—Greenville, the county-seat, is ninety-two miles west of Columbus, and ten from the Indiana line. It was laid off August 10, 1808, by Robert Gray and John Devor, and contains 1 Baptist, 1 Episcopal, 1 Methodist, and 1 Christian church, 16 mercantile stores, 1 flouring mill, 1 newspaper printing office, and about 800 inhabitants.

Greenville is a point of much historical note. In December, 1793, Wayne built a fort at this place, which he called Fort Greenville. He remained until the

FORT GREENVILLE.

28th of July, 1794, when he left for the Maumee rapids, where he defeated the Indians on the 20th of the month succeeding. His army returned to Greenville on the 2d of November, after an absence of three months and six days. Fort Greenville was an extensive work, and covered the greater part of the site of the town. The annexed plan is from the survey of Mr. James M'Bride, of Hamilton. The blocks represent the squares of the town, within the lines of the fort. Traces of the embankment are plainly discernible, and various localities within the fort are pointed out by the citizens of the town. The quarters of Wayne were on the site of the residence of Stephen Perrine, on Main street. Henry House, now (1846) of this county, who was in Wayne's campaign, says that the soldiers built loghuts, arranged in rows, each regiment occupying one row, and each hut—of which there were many hundred—occupied by six soldiers. He also informs us that Wayne drilled his men to load while running; and every night, when on the march, had good breastworks erected, at which the men had been so well practised as to be able to construct in a few minutes.—Old Edition.

Greenville is ninety-four miles west of Columbus, on the C. St. L. & P. R. R., and seventy miles north of Cincinnati. It is on Greenville creek, also the C. J. & M. and D. & U. railroads. County officers in 1888: Probate Judge, Samuel L. Kolp; Clerk of Court, Patrick H. Maher; Sheriff, David E. Vantilburg; Prosecuting Attorney, James C. Elliott; Auditor, Cyrus Minnich; Treasurer, Henry M. Bickel; Recorder, Daniel Snyder; Surveyor, Elliott M. Miller; Coroner, George W. Burnett; Commissioners, William M. Smith, Reuben K. Beam, Samuel J. Stapleton. Greenville has five newspapers: Darke County Democratic Advocate, Democratic, W. A. Brown, editor; Democrat, Democratic, Charles Roland, editor; Journal, Republican, E. W. Otwill, editor; Die Post, German

Democratic, George Feuchtinger, editor; Sunday Courier, Republican, A. R. Calderwood, editor. Banks: Farmers' National, G. W. Studabaker, president,

Drawn by Henry Howe in 1846.

VIEW ON THE PUBLIC SQUARE, GREENVILLE.

[The public square was included within the area of the fort. The old court-house, which is seen in the centre of this view, with an addition and changes, is now the town-hall; the latter is the building shown in the distance, in the new view taken by photograph. The street on the right is Broadway. The building in the rear of the tavern sign is the site of the Farmers' National Bank. The dwelling on the extreme left is now standing, and residence of J. Riley Knox.]

cashier. Churches: 1 German Reformed, 1 German Methodist Episcopal, 1 German Lutheran, 1 German Evangelical, 1 Baptist, 1 Methodist Episcopal, 1 Christian, 1 Catholic, 1 United Brethren, 1 Episcopalian, and 1 Presbyterian. The

largest industries here are machinery and moulding, the lumber business, and wagon

making. Population in 1880, 3,535.

On the 3d of August, 1795, Wayne concluded a treaty of peace with the Indians at Greenville. The number of Indians present was 1,130, viz., 180 Wyandots, 381 Delawares, 143 Shawnees, 45 Ottawas, 46 Chippewas, 240 Pottawattamies, 73 Miamies and Eel river, 12 Weas and Piankeshaws, and 10 Kickapoos and Kaskaskias. The principal chiefs were Tarhe, Buckongehelas, Black Hoof, Blue Jacket and Little Turtle. Most of the chiefs had been tampered with by M'Kee and other British agents; but their people, having been reduced to great extremities by the generalship of Wayne, had, notwithstanding, determined to make a permanent peace with the "Thirteen Fires," as they called the federal States. The basis of the treaty of Greenville was that hostilities were to cease and all prisoners restored. Article 3d defined the Indian boundary as follows:

The general boundary line between the lands of the United States and the lands of the said Indian tribes shall begin at the mouth of the Cuyahoga river, and run thence up the same to the Portage, between that and the Tuscarawas branch of the Muskingum, thence down that branch to the crossing-place above Fort Laurens, thence westerly to a fork of that branch of the Great Miami river running into the Ohio, at or near which fork stood Loromie's store, and where commenced the portage between the Miami of the Ohio and St. Mary's river, which is a branch of the Miami which runs into Lake Erie; thence a westerly course to Fort Recovery, which stands on the branch of the Wabash; thence southerly in a direct line to the Ohio, so as to intersect that river opposite the mouth of Kentucke or Cuttawa river.

The following are the reservations within the limits of Ohio granted to the Indians by

this treaty:

1st. One piece of land, six miles square, at or near Loramie's store, before mentioned.

2d. One piece, two miles square, at the head of the navigable water or landing on the St. Mary's river, near Girty's town. 3d. One piece, six miles square, at the head of the navigable water of the Auglaize river. 4th. One piece, six miles square, at the confluence of the Auglaise and Miami rivers, where Fort Defiance now stands. 8th. One piece, twelve miles square, at the British fort on the Miami of the lake, at the foot of the rapids. 9th. One piece, six miles square, at the mouth of the said river, where it empties into the lake. 10th. One piece, six miles square, upon Sandusky lake, where a fort formerly stood. 11th. One piece, two miles square, at the lower rapids of the Sandusky river.

These, with the other tracts, were given "for the same considerations, and as an evidence of the returning friendship of the said Indian tribes, of their confidence in the United States, and desire to provide for their accommodation, and for that convenient intercourse which will be beneficial to both par-

ties.'

A second treaty was concluded at Greenville, July 22, 1814, with the Wyandots, Delawares, Shawnees, Senecas, and Miamies.

The commissioners on the part of the United States were Gen. William Henry Harrison and Gov. Lewis Cass. By it these tribes engaged to aid the United States in the war with Great Britain and her savage allies. The prominent chiefs were Tarhe, Capt. Pipe, and Black Hoof. Both of the treaties were held on the same spot, within the present (1846) garden of Abraham Scribner, in Greenville. On the 22d of July, 1840, just twentysix years after the last treaty, there was a great celebration at this place, called "the Greenville Treaty Celebration," at which the many thousands present were addressed at length by Gen. Harrison.

From the year 1805 to 1808 the celebrated Tecumseh, with his brother, the prophet, resided at Greenville. It was the point where they formed their plans of hostility to the whites. During their residence at this place

they were visited by many Indians, who were wrought into the highest excitement by the eloquence of Tecumseh and the cunning of the prophet.

On the plan of Fort Greenville is laid down "Tecumseh Point," at the junction of the rivulet with Greenville creek, about a quarter of a mile from the court-house. At this place are some Indian graves; here Tecumseh had a cabin, and formerly near it was a spring, called "Tecumseh's Spring." In 1832 the remnant of the Shawnees, then moving to their new homes in the far West, from their reservation on the Auglaize, took this place on their route, instead of Cincinnati, as desired by the United States agents. They encamped on Tecumseh's Point to the number of several hundred, and remained a day or two to take a final farewell of a place so dear to their memories.

In the graveyard at Greenville lies the remains of ENOCH BERRY SEITZ, one of the greatest mathematicians of his time on the globe, and withal a man of

singular modesty and amiability of character. He died in Missouri in 1883, aged thirty-seven, and was brought here for burial, because he had been a teacher here for a number of years, was endeared to the people, and this was the home of his wife. He was born near Lancaster, Fairfield county, the son of a farmer, and early displayed great aptness for mathematics. He graduated at the Ohio Wesleyan University in 1870. His friend, Prof. John S. Royer, wrote of him:

"Having a special fondness for mathematics, he devoted his leisure hours to the broad fields and hidden beauties of its higher branches, delving deep into the mine of original investigation, and astonishing the world by the aptness with which he

unfolded the beautiful and mysterious relations of numbers.

Years ago he was a subscriber to the School-day Magazine, which had a mathematical department, edited by the great mathematician, Artemus Martin. He displayed great ingenuity and ability in solving difficult probability problems, and when asked what works he had on that difficult branch of mathematical science,

ENOCH BERRY SEITZ.

Mr. Seitz, to the great astonishment of his friend, replied: 'I have no books on that subject, but what I know of it I learned by studying the problems and solutions in your magazine.' Here was the secret of his success. He first studied the principle—laid a sure foundation, upon which he afterward reared the magnificent edifice. He furnished over 500 model solutions to the School Visitor, which evinced those striking characteristics of his mathematical work—originality, accuracy, and beauty. Many readers have gathered inspiration and taste for the science by his labor of love in this behalf. He was also a regular contributor to the Analyst, the Mathematical Visitor, and the Educational Times, of London, England.

The latter has a department sustained by the greatest mathematicians in Europe and America. In this everything is found starlight, but our lamented friend represented a most brilliant star, standing upon the eminent plane side by side with Woolhouse, England's acknowledged mathematical champion, and in his especial branches—'Average' and 'Probabilities'—Prof. Seitz had no superior in the world." In 1880 he was elected a member of the London Mathematical

Society, being the fifth American so honored. At the time of his decease he was Professor of Mathematics at the State Normal School, Kirkersville, Mo. He died young, but the work he accomplished remains, an endearing monument of fame and honor.

During the years 1827 and 1828 John H. Martin and Thomas F. Chenowith, by the aid of two four-horse teams, transported all of the products marketed in the county to Cincinnati, and brought back about all of the merchandise sold in the county. In 1886 they were both living, and at the age of about eighty years. The following items are from the "County History:"

Indian Trading.—The first permanent white settler in Darke county was Azor Scribner, who in 1806 or 1807 established an Indian trading-house in Greenville township. His goods were hauled from Cincinnati along Wayne's road by a yoke of oxen attached to a rough sled denominated a mud boot, and a trip usually occupied from three to six weeks. He exchanged his goods for furs and did a thriving business. The manner of trading has thus been described: The Indians, bringing with them their roll of furs, walked into the cabin and found seats, while each was presented with a small piece of tobacco. Pipes were lighted, and the residue was placed in pouches. After some time passed in smoking and talking among themselves, one arose, went to the counter, and taking up a yard-stick, pointed out the article wanted and asked the price.

Payment being made in skins, there was to each kind a recognized value. The muskrat was held at a quarter, the raccoon at a third, a doe at a half, and a buckskin at a dollar. Payment was made following each purchase, until all exchanges were effected. As each retired another came forward in his turn until all had traded. No one desired to anticipate his turn, decorum was observed, and no attempt was made to "beat down," for, if not satisfied, another article was pointed out and named. It is reported that Scribner not only sold the Indians tobacco, but rum, and they generally reserved some of their furs with which to procure liquor for a final frolic.

In the winter of 1807–8 Samuel Boyd moved in with his family, and in 1810 the three Rush brothers and some others. A year later the Indians became hostile and committed some murders. Prior to the war of 1812 several dwellings and four blockhouses were erected in Greenville. Among those who were killed by the Indians was Andrew Rush. One day in April, 1812, while going to mill through the wilderness, he stopped at the cabin of Mr. Daniel Potter, when Mrs. Potter asked him if he was not afraid of the Indians waylaying and killing him. Upon this he laughed, and running his hand through his hair jokingly replied: "No, I had my wife this morning cut my hair so short that they could not get my scalp off." That afternoon he was shot from his horse, tomahawked and scalped.

The First School-House.—So slow was the settlement of the county, that in 1824 there

were entire townships that did not contain a single inhabitant. There were but two meeting-houses, one a Methodist, the other a Hardshell Baptist. The roads of the county consisted of the old war traces of St. Clair and Wayne, some Indian paths and some few other traces cut by the early settlers. Educational advantages in town and county were for many years quite limited. There were a few rude school-houses widely scattered, and these were occupied three months of each winter by teachers whose qualifications better adapted them for burning brick than solving problems in mathematics, and consequently there was little learned. Schools were taught by subscription

Settlers built houses as they were needed. Many settlers had large families—as many as ten children were found in a single cabin—and to provide for the future of these young people, the parents came to this county. There was always work to be done, and the services of all hands were needed; it was only during the winter months that schools could be attended. At these only the elementary branches were taught, and the predominant idea of the school-master was discipline first, learning afterward. No grammar nor geography was taught. Few studied arithmetic, and these did not proceed, much beyond the rudiments; and when at length grammar was introduced, such pupils were thought well advanced.

In any locality, whenever sufficient families had moved in to form a school, the settlers stood ready to build a house and engage a teacher. Tall, strapping youths attended school, and the master had need of decision and courage as well as method and erudition. It was the custom for the person applying for the school to call upon the parties within sending distance and canvass for scholars. If enough were secured school opened. An illustration of the old-time method is given as follows: About the year 1815 a man came into the Rush neighborhood and offered his services as a teacher. The settlers located along Mud creek, West Branch and Bridge creek talked the matter over and concluded to employ him. It was a light labor for all to turn out with axes, handspikes and oxen, upon a day appointed, to chop and draw logs to a chosen site for the purpose of putting up a school-house. The location was near Rush Fort, on Mud creek. While some put up round logs, notched down one layer upon another, until they were of sufficient eleva-

tion to form a story, split clasp-boards for the roof, chamber floor and door, and puncheons for the floor, others drew stone for the fireplace, and prepared sticks and mud for the chimney. The floor being laid, next came the desks and the seats. Large holes were bored in a log on each side of the room, wooden pins were driven in, and a slab or unplaned plank laid on these pins. For seats, holes were bored in puncheons and legs driven in, two at each end. Windows were made by cutting out a log nearly the whole length of the house, leaving a hole a foot wide. Into this was foiled a sort of lattice-work of sticks, and upon this greased paper was pasted to transmit the light. Such was the schoolhouse of sixty-five years ago. It was not much of a structure, but there was no great contrast between it and the homes of the builders. There was no lack of ventilation, and the wood was not too long for the fireplace.

Love-Making and Marriage —The arrival of a family occasioned eager inquiry by the young men as to whether there were any marriageable daughters of the number. The demand was in excess of the supply. same maiden had sometimes several suitors; this involved the delicate matter of rejection

as well as choice.

Sometimes the girls were betrothed before leaving home, and a knowledge of this fact caused disappointment. For a long time after the first settlement of the county the people generally married young. The parties differed little in fortune, and none in rank. First impressions of love resulted in marriage, and a family establishment cost only a little labor.

The marriage ceremony was arranged to take place before dinner, which was a substantial feast of beef, pork, fowls, and sometimes venison and bear meat, roasted and boiled, with abundance of potatoes and other vegetables. Dinner was free from formality, and a time for mirth and enjoyment. There was dancing after dinner. "The figures of

the dance were three and four handed reels or square sets and jigs. The commencement was always a square four, which was followed by what was called jigging it off; that is, two of the four would single out for a jig, and were followed out by the remaining couple. The jigs were often accompanied with what was called cutting out, that is, when either of the parties tired of the dance, on intimation the place was supplied by some one of the company without any interruption to the dance. In this way the amusement was often continued till the musician was heartily tired of the situation.

Among marriages in pioneer days was that of Ullry to his brother's widow; they had lived together some time during the inoperative period before the election of justices, and when a justice was chosen they were legally married. In a spirit of jovialty a party of young people, being resolved to have a marriage, seized upon a man named Israel Wertz and fitted him out with a suit. One of the party furnished leggins, another some other article of dress until he was properly clothed, and then calling upon a woman named Jane Dugan, asked her if she was willing to marry Wertz. She replied affirmatively, and they all started for the house of Alexander Smith, a justice of the peace who lived east of Greenville. Wertz repented and broke away, upon which a dog was set after him, and he was caught and held. The ceremony was then performed, and the twain thus singularly made one lived many years together happily, and both finally died of old age.

At this date the only article of export from the county was hoop-poles. During the winter the principal employment of farmers was wagoning these hoop-poles to Germantown, wagoning these noop-potes to Germantowin, Middletown, Lewisburg, etc., and by this means they were enabled measurably to supply themselves with salt, groceries, leather and other necessaries. This supplied the people with ready money. The county-seat had only about 300 people, many very poor finding it hold work to state living.

finding it hard work to get a living.

We here make a valuable extract from the pen of Prof. W. H. McIntosh, in the "County History," relating to the climate when the country was in a wilderness condition, and the changes which the clearing away the forests have produced in the health of the people:

Since the early settlement of Darke county occurring changes have greatly modified the climate, and to a less extent this is still in progress. The original forest, together with the undergrowth, shut out the sun from the soil and impeded atmospheric circulation. The almost monotonous level, receiving the winter snows and spring rains, retained the water through the summer, and thereby caused a moist, cool air. The forests broke the sweep of the cold northwest winds of winter, and the freezing of large, partly submerged tracts gave off a sufficient amount of heat to sensibly mitigate the cold incident to the season. The soil, bedded in leaves and vegetation, was greatly protected from the frost, and the warm air of spring speedily awakened the dormant germs of vegetation. It also, being protected by the overhanging foliage from the heat of summer, more readily experienced the influences of wind and frost, and hastened winter.

The forests being gradually cut down to make room for cultivation, the land being thoroughly drained, these conditions have correspondingly changed. The earth now receives the sun-rays unobstructed; the air has free circulation. The tilled lands have been underdrained with tile and open ditches, thereby carrying away at once the melting

snows of winter and the rains of spring, leaving little moisture to affect the climate by evaporation. The effect of this denuding and draining of the soil is seen in the great depth to which the summer's sun-rays penetrate, and as these rays are given off, the arrival of winter is proportionally delayed.

But when the reserve of heat is exhausted the unprotected earth is deeply frozen, and from these conditions come later springs, warmer summers and delayed but more

severe winters.

An analysis of the climate of Darke county, according to the previous description, requires a consideration, also, of the situation of its land, and the direction and character of its winds.

Located about midway between the Allegheny mountains and the Mississippi river there is observable a prevalence of westerly This is explained by the enormous area of level lowlands whereon the atmosphere is influenced by the earth's rotary motion, causing it to move in westerly currents toward or from the equator. The west and northwest winds are mainly dry-air currents, so that although the annual rainfall is considerable, yet under their action the moisture is rapidly absorbed. Such conditions would inure to the productiveness of most soils, but in a good, rich soil, such as Darke county occupies, there is almost a certainty of ample and abundant crops.

The averages in the various seasons are, approximately, 31° for winter, 57° for spring, 74° for summer, 52° for autumn. The winter is long, and there are sudden changes from the mildness of spring to the most intense cold. These cold spells are rarely of more than seven or eight days' duration, and are generally preceded by storms of rain or snow. Rain falls almost nightly and for a day or so at a time during spring, and the temperature fluctuates from the chill of winter to the warmth of summer. Following one of these changes summer comes and throughout is one of a tropical character. As fall draws near, the atmospheric conditions approach uniformity, and at this period Darke county is seen to the greatest advantage. Breathing an agreeable atmosphere, surrounded by healthful conditions, the beholder looks with pleasure upon the fields, the orchards and the gardens. Turning to the woodlands, he sees the maples, elms and oaks in holiday attire, preparing for their period of rest. There is every hue and all shades of color. The winds toy with the branches; the sunlight is all about them; some are darkened as in shadow, others are brilliant in the glow of light, and all about there are seen bluish, smoke-like mists, completing nature's finest portraiture of the forest in the fall-time arrayed in splendor.

The health of the settler and of the later residents has been subjected to the mutations affecting the climate. In the low swamps miasma prevailed; the action of the sun upon the decaying vegetation opened by the clearing and stirred by the plow, induced

fevers and chills, and there were few that did not, at times, succumb to these disorders. The healthy and hardy entered into the struggle with nature courageously and joyously. Labor had its zest, and food and sleep were most refreshing; but there were many who struggled on under the depression and hindrances of sickness.

As settlers came in and clearing took greater sweep, sickness became more general, or at least more apparent, and when Drs. Perrine and Briggs came to Greenville, they found constant employment in attending to the calls of the sick. Fever and ague prevailed, and few, if any, families but had some sick members. Not then, as now, was quinine available—not even known—and the popular remedies were dog-wood and wildcherry bark steeped in native whiskey.

Slow progress was made for a time, as men became disheartened, left the county and circulated reports that were not only true, but sadly true, of an irreclaimable wilderness of morass and swamp, the haunt of pestiferous agues and consuming fevers. It is a fact that very few of the pioneers of Darke held

on through all vicissitudes.

From 1820 to 1840 the doctors were all kept busy attending to the sick, so prevalent were ague, flux and bilious fever at certain seasons of the year. The years 1836 and 1837 were comparatively healthy; the year following was more sickly, and 1839 still more so, and from that time till 1850 there were more or less of bilious complaints every season. Since that date both towns and country have been generally healthy.

As an illustration of the desperation to which the medical treatment subjected patients, we relate an incident in the practice of Dr. Gard, one of the veteran physicians of the early days. He was called in, as family physician, to minister to the wants of a sick child. Cold water was forbidden, and calomel, as was usual, was administered. The doctor then retired, with promise of a return the next day. Cold water was barred; the boy begged for a drink, but entreated in vain, as the doctor's orders were immutable law. He then resorted to strategy. Feigning a desire for rest and repose, the family retired to permit their indulgence. Soon heavy breathing announced that all were asleep, and the patient arose from bed, staggered to the water-bucket, and, to his dismay, found it empty. This discovery would have been hailed with imprecations that would have roused all in the house had not the necessity of the case demanded control. Water must be had, although the spring was at quite a distance. The coffee-pot was found, and the patient set out to assuage his consuming thirst. He rested several times in the wet grass, but finally arrived at the spring, drank heartly, and, undiscovered, returned to his bed, having placed the well-filled coffee-pot at his bedside. This was two-thirds emptied before this suicidal act was known, when the doctor was hurriedly summoned and stood with astonished and ominous look, awaiting

serious results that did not happen. In a few days the patient had recovered. Gard was as skillful as the best, and did his duty, but the practice of that day had its

Rich as the land was, it could not produce money, and this must be had to meet payments and taxes. Clearing, aside from small patches, had no stimulus. Of what avail were bins of corn and wheat, and droves of swine, without a purchaser or market, and of markets there were none. Having sufficient bread and meat, all were satisfied, and they shared freely with each other and with strangers. Wheat was worth about two shillings per bushel, and corn changed hands at about one-half that price. The current prices fluctuated with the supply; and it was a gratification when a newspaper for the first

time made its appearance and obtained general circulation in the county. It was published at Eaton, Preble county, and subscription was paid in corn at fifteen cents per bushel.

Pork was sold, when it could be sold, at two and three cents a pound; beef brought about the same price; maple sugar was held at six and eight cents per pound, and maple syrup at about two shillings a gallon. Wages ranged from two to three shillings a day, and this was regarded as an average of compensation. Had some wealthy man bought large tracts and taken steps to develop the capacity of the land, there were many who would have gladly offered their services; but improvement in wages, prices and health were yet far in the future, and this border life between the civilized and the savage had few attractions such as society affords.

During the war of the Rebellion Darke county contributed her full share to the ranks of the Union army. The Fortieth Ohio infantry, largely composed of Darke county men, was organized in the fall of 1861.

After varied service, in March, 1863, it joined the army of Kentucky at Franklin, Tenn., where, a few weeks later, an attack was made by a strong force of the enemy upon the place, but they were repulsed by the excellent fighting of some companies of the Fortieth out on picket line. The story of this fight, with the spicy conversation between Van Dorn and Serg. Orin of the Fortieth, who had been taken prisoner, we copy from the "County History:"

On the 10th of April, 1863, the regiment was placed on picket duty in front of the town, with Capt. Charles G. Matchett in command. At that time the rebel forces, under Gen. Van Dorn, were stationed at Spring Hill, Tenn., nine miles south of Franklin. Soon after 12 o'clock M. the rebels commenced an attack upon seven companies of the Fortieth, which had been stationed on and between the Columbia pike and the Big Harpeth river (a distance of about five hundred yards), but were hand-somely repulsed. The attack was renewed with reinforcements, and again repulsed. By this time the enemy were preparing to charge in force, and the situation of the Fortieth was precarious. Behind them, for the distance of more than half a mile, lay an open field without an obstacle or a shelter on it; but, momentarily expecting reinforcements, they held their ground, and repulsed charge after charge, for two hours.

Van Dorn then formed his entire force for a charge, and the Fortieth fell back in good order to the town, where, taking advantage of hedges, fences, houses, etc., they repulsed the enemy and drove them out of town, and, at 4 o'clock P. M., resumed their former po-

sition on picket duty.

The Fortieth's loss was three killed, four wounded, and ten missing, and all afterward were exchanged and rejoined the command.

The enemy's entire loss is not known. Two captains and fifteen men killed, one major and twelve men wounded, and thirteen prisoners fell into the hands of the Fortieth. The enemy's entire force was cavalry and two

batteries of artillery. Over one hundred horses, equipped, escaped within the Union lines and were captured by other commands. The prisoners, when exchanged, reported Van Dorn's entire loss in killed and wounded to be one hundred and fifty men and one hundred and twenty horses.

An incident connected with this fight is

worth relating:

Among the prisoners captured from the Fortieth that day was Jesse N. Orin, a sergeant of Company B, afterward a distinguished representative for many years in the Ohio Legislature from Clinton county. The prisoners were taken before Van Dorn, and questioned by him. Sergt. Orin answered in behalf of the captives.

"What commands do you belong to, boys?" said the rebel chieftain.
"Fortieth Ohio, sir," answered Orin.
"You don't all belong to the same regiment, do you?

Yes, sir.

"What officer was that in command of the forces you had in to-day's fight?"
"Capt. Matchett, of the Fortieth, sir."

"Have you got down so low that captains

must command your brigades?"
"Brigades? There was no other regiment fought against you to-day but the Fortieth, and only seven companies of that; for one company was in the town as provost-guard, and two companies were on the west of the

town, and neither of them were engaged."
"Then why in the name of thunder did not your captain quietly surrender when my

brigade of cavalry attacked them?'

"I presume, sir, the captain's orders were to defend the picket line as long as he could, and not to surrender.'

But, why were you not reinforced?"

"I do not know, sir; just before we began to fall back the captain rode along our lines and told each company that it was evident that we were not to be reinforced, and we could not successfully retreat over that cottonfield, unless each company implicitly obeyed his commands. We all understood this; and he concentrated and retired us in the manner you saw."
"How did you boys come to be cap-

tured?

"When our regiment had retreated about half the distance between the picket-line and the town, a column of your cavalry threatened to pass by our left, and get between us and the town, and 'gobble us all up,' and Capt. Matchett ordered me and another sergeant, with about twenty men, to a position about three hundred yards to the left and rear of our regiment, in order to oppose that threatened movement, with orders to hold that position at all hazards, until the regiment had retired beyond the cotton-gin, and then make our way back to town as best we could. We stayed there as ordered, but when your forces in front of the regiment were repulsed, they swept around to our position and took us all in, except a few who

At this a fine-looking officer, who was present, broke out into a loud laugh, and said: "Gen. Van Dorn, the joke is on you; you promised to show us how neatly you could take in the Yankees at Franklin, and it seems that you have been very cleverly repulsed by seven companies of infantry, commanded by a captain, with his left pro-

tected by a sergeant's squad."

At this Sergt Orin said: "General, I would like to be permitted to say one word in your defence; that is—there is not a private in the Fortieth Ohio who would not make a good colonel, and not a non-commissioned officer who would not make a good brigadier, and as to the captain who commanded us to-day, he could handle an army equal to Bonaparte."

"Thank you," said Van Dorn; and then, turning to the officer referred to above, he said: "How could you expect me, with my division of cavalry, to overcome a Bonaparte, his field-marshals, his sixty generals and five hundred colonels?"

Gen. Van Dorn then asked Sergt. Orin: "How many men have you at Franklin?"

"I do not know, sir, and if I did I should decline to answer your question."
"What is the nature and extent of your

fortifications there?'

General, possibly you had better obtain that information by another reconnoissance. "Well, Sergeant," said the General, "you'll do. When you rejoin the regiment, give my compliments to your brave comrades and the captain, and say to him that I hope he may never be promoted."
"Captain," said he, addressing an officer,

"see that these men are treated with that

courtesy and respect due brave men.

The men were then taken back, and remained prisoners only about three weeks, when they were exchanged. Their prison life was made far more agreeable to them

than they expected.

In 1878 a major of the Confederate army stopped for a few days at Greenville, Ohio, and called on Capt. Matchett, and said that he had belonged to the staff of the Inspector-General of the Confederate army; that they had come west to look after Bragg's army, and went to Spring Hill Run about the 8th of April, 1863, and found Gen. Van Dorn a very genial and social fellow, who induced the Inspector-General to go with him that day (April 10th), and see how nicely he would take in the Yankees at Franklin.

The major said that all the officers agreed that they had never seen "such a fighting regiment" as the Fortieth was; and that he was free to say that he never met with such coolness and determined bravery since. He detailed the conversation between Gen. Van Dorn and the captured sergeant, substantially as given above, which, in the mind of the writer, confirmed the statements made by Sergt. Orin and his captured comrades, on

their return from captivity.

Gettysburg is on the C. St. L. & P. R. R., 87 miles west of Columbus. is the shipping point for a very productive surrounding wheat country. Newspapers: School Visitor, educational, John S. Royer, editor and publisher. Churches: 1 Presbyterian, 1 Methodist Episcopal, and 1 German Lutheran. It is somewhat of an educational centre.

Population in 1880, 202.

ARCANUM, about 80 miles west of Columbus, at the intersection of the D. & U. and I. B. & W. Railroads, is surrounded by a fine farming district, and is a point of shipment for a large part of the tobacco crop of the county, of which the crop is generally immense. Newspaper: Tribuné, Democrat, S. M. Kemble, editor. Churches: 1 Methodist, 1 United Baptist, 1 German Reformed. It has two good natural gas wells and more are being put down. Milling, wood work and tile making are the main industries.

Population in 1880, 778. School census in 1886, 335.

Versailles is on the C. C. C. & T. R. R. It has one newspaper, *Policy*, Independent. Central Bank, J. R. Jackson, president; J. W. Starbuck, cashier. Census in 1880, 1,163. School census in 1886, 433; W. W. Long, superintendent. This village was laid out in 1819 by Silas Atchison under the name of Jacksonville.

The Hardshell Baptists, says the county historian, built here in 1823 the second church erected in the county. As their rules required every applicant for membership to give in a brief experience as a test of his fitness for admission, he relates this as an illustration. A person living up the creek by the name of Stoner it appears, notwithstanding his hard name, was a little soft. Nevertheless, he wanted to join the church. He rose in the congregation and thus began: "I got up this mornin', greased my shoes, combed my head and started to meetin'. As I was a

comin' along I saw a tree; I says to myself, Kin one man pull that ar tree up? No! Kin two men pull that ar tree up? No! Kin three men pull that ar tree up? No! Kin ten men pull that ar tree up? No! Kin twenty men pull that ar tree up? No! Kin God Almighty pull that ar tree up? Yes! I feel like suthin' is going to happen." He sat down. The preacher rose and said: "Brethren, extend the right hand of fellowship to Brother Stoner, for this is the true blatin' of the lamb."

Ansonia, about 90 miles west of Columbus, on Stillwater creek, and at intersection of the C. C. & I. and C. V. W. & M. Railroads, is in the centre of a grain-raising district. Newspaper: *Mirror*, Independent, Frank H. Jobes, editor and publisher. Churches: 1 Methodist Episcopal, 1 Christian, 1 German Lutheran. The Ansonia Stave Co., employing 18 hands, is the largest industry. Population in 1880, 542.

Union City is on three railways and in two States, Indiana and Ohio; two counties, Randolph, Ind., and Darke, Ohio, and has two village corporations with corresponding sets of officials. In 1880 the population of the Indiana side was 2,478, Ohio side, 1,127; total, 3,605. Union City was platted in 1852, and the place has grown up in consequence of railroads. The industries here are woodenware, staves, tubs, pails, clamps, broom handles, trunk slats, shingles, heading, hubs, spokes, chairs, also drain tile, etc. It is also a prominent point for the manufacture of flour and the purchase and shipment of grain.

DEFIANCE.

Defiance County was erected March 4, 1845, from Williams, Henry and Paulding, and named from Fort Defiance. It is watered by the Auglaize, the Tiffin and the Maumee; this last-named stream was anciently called "Miami of the Lake," and sometimes "Omee." The Maumee is navigable by steamers, in high water, to Fort Wayne, and in ordinary stages to that place for keel boats carrying sixty tons. The Auglaize is navigable for keel boats to Wapakoneta, and the Tiffin, which is a narrow, deep stream, is navigable, for pirogues of a few tons, about fifty miles. Prior to the building of the Wabash canal, Northern Indiana received a large part of its supplies by the Maumee. Much of this county is within the Black Swamp region, and where cleared and drained as fertile perhaps as the famed valley of the Nile. It was covered by abundant forests of oak, hickory, ash, and elm and other trees, mostly of gigantic size, rendering the clearing away a heavy labor. Area 420 squares miles. In 1885 the acres cultivated

were 113,070; pasture, 12,019; woodland, 65,823; lying waste, 906; produced in wheat, 342,352 bushels; oats, 242,330; corn, 650,887; wool, 66,570 pounds. School census 1886, 8,028; teachers, 148. It has 49 miles of railroad.

TOWNSHIPS AND CENSUS.	1840.	1880.	TOWNSHIPS AND CENSUS.	1840.	1880.

Defiance,	1,044	6,846	Milford,	175	1,460
Delaware,	201	1,505	Noble,		912
Farmer,	281	1,302	Richland,		$1,\!427$
Hicksville,	67	2,381	Tiffin,	222	$1,\!526$
Highland,	542	1,226	Washington,	98	1,325

Population of the county in 1840 was 2,818; in 1850, 6,966; in 1860, 11,983; in 1870, 15,719; and in 1880, 22,515, of whom 16,711 were Ohio-born; 1,780 born in Germany; 867 Pennsylvania; and 553 New York.

The annexed plan and description of Fort Defiance is found in the memoranda of Benj. Van Cleve, communicated by his son, John W. Van Cleve, of Dayton, to the American Pioneer.

At each angle of the fort was a block-house. The one next the Maumee is marked A, having port-holes, B, on the three exterior sides, and door D and chimney C on the side facing to the interior. There was a line of pickets on each side of the fort, connecting the block-houses by their nearest angles. Outside of the pickets and around the block-houses was a glacis, a wall of earth eight feet thick, sloping upwards and outwards from the feet of the pickets, supported by a log wall on the side of the ditch and by fascines, a wall of fagots, on the side next the Auglaize. The ditch, fifteen feet wide and eight feet deep, surrounded the whole work except on the side toward the Auglaize; the diagonal pickets, eleven feet long and one foot apart, were secured to the log wall and projected over the ditch. E and E were gateways. F was a bank of earth, four feet wide, left for a passage across the ditch. G was a falling gate or drawbridge, which was raised and lowered by pullies, across the ditch, covering it or leaving it uncovered at pleasure. The officers' quarters were at H, and the storehouses at I. At K, two lines of pickets converged toward L, which was a ditch eight feet deep, by which water was procured from the river without exposing the carrier to the enemy. M was a small sand-bar at the point.

FORT DEFIANCE.

The lands now embraced within Defiance county were ceded by the Indians to the United States by the treaty of Sept. 29, 1817, at the rapids of the Miami of Lake Erie. Surveys were made from the Indiana line east to the line of the Western Reserve and south to the Greenville treaty line. The base line of this survey is the 41st degree of north latitude and it is also the south line of the Connecticut Western Reserve. On the 12th of February, 1820, the legislature of Ohio passed an act erecting these ceded lands "into fourteen separate and distinct counties."

Among these was Williams county. When Williams was organized in 1824 Henry, Paulding and Putnam counties were attached to it for judicial purposes, with the town of Defiance as the county-seat of Williams county, and it so remained for many years, when Bryan, then covered with a dense forest, was selected as the site of the new county-seat of Williams. Dissatisfaction with this change led to the creation of Defiance county, with Defiance as the seat of justice.

The nucleus of the early settlement of these counties was at Defiance, and it was chiefly settled in what now constitutes Defiance county by those who were active in the early official life of Williams county.

The first court-house (a brick structure) for Williams county was, as late as 1883, standing on the banks of the Maumee in Defiance and used as a private dwelling. A large part of the settlers of Defiance county were Germans. Many were laborers upon the railroads, who remained and took up lands.

Drawn by Henry Howe in 1846.

DISTANT VIEW OF DEFIANCE FROM THE NORTH BANK OF THE MAUMEE.

DEFIANCE IN 1846.—Defiance, the county-seat, is on the south bank of the Maumee, at its junction with the Auglaize, on the line of the canal, 152 miles northwest of Columbus, 58 from Toledo and 50 from Fort Wayne. It was laid out in 1822 by Benj. Level and Horatio G. Philips and contains 1 Methodist and 1 Catho-

L. E. Beardsley, Photo., Defiance, 1887.

NEAR VIEW OF DEFIANCE FROM THE NORTH BANK OF THE MAUMEE.

lic church, 5 mercantile stores and a population of about 700. It is destined, from its natural position, to be, when the country is fully settled, a large and flourishing place; it already has an extensive trade with a large district of country. Defiance is on the site of a large Indian settlement, which extended for miles up and down the

river. Gen. Wayne, on his advance march, arrived at this place Aug. 8, 1794. His army found it surrounded by a highly cultivated country, there being vegetables of every kind in abundance, and not less than one thousand acres of corn around the Indian town, besides immense apple and peach orchards. It had been a great trading point between the Canadian French and the Indians. On the 9th of August Wayne commenced the erection of a fort, which he called Fort Defiance. The army remained here several days and then moved northward, and on the 20th routed the Indians at the Maumee rapids. On their return they completed the fortress. Fort Defiance was built at the confluence of the Auglaize and Maumee, traces of which work are now plainly discernible. The situation is beautiful and commanding: it is indicated in the view of Defiance by the flag shown on the left. Gen. Winchester, previous to his defeat at the river Raisin, in the war of 1812, encamped in a picketed fort, which he built on the Auglaize, about 100 yards south of the other and named Fort Winchester.

Defiance is 115 miles northwest of Columbus and 49 southwest of Toledo, at the confluence of the Auglaize and Maumee, formerly called "The Miami of the Lake," rivers. It is on the line of the W. St. L. & P. R. R. and the B. & O. & C. R. R. County officers in 1888: Probate Judge, John H. Bevington; Clerk of the Court, Simon M. Cameron; Sheriff, Henry Wonderly; Prosecuting Attorney, John W. Winn; Auditor, Wyatt T. Hill; Treasurer, John F. Dowe; Recorder, Geo. A. Heatley; Surveyor, Martin W. Steinberger; Coroner, D. P. Aldrich; Commissioners, Jacob Karst, David Miller, Frank J. Clemmer. Newspapers: Defiance County Express, Rep., Jos. Ralston, proprietor; Democrat, Dem., W. G. Blymer, editor; Weekly Herald, Dem., German, J. A. Diendorfer, editor; Local News, Rep., Aaron F. Schrack, editor. Churches: 1 Presbyterian, 1 Baptist, 1 Episcopal, 2 Catholic, 2 Methodist Episcopal, 1 German, and 1 English, 2

Lutheran, 1 Albright Methodist and 1 United Brethren. Banks: Defiance Na-

tional, James A. Orcutt, president, Edward Squire, cashier; Merchants' National, Wm. C. Holgate, president, E. P. Hooker, cashier.

Industries and Employees.—Karst & Fenger, doors, sash, etc., 34 hands; Burgland & Shead, butter tubs, etc., 69; Defiance Woollen Mills, 37; Defiance Machine Works, wood-working m chinery, 176; Corwin & Kiser, carriages, etc., 10; Kuhn Brothers, tobacco boxer and lumber, 75; Christ. Diehl, beer, 13; Turnbull Wagon Co., wagons and agricultural supplies, 190; L. Archembeault, wagons, etc., 5; Peter Schlosser & Son, carriages, etc., 20; C. Geiger & Son, furniture, 36; Wilhelm & Son, flour, etc., 12; Levi & Ginsburg, eigars, 32; Defiance Paper Co., wrapping paper, 25; John Marshall, lumber, etc., 11; J. V. Olds, spokes and hubs, 11; George H. Dicus, cooperage, 15; Alexander Friedman, eigars, 5; Arbuckle, Ryan & Co., flour, etc., 13; Oconto Box and Barrel Co., barrels and boxes, 40; Marshall and Greenlen, hoops and staves, 36; D. F. Holston & Son, hoops, 65; Crowe & Hooker, hoops and staves, 53; John Rowe & Son, hoops; Trowbridge & Eddy, staves and heading, 65.—State Report for 1887.

Population in 1880, 5,907. School census in 1886, 2,113; C. W. Butler, superintendent.

From early times Defiance has been an important historical point. It occupies the site of the ancient "Tu-en-da-wie" of the Wyandot and "En-sa-woc-sa" of the Shawnee. Wm. C. Holgate, in an address before the Historical Society of the Maumee Valley, describes it as the heart of the Indian nations, the great centre where the ancient races came to live, trade and counsel. He ascribes it to the peculiar topography of the Maumee valley, extending 100 miles east and west and 100 miles north and south, of which Defiance is the centre. The valley is the territory drained by the Maumee and its tributaries, which consists of about twelve counties in Ohio and parts of Michigan and Indiana. The chief tributary streams from the north, the Little St. Joseph and the Tiffin, originate in Hillsdale county, Mich., about fifty miles north of Defiance. All these streams

were navigable to a certain extent. The other two tributary streams from the south, the Auglaize and St. Mary's, originate as far south of Defiance.

Au Glaize and Grand Glaize were the names given by the French to this place, and it was so called in all historical accounts prior to the erection of Fort Defiance. It is claimed on good authority, says Knapp, that the noted chief Pontiac was born here, one of his parents being a Miami and the other belonging to the Ottawa tribe. Heckewelder states "the Miami of the Lake, at the junction of the Auglaize with that river," was the place of abode and refuge in 1781 for a remnant of the Moravian Christian Indians after the massacre of the Muskingum.

In 1780, during the Revolutionary war, an expedition under Col. Byrd was fitted out at Detroit, consisting of 600 men, including Indians and Canadians, with two pieces of artillery, destined for the invasion of Kentucky. This expedition took Au Glaize on their route and, it is inferred, erected a stockade here and rested on both going and returning from Detroit. This was the force that appeared before "Bryant's Station" and "Ruddle's Station" and compelled their surrender, and, after promising protection to the prisoners, massacred them in cold blood.

One of the early historical accounts speaks of a great council of all the Indian tribes, held at Au Glaize in October, 1792, and says it was the largest Indian council of the times; that the chiefs of all the tribes of the Northwest were here, and representatives of the seven nations of Canada and of the twenty-seven nations beyond Canada; that Cornplanter and forty-eight chiefs of the six nations of New York repaired here; that three men of the Gora nations were in attendance, whom it took a whole season to travel to this point. "Besides these," says Cornplanter, "there were so many nations that we cannot tell the names of them."

The question of peace or war was long and earnestly discussed: the chiefs of the Shawnees being for war, and Red Jacket, the Seneca chief, for peace. This convention represented a larger territory than any convention of Indians we have an account of, before or since, being held on the American continent. It seems to have been a natural intuition that led the red men of the forest to see that this was the strategetic centre of North America.

Captivity of Two White Boys.—Captives were brought to Au Glaize; and what is were brought to the Grand what is singular two boys, when captured, one nine years of age, John Brickell, from Pittsburg; the other eleven years of age, Oliver M. Spencer, from Cincinnati, have left written accounts of their experience. Brickell was taken in February, 1791, and was adopted by a Delaware Indian named Whingy Pooshies and lived with his family four years. In his narrative he says he was treated very kindly, every way as one of themselves, and had every opportunity of learning their manners, customs and religion, and thinks he has been influenced to good more from what he learned among these Indians than from what he has learned from amongst people of his own color. Honesty, bravery and hospitality were cardinal virtues among them. When a company of strangers come to a town and encamp, they are not asked if they want anything, but a runner starts out proclaiming "strangers have arrived." On this every family provide of the best they have, and take it to the strangers, for which not a thought is had of anything being received in return, and when they start out they are helped on their journey. Worshipping the Great Spirit, whom they call Manitou, "never," says Brickell, "even on one occasion did I know of their using the name irreverently," and they had no term in their language by which they could swear profanely. Their young honor the aged. The first corn that is fit to use is made a feast-offering. The first game that is taken on a hunting expedition is dressed whole without the breaking of a bone, with the head, ears and hoof on, and being cooked whole, all eat of it, and if any is left it is entirely burnt up; and in respect to things clean and unclean they follow the Jewish customs. They have no public worship except the feasts, but frequently observe family worship, in which they sing and pray. They believe in a resurrection after death, and in future rewards and punishments. Their cruel treatment of their enemies in war seems but the acting out of the precepts, "an eye for an eye, a tooth for a tooth, and blood for blood." Young Brickell was trained to hunt and much of his time was out on hunting expeditions. These were generally to the streams of the Maumee in summer, but in winter extended to the Scioto, the Hocking and Licking rivers. During his four years' so journ here, two very important events occurred—St. Clair's defeat, in 1791, and Wayne's victory, August 20, 1794.

He gives some interesting items in regard

to Wayne's victory. The following winter his people had to winter at the mouth of Swan creek, on the site of Toledo. He says: "We were entirely dependent upon the British, and they did not half supply us. The starving and sickly condition of the Indians made them very impatient, and they became exasperated at the British. It was finally concluded to send a flag to Fort Defiance in order to make a treaty with the Americans. This was successful. Our men found the Americans ready to treat, and they agreed upon an exchange of prisoners. I saw nine white prisoners exchanged for nine Indians. I was left, there being no Indian to give for me. Patton, Johnston, Sloan and Mrs. Baker were four of the nine; the names of the others I do not recollect.

On the breaking-up of spring we all went to Fort Defiance, and arriving on the shore opposite, we saluted the fort with a round of rifles, and they shot a cannon thirteen times. We then encamped on the spot. On the same day Whingy Pooshies told me I must go over to the fort. The children hung around me, crying, and asked me if I was going to leave them. I told them I did not know. When we got over to the fort and were seated with the officers, Whingy Pooshies told me to stand up, which I did. He then arose and addressed me in about these words: 'My son, these are men the same color with yourself, and some of your kin

may be here, or they may be a great way off. You have lived a long time with us. I call on you to say if I have not been a father to you; if I have not used you as a father would a son?' I said, 'You have used me as well as a father could use a son.' He said, 'I am glad you say so. You have lived long with me; you have hunted for me; but your treaty says you must be free. If you choose to go with people of your own color I have no right to say a word; but if you choose to stay with me your people have no right to speak. Now reflect on it and take your choice and tell us as soon as you make up your mind.' I was silent for a few minutes, in which time I seemed to think of most everything. I thought of the children I had just left crying; I thought of the Indians I was attached to, and I thought of my people whom I remembered; and this latter thought predominated, and I said, 'I will go with my kin.' The old man then said, 'I have raised I have learned you to hunt; you are a good hunter. You have been better to me than my own sons. I am now getting old and I cannot hunt. I thought you would be a support to my old age. Tleaned on you as on a staff. Now it is broken—you are going to leave me and I have no right to say a word, but I am ruined.' He then sank back in tears to his seat. I heartily joined him in his tears, parted with him, and have never seen or heard of him since.

On his return from his captivity Brickell settled in Columbus, and became one of its most esteemed citizens. O. M. Spencer, the eleven-year-old Cincinnati boy, was taken in 1792, while a little way from home, by two Indians. His captor was a Shawnee, but he shortly transferred his rights to his companion, Wah-paw-waw-qua, or White Loon, the son of a Mohawk chief. At their arrival at the confluence of the Auglaize and the Maumee, after disposing of their furs to a British Indian trader, they crossed over to a small bark-cabin near its banks, and directly opposite the point, and, leaving him in charge of its occupant—an old widow, the mother-in-law of Waw-paw-waw-qua—departed for their homes, a Shawnee village, on the river about one mile below.

Cooh-coo-che, the widow in whose charge young Spencer had been left, was a princess of the Iroquois tribe. She was a priestess, to whom the Indians applied before going on any important war expedition. She was esteemed a great medicine-woman.

The description of the settlement at that time is from the narrative of Spencer:

On this high ground (since the site of Fort Defiance, erected by General Wayne in 1794), extending from the Maumee a quarter of a mile up the Auglaize, about two hundred yards in width, was an open space, on the west and south of which were oak woods, with hazel undergrowth. Within this opening, a few hundred yards above the point, on the steep high bank of the Auglaize, were five or six cabins and log-houses, inhabited principally by Indian traders. The most northerly, a large hewed log-house, divided below into three apartments, was occupied as a warehouse, store and dwelling by George Ironside, the most wealthy and influential of

the traders on the point. Next to his were the houses of Pirault (Pero), a French baker, and M'Kenzie, a Scot, who, in addition to merchandising, followed the occupation of a silversmith, exchanging with the Indians his brooches, ear-drops, and other silver ornaments, at an enormous profit, for skins and furs. Still farther up were several other families of French and English; and two American prisoners, Henry Ball, a soldier taken at St. Clair's defeat, and his wife, Polly Meadows, captured at the same time, were allowed to live here, and by labor to pay their masters the price of their ransom; he by boating to the rapids of the Maumee.

and she by washing and sewing. Fronting the house of Ironside, and about fifty yards from the bank, was a small stockade enclosing two hewed log-houses, one of which was occupied by James Girty (brother of Simon), the other, occasionally, by M'Kee and Elliott, British Indian agents, living at Detroit.

From this station I had a fine view of the large village more than a mile south, on the east side of the Auglaize, of Blue Jacket's town, and of the Maumee river for several miles below, and of the extensive prairie covered with corn, directly opposite, and forming together a very handsome landscape.

Young Spencer was redeemed from captivity on the last day of February, 1793, and through the solicitation of Washington to the governor of Canada. The latter instructed Col. Elliott, the Indian agent, to interpose for his release. He was taken down the Maumee in an open pirouge, thence paddled in a canoe by two squaws along the shore of Lake Erie to Detroit. His route thence was by Lake Erie in a vessel to Erie, Pa., thence to Forts Chippewa and Niagara, across New York State, then mostly a wilderness, to Albany, down the Hudson to New York city, thence through Pennsylvania to Cincinnati. The distance was 2,000 miles, and such the difficulties to be overcome that two years were consumed in the journey; but for the protecting auspices of those highest in authority it could not have been accomplished at all.

Young Spencer became a Methodist minister, and reared a family of the highest respectability; one son became postmaster of Cincinnati about 1850, another

a judge of its superior court.

Wayne was eight days in building Fort Defiance; began on the 9th of August and finished on the 17th. After surveying its block-houses, pickets, ditches, and fascines, Wayne exclaimed, "I defy the English, Indians, and all the devils in hell to take it." Gen. Scott, who happened at that instant to be standing at his side, remarked, "Then call it 'FORT DEFIANCE!" and so Wayne, in a letter to the Secretary of War written at this time, said: "Thus, sir, we have gained possession of the grand emporium of the hostile Indians of the West, without loss of blood. The very extensive and highly cultivated fields and gardens show the work of many hands. The margin of those beautiful rivers—the Miamis of the lake (or Maumee) and Auglaize—appear like one continued village for a number of miles both above and below this place; nor have I ever before beheld such fields of corn in any part of America from Canada to Florida. We are now employed in completing a strong stockade fort, with four good block-houses, by way of bastions, at the confluence of the Auglaize and the Maumee, which I have called Defiance."

When first known, there was an abundance of apple trees at Defiance. bank of the Auglaize at one spot was lined with these trees, and there were single trees scattered about in various places. It is supposed they were planted by French missionaries and traders during the French dominion on the lakes, and cared for afterwards by the Indian trappers and traders. The fruit of these trees was better than that of the so-called natural trees of the present time; they grew larger, and had a more agreeable taste. The stocks were more like the forest trees; higher to the branches, longer to the limbs than the grafted trees of the present day. Probably the shade and contracted clearings in which they were grown had much to do with this large growth. There was then no civilization to bring in borers, worms, and curculios, and so the trees thrived without hindrance. The "County History," published in 1883, from which the above was derived, says: "Defiance has been famed for the possession of a monstrous apple tree. Strangers have seldom failed to visit it, to measure its proportions, and speculate upon its age and origin. It stands on the narrow bottom, on the north side of the Maumee, and nearly opposite the old fort. It has never failed, in the knowledge of present settlers, in producing a crop of very excellent apples. One large branch, however, has of late years been broken off by the storms, which has much marred its proportions; the remainder is yet healthy and prospering. Before the town was laid out there were many trees, equally thrifty and not less in size, in

this vicinity." The famed apple tree was destroyed by a gale in the fell of 1886. It was judged to be 150 years old, and was much dilapidated. It has produced

in some seasons 200 bushels of apples.

In the war of 1812 Fort Defiance was an important point for the concentration of troops, under Gen. Harrison, against the British and Indians on the frontier. On one occasion a revolt took place in the Kentucky regiment of Col. Allen. Gen. Harrison was not present, but luckily arrived that night in camp, and had retired, when he was suddenly awakened by Col. Allen and Maj. Hardin with the bad tidings. The outcome illustrates the knowledge of his men and the inimitable tact which Gen. Harrison appears to have possessed in his management of them. The details are from Knapp's "History of the Maumee Valley:"

Col. Allen and Major M. D. Hardin informed the General that Allen's regiment, exhausted by the hard fare of the campaign, and disappointed in the expectation of an immediate engagement with the enemy, had, in defiance of their duty to their country and all the earnest impassioned remonstrances of their officers, determined to return home. They begged the General to rise and interfere, as the only officer who could bring the mutineers to a sense of their duty.

Gen. Harrison informed the officers that he would take the matter in hand, and they retired. In the meantime, he sent an aid to Gen. Winchester to order the alarm, or point of war, to be beat the following morning in-

stead of the reveille.

The next morning, at the roll of the drum, every soldier sprang to his post, all alert and eager to learn the cause of the unexpected war alarm. Gen. Winchester formed them into a hollow square; at this moment Gen. Harrison appeared upon parade. The effect on the assembled troops of this sudden and unexpected appearance in their midst of their favorite commander can be easily imagined. Taking advantage of this Gen. Harrison immediately addressed them. He began by lamenting that there was, as he was informed, considerable discontent in one of the Kentucky regiments; this, although a mortification to himself, on their account, was happily of little consequence to the government. He had more troops than he knew what to do with at the present stage of the campaign; he was expecting daily the arrival of the Pennsylvania and Virginia quotas. It is fortunate, said this officer, with the ready oratory for which his native Virginia is so famed, that he had found out this dissatisfaction before the campaign was farther advanced, when the discovery might have been mischievous to the public interests, as well as disgraceful to the parties concerned. Now, so far as the government was interested, the discontented troops, who had come into the woods with the expectation of finding all the luxuries of home and of peace, had full liberty to return. He would, he continued, order facilities to be furnished for their immediate accommodation. But he could not refrain from expressing the mortification he anticipated for the reception they would meet from the old and the young, who had greeted them on their march to the scene of war, as their gallant

neighbors.

What must be their feelings, said the General, to see those whom they had hailed as their generous defenders, now returning with-out striking a blow and before their term of plighted service had expired? But if this would be the state of public sentiment in Ohio, what would it be in Kentucky? If their fathers did not drive their degenerate sons back to the field of battle to recover their wounded honor, their mothers and sisters would hiss them from their presence. If, however, the discontented men were disposed to put up with all the taunts and disdain which awaited them wherever they went they were, General Harrison again assured them, at full liberty to go back.

The influence of this animated address

was instantaneous.

This was evinced in a manner most flattering to the tact and management of the commander. Col. J. M. Scott, the senior colonel of Kentucky, and who had served in the armies of Harmar, St. Clair and Wayne, in the medical staff, now addressed his men.

These were well known in the army as the "Iron Works" from the neighborhood from which they had come. "You, my boys," said the generous veteran, "will prove your attachment for the service of your country and your general by giving him three cheers.

The address was attended with immediate success, and the air resounded with the shouts of both officers and men.

Colonel Lewis next took up the same

course and with the same effect.

It now became the turn of the noble Allen again to try the temper of his men. He begged leave of the general to address them. but excess of emotion choked his utterance. At length he gave vent to the contending feelings of his heart in a broken but forcible address, breathing the fire which ever burned so ardently in his breast. At the close of it, however, he conjured the soldiers of his regiment to give the general the same manifestation of their patriotism and returning sense of duty which the other Kentucky regiments had so freely done. The wishes of their high-spirited officer were complied with, and a mutiny was nipped in its bud which might, if persisted in, have spread disaffection

through the Kentucky troops, to the disgrace of that gallant State and the lasting injury of the public cause. No troops, however, behaved more faithfully or zealously through

the remainder of their service till the greater part of them offered up their lives in defence of their country on the fatal field of Raisin.

HICKSVILLE is twenty miles west of Defiance, on the line of the B. & O. & C. R. R. It has two newspapers: *Independent*, Republican, T. G. Dowell, editor; *News*, Independent, W. C. B. Harrison, editor. Churches: 1 Catholic, 1 Christian, 1 Methodist, 1 Episcopal, 2 Presbyterian, and, in 1880, 1,212 inhabitants.

Hicksville was laid out in 1836 by Miller Arrowsmith for John A. Bryan, Henry W. Hicks, and Isaac S. Smith. The next spring the Hon. Alfred P. Edgerton (born in Plattsburg, N. Y., in 1813) came out here in 1837 and assumed the management of the extended landed interests of the "American Land Company" and of the Messrs. Hicks, their interest being known as the "Hicks Land Company." He revised and added to the layout of the town, built mills, and made extensive improvements, and was a generous contributor to every good work or thing connected with the welfare of the community. In his land-office in Hicksville, up to October 5, 1852, he sold 140,000 acres, all to actual settlers.

In 1857 he removed to Fort Wayne, Ind., but remained a citizen of Ohio until 1862, and now, late in life, is Civil Service Commissioner

under the general government.

Mr. Edgerton is a man of remarkable intellectual and physical vitality, and his life has been strongly and usefully identified with the history of this region and the State. In 1845 he was elected to the State Senate from the territory embraced by the present counties of Williams, Defiance, Paulding, Van Wert, Mercer, Auglaize, Allen, Henry, Putnam, and part of Fulton, where he became the leader of the Democratic party, and electrified the Senate by his clear, logical speeches in opposition to some of the financial measures advocated by the late Alfred Kelley, the Whig leader. It was stated that "while the debate between the two was one of the most noted of the times, that the respectful deference shown by Mr. Edgerton to

ALFRED P. EDGERTON.

Mr. Kelley, who was the senior, won for him the respect of the entire Whig party of the State and secured to him ever after the warm friendship and respect of Mr. Kelley, which he often exhibited in kind and valuable ways." This was during the period of our original tour over the State, and we well remember seeing him in his place in the Senate, being impressed by the keen, sharp, intellectual visage of the then young man. That memory has prompted us to this full notice.

He was elected to Congress in 1850 and again in 1852, and during the latter term, with several others of the more sagacious members of the Democratic party,

opposed the rescinding of the Missouri Compromise.

On closing up the affairs of the land company Mr. Edgerton bought a large amount of land of them at a merely nominal price. We terminate this account of him by the relation of a very pleasant incident of honorable history, as related by Mr. Frank G. Carpenter:

Along early in the seventies Mr. Edgerton was worth between \$800,000 and \$1,000,000, and he was helping his brother, Lycurgus Edgerton, who was doing business in New

York. His brother had only his verbal promise for surety, and when the panic of 1873 came around and caused him to fail to the extent of \$250,000, Edgerton was not

legally responsible for his debts. Nevertheless, he paid every dollar of them, though in doing so it cost him the larger part of his fortune. In order to get the ready money he had to sell valuable stocks, such as the Pittsburg, Fort Wayne and Chicago railroad stock, and others which are now away above par, but which went then at a sacrifice. Upon Edgerton's friends urging him not to pay these debts of his brother, stating that he could not be held for them, he replied that the legal obligation made no difference to him. He had promised his brother that he would be his surety, and had he made no such promise he would have paid his brother's

debts rather than see his notes dishonored. Such examples as that above instanced by Mr. Carpenter of a fine sense of honor on the part of public men are of extraordinary educational value to the general public, especially so to the young. Hence it pleases us to here eite another illustrative instance on the part of one of Ohio's gallant officers, Gen. Chas. H. Grosvenor, the member of Congress from the Athens district. He made claim for an invalid pension, which was allowed. Later, finding he could attend to business so as to support his family, he felt it wrong to accept of his pension, and ordered the check in his favor, which was about \$5,000, to be cancelled.

DELAWARE.

DELLAWARE COUNTY was formed from Franklin county, February 10, 1808. It lies north of Columbus. The surface is generally level and the soil clay, except the river bottoms. About one-third of the surface is adapted to meadow and pasture, and the remainder to the plough. The Scioto and branches run through north and south—the Olentangy, Alum creek, and Walnut creek. Area, 450 square miles. In 1885 the acres cultivated were 108,277; in pasture, 98,488; woodland, 43,371; lying waste, 1,009; produced in wheat, 279,917 bushels; corn, 1,410,875; wood, 606,665 pounds; sheep, 107,895. School census 1886, 8,487; teachers, 196. It has 72 miles of railroad.

The population of the county in 1820 was 7,639; in 1840, 22,060; in 1860, 23,902; in 1880, 27,381, of whom 21,890 were Ohio-born.

The name of this county originated from the Delaware tribe, some of whom once dwelt within its limits, and had extensive corn-fields adjacent to its seat of justice. John Johnston says:

"The true name of this once powerful tribe is Wa-be-nugh-ka, that is, 'the people from the east,' or 'the sun rising.' The tradition among themselves is, that they originally, at some very remote period, emigrated from the West, crossed the Mississippi, ascending the Ohio, fighting their way, until they reached the Delaware river (so named from Lord Delaware), near where Philadelphia now stands, in which region of country they became fixed.

About this time they were so numerous that no enumeration could be made of

the nation. They welcomed to the shores of the new world that great lawgiver, William Penn, and his peaceful followers, and ever since this people have entertained a kind and grateful recollection of them; and to this day, speaking of good men, they would say, 'Wa-she-a, E-le-ne,' such a man is a Quaker, i. e., all good men are Quakers. In 1823 I removed to the west of the Mississippi persons of this tribe who were born and raised within thirty miles of Philadelphia. These were the most squalid, wretched, and degraded of their race, and often furnished chiefs with a subject of reproach against the whites, pointing to these of their people and saying to us, 'see how you have spoiled them,' meaning they had acquired all the bad habits of the white people, and were ignorant of hunting, and incapable of making a livelihood as other Indians.

In 1819 there were belonging to my agency in Ohio 80 Delawares, who were

stationed near Upper Sandusky, and in Indiana 2,300 of the same tribe.

Bockinghelas was the principal chief of the Delawares for many years after my going into the Indian country; he was a distinguished warrior in his day, and an old man when I knew him. Killbuck, another Delaware chief, had received a liberal education at Princeton College, and retained until his death the great outlines of the morality of the Gospel."

In the middle of the last century the Forks of the Muskingum, in Coshocton county, was the great central point of the Delawares. There are yet fragments of

the nation in Canada and in the Indian Territory.

The following historical sketch of Delaware county and its noted characters was written for the first edition by Dr. H. C. Mann:

The first settlement in the county was made May 1, 1801, on the east bank of the Olentangy, five miles below Delaware, by Nathan Carpenter and Avery Powers, from Chenango county, N. Y. Carpenter brought his family with him and built the first cabin near where the farm-house now stands. Powers' family came out towards fall, but he had been out the year before to explore the country and select the location. In April, 1802, Thomas Celler, with Josiah McKinney, from Franklin county, Pa., moved in and settled two miles lower down, and in the fall of 1803 Henry Perry, from Wales, commenced a clearing and put up a cabin in Radnor, three-fourths of a mile south of Delhi. In the spring of of a mile south of Deini. In the spring of 1804 Aaron, John and Ebenezer Welch (brothers) and Capt. Leonard Monroe, from Chenango, N. Y., settled in Carpenter's neighborhood, and the next fall Col. Byxbe and his company, from Berkshire, Mass., settled on Alum great and paged their settled on Alum creek, and named their township Berkshire. The settlement at Norton, by William Drake and Nathaniel Wyatt; Lewis settlement, in Berlin, and the one at Westfield followed soon after. In 1804 Carpenter built the first mill in the county, where the factory of Gun, Jones & Co. now stands. It was a saw-mill, with a small pair of stones attached, made of boulders, or "nigger heads," as they are commonly called. It could only grind a few bushels a day, but still it was a great advantage to the settlers. When the county was organized, in 1808, the following officers were elected, viz. : Avery Powers, John Welch and Ezekiel Brown, commissioners; Rev. Jacob Drake, treasurer; Dr. Reuben Lamb, recorder, and Azariah Root, surveyor. The officers of the court were Judge Belt, of Chillicothe, president; Josiah M'Kinney, Thomas Brown and Moses Byxbe, associate judges; Ralph Osborn, prosecuting attorney; Solomon Smith, sheriff, and Moses Byxbe, Jr., clerk. The first session was held in a little cabin that stood north of the sulphur spring. The grand jury sat under a cherry-tree, and the petit jury in a cluster of bushes on another part of the lot, with their constables at a considerable distance to keep off intruders.

Block-houses.—This being a border county during the last war, danger was apprehended from the Indians, and a block-house was built in 1812 at Norton, and another, still standing on Alum creek, seven miles east from Delaware, and the present dwelling of L. H. Cowles, Esq., northeast corner Main and William streets, was converted into a temporary stockade. During the war this county furnished a company of cavalry, that served several short campaigns as volunteers under Capt. Elias Murray, and several entire companies of infantry were called out from here at different times by Gov. Meigs, but the county never was invaded.

Drake's Defeat.—After Hull's surrender, Capt. Wm. Drake formed a company of rangers in the northern part of the county to protect the frontier from maurauding bands of Indians who then had nothing to restrain them, and when Lower Sandusky was threatened with attack, this company, with great alacrity, obeyed the call to march to its defence. They encamped the first night a few miles beyond the outskirts of the settlement. In those days the captain was a great wag, and naturally very fond of sport, and being withal desirous of testing the courage of his men, after they had all got asleep, he slipped into the bushes at some distance, and, dis-

charging his gun, rushed towards the camp yelling Indians! Indians! with all his might.

The sentinels, supposing the alarm to proceed from one of their number, joined in the cry and ran to quarters; the men sprang to their feet in complete confusion, and the courageous attempted to form on the ground designated the night before in case of attack; but the first lieutenant, thinking there was more safety in depending upon legs than arms, took to his heels and dashed into the Seeing the consternation and impending disgrace of his company, the captain quickly proclaimed the hoax and ordered a halt, but the lieutenant's frightened imagination converted every sound into Indian yells and the sanguinary war-whoop, and the louder the captain shouted, the faster he ran, till the sounds sank away in the distance and he supposed the captain and his adherents had succumbed to the tomahawk and the scalping-knife. Supposing he had been asleep a few minutes only, he took the moon for his guide and flew for home, but having had time to gain the western horizon she led him in the wrong direction, and after breaking down saplings and running through brush some ten miles through the woods, he reached Radnor settlement just at daybreak, bareheaded and with his garments flowing in a thousand streams. The people, roused hur-riedly from their slumber and horrified with his report that the whole company was massacred but him who alone had escaped, began a general and rapid flight.

Each conveyed the tidings to his neighbor, and just after sunrise they came rushing through Delaware, mostly on horse-back, many in wagons, and some on foot, presenting all those grotesque appearances that frontier settlers naturally would, supposing the Indians close in their rear. Many anecdotes are told, amusing now to us who cannot realize their feelings, that exhibit the varied hues of courage and trepidation characterizing different persons, and also show that there is no difference between real and supposed danger, and yet those actuated by the latter seldom receive the sympathy of

their fellows.

One family, named Penry, drove so fast that they bounced a little boy, two or three years old, out of the wagon, near Delaware, and did not miss him till they had gone five or six miles on their way to Worthington, and then upon consultation concluded it was too late to recover him amid such imminent danger, and so yielded him up as a painful sacrifice! But the little fellow found protection from others, and is now living in the western part of the county. One woman, in the confusion of hurrying off, forgot her babe till after starting, and ran back to get it, but being peculiarly absent-minded she caught up a stick of wood from the chimney corner and hastened off, leaving her child again quietly sleeping in the cradle! A large portion of the people fled to Worthington and Franklinton, and some kept on to Chillicothe.

In Delaware the men who could be spared from conveying away their families, or who had none, rallied for defence and sent scouts to Norton to reconnoitre, where they found the people quietly engaged in their ordinary avocations, having received a message from the captain; but it was too late to save the other settlements from a precipitate flight. Upon the whole, it was quite an injury to the county, as a large amount of produce was lost from the intrusion of cattle and the want of hands to harvest it; many of the people being slow in returning and some never did. Capt. Drake, with his company, marched on to Sandusky to execute the duty assigned him without knowing the effect produced in his rear. He has since been associate judge and filled several other offices in the county, and is still living, respected by his neighbors and characterized by hospitality and good humor and his strong

penchant for anecdote and fun.

Early Customs.—During the early period of the county the people were in a condition of complete social equality; no aristocratic distinctions were thought of in society, and the first line of demarkation drawn was to separate the very bad from the general mass. Their parties were for raisings and log-rollings, and the labor being finished, their sports usually were shooting and gymnastic exercises with the men, and convivial amusements among the women; no punctilious formality, nor ignoble aping the fashions of licentious Paris, marred their assemblies, but all were happy and enjoyed themselves in seeing others so. The rich and the poor dressed alike; the men generally wearing hunting-shirts and buckskin pants, and the women attired in coarse fabrics produced by their own hands. Such was their common and holiday dress, and if a fair damsel wished a superb dress for her bridal day, her highest aspiration was to obtain a common American cotton check. The latter, which now sells for a shilling a yard, then cost one dollar, and five yards was deemed an ample pattern. Silks, sating and fancy goods, that now inflate our vanity and deplete our purses, were not then even dreamed of.

The cabins were furnished in the same style of simplicity; the bedstead was homemade, and often consisted of forked sticks driven into the ground with cross poles to support the clapboards or the cord. One pot, kettle, and frying-pan were the only articles considered indispensable, though some included the tea-kettle; a few plates and dishes upon the shelf in one corner was as satisfactory as is now a cupboard full of china, and their food relished well from a puncheon table. Some of the weathiest families had a few split-bottom chairs, but, as a general thing, stools and benches answered the place of lounges and sofas, and at first the green sward or smoothly levelled earth served the double purpose of floor and carpet. Whisky toddy was considered luxury enough for any party-the woods furnished abundance of venison, and corn pone supplied the place of

every variety of pastry. Flour could not for some time be obtained nearer than Chillicothe or Zanesville; goods were very high, and none but the most common kinds were brought here, and had to be packed on horses or mules from Detroit, or wagoned from Philadelphia to Pittsburg, thence down the Ohio river in flat boats to the mouth of the Scioto, and then packed or hauled up. The freight was enormous, costing often \$4 per ton. Tea retailed at from two to three dollars a pound, coffee 75 cents, salt \$5 to \$6 per bushel (50lbs.). The coarsest calicoes were \$1 per yard, whisky from \$1 to \$2 per gallon, and as much of the latter was sold as of all other articles, for several years after Delaware was laid out; but it must be remembered that this then was the border town, and had considerable trade with the Indians.

It was the common practice to set a bottle on each end of the counter for customers to help themselves gratuitously to enable them to purchase advantageously! Many people suffered hardships and endured privations that now would seem insupportable. In the fall of 1803 Henry Perry, after getting up his cabin near Delhi, left his two sons and returned to Philadelphia for the remainder of his family, but finding his wife sick, and afterwards being sick himself, could not get back till the next June. These two little boys, Levi and Pepper, only eleven and nine years old, remained there alone eight months, fifteen miles from any white family, and surrounded by Indians, with no food but the rabbits they could catch in the hollow logs; the remains of one deer that the wolves killed near them, and a little corn meal that they occasionally obtained of Thomas Cellar by following down the "Indian trace." The winter was a severe one, and their cabin was open, having neither daubing, fire-place, nor chimney; they had no gun, and were wholly unaccustomed to forest life, being fresh from Wales, and yet these little fellows not only struggled through but actually made a considerable clearing! Jacob Foust, at an early day, when his wife was sick and could obtain nothing to eat that she relished, procured a bushel of wheat, and throwing it upon his shoulders carried it to Zanesville to get it ground, a distance of more than seventy-five miles, by the tortuous path he had to traverse, and then shouldering his flour retraced his steps home, fording the streams and camping out nights.

BIOGRAPHY.—*Col. Moses Byxbe* was for several years the most prominent man in the county, being the owner of some 8,000 acres of valuable land in Berkshire and Berlin, and joint owner with Judge Baldwin of about thirty thousand acres more, the sale of which he had the entire control. These were military lands which he sold on credit, at prices varying from two and a half to ten dollars an acre. He possessed a complete knowledge of human nature, and was an energetic and prompt business man. Upon the organization of the county he was elected one of the associate judges, and continued to hold the

office till 1822. He was afflicted with partial insanity before he died, which occurred in

1827 at the age of 67. Solomon Smith, Esq., was born in New Salem, N. H., and came here with Col. Byxbe in 1804. He was the first sheriff in the county, and was the first justice of the peace in the township, which office he held, by repeated elections, more than twenty years. He was also the first postmaster, and continued many years in that capacity. The responsible offices of county treasurer and county auditor he also filled for many years, and discharged the duties of all these stations with an accuracy seldom excelled, and a fidelity never questioned. In him was exhibited an instance of a constant office-holder and an honest man, and for a long time he possessed more personal popularity than any other man in the county. He died of congestive fever, at Sandusky City, on his return from New York, July 10, 1845, in his 58th

year, and his remains were brought here for interment.

Hon. Ezekiel Brown was born in Orange county, N. Y., in 1760, and moved to Northumberland county, Pa., when about ten years old. In 1776 he volunteered and marched to join Washington's army, which he reached just after the battle of Trenton. He participated in four different engagements, and in 1778 joined a company of rangers called out against the Indians. On the 24th of May, when out scouting with two others, they same across a party of fifteen Indians watching a house, and were themselves discovered at the same moment. The Indians fired and killed one man, and Brown and his comrade instantly returned the fire, wounding an Indian, and then fled. The other escaped, but he was not fleet enough, and was captured. They were Delawares and Cayugas, and first took him to Chemung, an Indian town on Tioga river, where he had to run the gauntlet, being badly beaten, and received a severe wound on his head from a tomahawk, but he succeeded in reaching the council-house without being knocked down.

After a few days they resumed their march to the north, and met Colonel Butler with a large body of British, tories and Indians on their way to attack Wyoming, and he was compelled to run the gauntlet again to gratify the savages. This time he did not get through, being felled by a war-club and awfully mangled. He recovered and proceeded on to the main town of the Cayugas, where Scipio, N. Y., now stands, and having again passed the gauntlet ordeal successfully he was adopted by a family, in the place of a son killed at Fort Stanwix. Afterwards he was taken to Canada, and kept to the close of the war in 1783, when he received a passport from the British general, M'Clure, and returned, after an absence of five years, to his friends in Pennsylvania. In 1800 he moved to Ohio, and in 1808 he settled near Sunbury, and was immediately elected one of the first county commissioners. Afterwards he was elected associate judge, and served in several minor offices, and died about five years ago, leaving

the reputation of an upright man.

Capt. John Minter, from Kentucky, one of the early settlers in Radnor, and brotherin-law of Col. Crawford, who was burnt by the Indians, was, in his younger days, a great hunter, and became famous for a terrible bear fight, in which he came very near losing his life. When hunting alone one day he came across a very large bear and fired at him. The bear fell, and reloading his gun Minter advanced, supposing him dead, and touched his nose with the muzzle of the gun, when he instantly reared upon his hind legs to seize him. Minter fired again, which increased his rage, only inflicting a flesh wound, and then threw his hatchet at him; and as the bear sprang forward to grasp him he struck him with the rifle on the head with all his might, producing no other effect than shivering the gun to pieces. Too late then to escape he drew his big knife from his sheath and made a plunge at his heart, but old Bruin, by a stroke of his paw, whirled the knife into the air, and enfolding its weaponless owner with his huge arms both rolled to the ground.

A fearful struggle then ensued between the combatants: one ruled by unvarying instinct, and the other guided by the dictates of reason. The former depended wholly upon hugging his adversary to death, while the latter aimed at presenting his body in such positions as would best enable him to withstand the vice-like squeeze till he could loosen the grasp. He was about six feet in height, possessing large bones and well-developed muscles, and being properly proportioned was very athletic. The woods were open and clear of underbrush, and in their struggles they rolled in every direction. Several times he thought the severity of the hug would finish him; but by choking the bear he would compel him to release his hold to knock off his hands, when he would recover his breath and gain a better position. After maintaining the contest in this way several hours they, happily for him, rolled back near where his knife lay, which inspired him with buoyant hope, but he had to make many ineffectual efforts before he could tumble the bear within reach of it. Having finally recovered it he stabbed him at every chance till he at last bled to death, only relaxing his

hold when life became extinct.

He attempted to get up, but was too much exhausted, and crawling to a log, against which he leaned, his heart sickened as he contemplated the scene. Not a rag was left on him, and over his back, arms and legs his flesh was lacerated to the bones by the claws of the bear. By crawling and walking he reached home after night with no other covering than a gore of blood from head to foot. His friends, who went out next morning to survey the ground and bring in the trophy, said the surface was torn up by them over a space of at least half an acre. After several weeks he recovered, but he carried with him the cicatrices and welts, some of which were more than a quarter of an inch thick, till he

died, which occurred about fifteen years ago. He never desired another bear hug, but gave up hunting, and turning his attention to agriculture left his children a comfortable

Rev. Joseph S. Hughes, from Washington, Pa., came to Delaware in 1810, and organized the first Presbyterian church here, and also those in Liberty and Radnor. For a short time, he was chaplain in the army, and was with Hull when he surrendered, at which time he returned. The societies being unable to pay much salary, he sought his support mainly from other sources, serving several years as clerk of the court, and afterwards in the capacity of editor. He possessed a liberal education, superadded to oratorical powers of a superior order by nature. As an orator he is described as being graceful, mellifluous, persuasive and convincing, and he has left the reputation among many of the old settlers of being the most effective speaker that they have ever heard. In the social circle, too, he excelled, but unfortunately he had an indomitable penchant for festivity and sport. Many anecdotes are related detracting from his clerical character, and when dwelt upon, we must not forget to associate the habits and customs of the times in which they occurred.

For instance, it is said that one time, on the occasion of a wedding at Capt. Minter's, after the ceremonies had been solemnized and the luxuries duly honored, he started off about dusk to go to a place some five miles through the woods, but after dark returned somewhat scratched by the bushes, and reported having been lost, and concluded to stay till morning. According to the general custom on such occasions, all the young folks in the settlement had assembled for a frolic, and they charged him with having returned to participate with them, and as he was a good musician, and their "knight of the bow" had disappointed them, they insisted upon his playing the fiddle for them to dance, which he did all night, with an occasional intermission for refreshment or to romp! Some of the old citizens say also that he was a good hand at pitching quoits, and as it was common to choose sides and pitch for the "grog," he seldom even then backed out!

For these and other charges he was arraigned before the presbytery, where, declining all assistance, and relying on his own ingenuity and eloquence, he made a successful defence. He continued to preach as "stated supply" until he was suddenly cut off by an epidemic fever in the fall of 1823, and was interred in the old burying-ground, but no tombstone points out the place where his mouldering remains lie. He was succeeded in 1824 by Rev. Henry Vandeman, the first installed pastor, and who has retained his charge ever since, a fact that is mentioned, because in the west preachers seldom retain a pastoral charge so long, and in this presbytery there is no similar instance, excepting that of Dr. Hodge, of Columbus.

Antiquities.—The remains of ancient forti-

fications are found in three places in the county, the most remarkable of which is in the lower part of Liberty, about eleven miles below Delaware, on the east bank of the

Olentangy.
Indian Villages.—There were formerly two villages belonging to the Delawares, mostly within the limits of the present town of Delaware. One occupied the ground around the east end of William street, and the other was at the west end, extending from near the sawmill to the hill-side. Upon the ground now occupied by the town, they cultivated a corn-field of about 400 acres. The Mingoes had a small village half a mile above town, on "horse-shoe bottom," where they also raised

Many of the old pioneers entertained towards the Indians an inveterate hatred, and did not consider it really criminal even to murder them. One time, after the last war, a dead Indian was seen floating down the Scioto on two logs, lashed together, having his gun and all his accoutrements with him. He had been shot, and the people believed the murderer was George Shanon, who had been in service considerably during the war, and one time when out, not far from Lower Sandusky, with a small company, fell in with a party of warriors and had to retreat. He lingered behind till he got a shot, and killed As soon as he fired, several Indians sprang forward to catch him alive, but being swift on foot, he could easily keep ahead, when he suddenly came to an open field, across which he had to run or be cut off. The Indians gained the first side just as he

was leaping the fence on the other and fired at him, one ball entering his hip. staunched the blood by stuffing the hole with a portion of his shirt, that they might not track him, and crawled into the brush; but they gave up the chase, thinking they had not hit him, and being convinced of his superior fleetness. Shanon got into camp and was conveyed home, but he was always lame afterwards, and fostered an unrelenting desire for vengeance towards the whole race, not excepting the innocent and harmless.

As late as 1820 two Indians were murdered on Fulton's creek. A party came down there to hunt, as was customary with them every fall, and Henry Swartz ordered them off. They replied, "No! the land belongs to the white man—the game to the Indian," and insisted that they were friends and ought not to be disturbed. A few days after, two of their number were missing, and they hunted the entire country over without finding them, and at last found evidence of human bones where there had been a fire, and immediately charged Swartz with killing and burning them. They threatened vengeance on him, and for several years after he had to be constantly on his guard to prevent being waylaid. It was never legally investigated, but the neighbors all believed that Swartz, aided probably by Ned Williams, murdered and disposed of them in the manner the Indians suspected, and at one time talked of driving them out of the settlement. They were considered bad men, and never prospered after-

Delaware in 1846.—Delaware, the county-seat, is pleasantly situated on rolling ground upon the western bank of the Olentangy river, twenty-four miles north from Columbus. The engraving shows the public buildings on one of the principal streets of this neat and thriving town. The churches which appear are respectively, commencing on the right, the First Presbyterian, the Episcopal, and the Second Presbyterian; between the first two the Methodist church, a substantial stone structure, is partially shown in the distance. The large building seen beyond the Second Presbyterian church is the "Hinton House," one of the largest and best constructed hotels in Ohio. The town contains the Ohio Wesleyan University, 4 taverns (one, the Hinton House, being among the largest in Ohio, having over 100 rooms), 8 dry-goods stores, 3 drug stores, 1 shoe store, 1 confectionery and variety store, and 2 small groceries; 2 divisions of the Sons of Temperance, 1 Odd Fellows' lodge, 1 Masonic society, 2 printing offices, from which issue weekly the Olentangy Gazette (Whig), by Abel Thomson, and the Loco Foco (Dem.), by George F. Stayman. The latter commenced in 1845; the former in 1821, by Hon. E. Griswold, then called the *Delaware Patron and Franklin Chronicle*. The first paper in town was published in 1818 by Rev. J. Drake and Joseph S. Hughs. Delaware also contains 2 saw mills, I flouring mill, 1 oil mill, and the woollen factory of Messrs. Howard & Sharp, carrying on quite an extensive business; 8 lawyers, 7 physicians, a full quota of mechanics, 275 dwellings, and about 2,000 inhabitants, including South Delaware, which properly belongs to it, though not included in the corporation. The Delaware bank, with a capital of \$100,000, is a branch of the State bank. A bank was opened in 1812, but failing to get a charter the next winter it wound up, redeeming all its notes; and during the same year a swindling concern, called the

"Scioto Exporting Company," was started by a posse of counterfeiters, who drew in some others, but it was destroyed by the citizens before they could get a large amount of paper afloat. The population of Delaware in 1840 was 898.

Delaware was laid out in 1808 by Col. Moses Byxbe and Hon. Henry Baldwin, of Pittsburg, who had purchased a large tract of land for that purpose. sold the lots at private sale, at the uniform price of \$30, the purchaser taking his choice. Joseph Barber put up the first cabin in the fall of 1807. It stood close to the spring, and was made of poles, Indian fashion, fifteen feet square, in which he kept tavern. The principal settlers were Messrs. Byxbe, William Little, Dr. Lamb, Solomon Smith, Elder Jacob Drake (Baptist preacher), Thomas Butler, and Ira Carpenter. In the spring of 1808 Moses Byxbe built the first frame house, on William street, lot 70, and the first brick house was erected the ensuing fall by Elder Drake, on Winter street, where Thomas Pettibone's mansion now stands; being unable to get but one mason, his wife laid all the brick of the inside walls. The court-house was built in 1815, the year in which the town was incorporated. The Methodists commenced the first meeting-house in 1823 (now the schoolhouse), but it was not finished for several years. The old churches of the First Presbyterians and the Episcopalians were built in 1825, upon the sites on which the present beautiful edifices were erected in 1845. The Second Presbyterian church was erected in 1844, the new Methodist church in 1846, and the Lutheran church in 1835.—Old Edition.

The Ohio Wesleyan University has been recently established at Delaware, with fine prospects of success—the Rev. Edward Thomson, D. D., president. The college edifice stands on a pleasant elevation in the southern part of the village, and embraces within its grounds ten acres of land, including the sulphur spring.

embraces within its grounds ten acres of land, including the sulphur spring.

The springs here have long been known. Tradition states that the Indians resorted to them to use the waters and to kill the deer and buffalo which came here in great numbers. Before the grounds were enclosed in the early settlement of the county the domestic animals for miles around made this a favorite resort in the heats of summer, and appeared satisfied with no other water. The water is said to be similar to that of the celebrated white sulphur springs of Virginia, and equal in their mineral and medicinal qualities. The water is cooler, being as low as 53°, contains more gas, and is therefore lighter and more pleasant than that of the Virginia water. Many cures have been effected of persons afflicted with scrofulous diseases, dyspepsia, bilious derangements of the liver and stomach, want of appetite and digestion, cases of erysipelas when all the usual remedies had failed, and injuries inflicted by the excessive use of calomel.—Old Edition.

Aside from the long-famed spring above described this region seems to abound in mineral springs. On the outskirts of the town, in the valley of Delaware Run, in an area of about thirty-seven acres, is a collection of five flowing springs called "Little's Springs," consisting of as many different varieties of water—white sul-

phur, black sulphur, magnetic, iron, and fresh water.

Delaware is on the Olentangy river, 24 miles north of Columbus, 131 miles from Cincinnati, 114 from Cleveland, 88 from Toledo, on the C. C. & I. and C. H. V. & T. railroads, very nearly in the centre of the State, 378 feet above Lake Erie, and 943 above the sea-level. County officers in 1888: Probate Judge, Norman E. Overture; Clerk of Court, John M. Shoemaker; Sheriff, William J. Davis; Prosecuting Attorney, Frank Kauffman; Auditor, John J. Ramage; Treasurer, N. Porter Ferguson; Recorder, Frank E. Sprague; Surveyor, Edmund S. Minor; Coroner, Robert C. Wintermute; Commissioners, John L. Thurston, James C. Ryant, George W. Jones. Newspapers: two dailies—Chronicle; Gazette, Independent, A. Thomson & Son, publishers. Weeklies—Herald, Democratic, James K. Newcomer, editor and publisher; Saturday Morning Call; Gazette, Republican, A. Thomson & Son, publishers. Banks: First National, C. B. Paul, president, G. W. Powers, cashier; Delaware County National, S. Moore, president, William Little, cashier; Deposit Banking Company, S. P. Shaw, president, H. A.

Welch, cashier. Churches: 4 Methodist Episcopal, 1 German Methodist Episcopal, 2 Colored Methodist Episcopal, 1 Presbyterian, 1 Episcopal, 1 Baptist, 1 Colored Baptist, 2 Lutheran, and 1 Catholic.

Campbell, superintendent.

The great distinguishing feature of this pleasant town is as an educational point. The Ohio Wesleyan University located here is one of the largest in America under the auspices of the Methodist Church. It was founded in 1842. The Ohio

THE OHIO WESLEYAN UNIVERSITY.

Wesleyan Female College, founded in 1853, was consolidated with the University in 1877, and the two institutions are now conducted as one, ladies being admitted to all branches of study. This part of the institution has the finest and largest of the college edifices: it is called Monnett Hall, and is about ten minutes' walk from the Male Department, in a pretty campus of about ten acres. Over 1,100 young men and women have graduated from the University, and several thousand have

MONNETT HALL.

taken a partial course; "the annual attendance has reached to 830." The University has a very complete Conservatory of Music, a flourishing Art Department. and a Commercial Department, giving a business training.

On William street, one block from the post-office, in Delaware, in a house now owned and occupied by J. J. Richards, was born on October 4, 1822, RUTHERFORD B. HAYES, the nineteenth President of the United States. The front is of brick

and the rear wood. When a boy he went to a private school—that of Mrs. John Murray—on Franklin street. A brother of his was drowned while skating in the Olentangy; a melancholy incident, remembered by the older citizens.

His father, Rutherford Hayes, a Vermonter, came to Delaware in 1817, and engaged in merchandising. He died in the very year of his son's birth (1822),

Ulrey & Bro , Photo., Delaware, 1886.

BIRTHPLACE OF PRESIDENT HAYES:

leaving a widow and three young children, with a large, unsettled business. Sardis Birchard, a brother of the widow, then a youth of sixteen, emigrated with the family from Vermont. He worked with his brother-in-law in building, farming, driving, taking care of stock, and employing all his spare hours in hunting, and was enabled with his rifle to supply his own and other families with turkeys and venison. He was a handsome, jovial young man, a universal favorite, and devoted to his sister and her little flock. In 1827, when the future President was five years of age, Mr. Birchard removed to Fremont, then Lower Sandusky, and from that date it became the home of the family.

Mr. Hayes graduated at Kenyon in 1840, then prepared in Columbus for entrance into the Harvard Law School, where he in due time also graduated. It was at this period he illustrated his regard for his native State, which all through his career has been a marked trait. The anecdote is thus related in the history of Delaware county, with which we here close, referring the reader to a more extended notice of him under the head of Sandusky county.

It was in 1844, while a law student at Cambridge, that Mr. Hayes went to Boston to witness a demonstration in honor of Henry Clay, who was a candidate for President against James K. Polk. The campaign was an exciting one, and hotly contested from the opening to the close. Upon the occasion referred to, the Hon. Cassius M. Clay was to make a speech before the Henry Clay club, and the most extensive preparations had been made for a big day. In accordance with the customs of those times, a grand civil parade was a chief feature of the proceedings. Mr. Hayes met Mr. Aigin, from Delaware, whom he recognized, and, while

standing in front of the Tremont House, they were joined by several others, among them his uncle, Mr. Birchard. The motley-bannered procession was being highly praised when young Mr. Hayes suggested that it only lacked an "Ohio delegation" to make its success complete. It was received as a happy jest, but nothing more thought of it until Mr. Hayes, who had been hardly missed, again appeared, carrying a rude banner which he had hastily constructed of a strip from the edge of a board, on either side of which, in awkward straggling letters, was painted the word "Ohio." As the procession passed, Mr. Hayes, with his banner, "fell in," while the others—three in number—brought up the rear. Ohio men continued to drop in and swell their ranks, until, when the procession halted on Boston Common, the "Ohio delegation" numbered twenty-four men, and was one of the most conspicuous in the line. The enthusiasm was great, and floral tributes were showered upon them from the balcony windows along the line of march. Among these tributes were several wreaths. These the young

leader carefully placed over the rude banner, and the unexpected "Ohio delegation," proudly marching under a crown of laurel leaves, was cheered and honored as Ohio had never been honored before. This was probably Mr. Hayes' first appearance as a political leader, and doubtless one of the happiest and proudest days of his life.

JOHN ANTHONY QUITMAN, a noted general of the Mexican war, and later governor of Mississippi, was a resident of Delaware for a number of years, studied law, and was admitted to the bar there. He was born in 1799, in Rhinebeck, THOMAS CARNEY, governor of Kansas during the rebellion, was born in Kingston township, near Rosecrans' birthplace. His private secretary was John C. Vaughn, the veteran journalist of Ohio and Kansas, who, now well in the eighties, with the memories of a useful life, is passing his remaining days an inmate of the "Old Gentlemen's Home," Cincinnati. PRESTON B. PLUMB, now United States Senator from Kansas, was born on Alum creek, in Berlin township. P. Morehouse, now governor of Missouri (born in 1835), is a native of this county. Gen. JOHN CALVIN LEE, who did efficient service in the Rebellion, and served two terms as lieutenant-governor under Hayes, is a native of Brown township. Judge Thomas W. Powell, now deceased, resided in Delaware. He was one of Ohio's most eminent and learned jurists, and author of a historical work entitled "History of the Ancient Britons." His son, Hon. T. E. Powell, was the Democratic candidate for governor of the State in 1887 versus J. B. Foraker. Mr. Philip Phillips, the famed Christian songster, has his home in Delaware—a pleasant residence. The annals of Delaware show a beyong authors: Rev. Drs. Payne and Merrick, Profs. McCabe, Parsons, and Grove—all of the University in works of instruction or theology; Prof. T. C. O'Kane, in Sunday-school songbooks, and Prof. G. W. Michael, in "Michael's System of Rapid Writing."

The Delaware Grape.—This remarkable and celebrated grape was first sent forth from this county. It took its name from the town. This was about the year 1850, when it was discovered growing near the banks of the Scioto in the hands of a Mr. Heath who brought it from New Jersey years before. Its origin is doubtful, whether foreign or native. Mr. Thompson, the editor of the Gazette, discovered its superior merits. Its introduction created a great furore in grape-

growing, called "the grape fever." The ability of grape propagators was taxed to the utmost to supply the demand, and Delaware grape-vines were sold in enormous quantities at prices ranging from \$1 to \$5 each. The wildest ideas prevailed in regard to it, and inexperienced cultivators suffered through their excess of zeal over knowledge. In soils suitable the Delaware grape maintains its original high character, but its cultivation requires great skill and care.

"The State Reform School for Girls," as it was originally called, but changed in 1872 by an act of the Legislature to the "Girls' Industrial Home," is on a beautiful site on the Scioto, ten miles southwest of Delaware, and eighteen above Columbus. The spot was long known as the "White Sulphur Springs." In early times a hole was bored here 460 feet for salt water, but, instead, was struck a spring of strong white sulphur water. In 1847 a large hotel and some cottages were put up for boarders, and the place was for a term of years quite a resort, but finally ran down.

It becoming a home for girls was the result of a petition to the Legislature by some of the benevolent citizens of the county, who, seeing the fine property going to decay, desired that it should be purchased by the State, and converted into an asylum for unprotected girls. In 1869 the State purchased it, and founded the institution "for the instruction, employment, and reformation of exposed, helpless, evil-disposed, and vicious girls," above the age of seven years and under that of sixteen. The institution at times has over 200 pupils, and is on a well-conducted foundation. Col. James M. Crawford is the superintendent.

Delaware county will be permanently rendered noted not only as the birthplace of a President but also of that of one of the most brilliant military strategists known to the art of war—that great soldier and patriot, WILLIAM S. ROSECRANS. Whitelaw Reid writes of Rosecrans: "As a strategist he stands among the fore-

most, if not himself the foremost, of all our generals. His tactical ability shone as conspicuously as his strategy. He handled troops with rare facility and judgment under the stress of battle. More than all, there came upon him in the hour of conflict the inspiration of war, so that men were magnetized by his presence into heroes. Stone River, under Rosecrans, and Cedar Creek, under Sheridan, are the sole examples in the war of defeats converted into victories by the reinforcement of a single man."

We give a sketch of his career from the pen of Mr. W. S. Furay, a native of

Drawn by Henry Howe, 1846.

THE WHITE SULPHUR SPRINGS.

Ross county, who was war correspondent of the Cincinnati Gazette, beginning with the opening campaign in Western Virginia and continuing until the close of the war. Since that period Mr. Furay has held various civil and journalistic positions, and is now on the editorial staff of the Ohio State Journal.

WILLIAM STARKE ROSECRANS was born in Kingston township, of Delaware county, Sept. 6, 1819. He merited in one respect the title of "the Dutch General," given him by the Confederates early in the War of the Rebellion, for his ancestors on the father's side came from Amsterdam, although his mother traced back her descent to Timothy Hopkins, one of the signers of the Declaration of Independence.

At the age of fifteen Rosecrans entered the military academy at West Point, graduating thence in the class of 1842. Entering the Engineer Corps of the Army as Second Lieutenant, he served the Government efficiently and well in various capacities until 1853, when he was promoted to First Lieutenant, and shortly after, to the great regret of his superior officers, resigned.

From this time until the breaking out of the rebellion, he devoted himself to civil engineering and kindred occupations, making his headquarters at Cincinnati. During all these years of his earlier career he exhibited, in the limited fields open to him, those characteristics of original conception, inventive genius, restless activity and tireless energy which were ever afterwards to carry him through a career of wonderful success at the head of great armies and enroll his name amongst those of the most brilliant soldiers known to military history.

The following is a rapid outline of that career:

In the spring of 1861, W. S. Rosecrans was commissioned by the Governor of Ohio Chief Engineer of the State of Ohio, with the rank and pay of United States Colonel of Engineers. Answering his country's call, however, as a citizen volunteer aide he organized the troops at Camp Dennison, Ohio, and began the organization of Camp Chase as Colonel of the 23d United States Ohio Volunteer Infantry.

As brigadier-general in the United States army, he went to West Virginia, fought the battle of Rich Mountain, and on the 23d or 24th of July, 1861, succeeded McClellan as commander of the Department of the Ohio, consisting of troops from West Virginia, Michigan, Ohio, and Indiana. While in command of that department he defeated the attempts of General Lee to penetrate West Virginia by Cheat Mountain and the Kanawha

route, and subsequently by way of Romney, and along the B. & O. road. The Legislature of West Virginia passed a unanimous vote of thanks in recognition of his services in defending the State, which was followed soon after by a similar vote of thanks from the Legislature of the State of Ohio.

In 1862 he submitted a plan for the campaign of that year auxiliary to that for the movements of the Army of the Potomac, which plan was highly approved by the general-in-chief and by the War Depart-

Early in April, 1862, he was ordered to Washington and sent to find and conduct Blencker's Division to General Fremont.

He submitted to the War Department a plan for the application of the forces under Generals McDowell, Banks, and Fremont to occupy the Shenandoah Valley and threaten

communications with the South.

In May, 1862, he was ordered to report to General Halleck, who commanded our army in front of Corinth, Mississippi. Was put in command of two divisions (Stanley's and Paine's) in front of that city, and when it was vacated by Bragg and Beauregard he led the infantry pursuit until ordered to stop.

In June, 1862, he was placed in command of the Army of the Mississippi, consisting of

four divisions.

In September, 1862, with two small divisions he confronted General Sterling Price, and

fought the battle of Iuka.

In connection with the mention of his general system of army management, it may be stated that he originated the making of photoprinting maps, and furnished his subordinate commanders with information maps of the regions of military operations; established convalescent hospitals for the treatment or discharge of chronic cases; organized colored men into squads of twenty-five each, and equipped and employed them as engineer troops; employed escaped colored women in laundries and as cooks for hospitals, etc.

On October 3d and 4th, 1862, with four divisions, he fought the battle of Corinth.

By order of the President he was placed in command of the Department of the Cumberland and Army of the Ohio, relieving General Buell, October 30, 1862. He reorganized this army, and established an Inspector-General's system by detail from the line, also a Topographical Department by detail of Brigade, Division, and Corps Engineers, and a Pioneer Corps by detail of officers and men from the infantry. He also reorganized both the cavalry and artillery.

On December 31, 1862, and January 1 and 2, 1863, he fought the battle of Stone River, against the Confederates under General Bragg, and drove him behind the line of Duck river.

From June 23 to July 7, 1863, he conducted the campaign of Tullahoma, by which Bragg was driven out of his intrenched camps (at Shelbyville and Tullahoma) in Middle Tennessee.

After the battle of Stone River he was tendered, almost simultaneously, a unanimous

vote of thanks from Congress and from the States of Ohio and Indiana.

From July 7, 1863, to August 14, 1863, he was bringing forward supplies, perfecting the organization of the army, and manœuvring for Chattanooga, giving special attention to the rebuilding of a railroad, as a necessary pre-requisite to success.

From August 14 to September 22, 1863, he made the campaign of Chattanooga, and fought the battle of Chickamauga, manœuvring the Confederates out of the objective point covered by Lookout Range and the

Tennessee river.

For his services at Chickamauga, he received a unanimous vote of thanks from the National House of Representatives.

After the battle of Chickamauga, he was engaged in making the preliminary arrangements to constitute Chattanooga a new main

depot, by water and rail connections with Nashville, Louisville, and Cincinnati.

Between October, 1863, and January 27, 1864, he presided over the great Western Sanitary Fair at Cincinnati, which raised \$325,000 for objects of beneficence to Union soldiers. He also presided over the Mississippi Valley Sanitary Fair, which raised \$525,000 for the same cause.

On the 27th of January, 1864, he was placed in command of the Department of Missouri, in which capacity he succeeded in defeating all the objects and purposes of Price in Missouri, defeated him on the Big Blue and at Maris des Cygnes, and drove him out in a state of disorganization, from which he never

He was also successful in exposing and defeating the objects of the Order of Ameri-

can Knights.

In January, 1866, he was mustered out as Major-General of Volunteers and resigned as Brigadier-General in United States Army in He was afterwards made Brevet 1867.

Major-General.

Up to the time of the battle of Chickamauga there was, neither with the government nor amongst the people, a single doubt as to the genius or ability of Rosecrans. Every step he had taken had been a successful step. Every campaign and every battle had added to his laurels and his glory. Rich Mountain had developed that penetrating sagacity without which no man can ever rise to distinction as a soldier. In the subsequent campaign in West Virginia he had with wonderful skill baffled and defeated the officer who subsequently became the renowned Commander-in-chief of the Confederate armies. At Iuka and Corinth his daring energy had blazed forth like a star, guiding the way to two shining victories. At Stone river he had assailed the rebel army under Gen. Bragg in its own chosen position, retrieved by his personal exertions what on the first day's conflict had seemed to be disastrous defeat, inspired the soul of every soldier under him with his own lofty resolve to conquer or die, and with matchless vigor, energy and skill fairly compelled success to alight upon the Union standards, and gained a victory which electrified the nation and the world. In the Tullahoma campaign he had exhibited a talent for strategy equal to Napoleon in the campaign of Ulm, and without the loss of a regiment, a gun or a stand of colors, had driven Bragg from his whole line of entrenched camps, and expelled him from

Middle Tennessee.
Rosecrans had been too successful. He had raised himself to too exalted a height. The fatal halo of supposed invincibility glimmered around his head. No soldier ever was or ever will be absolutely invincible, but he who is believed to be so must maintain the reputation or fall to a lower level than what he rose from. Nay, he must not merely succeed thereafter in attaining the object at which he aims; he must attain it in the manner that public opinion marks out for him, and scarcely dare achieve less than the

impossible.

The limits of this sketch will not permit a discussion of the campaign in August and September, 1863, and only the conclusions can be set down, which, by a prolonged and conscientious study of the whole history of that

campaign, have been arrived at.

The object that Rosecrans had in view when he commenced his great movement on the 23d of August, 1863, was to relieve East Tennessee from Confederate occupation and get possession of that central key to the Confederacy, the city of Chattanooga. The place was defended by Gen. Bragg's army, which from the first was fully equal in numbers to that under Rosecrans and soon became greatly superior. The all-knowing soldier who commanded the Union army knew from the first that Bragg could easily be reinforced, that every effort would be made by the Confederate government to save Chattanooga, and that his own force was inadequate to the mighty task he had before him. Hence he begged, pleaded and implored for reinforcements which were within easy reach, which were persistently denied him, but which when the campaign was ended came up in such numbers that had a third of them been sent to Rosecrans before he began his march across the Tennessee and the mountains to manœuvre Bragg out of Chattanooga, would have enabled him not only to get possession of that stronghold, but to utterly destroy the army opposed to him.

Chattanooga could not be obtained without a battle. To assail it directly would be simply madness. Rosecrans therefore began that splendid series of manœuvres to the southward of the city which carried his army into Georgia and threatened the Confederate communications with Atlanta. Bragg retired out of the city and marched southward, taking up such position that he could, at any time, return on shorter lines and compel Rosecrans to fight a battle for the prize. The Union general expected this, and had prepared accordingly. But while he was concentrating his army, that which he had clearly foreseen occurred. From every quarter of the Confederacy troops were hurried to Bragg's assistance. From Mississippi, from Mobile, from Savannah they came, and from Virginia the powerful corps of Gen. Longstreet was hurried to North Georgia to overwhelm the comparatively feeble army under Rosecrans. In round numbers, 40,000 Union soldiers were to contend with 75,000 Confederates, to see which would finally hold Chattanooga.

Before the Union army was fully concentrated the Confederates assailed it, and the awful battle of Chickamauga began. The first day the assailants were repelled at all points. The second day they rushed through a gap in our lines caused by a miswording or misunderstanding of orders, and separating the right wing of our army from the centre, overwhelmed that wing. Our centre and left stood firm; Rosecrans seeing this and that the enemy who had overwhelmed our right might push up the valley (which the right had been covering) into Chattanooga, hastened to rally the right, to get the troops left behind in Chattanooga as guards to our stores and reserve artillery, in proper shape, and to prepare a new position for the army at Rossville in case the centre and left should also be compelled to retreat. It was here he showed the greatness of the true soldier who leaves nothing to chance; it was here he specially proved his worthiness for the highest command. As fast as he could do so, he urged portions of the rallied troops to the assistance of that part of the army which still held the field; he sent word of all he was doing to the brave Thomas, who was so grandly resisting the enemy's onset, and gave new courage and confidence to that veteran by assuring him when he felt he could no longer hold his position on the field the new lines would be ready for his reception. It was this knowledge that inspired Thomas with the stern determination not to retreat in the face of the foe at all. And he did not retreat. He held his own until rightfall, suffering dreadful loss, but always inflicting more than he suffered, and when the last effort of the foe had been repelled, retiring leisurely to the new lines which the genius of Rosecrans had marked out for the army.

The next day the Confederate forces, who did not know that they had gained any victory, and who had really retired from the battle-field at night as far as our own soldiers had retired, came slowly and cautiously up towards the new Union lines, took a careful look at them, heard the loud cheers of the Union legion as Rosecrans rode along them, and decided not to attack! The great object of the campaign, the great prize of the battle, namely, the city of Chattanooga, was in possession of the National troops, and never again went out of their hands.

And this was the campaign, this the battle, with which some have associated the terms "failure" and "defeat!" The gallant Army of the Cumberland had crossed a great river, toiled over two chains of mountains, and, under the leadership of the brightest military genius that the war developed, had completely deceived the enemy and manœuvred him by masterly strategy out of his stronghold, then had baffled all his efforts to regain it, had fought nearly double its own numbers for two days, suffering a loss of 15,000 men and inflicting a loss of more than 18,000 upon the enemy, had held the field until it retired of its own choice and after all firing had ceased, then leisurely assumed the new position which its great leader had prepared, and then defiantly awaited another attack which its awfully punished foe did not dare to make. And it held the city it had won and for which the battle was fought. Was all this failure and defeat? The blood of every soldier who fell upon that gory field cries out against the falsehood!

Abraham Lincoln's clear eye perceived the truth; he saw that the skill of Rosecrans had assured relief to East Tennessee, had cut the line of the enemy's defence by rail, had secured the key that was to unlock the treasure-house of the foe, and had opened the way to the very heart of the Confederacy. He telegraphed Rosecrans, as well he might, "be of good cheer; we have unabated confidence in your soldiers, in your officers and

in you."

And Rosecrans was of good cheer, and immediately devised the plans for reopening communications along the line of the Nashville and Chattanooga railroad, plans which others afterwards executed; for the clear-sighted Lincoln yielded to some sinister influence; and the brilliant leader of the Army of the Cumberland, after a campaign which in all its aspects was one of the most successful known to history, and in the very midst of the city which his valor and genius had won, found himself summarily relieved of his command! It was the one act of measureless injustice and wrong which, while not Abraham Lincoln's fault, stains the annals of his otherwise spotless career.

On resigning his commission General Rosecrans went to California and became a citizen of that State. He was offered and declined the Democratic nomination for governor of California in 1867. He was also offered the nomination for governor by the convention of Independent Républicans held at Marysville, and declined. In 1868 he was nominated and confirmed as United States minister to Mexico, without consultation or knowledge on his part until officially notified thereof. He accepted this appointment on condition that he should be allowed carte-blanche to represent the good will of the American republic towards

In 1869 he returned to California and resumed the practice of his profession, namely, that of civil and mining engineering. It should be stated, however, that during his residence in Mexico he became thoroughly convinced that the mutual prosperity of Mexico and the United States would be promoted by the progress of Mexico under her own autonomy, and, acting in accordance with his carte-blanche, he urged the Mexican cabinet and other leaders to further and foster the construction of railroads. His efforts in this direction met with such success that the initiative period of Mexican development in this regard dates from the time of these earnest

efforts on his part.

In 1869 he was also offered and declined the Democratic nomination for Governor of Ohio. In 1870 he memorialized Congress, urging the encouragement of commerce with Mexico. In 1872-3, at the instance of influential people in this country, and on the invitation of the president of Mexico, he supervised the legislation in favor of railroad construction among the various States of that As a result of his presence in the country, and counsel given by means of public discussion in the prominent newspapers of the republic, the legislatures of seventeen Mexican States passed unanimously resolutions urging the government to take favorable legislative action for encouraging the construction of railroads in Mexico. other States, whose legislatures were not in session, the governors sent, officially, strong messages to the general government in favor of the fostering of such enterprises. Thus, practically, in twenty-three States favorable legislation was enacted asking the govern ment to encourage railroad construction.

In 1881 he was urged by the workingmen of California to allow his name to be used by the Democratic party as a candidate for the Forty-eighth Congress, and on his consent thereto was nominated and elected. He was re-elected to the Forty-ninth Congress. During each of his congressional terms he was assigned, as representative, to important legislative and political duties. In June, 1885, he was appointed by President Cleveland to the position of Register of the United States Treasury, the duties of which office he is now performing with characteristic thoroughness and efficiency. Thus his career has been as useful and honorable in peace as it was patriotic and glorious in war.

To the foregoing sketch of Mr. Furay we add a paragraph. Nearly a quarter of a century elapsed after the removal of Rosecrans when, at the reunion of the veterans of the Army of the Cumberland, at Washington, in May, 1887, he broke the long silence, unsealed his lips, and spoke of that event which at the time occasioned great indignation and sorrow throughout Ohio. His splendid services as a soldier, his absorbing enthusiasm and loyalty to the Union, his fiery denunciation of those who plotted a surrender to the treason, the entire spirit and elan of the man had given untold comfort to multitudes in the early years of the rebellion, an era of indescribable anguish and heart-sinking anxieties.

It was a most pathetic scene when he came upon the platform, an old man, sixty-eight years of age, and told his surviving comrades of the bloody fields how his removal took place. It is thus related by Frank G. Carpenter, the interesting Ohio correspondent, who was present:

"It was at night," said Rosecrans, "that I received the order, and I sent for Gen. Thomas. He came alone to the tent and took his seat. I handed him the letter. He read it, and as he did so his breast began to swell and he turned pale. He did not want to accept the command, but we agreed on consideration that he must do so, and I told him that I could not bear to meet my troops afterward. 'I want to leave,' said I, 'before the announcement is made, and I will start in the early morning.' I packed up that night, and the next morning about 7 o'clock I rode away through the fog which then

hung over the camp. The best of relations prevailed between Gen. Thomas and myself, and as to the statement that he considered himself my superior and obeyed orders only, from a sense of duty, I assure you it was not so."

As Rosecrans bowed to the audience and stepped back from the platform there was not a man present who did not feel sorry for him, and he was so much affected himself that his voice trembled as he uttered his closing words. He talked in a low tone and his accents were almost pleading.

SUNBURY, on Walnut creek and the C. Mt. V. & D. R. R., has 1 Baptist and 1 Methodist church; 1 bank: Farmers', O. H. Kimball, president, Emery J. Smith, cashier; 1 newspaper: *The Sunbury Monitor*, Sprague & Robinson, publishers; and had, in 1880, 340 inhabitants. School census 1886, 192; W. W. Long, superintendent.

Here are extensive blue-limestone quarries, supplying the finest quality of building stone; and the new process rolling mill at this place is described as "the

pride of the county."

ASHLEY, on the C. C. & I. R. R., has churches: 1 Presbyterian, 1 Methodist, 1 Baptist, 1 Friends; 1 newspaper: *The Ashley Times*, C. B. Benedict, publisher; 1 bank: Ashley, Sperry & Wormstaff; 2 regalia and emblems factories, a roller flouring mill, and is noted as a shipping-point for live-stock. In 1880 it had 483 inhabitants.

The village of Galena, on the C. Mt. V. & D. R. R., two miles south of Sunbury, had, in 1880, 250 inhabitants. School census 1886, 152; I. C. Guinther, principal. OSTRANDER, in 1880, had 269 inhabitants.

ERIE.

ERIE COUNTY was formed in 1838 from Huron and Sandusky counties. The surface to the eye seems nearly level, while in fact it forms a gentle slope from the south line of the county, where it has an elevation of about 150 feet above the lake, to the lake level. It has inexhaustible quarries of limestone and freestone. The soil is very fertile. The principal crops are wheat, corn, oats and potatoes. It is very prominent as a fruit-growing county, productive in apples, peaches and especially so in grapes. Its area is 290 square miles, being one of the smallest in territory in the State. In 1885 the acres cultivated were 78,912; in pasture, 20,638; woodland, 11,825; lying waste, 3,941; produced in wheat, 247,824 bushels; in oats, 294,676; corn, 564,863; potatoes, 301,306; wool, 144,992 pounds; grapes, 1,571,045. School census 1886, 10,929; teachers, 172. It has 90 miles of railroad.

The population in 1840 was 12,457; 1860, 24,474; 1880, 32,640, of whom 20,899 were Ohio-born; 1,651 New York; 534 Pennsylvania; 4,882 Germany; 1,196 Ireland; 702 England and Wales; and 287 British America.

The name of this county was originally applied to the Erie tribe of Indians. This nation is said to have had their residence at the east end of the lake, near where Buffalo now stands. They are represented to have been the most powerful and warlike of all the Indian tribes, and to have been extirpated by the Five Nations or Iroquois two or three centuries since.*

Father Lewis Hennepin, in his work published about 1684, in speaking of certain Catholic priests, thus alludes to the Eries: "These good fathers were great friends of the Hurons, who told them that the Iroquois went to war beyond Virginia, or New Sweden, near a lake which they called "Erige," or "Erie," which signifies "the cat," or "nation of the cat;" and because these savages brought captives from the nation of the cat in returning to their cantons along this lake, the Hurons named it, in their language, "Erige," or "Ericke," "the lake of the cat," and which our

Canadians, in softening the word, have called 'Lake Erie.' ''

Charlevoix, writing in 1721, says respecting Lake Erie: "The name it bears is that of an Indian nation of the Huron [Wyandot] language, which was formerly seated on its banks, and who have been entirely destroyed by the Iroquois. Erie, in that language, signifies cat, and in some accounts this nation is called the cat nation. This name probably comes from the large number of that animal formerly found in this country."

The French established a small trading-post at the mouth of Huron river, and another on the shore of the bay on or near the site of Sandusky City, which were abandoned before the war of the revolution. The small map annexed is copied from part of Evan's map of the Middle British Colonies, published in 1755. The reader will perceive upon the east bank of Sandusky river, near the bay, a French

^{*}These facts are derived from the beautiful "tradition of the Eries," published in the Buffalo Commercial, in the summer of 1845. That tradition (says the editor) "may be implicitly relied upon, every detail having been taken from the lips of Blacksnake and other venerable chiefs of the Senecas and Tonawandas, who still cherish the traditions of their fathers."

W. A. Bishop, Photo., Sandushy, 1888. SANDUSKY FROM THE BAY.

fort, there described as "Fort Junandat, built in 1754." The words Wandots are doubtless meant for Wyandot towns.

In 1764, while Pontiac was besieging Detroit, Gen. Bradstreet collected a force of 3,000 men, which embarked at Niagara in boats and proceeded up the lake to the relief of that post. Having burned the Indian corn-fields and villages at Sandusky and along the rich bottoms of the Maumee, and dispersed the Indians whom they there then found, he reached Detroit without opposition.* Having dispersed the Indians beseiging Detroit he passed into the Wyandot country by way of Sandusky bay. He ascended the bay and river as far as it was navigable for boats and there made a camp. A treaty of peace and friendship was signed by the chiefs and head men.†

Erie, Huron and a small part of Ottawa county comprise that portion of the Western Reserve known as "the fire-lands," being a tract of about 500,000 acres, granted by the State of Connecticut to the sufferers by fire from the British in their incursions into that State.\(\text{\text{The}}\) The history which follows of the fire-lands and the settlement of this county is from the MSS. history of the Fire-Lands, by C. B. Squier, and written about 1840.

The largest sufferers, and, consequently, those who held the largest interest in the fire-lands, purchased the rights of many who held smaller interests. The proprietors of the fire-lands, anxious that their new territory should be settled, offered strong inducements for persons to settle in this then unknown region. But, aside from the ordinary difficulties attending a new settlement, the Indian title to the western part of the reserve was not then extinguished; but by a treaty held at Fort Industry, on the Maumee, in July, 1805, this object was accomplished, and the east line of the Indian territory was established on the west line of the reserve.

The proprietors of the fire-lands were

The proprietors of the fire-lands were deeply interested in this treaty, upon the result of which depended their ability to possess and settle their lands. Consequently, the Hon. Isaac Mills, secretary of the company, with others interested, left Connecticut to be present at these negotiations. Cleveland was the point first designated for holding the treaty. But, upon their arrival, it was ascertained that the influence of the British agents among the Indians was so great as to occasion them to refuse to treat with the agents of the United States, unless they would come into their own territory, on the Miami of the Lakes, as the Maumee was then termed. Having arrived at the Maumee, they found several agents of the British government among the Indians, using every possible effort to prevent any negotiation

whatever, and it was fifteen or twenty days before they could bring them to any reasonable terms. Soon after the conclusion of the treaty, the settlements commenced upon the fire-lands.

It is quite difficult to ascertain who the first settlers were upon the fire-lands. As early, if not prior to the organization of the State, several persons had squatted upon the lands, at the mouth of the streams and near the shore of the lake, led a hunter's life and trafficked with the Indians. But they were a race of wanderers and gradually disappeared before the regular progress of the settlements. Those devoted missionaries, the Moravians, made a settlement, which they called New Salem, as early as 1790, on Huron river, about two miles below Milan, on the Hathaway farm. They afterwards settled at Milan.

The first regular settlers upon the fire-lands were Col. Jerard Ward, who came in the spring of 1808, and Almon Ruggles and Jabez Wright, in the autumn succeeding. Ere the close of the next year, quite a number of families had settled in the townships of Huron, Florence, Berlin, Oxford, Margaretta, Portland and Vermillion. These early settlers generally erected the ordinary log-cabin, but others of a wandering character built bark huts, which were made by driving a post at each of the four corners and one higher between each of the two end corners, in the middle, to support the roof, which

^{*} Lanman's Michigan.

[†] Whittlesey's address on Bouquet's expedition.

[‡] For some facts connected with the history of the fire-lands, see sketch of the Western Reserve, to be found elsewhere in this work.

were connected together by a ridge-pole. Layers of bark were wound around the side of the posts, each upper layer lapping the one beneath to shed rain. The roof was barked over, strips being bent across from one eave over the ridge-pole to the other and secured by poles on them. The occupants of these bark huts were squatters, and lived principally by hunting. They were the semi-civilized race that usually precedes the more substantial pioneer in the western wilderness.

For two or three years previous to the late war, the inhabitants were so isolated from other settlements that no supplies could be had, and there was much suffering for want of food and clothing; at times, whole families subsisted for weeks together on nothing but parched and pounded corn, with a very scanty supply of wild meat. Indeed, there was not a family in the fire-lands, between 1809 and '15, who did not keenly feel the want of both food and clothing. Wild meat, it is true, could usually be procured; but living on this alone would much enfeeble and disease any one but an Indian or a hunter accustomed to it for years.

For even several years after the war raccoon caps, with the fur outside, and deerskin jackets and pantaloons, were almost universally worn. The deerskin pantaloons could not be very well tanned, and when dried, after being wet, were hard and inflexible: when thrown upon the floor they bounded and rattled like tin kettles. A man, in a cold winter's morning, drawing on a pair, was in about as comfortable a position as if thrusting his limbs into a couple of frosty

stove-pipes.

To add to the trials and hardships of the early settlers, it soon became very sickly, and remained so for several years. The following is but one of the many touching scenes of privation and distress that might be related:

A young man with his family settled not far from the Huron river, building his cabin in the thick woods, distant from any other settlement. During the summer he cleared a small patch, and in the fall became sick and died. Soon after, a hunter on his way home, passing by the clearing, saw everything still about the cabin, mistrusted all was not right, and knocked at the door to inquire. A feeble voice bade him enter. Opening the door he was startled by the appearance of the woman, sitting by the fire, pale, emaciated, and holding a puny, sickly babe! He immediately inquired their health. She burst into tears and was unable to answer. hunter stood for a moment aghast at the scene. The woman, recovering from her gush of sorrow, at length raised her head and pointed towards the bed, saying, "There is my little Edward—I expect he is dying and here is my babe, so sick I cannot lay it down; I am so feeble I can scarcely remain in my chair, and my poor husband lies buried beside the cabin!" and then, as if frantic by the fearful recital, she exclaimed in a tone of the deepest anguish, "Oh! that I was back to my own country, where I could fall into the arms of my mother!" Tears of sympathy rolled down the weather-beaten cheeks of the iron-framed hunter as he rapidly walked away for assistance. It was a touching seen

A majority of the inhabitants of this period were of upright characters; bold, daring and somewhat restless, but generous-minded. Although enduring great privations, much happiness fell to the kind of life they were leading. One of them says: "When I look back upon the first few years of our residence here, I am led to exclaim, O! happy days of primitive simplicity! What little aristocratic feeling any one might have brought with him was soon quelled, for we soon found ourselves equally dependent on one another: and we enjoyed our winter evenings around our blazing hearths in our log-huts cracking nuts full as well, aye! much better than has fallen to our lots since the distinctions and animosities consequent upon the acquisition of wealth have crept in among us.'

Another pioneer says: "In illustration of that old saw,

'A man wants but lit

'A man wants but little here below, Nor wants that little long,'

I relate the following. A year or two after we arrived, a visit was got up by the ladies, in order to call on a neighboring family who lived a little out of the common way. hostess was very much pleased to see them, and immediately commenced preparing the usual treat on such occasions—a cup of tea and its accompaniments. As she had but one fire-proof vessel in the house, an old broken bake kettle, it, of course, must take some time. In the first place, some pork was tried up in the kettle to get lard—secondly, some cakes were made and fried in it thirdly, some shortcakes were made in it—fourthly, it was used as a bucket to draw water—fifthly, the water was heated in it; and sixthly and lastly, the tea was put in and a very sociable dish of tea they had. In those good old times, perfectly fresh to my recollection, the young men asked nothing better than buckskin pantaloons to go a courting in, and the young ladies were not too proud to go to meeting barefoot."

The following little anecdote illustrates the intrepidity of a lady in indulging her social feelings. A gentleman settled with his family about two miles west of the Vermillion river without a neighbor near him. Soon after a man and wife settled on the opposite side of the river, three miles distant; the lady on the west side was very anxious to visit her stranger neighbor on the east, and sent her a message setting a day when she should make her visit, and at the time appointed went down to cross the river with her husband, but found it so swollen with recent rains as to render it impossible to cross on foot. There was no canoe or horse in that part of the country. The obstacle was apparently insurmountable. Fortunately the man on the other side was fertile in expedients;

he yoked up his oxen, anticipating the event, and arrived at the river just as the others were about to leave. Springing upon the back of one of the oxen he rode him across the river, and when he had reached the west bank, the lady, Europa-like, as fearlessly sprang on the back of the other ox, and they were both borne across the raging waters, and safely landed upon the opposite bank; and when she had concluded her visit, she returned in the same manner. The lady still lives on the same spot, and is noted for her goodness of heart and cultivated manners.

Early in the settlement of the fire-lands the landholders injudiciously raised the price of land to \$5 per acre. The lands belonging to the general government on the west were opened for sale at \$2 per acre; immigration ceased, and as most of the settlers had bought their land on a credit, the hard times which followed the last war pressed severely upon them, and the settlements languished. Money was so scarce in 1820 and 1822, that even those who had their farms paid for were in the practice of laying up sixpences and shillings for many months to meet their taxes. All kinds of trade were carried on by barter. Many settlers left their improvements and removed farther west, finding themselves unable to pay for their lands.

The first exports of produce of any conse-

The first exports of produce of any consequence commenced in 1817; in 1818 the article of salt was \$8 per barrel; flour was then \$10, and a poor article at that.

There was no market for several years beyond the wants of the settlers, which was sufficient to swallow up all the surplus products of the farmer; but when such an outlet was wanted, it was found at Detroit, Monroe and the other settlements in the upper regions of Lake Erie. As to the commercial advantages, there was a sufficient number of vessels on the lake to do the business of the country, which was done at the price of \$2.50 per barrel bulk, from Buffalo to this place, a dis-

tance of 250 miles. Now goods are transported from New York to Sandusky City as low as forty-seven cents per hundred, or \$9 per ton. Most kinds of merchandise sold at a sale corresponding to the prices of freight. Domestic shirtings from fifty to sixty-two cents and satinets \$2.50 to \$3.50 per yard; green teas \$1.50 to \$2.50 per pound; brown sugar from twenty-five to thirty cents per pound; loaf from forty to fifty per pound, etc., etc. Butter was worth twenty-five cents, and corn \$1.00 per bushel. As to wheat there was scarcely a price known for some of the first years; the inhabitants mostly depended on buying flour by the barrel on account of the want of mills.

The Indians murdered several of the inhabitants in the fire-lands. One of the most barbarous murders was committed in the spring of 1812, upon Michael Gibbs and one Buel, who lived together in a cabin about a mile southeast of the present town of Sandusky. The murderers were two Indians named Semo and Omic. The whites went in pursuit of them; Omic was taken to Cleveland, tried, found guilty and executed. Semo was afterwards demanded of his tribe, and they were about to give him up, when, anticipating his fate, he gave the war-whoop, and shot himself through the heart.

In the late war, previous to Perry's victory, the inhabitants were in much dread of the Indians. Some people upon Huron river were captured by them, and also at the head of Cold creek, where a Mrs. Putnam and a whole family by the name of Snow (the man excepted) were attacked. Mrs. Snow and one little child were cruelly butchered, and the rest taken captive, together with a Mrs. Butler and a girl named Page, and carried to Canada. They were, however, released or purchased by the whites a few months after. Other depredations and murders were committed by the savages.

Sandusky in 1846.—Sandusky, the county-seat, is situated on Sandusky bay, 105 miles north of Columbus, and 60 from Cleveland and Detroit. Its situation is pleasant, rising gradually from the lake; and commanding a fine view of it. The town is based upon an inexhaustible quarry of the finest limestone, which is not only used in building elegant and substantial edifices in the town, but is an extensive article of export. A few hundred yards back from the lake is a large and handsome public square on which, fronting the lake, are the principal churches and public buildings. The first permanent settlement at Sandusky City was made in June, 1817, at which time the locality was called Ogontz place, from an Indian chief who resided here previous to the war of 1812. The town was laid out under the name of *Portland*, in 1817, by its proprietors, Hon. Zalmon Wildman, of Danbury, Ct., and Hon. Isaac Mills, of New Haven, in the same State. the first of July of that year, a small store of goods was opened by Moores Farwell, in the employment of Mr. Wildman. The same building is now standing on the bay shore, and is occupied by Mr. West. There were at this time but two log-huts in the place besides the store, which was a frame, and had been erected the year previous. One of the huts stood on the site of the Verandah hotel, and the other some sixty rods east. The first frame dwelling was erected by Wm. B. Smith in the fall of 1817, the second soon after by Cyrus W. Marsh, and a third

in the succeeding spring by Moores Farwell. The Methodist Episcopal church, a small frame building, and the first built, was erected in 1830; the Episcopal and Presbyterian churches in 1835; the Wesleyan chapel in 1836, and the rest since. Sandusky contains 1 Episcopal, 1 Methodist, 1 Congregational, 1 Reformed Methodist, 1 Catholic and 1 German Lutheran church, 1 high school, a large number of dry-goods and grocery stores, several forwarding and commission houses, 2 furnaces, 1 oil mill, 2 extensive machine shops for the manufacture of the iron for railroad cars, 2 printing offices, 2 banks, and a population estimated at 3,000. This town is now very thriving, and promises to be, ere many years, a large city. A great impetus has been given to its prosperity by the construction of two railroads which terminate here; the first, the Mad River and Little Miami railroad, connects it with Cincinnati; the other connects it with Mansfield, from which place it is constructing through Mount Vernon and Newark to Columbus: a branch will diverge from Newark to Zanesville. This last is one of the best built railroads in the country, and is doing a very heavy transportation business. commerce of Sandusky City is heavy, and constantly increasing. The arrivals at this port in 1846 were 447, clearances 441; and 843,746 bushels of wheat were among the articles exported. On the farm of Isaac A. Mills, west of the town, are some ancient works and mounds. In the late Canadian "patriot war," this city was a rendezvous for "patriots;" they had an action on the ice near Point-au-Pelee island with British cavalry in the winter of 1838. They were under Capt. Bradley, of this city, who has since commanded a company of volunteers in the war with Mexico. In this action the "patriots" behaved with cool bravery, and although attacked by a superior force, delivered their fire with steadiness, and repelled their enemy with considerable loss.—Old Edition.

Sandusky City, on Sandusky bay, an inlet of Lake Erie, is 100 miles north of Columbus and midway between Cleveland and Toledo. It is on the line of the L. S. & M. S.; I. B. & W.; L. E. A. & S.; and S. M. & N. railroads. County Officers in 1888: Probate Judge, Albert E. Merrill; Clerk of Court, Silas E. Bauder; Sheriff, Thos. A. Hughes; Prosecuting Attorney, Cyrus B. Winters; Auditor, Wm. J. Bonn; Treasurer, Jas. Alder; Recorder, John Strickland; Surveyor, Albert W. Judson; Coroner, Louis S. Szendery; Commissioners, William Zimmerman, Jas. Douglass, John L. Hull. Newspapers: Register, Republican, J. F. Mack & Bro., editors and proprietors; Journal, Democratic, C. C. Bittur, editor and publisher; Democrat, German, Democratic. Churches: 1 Congregational, 4 Episcopal, 3 Catholic, 1 Baptist, 1 Colored Baptist, 1 Presbyterian, 1 Friends, 1 Methodist Episcopal, 1 Colored Methodist, 4 German Evangelical, 1 German Lutheran and 1 German Methodist. Banks: Citizens' National, A. E. Merrill, president, Henry Graefe, cashier; Moss National, A. H. Moss, president, Horace O. Moss, cashier; Second National, R. B. Hubbard, president, A. W. Prout, cashier;

Third National, Lawrence Cable, president, E. P. Zollinger, cashier.

Principal Industries and Employees.—D. J. Brown & Co., hoops, etc., 35 hands; Germania Basket Company, baskets, 31; George W. Icsman, saw mills; Sandusky Tool Company, edge tools, 230; Ohlemacher Lime Company, lime, 34; J. B. Johnston & Co., lime, 14; Kilbourne & Co., cooperage, 20; J. T. Johnson, planing mill, 31; B. & O. R. R. Shops, railroad repairs, 130; B. & O. Grain Elevator; J. M. Soncrant, cooperage, 20; Johnson, Kunz & Co., lime; Schoeffle & Sloane, doors, sash, etc., 45; Woolsey Wheel Company, carriage wheels, etc., 143; B. B. Hubbard & Son, planing-mill; August Kunzman, carriages, etc., 10; Lea, Herbert & Co., planing-mill, 22; Sandusky Machine and Agricultural Works, engines, reapers, etc., 45; Barney & Kilby, engines, etc., 206; J. C. Butler & Co., doors, sash, etc., 142; Eureka Lumber Company, planing-mill, etc., 44; I. B. & W. R. R. Shops, railroad repairs, 164; The Sandusky Wheel Company, carriage wheels, etc., 260; Anthony Ilg & Co., lager beer, 12; Albert Schwehr, cigar boxes, 37; Portland Boiler Company; Frank Slang, lager beer, 15; J. Kuebler & Co., lager beer, 22; Hinde, Hansen & Co., paper, 18; J. S. Cowdery, crayons, chalk,

etc., 42; G. B. Hodgeman Manufacturing Company, cooperage, 112.—State Report for 1887. Population in 1880, 15,838. School census in 1886, 5,861; Alston Ellis, superintendent.

Sandusky has the largest and best harbor on the great chain of lakes, having the advantage of a large and land-locked bay, while the other lake ports are mostly but the mouths of rivers. This bay is eighteen miles in length, furnishing ample room for all the water craft that ever could be required.

Drawn by Henry Howe in 1846.

THE HARBOR OF SANDUSKY.

It is claimed for Sandusky that in the manufacture of wheels and other wood implements that it exceeds any other city of the Union; that of the 1,800 hands in its shops and factories an unusual per cent. are skilled mechanics, and married men, and very largely own the houses in which they live.

Ohio Soldiers' and Sailors' Home.—In the latter part of the year 1885 P. R. Brown, Commander of the Department of Ohio, G. A. R., learned that some old soldiers, survivors of the civil war, were living in county infirmaries. He immediately set inquiries on foot and learned by the end of the year that there were 300 such; and that many others, equally destitute, were supported by private benevolence. Soon after Gov. Foraker's inauguration, in January, 1886, Commander Brown conferred with him, and found his sympathies warmly enlisted.

A bill was introduced in the legislature and met with such general favor, that on the 30th of January an act was passed to establish "The Ohio Soldiers' and Sailors' Home," for all honorably discharged soldiers, sailors, and marines who have served the United States government in any of its wars, and who are citizens of Ohio at the date of the passage of this act, and are not able to support themselves, etc., etc., and who cannot gain admission to the national military homes.

The Governor appointed I. F. Mack, of Sandusky; R. B. Brown, of Zanesville; Durbin Ward, of Lebanon; W. P. Orr, of Piqua; and Thomas T. Dill, of Mansfield, trustees. Durbin Ward dying, Thomas R. Paxton, of Cincinnati, was appointed in his place, and I. F. Mack was elected president, and R. B.

Brown, secretary.

The board, on the 31st of July, having previously examined many titles in various parts of the State, resolved to establish the Home near Sandusky. On the 19th of August, they selected as the site ninety acres of breezy land, partly wooded, a mile outside the corporate limits of the city; the land being donated to the State, and guarantees being given for the construction of a large stone sewer from the grounds to the lake, of mains for water, gas, electricity, a railway switch to the grounds

and two fine avenues 100 feet in width as outlets. The grounds will be beautifully ornamented, the attractive features including a chain of lakes and shelter house.

The terms have been fulfilled by the county, the city, and by citizens. The legislature has been liberal in making appropriations from time to time; the trustees have been earnest in the work and have enjoyed the hearty cooperation of the governor.

Plans have been adopted for buildings to accommodate about 1,000 inmates, and aro now in course of construction; they consist of thirteen cottages of four different designs, dining and kitchen building, power-house, laundry and bath-rooms, hospital, chapel, conservatory, and the administration building, in which are located the offices of the commandant and his assistants and of the Board of Trustees. The buildings are of the best Ohio limestone and sandstone, and from an architectural point of view present a handsome appearance.

The land lies between forty and fifty feet above the level of the lake, and no higher land is near. The buildings are admirably designed, and are thoroughly built, with exterior walls of stone and partitions of brick. No building is more than two stories high. They will be comfortable and healthful, and

the architectural effect of the mass will be handsome and imposing.

The board is to be congratulated on its choice of Gen. M. F. Force, of Cincinnati, for commandant, a gentleman of rare ability, singular modesty and worth, under whose management the Home will assuredly meet the best purposes for which it is designed.

When the Civil war of 1861 was fairly inaugurated Gen. Force was a practicing attorney in Cincinnati. He joined a military company, and was soon after promoted to the lieutenant-colonelcy of the Twentieth Ohio, and at Camp Chase proved to be an excellent drill officer. The history of the Twentieth shows what efficiency he developed as a commanding officer of the regiment, the brigade, and eventually of the division. Stooping over his wounded friend, Adjutant Walker, in the terrible conflict at Atlanta, he received a bullet through his face just below the eye, and he now bears upon his frontlet the honored

scar of battle for his country. When the army disbanded Gen. Force returned to civil life, and was elected a judge of the Superior Court of Hamilton county, which office he held until his resignation in 1887.

The late Col. Charles Whittlesey wrote of him: "From his father, the late Peter Force, of Washington, he inherits a taste for literature, especially for history and ethnology. His publications, especially those upon the theory of evolution, devised by Darwin, and upon the character of the Mound Builders, also upon his war memoranda, filling one volume of the Scribner Series, display calm

also upon his war memoranda, filling one volume of the Scribner Series, display calm and faithful investigation with a clear and facile mode of expression. His address delivered at the first reunion of the Twentieth Regiment, on the anniversary of the battle of Shiloh Church, April 6, 1876, shows the finish of his style and the close personal relations that existed with his men."

Ohio State Fish Hatchery.—On the eastern margin of Sandusky, by the waterside, in a small, one-story, frame building of two rooms, is located the Ohio State Fish Hatch ry. Small and unpretentious as the quarters are, nevertheless a work of great importance goes on within their limits, and it is to be hoped that our State government will take measures for the greater development of this useful institution. With great increase in the needs of its people, a wise government makes provision for keeping its food supplies unimpoverished. The Ohio State Fish Hatchery was founded some twelve years ago at Toledo. Some years later the Sandusky branch was started, and then wing to a cutting down of funds that at Toledo was closed.

The establishment at Sandusky is under the charge of Superintendent Henry Douglass, assisted by George W. Littleton and six or seven extra assistants engaged during the hatching seasons. But two kinds of fish have as yet been hatched, pickerel and white fish; of these, 65,000,000 pickerel and 100,000,000 white fish were hatched during the past season, 1887–1888.

About April 1st the pickerel eggs are taken and about October 1st the white fish eggs. These are procured from fish caught in nets on Lak. Eric. From the females (which can be distinguished by their unusual size) the eggs are squeezed in three-gallon pans (eggs from three females to each pan). Next six male fish are picked out and the impregnating fluid squeezed from them into the pan. Males and females are then thrown back into the lake, and the pans containing the impregnated eggs are taken to the hatchery.

In the larger of the two rooms of the hatchery are ranged on each side and in the centre a series of wooden troughs, and below each trough a row of glass jars about two feet high and six or seven inches in diameter. Above each jar is a wooden faucet connected by a rubber hose a few inches long to a thick glass tube in the centre of the jar and of the same length as the jar. Four small "feet" at the bottom of the tube permit the water to flow from it up through the jar to its top where it is discharged into another, thence through other jars and so on. The impregnated eggs are placed in these jars and the

water turned on. The water is lake water supplied from the city water works. It is kept cold, sometimes freezing, as the eggs and the fish have to be kept cold until placed in the streams.

After the eggs are placed in the jars they must be kept constantly moving, and are watched night and day, that they may not adhere to each other or the sides of the jars as soon as an egg spoils (which is discovered by its failure to change color) it must be removed; this is done with a feather.

At the first the eggs have a kind of cream color, from which they change in a month to a much darker color, then in six weeks back to their original hue, and alternate colors in that manner until hatched, which is about two to four weeks for pickerel and five months for white fish. When hatched the pickerel are about one-quarter of an inch long and the white fish half an inch. Each fish is found to have a food sack containing a viseid colorless substance which sustains its life from three to four weeks, but what they live on after that is unknown. In about a year they grow to weigh a pound and increase in weight

each succeeding year, until the pickerel attains a weight of fifteen to eighteen pounds and the white fish a weight of twenty pounds

white fish a weight of twenty pounds.

The freshly hatched fish are given away to any one making application for them, the only requirement being that they be placed in some inland stream or lake. They are put up in cans similar to milk cans and are distributed according to order by the agents of the hatchery who travel through all parts of the State. Pickerel only are placed in streams as the white fish will not live in streams, but large numbers of the young white fish have been placed in Lake Erie, resulting in an apparent increase in the supply.

After years of effort it has been found impossible to hatch bass or perch. The difficulty lies in obtaining the impregnating fluid from

the males, who at the season of impregnation go into deep water and defy all efforts to capture them. Experiments have been made by keeping them in captivity, but without avail.

The only way that lakes can be stocked with bass is to catch the young fish with nets and transport them to where they are wanted.

This is often done. A year ago a lot of herring were hatched and placed in some lakes east of Cleveland, and if they thrive the hatching of herring will be made one of the features of the hatchery. Lake Erie abounds with them. They are a small fish, weighing but a pound when full grown, but are very good eating. Some experiments in the propagation of cat-fish are also to be undertaken shortly.

When the first settlers under the Fire-Lands Company arrived at Sandusky they found on the present site of the town a village of Ottawa Indians, and on the peninsula some French-Canadian settlers.

THE STORY OF OGONTZ.

The whole settlement was under the control of an Indian chief named OGONTZ. He was in many respects a remarkable man. Having been found when a babe in an Indian village in the far Northwest, whose inhabitants had all either died off or fled from smallpox, he was taken charge of by French Catholic priests near Quebec, and educated for a missionary among the Indians, and about the time of the outbreak of the Revolution went among the Ottawas to preach Christianity

He had a strong dislike of the British provincial government, and having gained great influence among the Ottawas, he induced two tribes and some French people in the neighborhood to locate at Sandusky, he going with them as priest or father; at his direction the French settled on the peninsula and the Indians on the other side of the bay.

Finding he could be more useful to these people as chief than priest, he gave up his holy office, was adopted into one of the tribes, and became its chief.

In an account of his life which he related to his friend and neighbor, Mr. Benajah Wolcott, who, in 1809, had settled on the

peninsula, he said:

"In my heart I had never been a good Catholic, though I had tried to be a good Christian. I found it, however, much easier to make Catholics than Christians of other Indians. What I mean is, that they were much more willing to observe the forms than to obey the laws of Christianity, and that they grew no better under my preaching. I became discouraged, and feared that my preaching was an imposition and I an impostor."

As priest the chief of the other tribe had been guided by him and profited by his counsels, but when Ogontz became a chief his jealousy was aroused, and during a drunken orgie he approached Ogontz from behind and

tried to stab him, but Ogontz was on his guard, and instead of slaying him he was him-

self slain by Ogontz.

Although Ogontz had slain his rival in self-defence a council was held to decide his fate. The Indian law is "blood for blood," and it was very rarely that this law was departed from, and as Ogontz sat on a log facing the lake, a few rods off, the council debated the question of life and death; and, having decided, the messengers of the council approached him. If the decision had been death they would have gone up behind and tomahawked him as he sat. As they neared him the solemn chief sat motionless, looking out upon the expanse of water before him, when the messengers made a slight detour and approached him face to face. The council had spared his life.

Ogontz adopted the son of the chief, and brought him up as his own, knowing that some day that son would kill him to avenge his father's death.

Ogontz was ever for peace. Foreseeing the war of 1812, he led his people back to Canada, as they could not stay at Sandusky and remain neutral. He said:

"I have done these people (Indians and French) all the good I could and have kept them at peace with each other, and, so far as I could, with all the world; but trouble will come on us all very soon. I had hoped to spend all my days near this bay. Your people will take our present corn-fields for themselves, but we could find others near enough if we could be at peace. A war between your people and the British is close at hand, and when that comes we must fly from here—all of us. Indians are great fools for taking part in the wars of the white people, but they will do so. Ottawas will join the British and fight in such a war. I wish your side success, but I must go with my people."

When peace was declared between the

United States and Great Britain he and his tribe went from Canada to Maumee river, and at a pow-wow held there he was murdered by his adopted son, meeting the death he knew was in store for him when he adopted the son of the chief he had slain in self-defence.

The lodge of Ogontz was on the site occupied by the national bank on Columbus avenue, between Market and Water streets. The bank building was originally the residence of Eleutheros Cooke, and built by him. His son, the celebrated banker, Jay Cooke, was born here in 1821. The family knew Ogontz very well. When a child, Ogontz at times

carried the boy Jay on his shoulders. Out of respect to his memory, Mr. Cooke in after years, when fame and fortune were his, built a magnificent country-seat at Chelton Hills, near Philadelphia, which he named Ogontz. The name of Ogontz is perpetuated at Sandusky by a street, flouring mills, a Knight Templars' lodge, a fire company, etc. When making investigations years since for a railroad in the Lake Superior country Mr. Cooke found the name Ogontz still perpetuated among the Indians, and in the person of a boy whose acquaintance he made, and who proved to be a grandson of the chief.

Three miles north of Sandusky, in her land-locked bay, lies Johnson's Island. Its area is about 300 acres; nearly a mile long and half that in breadth, gradually rising in the centre to a height of fifty feet. It was originally covered with heavy timber, and a favorite resort of the Indians, who came here in the fishing season, engaged in festivities, and brought their captives for torture.

Its first owner was E. W. Bull, and it was called Bull's Island, until 1852, when it was purchased by L. B. Johnson and its name changed to Johnson's

Island.

In 1811 an effort was made to found a town on the island, and steps taken to lay out village lots; the custom house of the port was located here, but the attempt was unsuccessful and abandoned.

In 1861 the property was leased by the government as a depot for rebel prisoners. The necessary buildings having been erected, the first prisoners were installed in their quarters in April, 1862, under the charge of Company A, Hoffman Battalion, which was subsequently increased to a full regiment, the 128th O. V. I.

The number of prisoners was constantly varying, the largest number at any one time being over 3,000; but, from the period of its establishment until the close of the war, over 15,000 rebels were confined here, and owing to its supposed security,

the prisoners were largely composed of rebel officers.

As the war progressed floating rumors of an intended rescue by rebel sympathizers in Canada came to the ears of the Federal authorities, and the steamer "Michigan," the only United States war vessel on Lake Erie, was stationed here. In September, 1864, a conspiracy was concocted to release the prisoners, at that time numbering about 2,400, arm them, burn Sandusky, Cleveland and other defenseless lake cities, secure horses, ride through Ohio, raiding the country on the route, and join the rebel army in Virginia; at the same time the "Michigan" was to be captured and co-operate with the released prisoners on land. The narrative of the occurrences which follows is abridged from that in the Lake Shore Magazine:

John Yates Beall, a Virginian of great wealth and a graduate of Virginia University, called "The Pirate of Lake Erie," was the prime mover in this conspiracy, and was aided in the enterprise by that arch traitor and fiend Jacob Thompson, the agent of the Confederate government.

September 19, 1864, the steamer "Philo Parsons," plying between Detroit, Sandusky and the adjacent islands, was boarded at Sandwich on the Canadian shore by four men, and at Malden by twenty more, who brought an old trunk with them. No suspicions were aroused, as large numbers of fugitives were constantly travelling to and from Canada at that time. After leaving

Kelley's Island, the clerk, who was in command of the boat, was suddenly confronted by four men with revolvers pointed at his head, the old trunk was opened, the whole party armed themselves, and with Beall at their head took possession of the boat. Her course was altered and turned back to Middle Bass Island. Here the "Island Queen," a boat plying among the islands, came alongside; she was immediately boarded, and although her captain (G. W. Orr) made a determined resistance, she was soon at the mercy of the conspirators, together with a large number of passengers. The engineer of the "Queen," refusing to do the bidding of the captors, was shot through the cheek.

But no discourtesy was offered to any one of us beyond the absolute necessity of the case, the conspirators being largely educated men from the best families of the South.

An oath of secrecy for twenty-four hours was extorted from the passengers, and they were then put ashore, the captain of the "Queen" being retained as pilot, a capacity in which he refused to act. The two steamers were then lashed together and put off toward Sandusky; but after proceeding a few miles the "Island Queen" was scuttled and the "Parsons" continued alone; she did not enter, but cruised around the mouth of Sandusky Bay, waiting for the signal from the conspirators on land. That part of the plot

had, however, failed.

A Confederate officer named Cole, to whom the operations at Sandusky had been entrusted, had, as a Titusville oil man, been figuring very largely in social circles, a liberal entertainer, giving wine suppers and spending money very freely. He had formed the acquaintance of the officers of the "Michigan" and had invited them to a wine supper on the evening of September 19th. The wine was drugged, and when the officers had succumbed to it a signal was to notify Beall, who was then to make the attack on the 'Michigan." But Cole had performed his part of the plan in such a bungling manner that the suspicions of the officers were aroused and the commanding officer of the "Michigan," Capt. Carter, arrested him on suspicion at the very moment when success seemed assured.

In the meanwhile Beall and his comrades waited outside the bay for the signal; but, as the time for it passed by and it was not given, they realized that the plot had failed, and made for the Canadian shore, passing Middle Bass Island, where he had left the "Island Queen" and "Parsons" passengers, who saw the "Parsons" pass "with fire pouring out of her smoke-stacks, and making for Detroit like a scared pickerel." The captain and others who had been kept to manage the "Parsons," were put off on an uninhabited island, and when the Canadian shore was reached, she was scuttled and the conspirators disbanded.

This daring venture excited great consternation among the lake cities and served to call attention to their defenseless condition.

Beall was captured a few months later, near Suspension Bridge, charged with being a spy both in Ohio and New York, also with an attempt to throw an express train from the track between Dunkirk and Buffalo. He confessed to much of the evidence brought against him, was found guilty and hung on Governor's Island, February 24, 1865.

Cole after being arrested managed to warn his accomplices in Sandusky, of whom he had a great number, and who, thus warned, escaped arrest. He himself was confined for some time on board the "Michigan," afterward transferred to the island, then to Fort Lafayette in September, 1865, and was ultimately released after the close of the war.

The treatment of the rebel prisoners on Johnson's Island was considerate even to the verge of indulgence; their wants were said to have been better filled than those of the soldiers guarding them; this was owing to their being supplied plentifully with money by their friends; they were well fed, clothed and housed and were allowed every privilege

consistent with security.

The prisoners were all confined within an enclosure of about eighteen acres surrounded by a stockade eighteen feet high, made of plank, with a platform near the top, about four feet wide, where the sentinels walked. This is shown in the engraving. At the east and west corner was a block-house with small brass cannon. The soldiers' and officers' quarters of the guard were at the left of the enclosure. The open space shown by the flag was the parade ground. On the left of the road was a line of small buildings, hucksters' shops, etc. Beyond appears Fort Hill. It was an earthwork and mounted a few guns. The graveyard was in the grove on the extreme right, where to this day are relics.

TRAVELLING NOTES.

Sandusky impresses one with the extreme solid appearance of its business and public buildings. It is because the whole city lies upon an inexhaustible quarry of the finest limestone, and all the people have to do for structures is to blast and rear. The outlook upon its harbor is extremely pleasant; it is so expanded and well defended. In the very heats of summer the breezes come from the lake with a refreshing coolness, while the thought that steamers are continually plying to the beautiful cluster of islands beyond the bay to give the visitor any needed change he may require of scene, adds to the attractions of the city as he may walk its solidly lined streets.

Four things come in mind in connection with Sandusky, viz., lumber, fish, lime, and grapes. It is a great lumber mart, the lumber coming mainly from Michigan, and it is the greatest fish market on the globe. Vast quantities of lime are burnt, especially over on the peninsula, that body of land forming the western boundary of the bay, and put on the map as Ottawa county; and as to grapes, there seems to be no end. In this county alone the vineyards aggregate nearly five square miles, viz., 3,082 acres. In 1885 the amount of wine manufactured amounted to 71,170 gallons. One gentleman in Sandusky. Gen. Mills, an octogenarian, has in a single body a vineyard of eighty acres, the largest, I believe, in Ohio. From this he makes a superior article of sparkling Catawba wine—"Mills' Brand"—that, having once tasted for "medicinal purposes only," a Rechabite for "medicinal purposes only," a Rechabite in temperance in a season of despondency would be sorely tempted for a revivification merely to yield his willing lips. The general tells me there is no money in the manufacture of this, a pure, honest article. The public demand is for cheap wines. The consequence

is they largely get adulterations, with which any vineyard has but slight connection, and as a return for their parsimony, the imbibants suffer from disordered stomachs and

splitting headaches.

Looking on the map again one will see forming the east boundary of the bay a strip of land about three miles long and a quarter of a mile wide, terminating in a point, called Cedar Point, on or near which is a lighthouse. In the summer season a steamer, the "R. B. HAYES," continually passes to and from the city, carrying parties thither for picnics in the groves and bathing. The beach there on the lake side is safe and beautiful for bathing, and so expansive the view that one standing there is affected by the same emotion as if gazing upon the ocean.

Johnson's Island, at the mouth of the harbor, is in plain sight from the dock at Sandusky. It will always be an object of interest to travellers as the spot where the officers of the Confederate army were confined. Mr. Leonard Johnson, son of the owner of the island, has given me some interesting items. He was then a boy of about eight years, and often went into the prison with his elder

brother.

The prisoners were always glad to see children, welcomed, and petted them. For amusement they had athletic games and theatricals. In summer, he told me, they were allowed to bathe in the lake, about 100 at a time, under guard. One of their amusements was whittling and carving finger-rings, watch-charms, etc., from gutta-percha buttons, their work being sometimes very ingenious and beautiful.

The guard were principally men recruited for this purpose in the lake neighborhood, and many had their families on the island.

Two men were drummed off the island—one for stealing blankets, and the other a teamster, for an offence of a different character. The latter had a placard in front and one in the rear proclaiming his malfeasance thus:

I SOLD WHISKEY TO THE REBELS.

His hands were tied behind, and he was marched in the middle of a squad of soldiers, with their bayonets pointed toward him, those in front having their guns reversed. To the music of drums and fifes he was conducted to the boat, thence through the streets of Sandusky to the depot. It was an occasion of great fun and frolic, and the derisive shouts of the following crowd added to the mortification of the teamster, who was employed to cart away offal, but "Sold whiskey to the rebels."

Prominent among the public men in Sandusky at the time of my original visit was

ELEUTHEROS COOKE, born in Granville, N. Y., in 1787, died in Sandusky in 1864: a large, fine-looking, enthusiastic gentleman, social, pleasing to meet, and universally respected. He was by profession a lawyer, was in the State Legislature and in Congress, and a pioneer in railroad enterprises, having been the projector of the Mad River railroad. He had a wonderful command of language, was an orator very flowery and imaginative, and indulged largely in poetical similes. On an occasion in Congress, when Mr. Stanberry, of Ohio, was assaulted on Pennsylvania avenue by Felix Houston, of Texas, for words spoken in debate, he declared, in a speech, that if freedom of discussion was denied them he would "flee to the bosom of his constituents," an expression that his political opponents ran the changes upon for a long time after.

He could talk for hours upon any given topic, and on an occasion when it was necessary to get a new writ from Norwalk to detain for debt an arrested steamboat man with his vessel, he talked to the court sixteen hours continuously to stave off a decision upon the defective writ by which he was held. In order to illustrate the legal question before the court, he had gone into a review of the history of the human race, and got from the Creation down to the destruction of Jerusalem by Titus when the necessary papers arrived; then he stopped the harangue, allowed the old writ to be squelched, the new writ was then served, when the defendant paid his debt, and sailed away in his steamer.

Mr. Cooke had one trouble—it was lifelong-stuck to him closer than a brother. It was in his name, Eleutheros. He was born in 1787, the year of the framing of the Federal Constitution, and the name was given in commemoration: it was from a Greek term signifying to set free. It showed his parents must have been fanciful and so he got his name alike with poetical tendencies from them. But the name liked to have been his ruin, that is political ruin. He lost one election by its misspelling, more particularly by the German voters. They spelt it in various ways, taking with it most unwarrantable liberties—spelling it "Luther," "Lutheros," "Eilutheros," "Eilutheros," "Eilros," etc. When he had boys of his own, taking warning from experience, he started them with names after great states— The first was Pitt Cooke, the second was Jay Cooke, and the third was to have been, perhaps, Fox Cooke, or something like it, when the mother rebelled and the child was given the good old-fashioned name of Henry D. Cooke. Pitt died at fifty; he was a partner with his brothers in the banking business. Henry D. became an eminent journalist, had an interesting and valuable life; was the first Governor of the District of Columbia, appointed by Grant, and died in 1881. The history of Jay Cooke, the great financier of our civil war, is dwelt upon under the head of Ottawa county, where lies Gibraltar, his beautiful summer island home in the lake, where he entertains his friends with abounding hos-

DEPOT OF CONFEDERATE PRISONERS, JOHNSON'S ISLAND, SANDUSKY BAY.

[Like all prisoners held under the American Flag, those at Johnson's Island were given comfortable quarters and good food, with occasional bathing in the lake; but being mostly officers, the gentlemen of the Confederate Army, they nade no complaint because not allowed fishing privileges therein.]

pitality and recreates with much fishing in

prolific waters.

In my original visit to Sandusky there was also residing here EBENEZER LANE, whose acquaintance I had the privilege of making. He was among the most eminent legal men of Ohio of that day: profound in scholarship and frank and cordial in his ways. In five minutes I felt as though we had been lifelong friends. His brothers in the profession idolized him. He was born in Northampton in 1793, graduated at Harvard in 1811, studied law under his uncle, Matthew Griswold, of Lyme, Conn.; early came to Ohio, was soon judge of Common Pleas, and from 1843 until 1845 judge of the Supreme Court, when he retired from the bench to give his attention to the railroad development of this region.

Sandusky never dreamed but what she would be the terminus of the Ohio canal. It was the shortest and direct distance across the State from the mouth of the Scioto on the Ohio to the lake, and its harbor expansive and safe. Instead of that, mainly through the efforts of Alfred Kelly, who then resided there and was one of the canal commissioners, Cleveland was made its terminus; thus increasing the distance by a winding tortuous course of perhaps thirty or more miles, yet bringing the canal nearer the big wheat fields and coal beds, and accommodating a larger farming population, a more densely settled older country.

The canal was a prime factor in making

Cleveland the great lake city of the State. The people of Sandusky felt keenly its loss as a cruel wrong, and with the hope of retrieving the disaster started the earliest in railroad construction; so Judge Lane, prompted by public spirit, left the bench to exert his powers in that direction, in the course of which he became President of the Lake Erie and Mad River Railroad, a link in the first continuous railroad line across the State.

Cleveland was also on the alert in railroad construction, but a little behind Sandusky, and tapping the great coal-fields of south-eastern Ohio and bringing down the iron of Lake Superior got a power for the lead that was irresistible. The diversion of Judge Lane from his profession was a loss to his fame, as otherwise his reputation would have become national, from his unquestionably

great powers.

On the publication of my original edition, I got four of those whom I regarded as the most influential men of the Ohio of that day to unite in a joint recommendation, two Demo-crats and two Whigs. Those four were Samuel Medary, of Columbus, editor of the Ohio Statesman, called the "Old Wheel Horse of Statesman, called the "Old Wheel Horse of the Democracy," Governor Reuben Wood, of Cleveland, the "Tall Chief of the Cuyahogas," Thomas Corwin, of Lebanon, "The Wagon Boy," and Ebenezer Lane, of Sandusky, and there I rested, fortified as the book was by a "Wheel Horse," a "Cuyahoga Chief," a "Wagon Boy," and a "Judge."

MILAN IN 1846.—Twelve miles from Sandusky City, and eight from Lake Erie is the flourishing town of Milan, in the township of the same name. It stands upon a commanding bluff on the bank of Huron river. The engraving on next page shows its appearance from a hill near the road to Sandusky City, and a few rods back of Kneeland Townsend's old distillery building, which appears in front. In the middle ground is shown the Huron river and the canal; on the right the bridge across the river; on the hill, part of the town appears, with the tower of the Methodist and spire of the Presbyterian church. Population about 100.— Old Edition.

Milan is 8 miles south of Lake Erie, on the Huron river, 55 miles west of Cleveland, on the line of the N. & H. and N. Y. St. L. and C. Raitroads. It was before the days of railroads a great grain depot, the grain product of several neighboring counties being brought in wagons here for shipment by river and canal. Some of the wagons had in them loads of a hundred bushels of grain and were drawn by four or six horses. Six hundred wagons have arrived in a day. As many as twenty sail vessels have been loaded in a single day, and 35,000 bushels of grain put on board.

Newspapers: Advertiser, Wickham & Gibbs, publishers. Churches: 1 Presbyterian, 1 Methodist Episcopal, 1 Episcopal, and 1 Catholic. Bank: Milan Banking Company, James C. Lockwood, president; L. L. Stoddard, cashier. Industries: 2 flouring mills, 1 tile factory, 1 spoke factory, and Stoakes' Automatic Pen

Factory.

Appended is a historical and descriptive sketch of the village and township given to the old edition by Rev. E. Judson, of Milan.

On the spot where the town of Milan now stands, there was, at the time of the survey of the fire-lands, in 1807, an Indian village, containing within it a Christian community, under the superintendence of Rev. Christian Frederic Dencké, a Moravian missionary. The Indian name of the town was Petquotting. The mission was established here in 1804. Mr. Dencké brought with him several families of Christian Indians, from the vicinity of the Thames river, in Upper Canada. They had a chapel and a mission house, and were making good progress in the cultivation of Christian principles, when the commencement of the white settlements induced them,

in 1809, to emigrate with their missionary to Canada. There was a Moravian mission attempted as early as 1787. A considerable party of Christian Indians had been driven from their settlement at Gnadenhutten, on the Tuscarawas river, by the inhuman butchery of a large number of the inhabitants by the white settlers. After years of wandering, with Zeisberger for their spiritual guide, they at length formed a home on the banks of the Cuyahoga river, near Cleveland, which they named Pilgerruh ("Pilgrim's rest.") They were soon driven from this post, whence they came to the Huron, and commenced a settlement on its east bank, and near the north

MILAN FROM NEAR THE SANDUSKY CITY ROAD.

line of the township. To this village they gave the name of New Salem. Here the labors of their indefatigable missionary were crowned with very considerable success. They were soon compelled to leave, however, by the persecutions of the pagan Indians. It seems to have been a portion of these exiles who returned, in 1804, to commence the new mission.

The ground on both sides of the Huron river, through the entire length of the township, is distinctly marked at short intervals by the remains of a former race. Mounds and enclosures, both circular and angular, some of which have strongly marked features, occur at different points along the river.

The land in the township of Milan was brought into market in 1808. In the summer of the following year David Abbott purchased 1800 acres, in the northeast section of the township, and lying on both sides of the Huron, for the purpose of commencing a settlement. He removed here with his family in 1810. Jared Ward purchased a part of Mr. Abbott's tract, and removed here in 1809. He was the first "actual white settler," who had an interest in the soil. The progress of the settlement was at first rapid. When hostilities with Great Britain commenced, in 1812, there were within

the township twenty-three families and about forty persons capable of bearing arms. The progress of the settlement was interrupted by the war, and few or no emigrants arrived between 1812 and 1816. This interruption was not the only evil experienced by the inhabitants. The British, in the early part of the war, commanded Lake Erie, and could at any moment make a descent upon the place. Many of the Indians were hostile, and were supposed to be instigated to acts of cruelty by the willingness of the British commander at Fort Malden to purchase the scalps of American citizens. Occasional outrages were perpetrated; houses were burned, and in a few instances individuals were murdered in cold blood, while others were taken prisoners. Near the southwestern corner of the township, at a place known as the Parker farm—from its having been first purchased and occupied by Charles Parker—there was a block-house, used as a place of resort during the war. A military guard was kept here. Two young men, apprehensive of no immediate danger, on a pleasant morning in the fall of 1812, left the block-house and wandered to the distance of a mile for the purpose of collecting honey from a "bee-tree." While in the act of cutting down the tree they were surprised by the Indians, who, it seems, had been for some time watching for their prey; one of them, named Seymour, was killed on the spot; the other was recognized by one of the Indians, made a captive and treated kindly. The Indian who captured him had been a frequent guest in the family where the young man had resided.

Some time previous two men, Buell and Gibbs, had been murdered by the Indians near Sandusky. Thirteen persons, women and children, had been captured near the present village of Castalia, some six miles to the westward of Sandusky. Of these, five, most of whom belonged to the family of D. P. Snow, were massacred. All the men belonging to the settlement were absent at the time of the massacre. These repeated butcheries, supposed at the time to be instigated by the British commander at Fort Malden, whither the scalps of all who were murdered were carried, kept the people of Milan in a constant state of alarm. In August Gen. Hull surrendered Detroit to the British, and from this time to the achievement of Perry's victory, in September of the following year, the inhabitants were in constant apprehension for their personal safety. The sighing of the breeze and the discharge of the hunter's rifle alike startled the wife and the mother, as she trembled for her absent husband or her still more defenceless "little one." During this interval, General Simon Perkins, of Warren, with a regiment of militia, had been stationed at "Fort Avery," a fortification hastily thrown up on the east bank of the Huron river, about a mile and a half north of the present town of Milan; but the inexperience of the militia, and the constant presence in the neighborhood of scouting parties of Indians, whom no vigilance could detect and no valor defeat, rendered the feeling of insecurity scarcely less than before. Some left the settlements, not to return till peace was restored. Those who remained were compelled, at frequent intervals, to collect in the fort for safety, or made sudden flights to the interior of the State, or to the more populous districts in the vicinity of Cleveland, where a few days of quiet would so far quell their fears as to lead them to return to their homes, to be driven off again by fresh alarms. With the return of peace, in 1815, prosperity was restored to the settlements, and the emigration was very The emigrants were almost considerable. exclusively of the New England stock, and the establishment of common schools and the organization of Christian churches were among the earliest fruits of their enterprising spirit. The town of Milan was "laid out" in 1816 by Ebenezer Merry, who had two years pre-viously removed to its township. Mr. Merry was a native of West Hartford, in Connecticut, and by his example contributed much, as the proprietor of the town, to promote good morals among the early inhabitants. He took measures immediately for the erection of a flouring-mill and saw-mill, which contributed materially to the improvement of the town, and were of great service to the infant settlements in the vicinity. In the first settlement of the place, grain was carried more than fifty miles down the lake in open boats, to be ground; and sometimes from points more in the interior, on the shoulders of a father, whose power of endurance was greatly heightened by the anticipated smiles of a group of little ones, whose subsistence for weeks together had been venison and hominy.

Mr. Merry was a man of acute observation, practical benevolence and unbounded hospitality. He repeatedly represented the county in the legislature of the State, was twice elected to a seat on the bench of the common pleas, an honor in both instances declined. He died January 1, 1846, at the age of 73,

greatly beloved.

David Abbott, as the first purchaser of land in the township, with a view to its occupancy as a permanent "settler," deserves some notice in this brief sketch. Mr. Abbott was a native of Brookfield, Mass. He was educated at Yale College. His health failed, and he was obliged to forego a diploma by leaving college in the earlier part of his senior year. He soon after entered upon the study of the law, and located himself at Rome, Oneida county, N. Y., whence he came to Ohio, in 1798, and spent a few years at Willoughby, whence he removed to Milan in 1809. He was sheriff of Trumbull county when the whole Western Reserve was embraced within its limits; was a member of the convention for the formation of the Constitution of the State, previous to its admission to the Union, in 1802; was one of the electors of President and Vice-President in 1812; clerk of the supreme court for the county, and repeatedly a member of both houses of the State legislature. He was a man of eccentric habits, and his life was filled up with the stirring incidents peculiar to a pioneer in the new settlements of the West. He several times traversed the entire length of Lake Erie, in an open boat, of which he was both helmsman and commander, and in one instance was driven before a tempest diagonally across the lake, a distance of more than a hundred miles, and thrown upon the Canada shore. There was but one person with him in the boat, and he was employed most of the time in bailing out the water with his hat, the only thing on board capable of being appropriated to such use. When the storm had subsided and the wind veered about, they retraced their course in the frail craft that had endured the tempest unscathed, and after a week's absence were hailed by their friends with great satisfaction, having been given up as lost. Mr. Abbott died in 1822 at the age of 57. Of the other citizens who have deceased, and whose names deserve honorable mention as having contributed in various ways to the prosperity of the town, are Ralph Lockwood, Dr. A. B. Harris and Hon. G. W. Choate.

The religious societies of the place are a Presbyterian, Methodist and Protestant Episcopal church, each of which enjoys the stated preaching of the gospel, and is in a flourishing state. The two former have substantial and valuable church edifices. The latter soci-

ety has one in process of erection. In 1832 a substantial and commodious brick edifice was erected as an academy, furnishing, beside two public school-rooms and suitable apartments for a library and apparatus, ten rooms for the accommodation of students. The annual catalogue for the last ten years has exhibited an average number of about 150 pupils.

In 1833 a company of citizens, who had been previously incorporated for the purpose, entered vigorously upon the work of extending the navigation of Lake Erie to this place by improving the navigation of the river some five miles from its mouth and excavating a ship canal for the remaining distance of three miles. After much delay, occasioned by want of funds, and an outlay of about \$75,000, the work was completed, and the first vessel, a schooner of 100 tons, floated in the basin July 4, 1839. The canal is capable of being navigated by vessels of from 200 to 250 tons burden. The chief exports of the place are wheat, flour, pork, staves, ashes, wool and grass seeds. The surrounding country is rapidly undergoing the improvements incident to the removal of the primitive forests, and with the increased productiveness the business of the town has rapidly increased.

The value of exports for the year 1844 was \$825,098; of this, more than three-fourths consisted of wheat and flour. The importation of merchandise, salt, plaster, etc., for the same period, was in value \$634,711.

TRAVELLING NOTES.

Ohio is the native State of those two eminent electricians, Chas. Francis Brush, born in Euclid, near Cleveland, in 1849, and Thomas Alva Edison, born in Milan in 1847. At noon, July 20th, I left the train at Milan to visit the birthplace of the latter. station is down in the valley, and ascending the hill I gained the plain on which the village stands. In the centre is a neat square of an acre covered with maples and evergreens. On this stands a soldiers' monument surmounted by an eagle and inscribed with the names of Milan's dead heroes. No spot could be more quiet. Scarcely a soul was in sight; the spirit of repose seemed to rest there in undisturbed slumber.

Two old men, octogenarians, gazed upon me as I neared them, and pausing in their presence I made known my errand, whereupon one of them, Mr. Darling, took me to Edison's birthplace. It is on Choate avenue, and now the residence of Mrs. Sarah Talcott. It is a neat brick cottage on the edge of a hill which overlooks the valley of the Huron, with a fine view, sixty or eighty feet below, of river, bridge, canal, railroad and rich farming country beyond. My venerable conductor could give me but a single reminiscence of the inventor, and that was as a child in frocks, too young to read or spell, when he saw him seated on the ground on the little village green, grasping a piece of chalk and

THOMAS ALVA EDISON.

copying on a board the letters of a store sign near by. It was a bright beginning; an ordinary child would not have done such a thing.

In the evening Mr. Ashley, an elderly gentleman, the village jeweler, gave me some items. The father of Mr. Edison was from Canada; the mother, originally a Miss Elliott, an American. He became a resident of Milan about 1842. He was a man of magnificent physique and so athletic that when at the war period, although about sixty years of age, not a single man in an entire Michigan regiment could equal him in length of running leap. His occupation in Milan was the making of shingles by hand from wood imported from Canada. He had a number of men under him, and it was quite an in-The wood was brought here in what are called bolts; a bolt was three feet long and made two shingles, was sawn in two by hand and then split and shaved. None but first-class timber could be used, and such shingles far outlasted those now made by machinery with their cross-grain cut. Mr. Ashley said he shingled his house in 1844, and now, after a lapse of forty-two years, it is in good condition.

The Edison family removed to Michigan, and they being in humble circumstances, young Edison at the age of twelve took the position of newsboy on the Grand Trunk line running into Detroit. The little schooling he received was from his mother, who had been a teacher, but he acquired the habit of reading, studied chemistry and made experiments when on the train.

Later he became interested in the operations of the telegraph, which he witnessed in the railroad stations, and improvised rude means of transmitting messages from his father's house in Port Huron to that of a neighbor. Finally a station master, whose child he had rescued in front of an incoming train, taught him telegraph operating, when he followed that profession and experimented in electric science, with results so surprising and useful as to gain for him undying fame.

and useful as to gain for him undying fame. The original owner of the land on which Milan stands was John Beatty, a native of the north of Ireland. He was the largest landowner in the Fire-Lands and the grandfather of General John Beatty, who has favored us with this sketch of him, accompanied with some racy anecdotes:

Among the more prominent of the early settlers of Erie county was John Beatty, formerly of New London, Connecticut. His first visit to Ohio was made in 1810, at which time he bought some 40,000 acres within the present limits of Erie and Huron, of what were then known as the "Fire-Lands." In 1815 he removed with his family to this wilderness and built his first residence five miles south of Sandusky, on what is still known to the older residents of

Geo. W. Edmondson, Photo , Norwalk, 1886 BIRTHPLACE OF THOMAS A. EDISON, MILAN.

that section as the "stone-house place." When the township of Perkins was organized Mr. Beatty was made its first clerk. Subsequently he was appointed postmaster, and for many years thereafter he served the pioneers as justice of the peace. About 1828 he removed to Sandusky, and in 1833 was elected mayor of that city. He died in 1845, and is still remembered as an upright, intelligent, warm-hearted, hospitable gentleman. The church edifice now standing on the public square of Sandusky, and occupied at this date by the Lutherans, was built at his cost and donated by him to the Wesleyan Methodist Society.

John Beatty was a local preacher of the Methodist Episcopal Church, and from 1815 to 1819 on almost every Sabbath met the pioneers in their log school-houses or at their homes and addressed them very acceptably on religious subjects. He was, however, a hot-tempered, impulsive, generous, obstinate Irishman, who never succeeded in reaching that degree of perfection which enabled him to love his enemies and offer the left cheek to an adversary who had smitten him on the right.

An Accommodating Postmaster.—In 1816, or thereabouts, a post-office was established and Beatty appointed postmaster. The era of cheap transportation and of cheap postage had not arrived. The settlers were poor; few of them could raise the shilling with which to pay the postage on a letter, but it was hard to have it withheld simply because they

were poor and had no money. The new postmaster proved equal to the occasion; he gave them their letters and never made returns to the department. When called upon to do so, he replied that he had received no money from the office, and therefore had none to return, and instead of being indebted to the government, the latter was in fact indebted to him. This sort of logic, however satisfactory to the settlers, was by no means pleasing to the Post-Office Department, and so the government in 1819 discontinued the office, and thus afforded Mr. Beatty greater leisure to look after the spiritual welfare of his neighbors.

He was the original proprietor of the land on which the town of Milan now stands; the site on the banks of the Huron river was naturally a very pretty one. Frederick Christian Deucke, a Moravian missionary, had, in 1804, established a mission there and called the place Petquoting—a very handsome name by the way and one which the people should never have abandoned. In 1814 Mr. Ebenezer Merry, having bought the place, laid out a village, and in honor of the first owner called it *Beatty*.

An Audacious Seizure.—Among the first, if not the first vessel built in what is now Erie county, was one built by Abijah Hewitt, Eleazer Bell and a man named Montgomery on the bay shore a few miles southeast of Sandusky. In one of its first voyages it brought to Sandusky a cargo comprising a stock of general merchandise for Mr. Beatty,

and among other things a cask of brandy which had not been entered at the custom house. The vessel was consequently seized and subsequently confiscated. Mr. Beatty's merchandise was put under lock and guard and the case reported to the department. The mails moved slowly in those days; time passed, and conscious of no fault on his part respecting the matter, Beatty grew impatient, and finally called his friends about him, drove his teams onto the wharf, put revenue officers and their employés aside, broke open the doors of the warehouse, and carried off his merchandise. All this was not difficult to do; the troublesome part of the affair came afterward, and resulted not from the cask of smuggled brandy, but from the violent and unwarrantable manner in which he had regained possession of his goods. The United States government was a big thing, even then, and no single citizen could afford to defy it, as Mr. Beatty discovered some years afterward when compelled to pay the costs and penalties growing out of this unfortunate

The Candle Story.—While a resident of New London, Connecticut, a boy stole from Mr. Beatty a box of candles; the thief was promptly arrested and arraigned before a magistrate; a witness appeared who testified that the boy was guilty as charged, and Beatty being called to prove the value of the property, swore that "the candles were worth four dollars, every penny of it." Under the law respecting petty offence at that time in force in Connecticut, when the property stolen was worth from four dollars and upward, the penalty was whipping at the post! The magistrate was about to pass sentence, when Beatty realized for the first time the terrible nature of the punishment; his anger had by this time cooled, and a feeling of pity for the boy supplanting every other emotion, he took the witness stand again and said: "If it please your honor I desire to correct my testi-

mony. I swore that the candles were worth four dollars, but I omitted to add that that was the retail price; as the boy took a whole box I'll put them to him at three dollars and thirty-three cents." The boy was not whipped.

Jay Cooke's Start.—Mr. Pitt Cooke once told me how his brother Jay happened to get into the banking business, and as nearly as I can recollect it was as follows: The Cookes were living in a house on Columbus avenue (Sandusky), near the present site of the Second National Bank. One day, when the family were seated at the dinner table, Eleutheros Cooke, the father, said in a spirit of pleasantry: "Well, boys, you must look out for yourselves. I have sold this house to 'Squire' Beatty, and we have no home now." Jay was the only one who took the matter seriously. He obtained a situation in a store that afternoon, subsequently accompanied his employer to Philadelphia, and this opened the way for him to the position of clerk in a banking house, and from this humble start in life he became the financial agent of the United States.

The Rev. Alvan Coe, a very worthy and devout man, at an early day established a school for Indian boys, on the Fire-Lands in the vicinity of Milan, where he sought to instruct them in the mysteries of religion and teach them to read and write. The father of one of the Indian boys came over from the Sandusky river to visit his son, and while lingering in the vicinity wandered into a distillery. As was the custom in those days, the proprietor offered him a cup of whiskey. The Indian shook his head, and with much dignity said: "My boy tell me, Mr. Coe say, Ingin no drink, good man: go up much happy. Ingin drink, bad man: go down burn much." Then looking wistfully at the whiskey he picked it up, and raising it slowly to his lips said: "Maybe Mr. Coe tell d—n lie," and drank it down.

Berlin Heights is a village on the line of the N. Y. St. L. & C. R. R., which has three churches and about 500 inhabitants. Census of 1880 was 424. School census 1886, 208; Hugh A. Myers, superintendent. It is the largest of the three villages of Berlin township, the other two being Ceylon and Berlinville. The township of Berlin from a small beginning has become noted for the perfection of its various fruits and the skill of its horticulturists. The proximity to the lake prevents damaging frosts, and the soil is well adapted to the apple, pear, peach, and grape. The pioneers at an early day were determined to have orchards, and began to plant trees before the ground was clear of the forests. Canada was the nearest place from whence fruit-trees could be obtained, and in 1812 John Hoak and Mr. Fleming, of Huron, crossed the lake, and returned with a boat-load of trees, apple and pear. Some of these old trees are now standing, vigorous, and of enormous size and productiveness. One of the pear trees is seventy feet in height, with a girth of eight feet nine inches eighteen inches from the ground; an apple tree is over nine feet in girth.

A quarter of a century ago Berlin Heights widely attracted attention from the organization therein of a Socialistic or Free Love society; only a single citizen of the township was identified with the movement, its supporters being drawn from various States. Three successive communities were established and each failed.

The last was the Berlin Community, or Christian Republic; it commenced in 1865, and had twelve adult members and six children, and lived about one year. The Socialists started journals, which had in succession brief careers, but striking names, as Social Revolutionist, Age of Freedom, Good Time Coming, The New Republic, The Optimist and Kingdom of Heaven, etc. One of the papers, The Age of Freedom, issued in 1858, was so obnoxious that twenty Berlin women seized the mail-sack which Frank Barry, the editor, had brought on his shoulders to the post-office, loaded with copies, and made a bonfire of them in the street.

The author of the historical sketch of Berlin Heights, from which the foregoing items are derived, says: "The drifting to this section of so many individuals who, to use their own phrase, were 'intensely individualized,' and who remained after the complete failure of their schemes, has had an influence on the character of the town. They engaged in fruit-growing, have multiplied the small farms, and added to the prosperity and intellectual life of the people. From the beginning their honesty was never questioned, however mistaken their ideas." This author, Hudson Tuttle, was born here in 1836, in a log-cabin, on the spot where he now has a productive fruit-farm of between 200 and 300 acres of orchards and vineyards. He is known to the outside world by his spiritualistic and other works, and his wife, Mrs. Emma Tuttle, by her two volumes of poems: "Blossoms of Our Spring" and songs which have been set to music, as "My Lost Darling," "The Unseen City," and "Beautiful Claribel."

Hon. Almon Ruggles, the original surveyor of the "Fire-Lands," was a resident of Berlin and died in 1840 in the sixty-ninth

year of his age. He came in 1805 from Danbury, Conn., to survey the "Sufferers' Lands," as the Fire-Lands were sometimes termed. In addition to his salary he was permitted to select one mile square anywhere on the lake shore within the limits of his survey at one

ALMON RUGGLES.

dollar per acre. He selected the land in the township of Berlin. His early life was a struggle with adversity, and he had but six months schooling. He obtained his first book by catching wood-chucks, tanning the skins and braiding them into whip lashes for market; and later he became a school-teacher. He

was a man of great kindness of heart—had a store of general merchandise and trusted all those who could not pay. It was said of him that he might have been very rich had he been disposed to grind the face of poverty. He preferred to live more unselfishly and merit the confidence and respect of his fellows. He not only encouraged the early settlers with material aid, but with cheerful looks and kind words. He represented this senatorial district in the State legislature in 1816–17–19, when the district consisted of the counties of Ashtabula, Geauga, Portage, Cuyahoga and Huron. He was associate judge for several years under the old constitution. His ability, his integrity, his knowledge of the country and the people eminently qualified him for the places he filled. He was an earnest worker in the Whig party, and a personal friend of Gen. Harrison.

Mr. Tuttle, from whose township history the notice of Almon Ruggles is derived, draws a refreshing picture of virtue in his sketch of Rev. Phineas Barker Barber of Berlin. He was a Methodist preacher who died in 1877 at the age of eighty-four.

His ministry commenced in Ohio in 1830, when he could stand in his own door and shoot deer and other game, which he frequently did. During the fifty-eight years of his ministy he never received a dollar for preaching, but supported his family by hard labor on his farm. His endurance was wonderful. He preached every Sunday and his appointments were from five to twenty miles apart; in the early times he went through the wilderness on foot. He also attended on an average three funerals a week, and invariably suffered with a sick headache after preaching. His long and useful life was filled with labor and adorned with love.

Huron, on Lake Erie, at the mouth of the Huron river, is nine miles east of Sandusky and fifty-six miles west of Cleveland, on the L. S. & M. S. and N. & H. Railroad. Newspaper: *Erie County Reporter*, Independent, D. H. Clock, publisher. Churches: 1 Presbyterian, 1 Methodist and 1 German Evangelical. Bank: Huron Banking Co., V. Fries, president; H. W. Rand, cashier.

Manufactures and Industries.—One of the largest fishing industries on the lakes is located here, employing 150 men. About 500 tons are annually frozen during the winter months and 2,000 tons salted during the fall and spring. Its manufactures are tackle blocks, mast hoops and a patent shifting seat for top buggies.

Population in 1880, 1.038. School census in 1886, 371; C. K. Smoyer, superintendent.

Huron has one of the best harbors on the lake, with about fifteen feet of water in the channel and room enough for all the shipping on the lake. The French had a tradingpost at the mouth of the Huron river about the year 1749. The Moravian missionaries, consisting of a few white settlers and Indians, located on a part of the southeast corner of Huron and the northeast corner of Milan

townships, which they abandoned previous to the Revolutionary war.

In the latter part of the last century or beginning of this, John Baptiste Flemond or Fleming from Montreal opened a trading station and dealt with the Indians on the east bank of the Huron about two miles from its mouth. He at one time assisted the surveyors in surveying the Fire-Lands.

Castalia is a neat village on the line of the I. B. & W. and L. E. & W. Railroads at the head of Coal creek, five miles southwest of Sandusky City. It borders on a beautiful prairie of about 3,000 acres; was laid out in 1836 by Marshall Burton and named from the Grecian fount.

The phenomena presented by the Castalia Springs has excited considerable curiosity and interest. At Castalia a volume of water called Cold creek, which forms quite a river, flows up from several deep orifices in the limestone rock and supplies in its descent of fifty-seven feet to Sandusky bay, three miles distant, the motive power for several mills. Being fed by subterranean fountains it is not much affected by floods and drouths. In its natural channel this creek ran through a piece of prairie covering several hundred acres into a quagmire and "muskrat garden." It now runs nearly its whole length through an artificial channel or mill-race.

In 1810 a grist mill was built near the head of Cold creek which ground corn until the settlers were driven away by the news of Hull's surrender. This was probably the first grist mill on the Fire-Lands.

Similar springs to the Castalia are found in all limestone countries. The water is so pure that the smallest particle can be seen at the bottom, and when the sun is at the meridian all the objects at the bottom, logs, stumps, etc., reflect the hues of the rainbow, forming a view of great beauty. The constituents of the water are lime, soda, magnesia and iron, and it petrifies all objects, as grass, stumps, moss, etc., which come in contact with it. The water wheels of the mills upon it are imperishable from decay in consequence of their being incrusted by petrifaction. The water is very cold but never freezes, and at its point of entrance to the lake prevents the formation there of ice; it maintains nearly the same temperature summer and winter.

In 1870 Mr. John Hoyt procured a couple of thcusand of eggs of the brook or speckled trout, made hatching troughs and was successful in raising trout on Cold creek. The stream is now well stocked with trout and is leased to two clubs of gentlemen for sporting purposes, "The Castalia Spring Club" and the "Cold Creek Trout Club."

The village of Venice is on Sandusky bay, near the mouth of Cold creek, and on the L. S. & M. S. R. R. In the summer of 1817 the village was founded and the mill-race was begun to bring Cold creek to the present site of the Venice mills. The flouring mills here have performed a very important part in the development of the country. The Venice flouring mills, completed in 1833, established the first permanent cash market for wheat in the "Fire-Lands." The first 100 barrels of flour in the merchant work was sent to New York. On its arrival hundreds of people went to see it, for it was the first shipment of extra flour from Ohio, and some even predicted that in time Ohio might furnish them with several thousand barrels of flour a year.

Much of the flour made in Ohio before 1840 was sent West for market. In

1836 Oliver Newberry purchased 500 barrels of flour, at \$8 per barrel, and took it to Chicago, then a struggling frontier village, and sold it for \$20 a barrel, citizens holding a public meeting thanking him for not asking \$50. It was all the flour the people of Chicago had for the winter. Board in Chicago was at that early day enormously high, owing to the scarcity of food, the country around being then an unproductive wilderness.

Before the starting of the flouring-mills in the fire-lands, the earliest settlers in some cases took their wheat in boats over the lake to the French mills, near Detroit. A touching incident is told of a party of men who started with their year's wheat in a boat and landed near the close of the day on one of the islands and then went inland a short distance to select a place to camp over night. On their return to the shore, lo and behold their boat was nowhere to be seen. A sudden gust of wind had freed it from its mooring and it had floated off with its precious load upon the broad expanse of Lake Erie. What situation could be more deplorable! They were

on a lone island and no way of escape. There were no passing vessels to rescue them. The lake was at that time but a solitude of water. Thoughts of their families, starvation for them and starvation for themselves seemed inevitable. Poor men! they broke down, shed tears, and passed a night of woe. Morning came. Heartbroken, they wandered down to the shore and gazed upon the wild waste of waters. Then all at once in a little nook, safe and close in shore, they discovered their boat. A change of wind in the night had floated it back as silently as it had floated away.

Kelley's Island is a township of Erie county; lies in the lake, thirteen miles from Sandusky, and contains a little over four square miles. It was originally called Cunningham's Island, from a Frenchman, who came here about 1803. He was an Indian trader, and built a cabin or trading shanty. In 1810 came two other Frenchmen, Poschile and Bebo; all three left the island in the war period, at which time Gen. Harrison, in command of the "Army of the Northwest," stationed a guard on the west point of the island to watch the movements of the British and Indians on the lake. In 1818 a man named Killam came with his family and one The steamboat "Walk-in-the-Water," the first built upon the lakes, came out this year, and Killam furnished her with fuel—all red cedar. In 1820 the "Walk-in-the-Water" was wrecked at Point Albino. In 1833 Datus Kelley, of Rockport, in connection with his brother, Irad Kelley, of Cleveland, bought the island, with a view of bringing into the market the red cedar with which much of the island was then covered. At this time there were only three or four families, and those squatters, on the island, and only six acres of cleared land. In 1836 Mr. Datus Kelley moved his family to his island home, and remained until his death, in 1866, in his seventy-eighth year. He was a man of great force of character, and careful not to sell land to any settlers except to people of thrift and general good habits; the result of this is apparent in the fine moral status of its present population. The census of 1840 gave it a population of 68; that of 1880, 888.

The sales of wood, cedar, and stone soon repaid many times the entire purchase, and the tillable land, a strong limestone soil, proved to be of superior quality. The stone trade grew into great proportions. Large quantities of limestone were then quarried for building and other purposes. Some of the most elegant structures of our cities are built with the Kelley Island limestone.

Another element came in to effect a revolution in the pursuits of the people. About the year 1842, Mr. Datus Kelley noticing that the wild grapes upon the island were remarkably thrifty, brought from his former residence at Rockport the Catawba and Isabella grape vines, and found the soil and climate surprisingly well adapted to the culture of the grape. Mr. Charles Carpenter, son-in-law of Mr. Kelley—born in Norwich, Conn., in 1810—planted the first acre of grapes as a field crop, and the demonstration was such that in a few years there were nearly 1,000 acres set to vines, about one-third of the entire area of the island. Large profits for a time resulted from the sale of the fruit packed for table use, and as a consequence the price of land advanced several hundred per cent. The excess of

supply over demand for table use, and also the quality of the crop for that purpose, led to the manufacture of wine, and there were in course of time erected on the island cellars which, including those of the Kelley Island Wine Company, had a capacity of storing half a million gallons of wine. The average crop of grapes by 1880 had grown to 700 tons, all of which was manufactured into wine. Mr. Carpenter, mentioned above, was not only prominent as a horticulturist, but he took a deep interest in the artificial propagation of fish; was active and prominent in inducing the State to experiment in the propagation of white-fish, and was put in charge of a branch of the State Fish Hatchery on Kelley's Island.

Antiquities.—Kelley's Island was a favorite place of resort of the aborigines, which is shown by the remains of mounds, burial-places, and implements. Here is the famous "Inscription Rock," which archæologists have regarded as the work of the Eries, or Cat nation, which was annib lated in a wholesale slaughter by the Iroquois in 1655. The following brief description is from the pen of Mr. Addison

Kelley:

This Inscription Rock lies on the south shore of Kelley's Island, in Lake Erie, about 60 rods east of the steamboat landing. The rock is 32 feet greatest length, and 21 feet greatest breadth, and 11 feet high above the water in which it sets. It is a part of the same stratification as the island, from which it has been separated by lake action. The top presents a smooth and polished surface, like all the limestone of this section of country when the soil is removed, suggesting the idea of glacial action; upon this the inscriptions are cut; the figures and devices are deeply sunk in the rock

deeply sunk in the rock.

Schoolcraft's "Indian Antiquities" says of it: "It is by far the most extensive and well sculptured and best preserved inscription of the antiquarian period ever found in America." It is in the pictographic character of the natives; its leading symbols are readily interpreted. The human figures, the pipe, smoking groups, and other figures denote tribes, negotiations, crimes, and turmoils, which tell a story of thrilling interest, connected with the occupation of this section by the Eries—of the coming of the Wyandots—of the final triumph of the Iroquois, and

flight of the people who have left their name on the lake.

In the year 1851 drawings of these inscriptions were made by Col. Eastman, of the United States army, who was detailed by the government at Washington to examine them on the representation of Gen. Meigs, who had examined them. Copies of the inscriptions

were made and submitted to Shingvauk, an Indian learned in Indian pictography, and who had interpreted prior inscriptions submitted to him.

We copy a few lines from Schoolcraft's "American Antiquities," page 85 to 87 inclusive: "No. 6, is a chief and warrior of distinction; 7, his pipe, he is smoking after a fast; 15-16, are ornaments of leather worn by distinguished warriors and chiefs; No. 14, ornaments of feathers; 33, is a symbol for the No. 10, and denotes ten days, the length of his fast; 34, is a mark for the No. 2, and designates two days, and that he fasted the whole time, except a morsel at sunset.

time, except a morsel at sunset.

"Nos. 1, 2, 3, 4, 5, 8, 9, 10, 11, 12, 13, 17, 18, 19, 20, 22, 23, 24, 25, 26, and 43 represent different objects relied upon by the chief in the exhibition of his magical and political powers, denoting in him the sources of long life and potent influences; figures 30, 19, 41, denote a journey in snow shoes; 31–40. war clubs; 78, a road; 122, serpents who beset

his path, etc., etc.

These inscriptions were first brought to the knowledge of "the white man," about the year 1833-4, soon after the purchase of the island by Datus and Irad Kelley, being discovered by Mr. Charles Olmstead, of Connecticut, while tracing, and studying the glacial grooves. Since then the rock has been visited by thousands of persons, and has become much worn, and some of it is so much obliterated as to prevent a full photograph being taken of it, as it was when first discovered.

Prior to photographing the view shown of Inscription Rock Mr. Bishop and Mr. Addison Kelley, the latter shown on its summit, passed half a day in going over the partly obliterated lines in red chalk because red photographs black.

The most celebrated locality perhaps in the world to show the marks of the receding glaciers is in this island region, and especially are they strong on Kelley's Island, as described on the third page of the article in this work, "Glacial Man in Ohio." Col. Chas. Whittlesey, in a paper read before the "American Association for the Advancement of Science," August, 1878, entitled "Ancient Glacial Action, Kelley's Island, Lake Erie," says: "These islands originally formed a part of the main land on the south and of the low coast to the west. Probably all of the lake west of Point Pellee, in the pre-glacial period, was more land than water.

Instead of a lake with islands it must have been a country with lakes, rivers and swamps." Some of the furrows on this island worn by the ice are two feet deep.

In this region whenever the rocks are laid bare the evidences of ice action are very marked. In Sandusky City many of the cellar bottoms show polished,

grooved and striated surfaces.

Vermillion is on the L. S. & M. S. and N. Y. C. and St. L. R. R., at the mouth of Vermillion river, which was so named by the Indians on account of a paint they found along its banks. Census of Vermillion in 1880, 1,069. School census, 1886, 329; J. Q. Versoy, principal. The first settlers in this vicinity came between the years 1808 and 1810 and were Wm. Haddy, William Austin, George and John Sherarts, Enoch Smith, Horatio Perry, Solomon Parsons, Benjamin Brooks, Barlow Sturges, Deacon John Beardsley, James Cuddeback and Almon Ruggles, surveyor of the Fire-Lands and land agent for the company. One of these, Capt. Wm. Austin, said he often held Commodore O. H. Perry on his knees when a baby. About 1842 the harbor here was dredged to a depth of fourteen feet, a light-house built and ship-building extensively prosecuted.

FAIRFIELD.

Fairfield County was formed December 9, 1800, by proclamation of Gov. St. Clair and so named from the beauty of *its fair fields*. It contains every variety of soil, from the richest to the most sterile. In the north and west it is generally level and the soil fertile. The southern part is hilly and broken, the soil thin and in many places composed of sand and gravel. A great and permanent source of wealth to the county is its vast sandstone quarries, the stone from which is largely sent to other parts of the State for building purposes. Area 470 square miles. In 1885 the acres cultivated were 130,721; in pasture, 93,071; woodland, 42,005; lying waste, 5,258; produced in wheat 160,756 bushels; corn, 2,649,925; butter, 713,868 pounds; wool, 146,192; cattle owned, 23,448; sheep, 30,391; hogs, 32,538. School census, 1886, 10,663; teachers, 205. It has 95 miles of railroad.

The population in 1820 was 16,508; 1840, 31,858; 1860, 30,538; 1880, 34,-284, of whom 29,963 were Ohio-born; Pennsylvania, 1,058; Germany, 1,018; Ireland, 230; Virginia, 623; New York, 135; Indiana, 143.

From the lecture delivered before the Lancaster Literary Institute, in March, 1844, by George Sanderson, Esq., we derive the following sketch of the history of this region:

The lands watered by the sources of the Hockhocking river, and now comprehended

within the limits of Fairfield county, when first discovered by the early settlers at Mari-

etta, were owned and occupied by the Wyandot tribe of Indians. The principal town of the nation stood along the margin of the prairie, between the south end of Broad street and T. Ewing's canal basin, and the present town of Lancaster, and extending back to the base of the hill, south of the Methodist Episcopal church. It is said that the town contained, in 1790, about 100 wigwams and a population of 500 souls. It was called Tarhe, or in English the Crane-town, and derived its name from that of the principal chief of the tribe. Another portion of the tribe then lived at *Tobey-town*, nine miles west of Tarhetown (now Royalton), and was governed by an inferior chief called *Tobey*. The chief's wigwam, in Tarhe, stood upon the bank of the prairie, near where the fourth lock is built on the Hocking canal, and near where a beautiful spring of water flowed into the Hockhocking river. The wigwams were built of the bark of trees, set on poles in the

form of a sugar camp, with one square open, fronting a fire, and about the height of man. The Wyandot tribe numbered at that day about 500 warriors. By the treaty of Greenville, in 1795, the Wyandots ceded all their territory on the Hockhocking river to the United States.

The Crane chief, soon after the treaty, with many of the tribe, removed and settled at Upper Sandusky; others remained behind for four or five years after the settlement of the country, as if unable or unwilling to tear themselves away from the graves of their fore-fathers and their hunting-grounds. They were, however, so peaceably disposed towards the settlers, that no one felt willing to drive them away. In process of time, the game and fur became scarce. and the lingering Indian, unwilling to labor for a living, was forced by stern necessity to quit the country, and take up his abode with those of his tribe who had preceded him, at Upper Sandusky.

In 1797 Ebenezer Zane opened the road known as "Zane's Trace," from Wheeling to Limestone (now Maysville). It passed through the site of Lancaster, at a fording about 300 yards below the present turnpike bridge, west of the town, and then called the "crossings of the Hockhocking." He located one of his three tracts of land, given by Congress for the performance of this task, on the Hockhocking, at Lancaster.

In 1797, Zane's trace having opened a communication between the Eastern States and Kentucky, many individuals in both directions, wishing to better their condition in life by emigrating and settling in the "back-woods," so called, visited the Hockhocking valley for that purpose. Finding the country surpassingly fertile, abounding in fine springs of the purest water, they determined to make

it their new homes.
In April, 1798, Capt. Joseph Hunter, a bold and enterprising man, with his family, emigrated from Kentucky and settled on Zane's trace, upon the bank of the prairie, west of the crossings, and about 150 yards northwest of the present turnpike road, and which place was called "Hunter's settlement." Here he cleared off the underbrush, felled the forest trees and erected a cabin, at a time when he had not a neighbor nearer than the Muskingum or Scioto rivers. This was the commencement of the first settlement in the Upper Hockhocking valley, and Capt. Hunter is regarded as the founder of the flourishing and populous county of Fairfield. He lived to see the county densely settled and in a high state of improvement, and died about the year 1829. His wife was the first white woman that settled in the valley, and shared with her husband all the toils, sufferings, hardships and privations incident to the formation of the new settlement. During the spring of the same year (1798) Nathaniel Wilson, the elder, John and Allen Green, John and Joseph M'Mullen, Robert Cooper, Isaac Shaeffer and a few others, reached the valley, erected cabins and put out a crop of

In 1799 the tide of emigration set in with

great force. In the spring of this year two settlements were made in the present township of Greenfield. Each settlement contained twenty or thirty families. One was called the Forks of the Hockhocking, and the other Yankeetown. Settlements were also made along the river below Hunter's, on Rush creek, Raccoon and Indian creeks, Pleasant run, Fetter's run, at Tobeytown, Muddy Prairie, and on Clear creek. In the fall of 1799 Joseph Loveland and Hezekiah Smith erected a log grist-mill at the upper falls of the Hockhocking, now called the Rock mill. This was the first grist-mill built on the Hockhocking.

In April, 1799, Samuel Coates, Sen., and Samuel Coates, Jr., from England, built a cabin in the prairie at the "Crossings of the Hockhocking," kept bachelors' hall, and raised a crop of corn. In the latter part of the year a mail route was established along Zane's trace, from Wheeling to Limestone. The mail was carried through on horseback, and, at first, only once a week. Samuel Coates, Sen., was the postmaster, and kept his office at the Crossings. This was the first established mail route through the interior of the territory, and Samuel Coates was the first postmaster at the new settlements.

The settlers subsisted principally on cornbread, potatoes, milk and butter, and wild meats. Flour, tea and coffee were scarcely to be had; and when brought to the country, such prices were asked as to put it out of the reach of many to purchase. Salt was an in-dispensable article, and cost at the Scioto salt works \$5 per fifty pounds. Flour brought \$16 per barrel; tea, \$2.50; coffee, \$1.50; spice and pepper, \$1 per pound.

In the fall of 1800 Ebenezer Zane laid out Lancaster, and by way of compliment to a number of emigrants from Lancaster county, Pa., called it New Lancaster. It retained that name until 1805, when, by an act of the Legislature, the word "New" was dropped. A sale of lots took place soon after the town was laid off and sold to purchasers at prices ranging from five to fifty dollars each. The greater portion of the purchasers were mechanics, and they immediately set about putting up log-buildings. Much of the material needed for that purpose was found upon their lots and in the streets, and so rapidly did the work of improvement progress during the fall of 1800 and following winter that in the spring of 1801 the principal streets and alleys assumed their present shapes and gave assurance that New Lancaster would, at no distant day, become a town of some importance.

About this time merchants and professional men made their appearance. The Rev. John Wright, of the Presbyterian church, settled in Lancaster in 1801, and the Rev. Asa Shinn and Rev. James Quinn, of the Methodist church, travelled on the Fairfield circuit.

Shortly after the settlement, and while the stumps yet remained in the streets, a small portion of the settlers occasionally indulged in drinking frolies, ending frequently in fights. In the absence of law, the better disposed part of the population determined to stop the growing evil. They accordingly met and resolved, that any person of the town found intoxicated, should, for every such offence, dig

a stump out of the street, or suffer personal chastisement. The result was, that after several offenders had expiated their crimes, dram drinking ceased, and for a time all became a sober temperate and happy people

of Licking and Knox; a large portion of Perry, and small parts of Pickaway and Hocking counties.

The first white male child born in Fairfield was the son of Mrs. Ruhama Greene. This lady emigrated to this region in 1798 and settled three miles west of Lancaster, where her child was born. The sketch appended of her is from Col. John McDonald, of Ross county.

Mrs. Ruhama Greene was born and raised in Jefferson county, Virginia. In 1785 she married a Mr. Charles Builderback, and with him crossed the mountains and settled at the mouth of Short creek, on the east bank of the Ohio, a few miles above Wheeling. Her husband, a brave man, had on many occasions distinguished himself in repelling the Indians, who had often felt the sure aim of his unerring rifle. They therefore determined at all hazards to kill him.

On a beautiful summer morning in June, 1789, at a time when it was thought the enemy had abandoned the western shores of the Ohic, Capt. Charles Builderback, his wife and brother, Jacob Builderback, crossed the Ohio to look after some cattle. On reaching the shore, a party of fifteen or twenty Indians rushed out from an ambush, and firing upon them, wounded Jacob in the shoulder. Charles was taken while he was running to escape. Jacob returned to the canoe and got away. In the meantime, Mrs. Builderback secreted herself in some drift-wood, near the bank of the river. As soon as the Indians had secured and tied her husband, and not being enabled to discover her hiding-place, they compelled him, with threats of immediate death, to call her to him. With a hope of appeasing their fury, he did so. She heard him, but made no answer. "Here,"

to use her words, "a struggle took place in my breast, which I cannot describe. Shall I go to him and become a prisoner, or shall I remain, return to our cabin and provide for and take care of our children?" He shouted to her a second time to come to him, saying, "that if she obeyed, perhaps it would be the means of saving his life." She no longer hesitated, left her place of safety, and surrendered herself to his savage captors. All this took place in full view of their cabin, on the opposite shore, and where they had left their two children, one a son about three years of age, and an infant daughter. The Indians, knowing that they would be pursued as soon as the news of their visit reached the stockade, at Wheeling, commenced their retreat. Mrs. Builderback and her husband travelled together that day and the following night. The next morning the Indians separated into two bands, one taking Builderback, and the other his wife, and continued a westward course by different routes.

In a few days the band having Mrs. Builderback in custody reached the Tuscarawas river, where they encamped, and were soon rejoined by the band that had had her husband in charge. Here the murderers exhibited his scalp-on the top of a pole, and to convince her that they had killed him, pulled it down and threw it into her lap. She recognized it

at once by the redness of his hair. She said nothing, and uttered no complaint. It was evening; her ears pained with the terrific yells of the savages, and wearied by constant travelling, she reclined against a tree and fell into a profound sleep, and forgot all her sufferings until morning. When she awoke, the scalp of her murdered husband was gone, and she never learned what became of it.

As soon as the capture of Builderback was

known at Wheeling, a party of scouts set off in pursuit, and taking the trail of one of the bands, followed it until they found the body of Builderback. He had been tomahawked and scalped, and apparently suffered a lin-

gering death.

The Indians, on reaching their towns on the Big Miami, adopted Mrs. Builderback into a family, with whom she resided until released from captivity. She remained a prisoner about nine months, performing the labor and drudgery of squ. ws, such as carrying in meat from the hunting-grounds, preparing and drying it, making moccasins, leggings and other clothing for the family in which she was raised. After her adoption, she suffered much from the rough and filthy manner of Indian living, but had no cause to complain of ill-treatment otherwise.

In a few months after her capture, some

friendly Indians informed the commandant at

Fort Washington that there was a white woman in captivity at the Miami towns. She was ransomed and brought into the fort, and in a few weeks was sent up the river to her lonely cabin, and to the embrace of her two orphan children. She then recrossed the mountains, and settled in her native county.

In 1791 Mrs. Builderback married Mr. John Greene, and in 1798 they emigrated to the Hockhocking valley, and settled about three miles west of Lancaster, where she continued to reside until the time of her death, about the year 1842. She survived

her last husband about ten years. Her first husband, Builderback, commanded a company at Crawford's defeat. He was a large, noble-looking man, and a bold and intrepid warrior. He was in the bloody Moravian campaign, and took his share in the tragedy by shedding the first blood on that occasion, when he shot, tomahawked and scalped Shebosh, a Moravian chief. But retributive justice was meted to him. After being taken prisoner, the Indians inquired his name. "Charles Builderback," replied he, after some little pause. At this revelation, the Indians stared at each other with a malignant triumph. "Ha!" said they, "you kill many Indians—you big captain—you kill Moravians." From that moment, probably, his death was decreed.

Near the town of Lancaster stands a bold and romantic eminence, about two

Drawn by Henry Howe in 1846.

MOUNT PLEASANT.

hundred feet high, known as Mt. Pleasant, which was called by the Indians "the Standing Stone." A writer on geology says in reference to this rock: "What is properly called the sandstone formation terminates near Lancaster in immense detached mural precipices, like the remains of ancient islands. One of these, called Mt. Pleasant, seated on the borders of a large plain, affords from its top a fine view of the adjacent country. The base is a mile and a half in circumference, while the apex is only about thirty by one hundred yards, resembling, at a distance, a huge pyramid. These lofty towers of sandstone are like so many monuments to point out the boundaries of that ancient western Mediterranean which once covered the present rich prairies of Ohio."

It is a place much resorted to by parties of pleasure. The Duke of Saxe-Weimar, when in this country in 1825, visited this mount and carved his name upon the rocks. The lecture delivered before the Literary Institute gives a thrill-

ing narrative of the visit of two scouts to this spot (the famed Wetzel brothers) at an early day, their successful fight with the Indians, the recapture of a female prisoner and their perilous escape from the enemy. The incident was the foundation of a novel by Emerson Bennett, issued about 1848. The name of his heroine was Forest Rose.

VIEW IN MAIN STREET, LANCASTER.

[Near the top of the hill on the left is the Sherman homestead, where in a then log-house were born Senator and General Sherman. The Ewing mansion and new court-house are near them on the summit of the hill.]

Lancaster in 1846.—Lancaster, the county-seat, is situated on the Hockhocking river and canal, on the Zanesville and Chillicothe turnpike, 28 miles southeast of Columbus, 37 from Zanesville, 18 from Somerset, 19 from Logan, 35 from

Chillicothe, 20 from Circleville and 27 from Newark. It stands in a beautiful and fertile valley, and is a flourishing, well-built town. It contains 1 Presbyterian, 1 Methodist, 1 Catholic, 1 Lutheran, 1 Protestant Methodist, 1 Baptist and 1 German Reformed church, about 20 mercantile stores, 2 newspaper offices, and had, in 1840, 2,120 inhabitants. It has since much increased. The engraving shows the appearance of the principal street in the town. It was taken near the court-house and represents the western part of the street. The court-house is shown on the right and the market on the left of the view.—Old Edition.

Lancaster, at the intersection of the C. H. V. & T. and C. & M. V. Railroads, 32 miles southeast of Columbus. It has natural gas and a fine surrounding agricultural district. Its fair ground is one of the finest in the State and its fairs highly successful. County officers in 1888: Auditor, Benjamin Deem; Clerks, Wm. H. Wolfe, Wm. B. Henry; Coroner, Wm. L. Jeffries; Prosecuting Attorney, Wm. H. Daugherty; Probate Judge, John Theodore Busby; Recorder, Robert A. Bell; Sheriff, Benj. F. Price; Surveyor, Chas. W. Borland; Treasurer, Solomon Bader, Michael C. Miller; Commissioners, Allen D. Friesner, Henry W. Gerrett, John Hozey. Newspapers: Ohio Eagle, Dem., Thos. Wetzler, editor and publisher; Gazette, Rep., S. A. Griswold, editor; Fairfield County Republican, Rep., A. R. Eversole, editor and publisher. Churches: 1 Methodist Episcopal, 1 Presbyterian, 1 Catholic, 3 Lutheran, 1 Reformed, 1 Episcopal and 1 Evangelical. Banks: Fairfield County, Philip Rising, president, H. B. Peters, cashier; Hocking Valley National, Theo. Mithoff, president, Thomas Mithoff, cashier; Lancaster, S. J. Wright, president, George W. Beck, cashier.

Industries and Émployees.—E. Becker & Co., lager beer, 14 hands; McAnespie & Co., cloth, yarns, etc., 10; J. B. R. Mumaugh, flour, etc.; Hocking Valley Manufacturing Co., agricultural implements, 93; Hocking Valley Bridge Co., bridges, 14; C. & M. V. R. R. Shops, railroad repairs, 40; A. Bauman, erackers, etc., 13.—State Report for 1887.

Population in 1880, 6,803. School census in 1886, 2,023; Geo. W. Walsh,

superintendent.

On the 1st of February, 1887, natural gas was discovered, after prospecting about fifteen months, in the city of Lancaster, on the grounds in the south part of the city belonging to Dr. E. L. Slocum, who was the first to advocate the organization of a stock company to bore for gas. At the depth of 1,957 feet a flow of gas of 100,000 cubic feet a day was discovered in the Clinton or limestone rock. This was named the Wyandot well, or Well No. 1. Since the discovery at the Wyandot well two other wells have been put down: the one is named Mt. Pleasant, or Well No. 2, and the other East End well, or Well No. 3. Well No. 2 has a flow of 900,000 cubic feet per day, and Well No. 3 over 1,000,000 cubic feet per day.

The pressure is 700 pounds to the cubic inch, being much higher than any in the State. Well No. 2 is 1,989 feet deep, and Well No. 3 is 2,023 feet deep. In all of those wells the gas was found in the Clinton shale or limestone rock. At the depth of about 1,900 feet a large flow of salt-water was found in each of the wells in the Niagara shale, which had to be cased off before boring could proceed. The Clinton rock at Lancaster is a highly crystalline limestone, included between two beds of rock, the upper one being a deposit of the famous fossil ore of the Clinton formation. The gas is regarded as being equal to any in the State. Two additional wells are now being put down: one at the Eagle Machine Works, and the other at the Becker brewery. Pipes are now being laid along the principal streets in the city, and all the manufactories, and some of the offices, hotels, and residences are already using it.

Lancaster has an unusual record in the line of illustrious men. First for our notice comes Thomas Ewing, who passed most of his youth in Athens county, under

J. Sumo

Mil Munual.

which head will be found details of his early life from his own pen. From 1816 to 1831 he practised law in Lancaster. He first entered political life in 1830, and served two terms in the United States Senate, viz., having been elected by the Whigs from 1831 to 1837, again in 1850–51 in the place of Thomas Corwin on the appointment of the latter to the office of Secretary of the Treasury.

In the Senate Mr. Ewing wielded great power and introduced several important bills. In his last term he opposed the fugitive slave law, Clay's compromise bill, and advocated the abolition of slavery in the District of Columbia. In 1841 he became Secretary of the Treasury under Harrison. Upon the death of the President, Vice-President Tyler invited the Cabinet in a body to remain. Upon the meeting of the extra session of Congress, having evidence that Mr. Tyler designed to betray the trusts and disappoint the hopes of the Whig party that had elevated him to power, Mr. Ewing indignantly resigned. He retired from public life in 1851 and resumed the law practice. He early won and maintained throughout life unquestioned supremacy at the bar of Ohio, and ranked in the Supreme Court of the United States with the foremost lawyers of the nation.

In strength and massiveness of intellect he was then and is to-day by many regarded as not having had an equal in the history of the State. In physical strength also he had but few equals, being a man of large frame and ponderous in body. We take the following

items from the county history:

At one time, when Mr. Ewing was chopping wood in the forest, a pioneer Methodist preacher came along. By a recent rain the stream to be crossed was swollen. The missionary was afraid to attempt to ford it. Mr. Ewing, being a young man, strong and tall, took the preacher on his shoulders, the horse by the bridle, and landed them safely on the other side of the stream, and then returned to his axe.

At another time, as he was passing the old court-house in Lancaster, shown in the view, a number of stout men were trying to throw a chopping-axe over it; they had all in vain tried their power. Mr. Ewing halted just long enough to take the axe-handle in his

hand and send it sailing five feet or more above the steeple and then passed on.

In oratory he was not eloquent, but he could say more in fewer words than any one, and in that lay his great success. By some he was considered unsocial, as he seemed when his mind was at work; but when once reached, his social qualities were warm, cordial and sincere. His mind worked on an elevated plane, leaving the impression that he knew little of the small affairs of life, but at the same time he could tell a farmer more about plows than he could tell himself. During the latter part of his professional life his business was chiefly before the Supreme Court at Washington. Daniel Webster in his last years largely sought his aid in weighty cases. Among the anecdotes related of him it is said that after two eminent lawyers had argued a case before the Supreme Court for two days, he took but a little over an hour for reply and won his suit.

Mr. Ewing in 1861 was a member of the Peace Congress, and during the civil war he gave through the press and by correspondence and personal interviews his countenance and influence to the support of the national authorities. He died in Lancaster and was buried in the Catholic cemetery by the side of his wife Maria, eldest daughter of Hugh Boyle. Her death was in 1864. On the lid of Mr. Ewing's burial casket was engraved

the following:

THOMAS EWING,

Born December 28, 1789. Died October 26, 1871.

The Ewing mansion stands on the summit of the hill on the corner to the left shown in the street view, and which until recently was the home of Mr. Ewing's daughter, Mrs. Col. Steele. It is of brick: a solid, substantial edifice, comporting with the memory of the giant among men who once made it his home; of the memory of one of whom James G. Blaine, who in his youth was a visitor here, wrote on the occasion of his death to his daughter, Mrs. Ellen Ewing Sherman: "He was a grand and massive man, almost without peers. With no little familiarity and association with the leading men of the day, I can truly say I never met with one who impressed me so profoundly." In an interesting article upon Mr. Ewing, Mr. Frank B. Loomis, late State Librarian, appends this sketch of his also eminent family:

"Thomas Ewing transmitted to his sons some of the fine and rare qualities that made him a great man. His four sons, Hugh,

Philemon, Thomas and Charles, have all distinguished themselves in various useful ways.

Hugh, Charles and Thomas Ewing were brave and successful soldiers in the war of

the rebellion

General Thomas Ewing has achieved political prominence, and is now a lawyer of note in New York; has been President of the Ohio Society there from its beginning.

General Charles Ewing, who was a man of

much prominence, is dead.

Major-General Hugh Ewing was engaged in the practice of law at the outbreak of the civil war. In May, 1861, he was appointed by Gov. Dennison Brigade-Inspector of the Third Brigade, Ohio militia, with the rank of Major, and was stationed at Camp Dennison until the 21st of June in the same year, when he enlisted in the three-years service and joined McClellan's army at Buckhannon,

THE EWING MANSION.

W. Va. He participated in a number of important battles. At Antietam he commanded a brigade at the extreme left which, according to Gen. Burnside's report, saved

that wing from disaster.

Gen. Ewing commanded the Thirtieth, Thirty-second and Forty-seventh Ohio and the Fourth Virginia Infantry before Vicksburg, and with this brigade led a gallant but unsuccessful movement on the city. The colors that were borne in that memorable charge are furled in the general's reception-room at his home. They are riddled with bullet holes and the battered staff bears many

In 1886 Gen. Ewing was appointed Minister of The Hague. He is now living in pleasant retirement at Lancaster.

General Thomas Ewing, the third son of Thomas Ewing, was born in Lancaster, August 11, 1829. He was liberally educated, and is an alumnus of Brown University and of the Cincinnati Law School. In 1856 he removed to Leavenworth, Kan., and commenced the practice of law. He soon became prominent, and for two years held the position of Chief Justice of the Supreme Court of the State.

In 1862 he organized the Eleventh Regiment of Kansas Infantry, of which he was appointed colonel. At Pilot Knob he was engaged against several times his force in one of the most stubborn, and, in proportion to the number engaged, one of the most fatal conflicts of the war. He lost one-fourth of his available force, and, having to retreat, kept up a running fight for twenty miles. The campaign of a week was a remarkable

The enemy lost more than 1,500, while Gen. Ewing's entire force was but 1,060, and these largely raw troops. The result of Ewing's brave stand was to put an end to all attempts upon St. Louis by the rebels.

Thomas Ewing's oldest daughter, Ellen Ewing, was married to Gen. W. T. Sherman in 1850. Mrs. Sherman has inherited some of her father's mental vigor and has manifested it in a literary, social and religious way. The Ewings are zealous members of the Catholic church, and Senator Ewing embraced that faith a short time before he died. So the influence of this remarkable family has always been cast upon the side of effective Christianity.

It is rare that so small a place as Lancaster has in its history two such famous families as the Ewings and the Shermans. The founder of the Sherman family, Judge Charles Sherman, was born in Norwalk, Conn., May 26, 1788. In 1810 he was admitted to the bar, the same year marrying Mary Hoyt, of Norwalk. In the following year he came to Lancaster with his wife and infant child, and commenced the practice of the law. Their journey from their New England home was weary and beset with hardships, exposure, and danger, being obliged to journey the greater part of the distance on horseback, carrying the baby on a pillow before them. The little boy carried thus was the late Hon. Charles Taylor Sherman, United States District Judge of the northern district of Ohio.

Charles Sherman, the father, was elected by the Legislature to the bench of the Supreme Court in 1823; here he remained over six years, when he died suddenly at Lebanon, Ohio, from cholera, while attending court, June 24, 1829. He was but forty-one years of age, and a man of fine legal capabilities. Mary Hoyt Sherman survived him many years. Their tombs are in the cemetery east of Lancaster.

Judge Sherman was the father of Hon. John Sherman, born in 1823, now of the United States Senate, and Gen. William Tecumseh Sherman, born February 8, 1820; also, Mrs. W. J. Reece, of Lancaster, and Frances, wife of the late Col. Charles W. Moulton, of New York, and other children—eleven in all. A sketch of Senator Sherman is given under the head of Mansfield, Richland county, which has been his home from early manhood. We here give a few paragraphs to WILLIAM TECUMSEH SHERMAN:

General Sherman, we believe, is the only eminent American named from an Indian chief. His father had seen and greatly admired Tecumseh from his nobility of character and his humanity to prisoners, and he wanted one boy trained for the army. The name, considering the brilliant history of its recipient, is peculiarly appropriate, as in the Indian tongue it signifies the Shooting Star.

A few months after his father's death was taken to the church to be benefited.

A few months after his father's death he was taken to the church to be baptized. The preacher, a Presbyterian, objected to baptizing him by the name of a heathen, Tecumseh. He wanted to call the lad simply William. He at once rebelled, saying, "My father called me Tecumseh, and Tecumseh I will be called. If you won't, I'll not have any of your baptism." The preacher yielded.

Judge Sherman's widow being left with a large family and her means of support slight.

Judge Sherman's widow being left with a large family and her means of support slight, Hon. Thomas Ewing offered to adopt one of the boys and educate him. He consulted with the mother, and "Cump," as the general was then called, a sandy-haired youth, was selected. At the moment the future warrior was playing with other lads in a neighboring sand-bank. The new home was only a stone's throw from his mother's, so the lad was in no danger from attacks of nostalgia. Beside he found in Mr. Ewing's little daughter Ellen a pleasant playmate to vary the monotony of excursions to sand-banks, and who from the very happy intimacy thus began eventually became the queen of his heart and home.

Mr. Ewing educated the lad and sent him when 16 years of age to West Point, where he graduated the sixth in his class. He was commissioned second lieutenant in the Third Artillery, and sent to Fort Moultrie, Charleston, thence in 1846 to California, where he rose to the rank of captain. In 1850 he went to Washington, and then married the eldest daughter of his friend and benefactor. Three years later, tired of the monotony of military life, he resigned, and from 1853 to 1857 had charge of a banking-house in California, and again for a short time in New York, but with small success. Having studied law in the leisure of his army life, he united with his

brother-in-law, Thomas H. Ewing and Gen. D. McCook, who were establishing themselves in the law in Leavenworth, Kansas. The practice of the profession not agreeing with his tastes, he was offered and accepted the position in 1859 of President of the Louisians State Military Academy at a salary of \$5,000 per annum.

He remained in that position until he saw that civil war was inevitable and then sent in his resignation, with a letter which clearly showed that he read correctly the signs of the hour. This is the closing paragraph of the letter: "I beg you to take immediate steps to remove me as Superintendent the moment the State resolves to secede, for on no earthly account will I do any act or think any thoughts hostile to the defence of the old Government of the United States." It will be seen by the foregoing sketch that Sherman's experience had been a wide one. He was acquainted with many people in many parts of the country; he was impressed with the notion (gained from his life among the people of the South) that the war was to be Washington and had an interview with the President and Secretary of War. He laid his views before them, but they laughed him aside and thought him a crusty and excitable man. He failed to convince the Government that the struggle was to be something more than a temporary storm. Seventy-five thousand troops were called for, and Sherman exclaimed, "You might as well undertake to extinguish the flames of a building with a squirt-gun as to put down this rebellion with three months' troops. We ought,' said he, "to organize at once for a gigantic war, call out the whole military power of the country, and with its forces strangle the rebellion in its very birth.

The five years of bloody contest which ensued demonstrated the truth and power of Sherman's prophecy. In the first battle of Bull Run Sherman was commander of a brigade in the regular army. He fought bravely and desperately. Two-thirds of the loss fell on his brigade. He was shortly made brigadier-general of the volunteers which were sta-

tioned at Louisville. He had some trouble with newspaper correspondents, and the rumor that he was insane was set affoat. Sherman next distinguished himself at Shiloh. Rousnext distinguished himself at Shiloh. Rousseau, in speaking of his conduct on that field, said, "No man living could surpass him," and Gen. Nelson remarked a few hours before his death, "During eight hours the fate of the army, on the field of Shiloh, depended on the life of one man. If Gen. Sherman had fallen the army would have been captured or destroyed." Gen. Grant added, "To his individual efforts I am indebted for the success of that battle." Sherman's serthe success of that battle." Sherman vices before Vicksburg are well known. Sherman's ser-

He was next heard of thundering along the heights of Mission Ridge and Lookout Mountain. Here he added to his reputation and to his services to the country. In the spring of 1863 he began to prepare for his movement upon Atlanta; it was a remarkable campaign, and again demonstrated his wonderful foresight and genius. It was followed by a still more important military movement, the Georgia campaign and the march to the sea. He cut loose from all that was behind him, burned his bridges, threw aside superfluous baggage, and marched without provisions into the heart of the enemy's country. He set at defiance many of the old and established maxims of warfare, and when his daring project was first made public the world was astonished.

"Military critics and warriors in this country and in Europe predicted the destruction of his army. They said: 'The people of the South and on the line of his proposed march would hang about his army as light-ning plays along the thunder clouds.' These same critics declared 'that people would re-move all provisions beyond his reach, so that his soldiers must perish by starvation.' British Army and Navy Gazette said: 'He

has done either one of the most brilliant or most foolish things ever performed by a mil-Sherman, however, trusting itary leader. in Thomas and Grant, his own army, his own genius, and a favoring Providence, set duly out on his march. He drove before him the troops of the enemy, and in a short time established his headquarters in the Executive Mansion at Macon. The soldiers fared sumptuously on the fat of the land. No army was ever more contented or in better condition. The great column swept splendidly on through cities, villages and forests. It was a triumphal march. All opposition melted before them. Savannah was the next point to be gained, and Sherman was soon able to send the following despatch to the President of the United States: 'I beg to present to you as a Christmas gift the city of Savannah with 150 guns and plenty of ammunition and about 25,000 bales of cotton.

"So ended one of the most remarkable campaigns in the world's military history. To the prestige of his Georgia achievements, Sherman soon added the glory of a successful campaign in the Carolinas. He swept on in his resistless way and practically received the surrender of Johnston at Raleigh, though the War Department fell out with him about his terms with the rebel commander, and finally sent Gen. Grant to arrange for the

surrender of Johnston's army.

Sherman was appointed lieutenant-general in 1866, and in 1869 became commanderin-chief. He has had ample justice done to the daring originality of design, the fertility of resource, the brilliant strategy and untiring energy, that made Gen. Grant pronounce him 'the best field officer the war had produced.' He retired from the command of the army of the United States November 1,

Of the many interesting characters that adorned our military annals not one occupies a warmer place in the affections of his countrymen; and, moreover, he has the singular distinction of refusing to become Chief Magistrate when it was freely offered. In the progress of the nation but a little time will elapse when the names of most of those on the long roll of its Presidents will be forgotten, but never that of the bold, gallant leader of the famous "March to the Sea."

It is in place here to give the famous army song which Sherman's veterans chanted on their victorious march. It was written by Adj. Byers, of the Fifth Iowa, while in the prison at Columbia, S. C., and being set to music, was frequently sung by the captives as a relief to the monotony of their prison life. After Wilmington was taken it was sung in the theatre, producing immense enthusiasm.

THE MARCHING SONG OF SHERMAN'S ARMY ON THE WAY TO THE SEA.

Our camp fires shone bright on the mountains That frowned on the river below, While we stood by our guns in the morning And eagerly watched for the foe-When a rider came out from the darkness That hung over mountain and tree, And shouted, "Boys, up and be ready, For Sherman will march for the sea.

When cheer upon cheer for bold Sherman
Went up from each valley and glen,
And the bugles re-echoed the music
That came from the lips of the men.
For we knew that the stars in our banner
More bright in their splendor would be,
And that blessings from Northland would greet us,
When Sherman marched down to the sea.

Then forward, boys, forward to battle,
We marched on our wearisome way,
And we stormed the wild hills of Resaca—
God bless those who fell on that day.
Then Kenesaw frowned in its glory,
Frowned down on the flag of the free,
But the East and the West bore our standards,
And Sherman marched on to the sea.

Still onward we pressed, till our banners
Swept out from Atlanta's grim walls,
And the blood of the patriot dampened
The soil where the traitor flag falls.
But we paused not to weep for the fallen,
Who slept by each river and tree,
Yet we twined them a wreath of the laurel
As Sherman marched down to the sea.

O, proud was our army that morning,
That stood where the pine darkly towers,
When Sherman said, "Boys, you are weary;
But to-day fair Savannah is ours."
Then sang we a song for our chieftain,
That echoed o'er river and lea,
And the stars in our banners shone brighter
When Sherman marched down to the sea.

The bar of Fairfield county has from early times been pre-eminent. We here notice some of the more prominent. Hocking H. Hunter was among them, and alike valued professionally and as a man. He was the son of Joseph Hunter, the first white man to build a cabin in the Hocking valley. He named his son from the river. The latter died in 1872. WILLIAM J. REESE, a lawyer, who came, in 1827, from Philadelphia to Lancaster, was a prominent Mason, and is said to have been the first Scottish-rite Mason in Ohio. He was a man of rare culture and refinement. He died in 1883, and his widow, a sister of Gen. Sherman, still survives him.

PHILEMON BEECHER was one of the Connecticut Beechers; was born in Kent, Litchfield county, in 1775, came out here early, represented this district in Congress from 1817 to 1827, and died about 1840. Was in politics a Whig, and a man of fine address and presence. He it was who gave Thomas Ewing his first law business of any moment. The very elegant Henry Stanbery, who began his law practice in Lancaster, and lived here for many years, married for his first wife a daughter of Mr. Beecher. He later lived in Columbus and in the vicinity of Cincinnati, and ended his professional career as Attorney-General of the United States under President Johnson.

WILLIAM MEDILL was the eleventh governor of the State, and the first under the new Constitution, which he had done so much to mould. He came from the State of Delaware, and opened a law office in Lancaster in 1832. He early acquired the public confidence, and arose to distinction; was a Democrat, and ambitious politically; was three times elected to the Ohio Legislature. In 1838–41 he was a member of Congress, serving four years. He occupied the position of Indian agent at Washington, and, in 1860, held the office of First Comptroller of the Treasury under Buchanan. In the fall of 1852 he was elected lieutenant-governor of Ohio, and acted as governor the latter part of the term. In 1854 he was chosen

governor. He was never married, and at his death, in Lancaster, in 1865, left a large estate. He was a man of superior ability and character. In his administration of the Indian Department he inaugurated many needed reforms, and won the regard of the Indians by his just, kind treatment.

The Ohio Boys' Industrial School was founded in 1858 by the Legislature, who appointed three commissioners, and they purchased a farm site of 1,170 acres six miles a little south or southwest of Lancaster, high up on the hills and 500 feet above the town. The following description is from the "County History:"

Cheap log-buildings were first erected, and to these ten boys were brought from the House of Refuge of Cincinnati, and a beginning made. George E. Howe was constituted acting commissioner, and with his family resided on the farm, and had general superintendence until 1878, with Mrs. Howe as matron. He was then superseded by John C. Hite, of Lancaster, with Mrs. Hite as matron. Mr. Howe was then called to the

THE OHIO BOYS' INDUSTRIAL SCHOOL.

charge of the State Reform School of Connecticut, at Meriden, which he still retains. From an humble beginning the farm has grown into gigantic proportions and beauty. The soil for the most part is thin, but it seems well adapted to fruits—as apples, pears, peaches, berries, grapes, etc.—of which large quantities as well as garden vegetables are produced and consumed in the institution, numbering usually about 600 inmates.

The institution became popular from the start; the log structures soon disappeared and fine brick buildings took their place. The present value of the farm with all its buildings and improvements is over half a million dollars. The total number of pupils who have passed through the school is over 4,000, of whom it is estimated eighty per cent. have become good citizens.

The main building is 161 feet in length, with projections. It contains offices, reception-rooms, parlors, dining-rooms, residence, guest-rooms, storage-rooms, council-chamber, and telegraph-offices. The kitchen, culinary department, and boys' dining-rooms are all in projections of the main building.

What are denominated family buildings are two-story bricks, with basement. The basement is the wash-room and play-place for the boys; the second story is the school-room and apartments of the elder brother and his family; the third story is the sleeping apartment for boys. There are nine of these family buildings, besides union family buildings. The other buildings of the farm are the chapel, shops, laundry and wash-houses, water-tower, bake-house, engine-house, stables, hot-houses, coal-houses, hospital, "chamber of reflection," besides many other outbuildings. The buildings are disposed in squares, more or less spaced, and altogether occupy an area of about twenty acres. The Ohio building, which is the home of the small boys, is isolated from the others, and stands off a third of a mile to the east, and is connected with the chapel and main grounds by a plank walk. A telegraph line connects it with the main buildings shown in the engraving. The grounds are laid off with gravel drives and plank walks, and are beautifully decorated with evergreen trees, arbors, flower-houses, and grass-lawns. The family

buildings are named after rivers in Ohio, thus: Muskingum, Ohio, Hocking, Scioto, Cuyahoga, Huron, Maumee, Miami, and Erie. The family of boys of each building take the family name after the building, as the Mau-

mee family, Hocking family, etc.

In the incipient state of the school some discrepancy of opinion existed in regard to modes of discipline. By some it was proposed to adopt the House of Refuge plan, in part, in connection with the "open system." The latter was adopted. The term "open system" signifies that an establishment is not walled in like a prison, but is all open to the surrounding country, the same as it would be were it not a place of confinement.

The time of the boys is divided between work of some kind, school, and recreation. Every boy is half the day in school and the other half at work. There is an hour for dinner. Recreations in the form of playing ball and other athletic plays are taken after supper, on Saturday afternoons, and holidays. Each family is under the management of an officer denominated the elder brother, whose wife, with few exceptions, is the teacher. The branches taught are those of a common-school education. The boys are held to close and rigid discipline, but treated with uniform kindness and trust. One of the leading features of the discipline is to inspire the inmates with the ambition of earning a good reputation for trustworthiness. Corporal punishment is only resorted to in extreme cases, and is always with the rod. A lockup is provided for the most incorrigible, and is denominated the "chamber of reflection."

In addition to school education and manual labor on the farm mechanical branches are also taught. The institution has a shoe and boot manufacturing establishment, a brush factory, a tailor-shop, a cane-seat making department, a telegraph-office, and a printingoffice, from which is issued a weekly newspaper, edited and printed by the boys.

Other mechanical trades have been learned there that have been highly creditable to the institution, and greatly advantageous to the inmates. The management find homes for them on their discharge. The time of commitment depends upon conduct, as no time is specified, this matter being optional with the superintendent. Boys under sixteen years of age who commit penitentiary crimes are usually sent to the Reform Farm, and some who have been sentenced to the State prison have been commuted to the farm.

Religious instruction is given in the chapel and Sunday-school, and presided over by alternation of clergymen of different denominations. There is also a library provided by the State, and from which they draw books under

regulations.

TRAVELLING NOTES.

My experience has been peculiar-a Sunday passed at the Industrial School of Ohio, high on the hills six miles south of Lancaster. I went out Saturday afternoon in a carriage belonging to the institution. The ride out was invigorating; all the way up hill, with peeps down into side valleys where, in little dimpling spots, farmhouses were snugly nestled with orchards and vineyards.

It is an interesting spot. I felt while there as if I was lifted above the world, the location is so sightly and so secluded. It seemed as if one could see over everything. To the west, points thirty miles away in Pickaway county, and to the east, in Perry county, about as far, are in view. With a glass, I am told, one can discern the spire of St. Joseph, near Somerset, a place associated with the boy days of Phil. Sheridan.

The institution is under the charge of Mr. J. C. Hite, a tall, venerable-looking gentleman, who gave me a cordial welcome. He was born on a farm, and has had a varied experience as farmer, teacher, bookseller, county auditor, and now superintendent. The boys address him as "Brother," as they do all of the officers. In the evening Mr. Hite took me over to the buildings, a quarter of a mile away, where dwell the smaller boys from ten to twelve years of age. About 200 were in the school-room seated on benches, and in the centre was a black boy cutting the hair of his mates. It was Saturday night, and they were preparing for Sunday. Presently they marched around the room in single file preparatory to retiring—marched to music; and then I witnessed a sight that surprised me. A boy passed me completely transformed; he marched stiff, head thrown back, arms stiff by his side, his face transfused, expression intense, and he seemed completely as if under the influence of melody and rhythm. In a moment another went by in like manner affected, and then another, and so in that long string of marchers about one in five were thus possessed. Mysterious power, this of music, to lift the soul into the far-away realms of what we fancy without a particle of knowledge must be akin to the spirit-world. And what a lever this emotional faculty is to work upon in this checkered life of ours for good or evil!

The scene on the lawn the next morning, the first Sunday in May, was charming. It was alive with birds. Birds are social, seek the company of man, and here are none to molest or make afraid. The variety is great, and at times the lawn is fairly studded with robins. Here, too, fly the blue-birds, the yellow-birds, scarlet-tanagers, mocking-birds, the modest little chip-bird, who says, "Is there room for me in the world?" and the saucy little sparrow, who asks no odds of anybody, and tries to fight its way into the boxes of the martens, but can't quite make it; woodpeckers from the adjacent woods beat their rataplan, and whip-poor-wills in the shadows of night send forth their sad, re-

proachful cries.

Ten o'clock came, and then opened a beautiful sight. My ears were arrested by a slow, measured tramp, tramp, on the planks, like that of soldiers. And then I saw what it was: the boys, in companies of about fifty. one company from each cottage, were marching to church, neatly attired in blue blouses and blue caps and gray pantaloons. Some of these companies were composed of lads from sixteen to eighteen years of age, in stature men.

Everything was so orderly and neat, that I instinctively felt a respect for them; and well I might. Most of those who live here become so well grounded in the principles of morality that they become good citizens. Very many of the boys never had virtuous homes, and their coming here where the law of kindness is the prevailing rule has been a great blessing. Prominent engineers, builders, lawyers, farmers, and merchants have gone from this institution, and I expect the time will come when some of them will rise to be among the highest in the land. They have among them a literary and debating society, issue a newspaper, and have a Christian association of 200 or more members.

The entire village, as I may call it, gathered into the chapel—in all about 700 souls. A huge platform filled one side of the auditory. Being an expected visitor, Mr. Hite introduced me to the boys, telling them who I was and what I had done in the past for the State and was now doing, and how my book had blessed his youthful days, so that when I alighted from the carriage the evening before and made myself known a thrill passed over him. I had brought back the memories of youth; he had never expected to meet me. The boys wanted me to talk to them; and I did, the sum of it about this, which I repeat here for the benefit of the young people, for whose use I give these Travelling Notes:

"Happiness is what we all desire; but it won't come by a grab for it. This is where those silly ones, the pleasure-seekers and self-indulgent, fail; it only comes by *indirection*, the following of the path of duty. Many live in their imaginings and not in their facts, and hence are largely miserable. The wise Thomas Jefferson once truly said, man-

kind suffered more from imagining evil that never ensued than all the real evils of life. Once I saw this sentence in a newspaper: 'If you would be happy, perform the disagreeable duty first.' There was a world of wisdom in this; for, if shrunk from, there is misery in the sense of duty unperformed, and when met is never so disagreeable as imagined; in fact, generally proves a positive pleasure, and when finished lifts the spirits in the emotion of triumph that is inevitable. It is as a successful charge of the bayonet; after it one is ready for the next fight with a stronger heart and more cheery spirit. This as a continuous rule of life results in victory all along the line."

Mr. Hite being bred a farmer, is very enthusiastic upon the agricultural capacities of these hills. Immense quantities of fruit are raised here, as apples, pears, peaches, grapes, and berries of all sorts, for which last the soil seems peculiarly well adapted. The success is such that it is bringing in a better class of farmers, and pushing out the rude population yet dwelling in cabins, and called by the boys "hillikens." The "hillikens" are the police of the institution, and ever ready to "nab" a runaway for the standing reward of \$5. Land on the hills is cheap, and can now be bought for from \$10 to \$15 per acre. The autumnal scenery here is said to be grand, from the mixture of the green of the pines with the scarlet and gold of the oaks and other deciduous trees. In summer these hills are cooler and in winter warmer than the valleys. And what homes there will be among them and all the hill country of Southeastern Ohio, on their summits and slopes, in the riper, richer future of the coming decades. This is one of the most healthy spots of the globe. From 1858 to 1885, a period of twentyseven years, out of 4,530 boys who have been here there have been but twenty-three deaths, four of these by accident. From this, it would seem as though this was one of those peculiar places where people neglect trying to get sick, and when, perchance they do, refuse to die.

LITHOPOLIS, about eighteen miles southeast of Columbus, is on a high elevation, surrounded by a fine farming district. Newspaper: Lithopolitan Home News, Independent, Miss O. E. D. Baughn, editor and proprietor. Churches: 1 Lutheran, 1 Methodist, and 1 Presbyterian. Industries: Hunter Buggy Works, Lithopolis free-stone and William Long quarries, Stone City Creamery, etc. Population in 1880, 404. School census in 1886, 156; H. C. Bailey, superintendent.

Rushville, thirty-seven miles southeast of Columbus, on the T. & O. C. R. R. Newspaper: *Item*, Independent, W. J. Mortal, editor and publisher. Churches: i Methodist Episcopal, 1 German Reformed. Population in 1880, 227.

AMANDA, on the railroad, about eight miles southwest of Lancaster, has 1 Presbyterian, 1 Methodist, and 1 Lutheran church, and, in 1880, 375 inhabitants; is in a fine farming country, and is a large grain market.

Baltimore, twenty-nine miles east of Columbus, on the T. & O. C. R. R., is situated in a fine farming country. Newspaper: *Messenger*, Independent, Miller & Evans, publishers. Churches: 1 Methodist Episcopal, 1 Baptist, 1 German Reformed, and 1 Evangelical. Population in 1880, 489. School census in 1886, 217.

FAYETTE.

FAYETTE COUNTY was formed in March, 1810, from Ross and Highland. The surface is flat; about half the soil is a dark vegetable loam on a clayey subsoil, mixed with limestone gravel, the rest is a yellow, clayey loam. The growth of the county when first settled was retarded by much of the land being owned by non-residents, and also from the wet lands, which, when drained, proved highly productive. The county is noted for stock-raising, its fine horses and cattle. Its area is 420 square miles. In 1885 the acres cultivated were 95,549; in pasture, 78,938; woodland, 26,167; lying waste, 1,841; produced in wheat, 111,318 bushels; corn, 2,594,944; wool, 142,852 pounds; hogs, 33,958. School census 1886, 6,733; teachers, 136. It has 97 miles of railroad.

Population in 1820 was 6,336; 1840, 10,979; 1860, 15,935; 1880, 20,364, of whom 17,363 were Ohio-born; Virginia, 1,052; Kentucky, 298; Pennsylvania, 291; Ireland, 256; Germany, 136.

A gentleman of the county at the time of the issue of the first edition gave the annexed list of some of the more prominent characters in the early history of Fayette. This gentleman was the late Hon. Alfred S. Dickey, whom Justice Chase described as "an eminent judge in Ohio, and worthy of the great esteem in which he is held." He died in 1873, aged sixty-two years. He was the father of Hon. H. L. Dickey, of the Forty-fifth and Forty-sixth Congress:

The following are the names of some of the first settlers of this county, viz.: Col. James Stewart, Jesse Milliken, Wade Loofborough, Thomas M'Donald, Dr. Thomas M'Gara, John Popejoy, Gen. B. Harrison, Jesse Rowe, John Dewitt, Hamilton and Benjamin Rogers, William Harper, James Hays, Michael Carr, Peter Eyeman, William Snider, Judge Jacob Jamison, Samuel Waddle, James Sanderson, and Smith and William Rankin.

Col. Stewart, at an early date, settled near the site of Bloomingburg, about five miles northerly from Washington. His untiring industry in improving the country in his vicinity and the moral influence which he had in the community will be long remembered. Jesse Milliken was one of the first settlers of Washington, was the first postmaster, and the first clerk of both the supreme and common pleas courts of the county, in all of which offices he continued until his death in August, 1835. He was also an excellent surveyor, performed much of the first surveying done in the county, and erected some of the first houses built in the town. Wade Loof borough, Esq., was one of the first citizens and lawyers in the county. Thomas M'Donald was one of the first settlers in this part of Ohio, built the first cabin in Scioto county, was engaged with Gen. Massie and others in laying off the county into surveys. He rendered valuable services in Wayne's campaign, in which he acted as a spy, and was also in the war of 1812.

Dr. Thomas M'Gara was one of the first settlers and first physician of the town of Washington, where he practised his profession for a number of years. He represented the county in the Legislature, and was associate judge. John Popejoy, Esq., was one of the first justices in the county; he built the one-story house on Court street, on the lot No. 5. It is said that he kept his docket on detached scraps of paper in the most convenient cracks of his cabin, and that his ink was made of

walnut bark. Although many amusing anecdotes are related of him yet he was a good man, sincerely desirous of promoting peace and good-will in the community. When a lawsuit was brought before him his universal practice was, if possible, to prevail upon the parties to settle the dispute amicably. He always either charged no costs, or took it in beer, cider, or some other innocent beverage, of which the witnesses, parties, and spectators partook at his request, and the parties generally left the court in better humor and better satisfied than when they entered.

The first court of common pleas in the county was held by Judge Thompson, at the cabin of John Devault, a little north of where Bloomingburg now stands. The judge received a severe lecture from old Mrs. Devault for sitting upon and rumpling her bed. The grand jury held their deliberations in the stable and in the hazel-brush. Judge Thompson was a man of strict and Puritan-like morality, and distinguished for the long (and in some instances tedious) moral lectures given

in open court to the culprits brought before him.

The Fighting Funks.—The pioneers of Fayette county were principally from Virginia and Kentucky, and were generally hale and robust, brave and generous. Among the Kentuckians was a family of great notoriety, by the name of Funk. The men, from old Adam down to Absalom, were of uncommonly large size, and distinguished for their boldness, activity, and fighting propensities. Jake Funk, the most notorious, having been arrested in Kentucky for passing counterfeit money, or some other crime, was bailed by a friend, a Kentuckian by the name of Trumbo. Having failed to appear at court, Trumbo, with about a dozen of his friends, well armed, proceeded to the house of the Funks for the purpose of taking Jake, running him off to Kentucky and delivering him up to the proper authorities, to free himself from paying bail.

The Funks, having notice of the contemplated attack, prepared themselves for the conflict. Old Adam, the father, took his seat in the middle of the floor to give command to his sons, who were armed with pistols, knives, etc. When Trumbo and his party appeared, they were warned to desist; instead of which, they made a rush at Jake, who was on the porch. A Mr. Wilson, of the attacking party, grappled with Jake, at which the firing commenced on both sides. Wilson was shot dead. Ab. Funk was also shot down. Trumbo having clinched Jake, the latter drew him to the door, and was about to cut his throat with a large knife, when old Adam cried out, "Spare him!—don't kill him!—his father once saved me from being murdered by the Indians!"—at which he was let off, after being severely wounded, and his companions were glad to escape with their lives. The old house at which this fight occurred is still standing (1846), on the east fork, about eight miles north of Washington, with the bullet-holes in the logs as a memento of the conflict.

The Funk family were no enemies to whis key. Old Adam, with some of his comrades, being one day at Roebuck's grocery—the first opened in the county, about a mile below Funk's house—became merry by drinking. Old Adam, wishing to carry a gallon of whiskey home, in vain endeavored even to procure a wash-tub for the purpose. Observing one of Rechuck's pigs running about the yard, he purchased it for a dollar and skinned it whole, taking out the bone about two inches from the root of the tail, which served as a neck for the bottle. Tying up the other holes that would, of necessity, be in the skin, he poured in the liquor and started for home with his companions, where they all got drunk from

the contents of the hog-skin.

Captain John was a Shawanee chief, well known to the early settlers of the Scioto valley. He was over six feet in height, strong and active, full of spirit and fond of frolic. In the late war he joined the American army, and was with Logan at the time the latter received his death-wound. We extract two anecdotes respecting him from the notice by Col. John M'Donald. The scene of the first was in Pickaway, and the last in this county.

When Chillicothe was first settled by the whites, an Indian named John Cushen, a halfblood, made his principal home with the McCoy family, and said it was his intention to live with the white people. He would sometimes engage in chopping wood, and making rails and working in the corn-fields. He was a large, muscular man, good humored and pleasant in his interviews with the whites. In the fall season, he would leave the white settlement to take a hunt in the lonely forest. In the autumn of 1779, he went up Darby creek to make his annual hunt. There was an Indian trader by the name of Fallenash, who traversed the country from one Indian camp to another with pack-horses, laden with whiskey and other articles. Captain John's hunting camp was near Darby creek, and John Cushen arrived at his camp while Fallenash, the Indian trader, was there with his

The Indians set to for a goods and whiskey. real drunken frolic. During the night, Captain John and John Cushen had a quarrel, which ended in a fight: they were separated by Fallenash and the other Indians, but both were enraged to the highest pitch of fury. They made an arrangement to fight the next morning, with tomahawks and knives. They stuck a post on the south side of a log, made a notch in the log, and agreed that when the shadow of the post came into the notch the fight should commence. When the shadow of the post drew near the spot, they deliberately, and in gloomy silence, took their stations on the log. At length the shadow of the post came into the notch, and these two desperadoes, thirsting for each other's blood, simultaneously sprang to their feet, with each a tomahawk in his right hand and a scalpingknife in the left, and flew at each other with the fury of tigers, swinging their tomahawks around their heads and yelling in the most terrific manner. Language fails to describe the horrible scene. After several passes and some wounds, Captain John's tomahawk fell

on Cushen's head and left him lifeless on the ground. Thus ended this affair of honor, and

the guilty one escaped.

About the year 1800, Captain John, with a party of Indians, went to hunt on the waters of what is called the Rattlesnake fork of Paint creek, a branch of the Scioto river. After they had been some time at camp, Captain John and his wife had a quarrel and mutually agreed to separate; which of them was to leave the camp is not now recollected. After they had divided their property, the wife insisted upon keeping the child; they had but one, a little boy of two or three years of age. The wife laid hold of the child, and John attempted to wrest it from her; at length John's passion was roused to a fury, he drew his fist, knocked down his wife, seized the child and carrying it to a log cut it into two parts, and then, throwing one-half to his wife, bade her take it, but never again show her face, or he would treat her in the same manner. Thus ended this cruel and brutal scene of savage tragedy.

Washington Court-House in 1846.—Washington Court-House, the countyseat, is on a fork of Paint creek, 43 miles south-southwest of Columbus. It contains 1 Presbyterian, 1 Methodist church, 1 academy, 8 mercantile stores, 2 newspaper printing offices, 2 woollen factories, 1 saw and 2 grist mills, and 97 dwellings. It was laid out in 1810 as the county-seat, on land given for that purpose by Benjamin

Temple, of Kentucky, out of his survey.—Old Edition.

Washington Court-House, county-seat, is on the C. & C. M., D. Ft. W. & C., P. C. & St. L., and I. B. & W. railroads, thirty-eight miles from Columbus and seventy-seven miles from Cincinnati. County officers in 1888: Probate Judge, Thomas N. Craig; Clerk of Court, E. W. Welsheimer; Sheriff, A. B. Rankin; Prosecuting Attorney, Robert C. Miller; Auditor, T. J. Lindsey; Treasurer, James F. Cook; Recorder, John R. Sutherland; Surveyor, Frank M. Kennedy; Coroner, L. F. House; Commissioners, Lewis C. Mallow, Henry Mark, Thomas F. Parrett. Newspapers: Herald, Republican, William Millikan & Son, editors; Fayette Republican, Republican, Thomas F. Gardner and Will R. Dalbey, editors; Ohio State Register, Democratic, William Campbell, editor. Banks: Commercial, Morris Sharp, manager; Merchants' and Farmers', M. Pavey, president, J. W. Faringer, cashier; People's and Drovers', Daniel McLean, president, Robert A. Robinson, cashier. Churches: 1 Presbyterian, 1 Catholic, 1 Christian, 1 Methodist, 1 Colored Methodist, 1 Baptist, and 1 Colored Baptist. Principal industries: Janney & Manning's machine shop; Fayette Creamery Company; White & Ballard's shoe factory; A. Coffman & Co., doors, sash, and blinds; the Ludlow Soap Factory; J. D. Stucky and Parks Bros., milling. Population in 1880, 3,798. School census 1886, 1,398; Charles F. Dean, superintendent.

Washington is a leading stock centre. The last Tuesday of every month is stock-sales day, when the streets are often filled with cattle. As many as 6,400

head of cattle have been sold in a single day.

There is yet a pensioner of the American Revolution alive and residing in Washington Court-House—Mrs. Mary Casey, "a war widow," who when young married an old soldier of the "times that tried men's souls."

On the 8th of September, 1885, Washington Court-House was partially destroyed by one of the most disastrous of cyclones. The loss of life was surprisingly small considering the fearful disturbance of the elements, there being but six persons killed and a comparatively small number injured. The loss of property was estimated to be nearly \$500,000.

The cyclone had its origin in Greene county, and moving southeasterly struck Fayette county in Jasper township, increasing in power and destructiveness until it reached Washington Court-House, about eight o'clock in the evening, leaving almost total devastation along its course of twelve miles. An hour before the cyclone struck Washington a huge black cloud slowly crept up the western horizon,

Drawn by Henry Howe in 1846.

VIEW IN WASHINGTON C. H.

which was followed by a strange phosphorescent cloud filled with lightning shooting from heaven to earth in a constant chain. Some described the cloud as resembling a huge elephant's trunk, the lower end of which dipped down first on the right hand and then on the left. Others say it resembled a great and luminous hornet's-nest, whirling in the heavens in frantic fury. As the clouds approached

Willett, Photo, Washington, 1886.

A STOCK SALES DAY IN WASHINGTON C. H.

the darkness became intense; the roar of the angry elements could be heard gradually increasing in power. About five minutes past eight the rain commenced falling in torrents, and the storm burst upon the town with a terrible roar, amidst which could be heard the falling of walls, crashing of timbers, and smashing of glass, while the earth seemed to sway and reel under the force of the discordant elements. This lasted about a minute, when the storm passed over, but the rain continued falling in torrents.

The entire western, southern, and central parts of the town were swept by the storm, and within that territory which includes the business portion very few houses escaped injury, while many were totally destroyed, and the majority more or less seriously damaged.

Along the course of the storm in the country whole farms were totally destroyed, buildings blown down, and fields mowed clean of vegetation; corn not only blown from the stalks, but in some instances completely husked; patches of timber literally mowed down, and barns, straw-stacks, etc., blown to atoms. On the farm of Mr. Jesse Bush, three miles from Washington, blades of straw were found blown endwise into trees to the depth of half an inch; in another place a piece of pine fence-board was found with a piece of tarred-paper roofing driven into it to a depth of three-quarters of an inch and firmly imbedded. A train of nine cars and caboose standing on a bridge on the Ohio Southern railroad was blown off. An apple-tree in the yard of Mrs. Lou Harris, the milliner, on Fayette street, was driven from two to three feet into the ground without breaking a bough. A carload of tin roofing, cornices, etc., from Washington, was gathered on a farm eighteen miles distant.

Besides these curious freaks of the great storm illustrating its power, and which are vouched for by thoroughly trustworthy parties, many instances of heroism transpired, one of which is particularly noteworthy. Miss Lucy Pine, a school-teacher, was left in charge of her sister's children, two boys, aged respectively one and a half and three years. The babies had been put to bed; when the storm came up Miss Pine rushed to them, and, as the roof was torn off, she leaned over the bed, receiving the weight of a falling joist upon her back, and thus saved their lives. By pressing down the springs of the bed she was enabled to extricate them and herself from their perilous position. From the Fayette Republican we quote:

"The residence of Mr. Henry C. Shoop, on the corner of Oak Lawn avenue and the Washington pike, was considerably shaken up. Mr. Shoop tells the following story: 'My wife and myself, with our three small children, were in the house when the cyclone struck it. The house shook and the glass door crashed in. Fearing the house would be demolished and we all crushed beneath the ruins, my wife and children rushed out of the door, and were carried by the wind fully fifty feet. I, anxious about my wife and little ones, leaped out of the house, and was instantly carried ten feet high into the air. The whole family were blown against the fence in front of the house. A large tree was blown up by the roots and fell across the street, the top of it almost reaching us as we clung with a death-grip to the fence, which, fortunately, was not blown away by the terrific gale. A large limb of the tree was hurled over the fence, and struck on the ground just a few feet away. The screams and moans of those who were buried beneath the *débris* were heartrending. Many of my neighbors' houses were blown entirely away, and the inmates pinned to the ground by heavy timbers. As my house was the only place in the neighborhood where the lights were not extinguished my neighbors, after extricating themselves from the rubbish, congregated there for shelter. My house was full of unfortunate victims; mothers and

children crazed with fright, with blood streaming from their wounds and chilled by exposure to the heavy rains. Those who could not help themselves from the ruins cried most pitifully for help. The house of Mr. James Bench was in the same locality as mine, and it was utterly demolished. His wife, who was lying upon the bed, holding in her arms an infant but three days old, and her two little children standing at her bedside, were in an instant carried quite a distance with their house, which was picked up by the whirling monster and dashed to pieces upon the ground. Mr. Bench was knocked sense-After he began to realize the situation he heard screams from his children, and hearing his wife's voice, he was overjoyed to think that they were still alive. Mrs. Bench received several bruises, which were not serious, and the infant was unharmed. Mr. Bench is a very industrious young man, and by economy and frugality had just finished paying for his little house. But the cyclone scattered it to the four winds, and to-day he and his estimable family are homeless. The house of Mr. George Bybee, Sr., moved on its foundation, and it was feared it was going, but Mr. Bybee, who has been prostrated upon a bed of affliction for years, remained in the house with his family unharmed, while the huge trees in the yard were torn up by the roots and thrown all around them.

One of the narrow escapes was that of the Rev. John B. Steptoe, paster of the Second Baptist (colored) church, who had sought shelter from the storm in the tower of the Catholic church, and was there engaged in prayer at the moment of its destruction. The reverend gentleman has favored us with the following unique account:

I was going home from prayer meeting at the Second Baptist church (colored), of which I was pastor, and the skies above me seemed angry and threatening. As the lightning above me would flash every moment I noticed clouds of different kinds and colors, dark and angry, red, pale and an inky blue.

Then a kind of warm something passed by me. At this time I was a few rods from the Catholic church when balls of hail commenced to fall around me, and way above my head in the air it appeared that something like large whips and guns were firing and cracking. I turned back in search of a place of refuge, but I could not get any farther than the Catholic church. There I stood in the tower, and in a quiet manner I thought I was praying my last prayer. I did not make a noise,

but I prayed secret.

Just across the street stood the First Baptist church, when something like a big slap struck it and it fell; then with two crashes the Catholic church fell, all except the tower, in which I was standing and praying; but the Catholic church went down so easy, as it appeared to me, that I thought it was only a breach or two in the wall, for where I was standing I could not see the main building. I had my umbrella in my hand and the top part of the stick was broken off and carried away; my hat was also taken off my head. I have never found it. My lantern was burning in my right hand and did not go out. I don't suppose the cyclone lasted over two or three minutes, but it was a long time to me. I passed the same by myself, for nobody knew where I was, and as soon as the storm was over, instead of going home as I had started to, I turned back bare-headed to tell the people what had happened, for I was not aware at that time the destruction was nearly general, and I tell you, my dear reader, I never felt so thankful in my life as I did that night when God heard and answered my prayer. It is a truth, and my very legs felt glad in a way they had never felt before. But afterward, when I had surveyed the remains of the church, and saw what a narrow escape I had made, my legs then reversed their feeling, for they trembled, and I could not avoid it. "Though Thou slay me, yet will I trust in Thee!"

TRAVELLING NOTES.

Some places we can never forget. In my experience Washington Court-House is one such. First, because it is the only town in Ohio which, when named, it seems necessary to convey the idea that there justice is done, so it is written with "Court-House" against it. Second, because there, on my original tour, I made the acquaintance of the man

who had committed one of the most audacious, if not the most audacious, act known in American history—the man who had committed a personal assault on a President of the United States, and that President Gen. Jackson! He had tried to pull his nose, and, as he claimed, succeeded; but this was denied.

This man was Lieut. Robert B. Randolph,

Willet, Photo.

THE CATHOLIC CHURCH AFTER THE CYCLONE,

of Virginia, who had been dismissed in disgrace from the navy by President Jackson.

Assault on General Jackson.—The circumstances of the assault were these. In the summer of 1833, in company with Vice-President Martin Van Buren and the members of his cabinet, the President, or "Old Hickory," as the people often called him, made his grand tour through the principal cities. Just before starting he went down to Fredericksburg, Virginia, to attend the ceremony of the memory of the mother of Washington. On the way thither the steamboat in which he was stopped at the wharf at Alexandria.

At the moment the general was almost alone in the cabin, reading a newspaper, when Randolph, smarting under a sense of wrong, hurried aboard, and finding him thus absorbed, rushed upon him, and having fully accomplished, as he claimed, this indignity, quickly made good his escape before the bystanders could fairly comprehend it. Taken by surprise, the aged warrior, in a torrent of passion, sprang from his seat, his spectacles, it was said, going one way and his newspaper another, and called out, "Give me my cane! Give me my cane! By the Eternal, I'll chastise the rascal."

A Pen Portrait of Gen. Jackson.—The wrath of Gen. Jackson was something terrible to behold. I saw him on his tour and I

can imagine it; a six-foot tall, wiry old man, visage long, thin, melancholy, solemn as that of the Knight of the Rueful Countenance. His face was red from the sunburn of recent travel, having bowed bareheaded, riding in his carriage, to enthusiastic, shouting multitudes in many cities through which he had lately passed. In striking contrast, his hair, snowy white, stood upright, bristling from every part of his head. It was a common saying in that day, "Yes; his hair stands up bristling all over his head just like General Jackson's." He wore a tall white hat, the Jackson's." He wore a tall white hat, the lower half buried in crape in mourning for his deceased wife, upon whom he had doted, and in defence of whose good name he once fought a duel and killed his man. assault created a great sensation at the time. Jackson was a man implacable in his enmities and warm in his friendships. He was idolized by the people at large because he had defeated the British at New Orleans, the feeling at that era being very bitter against England, and for the effective manner in which he had stamped out nullification in South Carolina.

Lieut. Randolph.—At the time of my visit to Washington I met Randolph, who was boarding at the Wilson tavern shown in the old view, where I was stopping. He was indeed a pitiable object, old, poor and seedy; a disgraced and fallen man living in bitter memories, existence joyless, without hope. But, withal, his air was of one born to command, and I saw in that tall, imperious presence a gentleman from one of the proudest, most honored families of old Virginia.

On making his acquaintance he greeted me with great warmth. I had but a short time previously made an historical tour of his beloved Virginia and published a book on it, and this warmly commended me to his regards. He had that indescribable air characteristic of the old style gentlemen of Virginia in their social intercourse, a mingling of dignity with great suavity and deference of manner and a simplicity and frankness of speech that was charming. Like children, it seemed often in talking with such as though they were laying their hearts open bare to

one's gaze. A highly emotional people, largely planters, knowing nothing of the great business' world, when the finer chords of their nature were played upon, nothing could be more winning than their society.

Randolph's Eccentricities.—On this present

visit I found Richard Millikan, an elderly gentleman, here, one who knew Randolph well. He gave me some items. Having been at sea in early life, Millikan and Randolph met on congenial grounds; and they were quite intimate, often took their Sunday dinners together. Randolph came here to have the oversight of some wild land which belonged to the family. He was, when not antagonized, a pleasant man, delighted in children, had a fancy for the young men of the town, whom he was wont to gather in his room and play chess and entertain with nautical stories of his experience while in the navy. As was common with the old-style of seafaring men, he was exceedingly profane, but was never known to utter an oath in the presence of ladies or of clergymen. Although very poor he seemed, Old Virginia like, to have no idea of the value of money. He shipped a barrel of hickory nuts to his wife in Richmond. This was before railroads and the freight was \$10.00. He was in continued litigation with his double cousin, Richard Randolph. He had quarrels with him and Judge Jacob Jamieson; with the latter in regard to a boundary line. One night he displayed his wrath; hung them both in effigy here in Washington on the Court-House Square, the bodies being duly labeled with their names.

He finally sold his land for a trifle, owing to an imperfection in the title, which, however, proved good, and then returned to Virginia. In Buchanan's administration he for a time held a petty office in the navy department at Washington, but was not allowed to hold it long. Some member of Congress from Jackson's State, Tennessee, made a raid upon him and had him turned out. The poor old fellow long ere this must have been gathered to his fathers, the Randolphs of Virginia.

JEFFERSONVILLE, about 35 miles southwest of Columbus, is in the centre of a fine stock-raising and grain district. It is on the O. S. and C. C. & H. V. Railroads. Newspapers: Ohio Citizen, Independent, L. A. Elster, M. D., editor; Chronicle, Independent, Adolphe Voight, editor and publisher. Churches: 1 Congregational, 1 Methodist Episcopal, 1 Universalist. Jeffersonville Bank, E. A. Lewis, president, S. M. Taggart, cashier. Industries: Jeffersonville is the shipping point for fine specimens of Poland-China hogs and Short-horn cattle for breeding. Population in 1880, 374.

BLOOMINGBURG, on the C. & C. M. R. R. and on the east fork of Paint, 5 miles easterly from Washington Court-House, has several churches and, in 1880, 526 inhabitants.

FRANKLIN.

Franklin County was formed from Ross, April 30, 1803, and named from Benjamin Franklin, who died April 17, 1790, aged eighty-four years, who was "at once philosopher, diplomatist, scientific discoverer, moralist, statesman, writer and wit, and in many respects the greatest of Americans, and one of the greatest men whose names are recorded in history." The prevailing character of the soil of the county is clay, and the surface is generally level. It contains naturally much low wet land, and is best adapted to grain; but it has many finely cultivated farms, especially along the water courses. In 1885 the acres cultivated were 151,102; in pasture, 55,100; woodland, 32,799; lying waste, 6,521; bushels wheat, 145,240; corn, 3,590,968 (being next to Pickaway the greatest amount of any county in the State); oats, 221,319; apples, 145,651. School census 33,223; teachers, 520; area, 540 square miles. It has 228 miles of railroad.

The population of Franklin in 1820 was 10,300; in 1830, 14,756; in 1840, 24,880; 1860, 50,361; 1880, 86,882, of whom 63,224 were Ohio-born; 2,910 Pennsylvania; 1,920 Virginia; 1,699 New York; 601 Kentucky; 521 Indiana, 6,098 Germany; 2,742 Ireland; England and Wales, 1,598; British America, 396; France, 266; Scotland, 156.

The tract comprised within the limits of the county was once the residence of the Wyandot Indians. They had a large town on the site of the city of Columbus, and cultivated extensive fields of corn on the river bottoms opposite their town. Mr. Jeremiah Armstrong, who early kept a hotel at Columbus, was taken prisoner when a boy from the frontier of Pennsylvania, and brought captive to this place: after residing with them a number of years he was ransomed and returned to his friends. Mr. Robert Armstrong, also a native of Pennsylvania, being an orphan boy was bound to a trader, and while trapping and trading on the Alleghany, himself and employer were surprised by some Wyandots and Senecas. The master was killed and Armstrong brought to their town at Franklinton. He was raised by the Indians, became a great favorite, lived, married and died among them. He was occasionally an interpreter for the United States. He left two sons who went with the Wyandots to the far west; both of them were educated, and one of them was admitted to the Ohio bar.

In the year 1780 a party of whites followed a band of Indians from the mouth of the Kanawha, overtook them on or near the site of Columbus and gave them battle and defeated them. During the fight, one of the whites saw two squaws secrete themselves in a large hollow tree, and when the action was over they drew them out and carried them captive to Virginia. This tree was alive and standing, on the west bank of the Scioto, as late as 1845.

Pronk Henry Houe, Amaleur Photo., 1888. The State Capitol at Columbus,

The annexed anecdote, derived from J. W. Van Cleve, of Dayton, shows a pleasing feature in the character of the Indian.

A party, surveying on the Scioto, above the site of Columbus, in '97, had been reduced to three scanty meals for four days. They came to the camp of a Wyandot Indian with his family, and he gave them all the provisions he had, which comprised only two rabbits and a small piece of venison. This

Wyandot's father had been murdered by the whites in time of peace: the father of one of the surveyors had been killed by the Indians in time of war. He concluded that the Indian had more reason to cherish hostility towards the white man than he toward the Indian.

In June, 1810, there was an old Wyandot chief, named Leatherlips, executed in this county, and it is claimed for the sole reason that he was a friend of the white man and opposed to taking up armies against the whites. We take the account of this event from "Drake's Life of Tecumseh," where it is abridged from an article by Otway Curry, in the "Hesperian."

Gen. Harrison entertained the opinion that his death was the result of the prophet's command, and that the party who acted as executioners went directly from Tippecanoe to the banks of the Scioto, where the tragedy was enacted. Leatherlips was found en-camped upon that stream, twelve miles above Columbus. The six Wyandots who put him to death were headed, it is supposed, by the chief Roundhead. An effort was made by some white men, who were present, to save the life of the accused, but without success. A council of two or three hours took place: the accusing party spoke with warmth and bitterness of feeling: Leatherlips was calm and dispassionate in his replies. The sentence of death, which had been previously passed upon him, was reaffirmed. "The passed upon him, was reaffirmed. prisoner then walked slowly to his camp, partook of a dinner of jerked venison, washed and arrayed himself in his best apparel, and afterwards painted his face. His dress was very rich—his hair gray, and his whole appearance graceful and commanding." When the hour for the execution had arrived, Leatherlips shook hands in silence with the "He then turned from his spectators. wigwam, and with a voice of surpassing strength and nelody commenced the chant of the death song. He was followed closely by the Wyandot warriors, all timing with their slow and measured march the music of his wild and melancholy dirge. The white men were likewise all silent followers in that strange procession. At the distance of seventy or eighty yards from the camp, they came to a shallow grave, which, unknown to the white men, had been previously prepared by the Indians. Here the old man knelt down, and in an elevated but solemn tone of voice, addressed his prayer to the Great Spirit. As soon as he had finished, the captain of the Indians knelt beside him and prayed in a similar manner. Their prayers, of course, were spoken in the Wyandot tongue. . . . After a few moments' delay, the prisoner again sank down upon his knees and prayed, as he had done before. When he had ceased, he still continued in a kneeling position. All the rifles belonging to the party had been left at the wigwam. There was not a weapon of any kind to be seen at the place of execution, and the spectators were consequently unable to form any conjecture as to the mode of procedure which the executioners had determined on for the fulfilment of their purpose. Suddenly one of the warriors drew from beneath the skirts of his capote a keen, bright tomahawk—walked rapidly up behind the chieftain brandished the weapon on high for a single moment, and then struck with his whole strength. The blow descended directly upon the crown of the head, and the victim immediately fell prostrate. After he had lain awhile in the agonies of death, the Indian captain directed the attention of the white men to the drops of sweat which were gathering upon his neck and face; remarked with much apparent exultation, that it was conclusive proof of the sufferer's guilt. Again the executioner advanced, and with the same weapon inflicted two or three additional and heavy blows. As soon as life was entirely extinct, the body was hastily buried, with all its apparel and decorations, and the assemblage dispersed.

One of Mr. Heckewelder's correspondents, as quoted in his historical account of the Indian nations, makes Tarhe, better known by the name of Crane, the leader of this party. This has been denied; and the letter of Gen. Harrison on the subject proves quite conclusively that this celebrated chief had nothing to do with the execution of Leatherlips. Mr. Heckewelder's correspondent concurs in the opinion that the original order for the death of this old man was issued from the head-quarters of the prophet and his brother

Tecumseh.

In Columbus is a social organization called the "Wyandot Club." Its officers are, President, William Taylor; Vice-Pres. A. McNinch; Secretary, E. L. Taylor; Treasurer, G. W. Willard. Among their intentions is to perpetuate the

memory of Leatherlips, by the erection of a monument on the place of his execution and burial, which is about fourteen miles north of Columbus near the

Delaware county line.

Steps were taken for this purpose at their annual reunion, September 18, 1887. This took place in a noble forest named "Wyandot Grove" on the west bank of the Scioto about eight miles northwest of the city, with about 150 invited guests, where under a spreading tent they sat down to a sumptuous repast gathered from the farm, garden, river, and tropics, amid which the florist made a gorgeous display.

This feast had been preceded by a speech by Col. Samuel Thompson, in which he gave a sketch of the noble Wyandot tribe, the most humane of all the Indian tribes, and largely opposed to the torture of prisoners. He paid a tribute to one of their great chiefs, Tarhe, or Chief Crane, so wise in council, and so renowned in war, and who had interposed in vain to save the ill-fated Col. Crawford from the stake. "I learned," said he, "from our venerable friend, the late Abraham Sells, former proprietor of this beautiful grove, rightly named by him Wyandot Grove, near yon crystal spring once stood the cabin of this noted chief. It was here that the Wyandots halted to rest and refresh themselves when on their way to the white settlements at Chillicothe and subsequently at Franklinton, this county."

The Colonel then told the story of Leatherlips, who was executed "for political reasons," substantially as already given. He was followed by Capt. E. L. Taylor, who spoke in a very interesting manner, after which a committee was

appointed to take measures for the erection of the monument.

The first settlement of this county was commenced in 1797. Some of the early settlers were Robert Armstrong, George Skidmore, Lucas Sullivant, Wm. Domigan, the Deardorfs, the M'Elvains, the Sellses, James Marshall, John Dili, Jacob Grubb, Jacob Overdier, Arthur O'Harra, Colonel Culbertson and John Brickell. This last-named gentleman was taken prisoner when a boy, in Pennsylvania, brought into Ohio and held captive four and a half years among the Delawares. He was liberated at Fort Defiance, shortly after the treaty of Greenville, the details of which will be found under the head of Defiance county.

In the month of August, 1797, Franklinton was laid out by Lucas Sullivant. The settlement at that place was the first in the county. Mr. Sullivant was a self-made man and noted as a surveyor. He had often encountered great peril

from the attacks of Indians while making his surveys.

The following items of local history are from a "A Brief History and Description of Franklin County" which accompanied Wheeler's map.

Next after the settlement of Franklinton, a Mr. Springer and his son-in-law, Osborn, settled on Darby; then next was a scattering settlement along Alum creek, which last was probably about the summer of 1798. Among probably about the summer of 1798. Among the first settlers here were Messrs. White, Nelson, Shaw, Agler, and Reed. About the same time, some improvements were made near the mouth of Gahannah (formerly called Big belly), and the settlements thus gradually extended along the principal water courses. In the mean time, Franklinton was the point to which emigrants first repaired, to spend some months, or probably years, prior to their permanent location. For several years there was no mill nor considerable settlement nearer than the vicinity of Chillicothe. In Franklinton, the neighbors constructed a kind of handmill, upon which they generally ground their corn. Some pounded it, and occasionally a trip was made with a canoe or periogue, by way of the river, to the Chillicothe mill. About the year 1799, a Mr. John D. Rush erected an inferior mill on the Scioto, a short

distance above Franklinton; it was, however, a poor concern, and soon fell to ruin. A horsemill was then resorted to, and kept up for some time; but the first mill of any considerable advantage to the country was erected by Col. Kilbourne, near Worthington, about the year 1805. About the same time, Carpenter's mill, near Delaware, and Dyer's, on Darby, were erected. About one year, probably, after the first settlement of Franklinton, a Mr. James Scott opened the first small store in the place, which added much to the convenience of the settlers. For probably seven or eight years, there was no post-office nearer than Chillicothe, and when other opportunities did not offer, the men would occasionally raise by contribution the means, and employ a man to go the moderate distance of forty-five miles to the post-office to inquire for letters and newspapers. During the first years of the settlement, it was extremely sickly—perhaps as much so as any part of the State. Although sickness was so general in the fall season as to almost entiny discourage the inhabitants,

yet, on the return of health, the prospective advantages of the country, the luxuriant crops, and abundance of game of all kinds, together with the gradual improvement in the health of the country generally, induced them to remain. The principal disease of the country being fever and ague, deaths were comparatively seldom.

Franklinton in 1846.—Franklinton lies on the west side of the Scioto, opposite Columbus. It was the first town laid off in the Scioto valley north of Chillicothe. From the formation of the county, in 1803, it remained its seat of justice until 1824, when it was removed to Columbus. During the late war, it was a place of general rendezvous for the northwestern army, and sometimes from one to three thousand troops were stationed there. In those days, it was a place of considerable note; it is now a small village, containing, by the census of 1840, 394 inhabitants.—Old Edition.

Franklinton now is included in the city of Columbus. It has changed less than any part of the city so near the centre, and preserves to this day many of its old style village features. It is a quiet spot, but cannot much longer so remain in the rapid progress of improvements.

WORTHINGTON IN 1846.—Worthington is a neat town, 9 miles north of Columbus, containing 3 churches, and by the census of 1840, 440 inhabitants. At

WORTHINGTON FEMALE SEMINARY

this place is a classical academy, in the old botanic college building, in tine repute, under the charge of the Rev. R. K. Nash; also a flourishing female seminary, under the patronage of the Ohio Methodist Conference, of which the Rev. Alexander Nelson is the principal. The building is of brick, and stands in a pleasant green.—
Old Edition.

Since 1840 to 1880 Worthington has increased from 440 to 459 inhabitants. It is now on the

line of the C. C. C. and I. railway. It has long been known as an educational point, and it was the attractions of this spot that first drew Bishop Philander Chase to Ohio. He came out and settled here in 1817, bought five village lots, and a farm of 150 acres just south of the place. About 60 acres were cleared, and the total cost was two thousand and fifty dollars. He was appointed principal of the academy and conducted services in the Episcopal church. While residing here he was made in 1818 the first Bishop of Ohio. Worthington was also honored by the early residence of Salmon P. Chase. Williams Bros.' combined history of Franklin and Pickaway counties gives the following amusing items:

Boyhood Pranks of Salmon P. Chase.—Salmon P. Chase came to Ohio to live with his uncle, Bishop Chase, in 1820, when but twelve years of age. He did chores about the farm, drove the cows to pasture and home again, took grain to the mill, and was kept busy when not at school. He once received instructions from his uncle to kill and dress a little young pig which was to be roasted for dinner. He knew how to kill and scald him, but either the water was too hot, or he left the pig in too long, for when he expected to remove the bristles easily, he could hardly pull out even a single bristle at a time. He was aware that the pig must be ready promptly for dinner, and bethought himself of his cousin Philander's razor which he got and with which he neatly shaved the pig. The job was well done and reflected credit on the barber, but about ruined the razor.

Salmon was also accustomed to ride a horse belonging to Squire Charles E. Burr, the same animal being a favorite with the college professors and others. He found that by sticking his heels in the sides of the horse that he resented the indignity by kicking. He enjoyed the fun and continued it until the horse was completely ruined for the ordinary uses of a horse; it could not be used for any purpose whatsoever except to kick everything within the swing of his heels, which it ever after did, and with a gusto.

Salmon lived with his uncle about a year and a half. Mr. Elias Lewis of Worthington, now in his eighty-third year, when a bricklayer had Salmon P. Chase for a mort carrier and speaks with pride of the fact that a man who afterward became a governor of Ohio and chief justice of the United States should have carried the hod for him.

The township of Sharen, in which Worthington is, was very early settled by

"The Scioto Company," formed in Granby, Conn., in the winter of 1801–2, and consisting at first of eight associates. They drew up articles of association, among which was one limiting their number to forty, each of whom must be unanimously chosen by ballot, a single negative being sufficient to prevent an election. Col. James Kilbourne was sent out the succeeding spring to explore the country, select and purchase a township for settlement. He returned in the fall without making a purchase, through fear that the State Constitution, then about to be formed, should tolerate SLAVERY, in which case the project would have been abandoned. It is here worthy of notice that Col. Kilbourne on this visit constructed the

It is here worthy of notice that Col. Kilbourne on this visit constructed the FIRST MAP OF OHIO, which he compiled from maps of its different sections in the office of Col. Worthington (afterwards governor), then register of the United States land office at Chillicothe. The part delineating the Indian territory was from a map made by John Fitch, of steamboat memory, who had been a prisoner among the Indians, which, although in a measure conjectural, was the most accurate of

that part of the Northwest Territory.

Immediately upon receiving information that the Constitution of Ohio prohibited slavery Col. Kilbourne purchased this township, lying within the United States military land district, and in the spring of 1803 returned to Ohio and commenced improvements. By the succeeding December 100 settlers, mainly from Hartford county, Conn., and Hampshire county, Mass., arrived at their new home. Obeying to the letter the articles of association, the first cabin erected was used for a school-house and church of the Protestant Episcopal denomination; the first Sabbath after the arrival of the third family divine worship was held therein, and on the arrival of the eleventh family a school was commenced. This early attention to religion and education has left its favorable impress upon the character of the people to the present day. The succeeding 4th of July was appropriately celebrated. Seventeen gigantic trees, emblematical of the seventeen States forming the federal union, were cut so that a few blows of the axe, at sunrise on the Fourth, prostrated each successively with a tremendous crash, forming a national salute novel in the world's history.

James (sometimes called Colonel and sometimes Reverend, for he was both) Kilbourne laid out the village of Worthington in May, 1804, into 162 lots, one of which was reserved for church and another for school purposes. This eminent pioneer was born in New Britain, Conn., in 1770, and named the village from the parish of Worthington, which is near that of New Britain. He was first apprenticed to a farmer, and learned mathematics and the classics from the farmer's son. He became a mechanic, subsequently acquired a competence as a merchant and manufacturer, and about the year 1800 took orders in the Episcopal church. He organized the Episcopal church in Worthington, the first organized in Ohio. In 1804 he retired from the ministry, and in 1805 was appointed by Congress surveyor of public lands. In 1812 he was on the commission to settle the boundary between the public lands and the Virginia reservation, and was a colonel of a frontier He was from 1813 to 1817 a regiment.

member of Congress (sent by the Democrats), and had the distinguished merit of originating the measure to grant the public lands of the Northwest Territory to actual settlers, and was chairman of the select committee that drew up the bill for that purpose. He died in Worthington in 1850. A useful and most worthy citizen, he was of a strong social nature, and sometimes indulged in poetry, as will be seen in his "Song of Bucyrus," two verses of which are under the head of Crawford county.

The grave of Col. Kilbourne in the Worthington cemetery is marked by a stone, on which he had cut prior to his death the names of his family, including that of his second wife. She took exception to the cutting of her name upon a tombstone before her death, and directed that her remains should not be interred there. Her wish was observed, and her body now lies in Green Lawn cemetery.

Columbus.

Columbus in 1846.—Columbus, the capital of Ohio, and seat of justice for Franklin county, "is 106 miles southerly from Sandusky City, 139 miles southwest from Cleveland, 148 southwestwardly from Steubenville, 184 in the same direction from Pittsburg, Pa., 126 miles west from Wheeling, Va., about 100 northwest from Marietta, 105 northwest from Gallipolis, 45 north from Chilli-

This view, photographed by Frank Henry Howe in 1887, is looking South on High Street. On the right is shown the present Neil House, on the site of that burnt, and on the left the present Capitol of Ohio.

This view, drawn by Henry Howe in 1846, is looking south on High Street, Columbus. On the right is shown the old Neil House, later burnt, and on the left the old Ohio State Capitol and buildings.

cothe, 90 in the same direction from Portsmouth, at the mouth of the Scioto river, 118 northwardly from Maysville, Ky., 110 northeast from Cincinnati, 68 easterly from Dayton, 104 southwardly from Lower Sandusky, and 175 due south from Detroit, Mich.; N. lat. 39° 57′, W. long. 6° from Washington city, or 83° from London. It is situated exactly on the same parallel of latitude with Zanesville and Philadelphia, from which latter place it is 450 miles distant; and on the same meridian with Detroit, Mich., and Milledgeville, Ga. The National road passed through it east and west, and the Columbus and Sandusky turnpike extends from this point north to Lake Erie. In all other directions roads are laid out, and many of them in good repair. By the Columbus feeder water communication is opened with the Ohio canal, and thence to Lake Erie and the Ohio river." Columbus is beautifully situated on the east bank of the Scioto, about half a mile below its junction with the Olentangy. The streets are spacious, the site level, and it has many elegant private dwellings. Columbus has a few manufactories only; it does, however, a heavy mercantile business, there being many stores of various kinds. It contains 17 churches, viz., 2 Methodist Episcopal, 1 German Methodist, 2 Presbyterian, 1 Baptist, 1 German Lutheran, 1 German Evangelical Protestant, 1 German Reformed, 2 Épiscopal, 1 Catholic, 1 Welsh Presbyterian, 1 United Brethren, 1 Universalist, and 1 Bethel, and 1 Baptist for colored persons. The principal literary institutions in this city are the Columbus Institute, a flourishing classical institution for males, Mr. and Mrs. Schenck's female seminary, and the German Theological Lutheran Seminary, which last has been established about seventeen years, Rev. William Lehmann, professor of theology. in Columbus 6 weekly, 2 tri-weekly, and 1 semi-monthly newspaper and several The great State institutions located at Columbus do honor to Ohio, give great interest to the city, and present strong attractions to strangers. They are the Asylum for Lunatics, the Asylum for the Blind, the Asylum for the Deaf and Dumb, and the Penitentiary, which last is the most imposing edifice in Columbus, and is situated on the east bank of the Scioto, about half a mile north of the State-Its population in 1815 was about 700; in 1820, about 1,400; in 1830, 2,437; in 1840, 6,048, and in 1846, 10,016.—Old Edition.

Columbus, the capital of Ohio, is a great railroad centre, and on the line of thirteen different railroads, viz., B. & O.; C. St. L. & P.; C. A. & C.; C. C. & I.; C. & E.; C. & C. M.; C. H. Manufacturers and Employees.—The State Report of Inspector of Workshops and Factories for 1887 gave a list of 194 establishments, of which the followingin all 58—employed 40 hands and over: Columbus Sewer Pipe Company, 80 hands; B. B. Anderson, cigars, etc., 45; U. S. Carriage Company, 109; Scioto Buggy Company, 103; Hildreth & Martin, doors, sash, etc., 40; Columbus Cabinet Company, furniture, 72; C. Emrich, stoves, 60; Halm, Bellows & Co., furniture, 127; Ohio Furniture Company, 65; Butler, Crawford & Co., coffee and spices, 80; Franklin Furnace, pig-iron, 75; R. C. Schmertz & Co., window glass, 60; P. Hayden & Co., iron and hames, 178; F. R. Winget, cigars, 120; Columbus Cigar Manufacturing Company, 95; Kilbourne & Jacobs Manufacturing Company, wheelbarrows, road scrapers, etc., 430; Ohio Tool Company, 70; N. Schlee, beer and malt, 45; Born & Co., beer and malt, 40; L. Hoster Brewing Company, beer and malt, 95; John Immel & Son, carriages, etc., 45; Columbus Bolt Works, 125; Reed, Jones & Co., shoes, 75; Case Manufacturing Company, mill machinery, 150; J. W. Dann Manufacturing Company, bent wood-work, 50; Columbus Dash and Wagon Company, 78; M. T. Gleason, brass foundry, 40; Scheuweker Bros., leather, 50; Ohio Pipe Company, iron pipes, 175; Steel Skein Works, wagon skeins, 45; Buckeye Buggy Company, 139; Wassall Fire-Clay Company, fire-brick, sewer pipe, etc., 40; C. H. V. & T. R. R. Shops, railroad supplies, 400; Lechner Manufacturing Company, mining machinery, 50; Door, Sash, and Lumber Company, 133; E. D. & J. C. Howard, brooms, 55; Newark Machine Company, clover hullers, etc., 312; Columbus Machine Company, engines and castings, 80; Capital City Carriage Company, 75; Westbote Printing Company, 48; William Armbruster, hosiery, etc., 46; S. R. Klotts, stogies, 106; James Ohlen, saws, 75; Slade & Kelton, sash, 60; Inter-State Cigar Company, 44; Columbus Coffin Company, 52; Vulcan Iron Works, founders and machinists, 70; J. J. Wood Starch Company, starch, 150; Columbus Watch Company, 220; William Fish & Son, building stone, 40; E. Wood & Co., malleable iron, 65; W. D. Brickell & Co., newspaper, 60; Snyder, Chaffee & Co., candies, 73; Munson & Hayden, malleable iron, 120; H. C. Godman, shoes, 46; McMorrow & Miller, shoes, 40; P. Hayden & Co., foundry and machine shop, 47; P. Hayden S. H. Company, chains, 90; Senter & Lerch, boxes, 43; The M. C. Lilley & Co., regalia for Masons, Odd Fellows, etc., 420 employees, and said to be the largest establishment of the kind in the world.—State Report for 1887. Population in 1880, 51,647; in 1888, estimated, 106,000. School census in 1886, 22,404; Robert W. Stevenson, superintendent.

The following article, "COLUMBUS, ITS PAST AND PRESENT," was contributed for this work by Mr. E. O. Randall, ex-President of the Columbus Board of Trade.

The site of Columbus was originally occupied by the Wyandots and other tribes who had settlements of a straggling, transitory character in the forests upon the banks of the creeks now known as the Darby, Alum, Walnut and Black Lick, and the rivers Scioto and Olentangy. Among other interesting items is the fact, shown by the former existence of mounds, that the Wyandots had a flourishing village within the limits of Franklinton—now West Columbus—and cultivated corn on the low, flat lands of the Scioto. Franklinton was laid out in 1797 by Lucas Sullivan, a young man from Kentucky engaged in surveying lands and

locating land warrants in the Virginia military district west of the Scioto; its settlement immediately ensued, and it became a white man's village.

The county of Franklin, one of the first to be created by the new State legislature, was formed in 1803 with Franklinton as the seat of justice. The first official building created was a log-cabin jail. The first court-house was built in 1807, of brick pressed from the clay of a mound that had entombed the bones and beads of chiefs, squaws and pappooses.

The Ohio legislature first convened in 1803, and until 1816 it had no local habitation, but sojourned temporarily at Chillicothe, where it met until 1810, when it wandered to Zanesville for two sessions, thence returning to Chillicothe and there abiding until 1816. In the winter of 1810, while the legislature was in Zanesville, four citizens of Franklinton (viz., Lyne Starling, James Johnson, Alex. McLaughlin and John Kerr, formed a company to establish the State capitol "on the high bank of the Scioto river opposite Franklinton." lages of Dublin, Worthington and Delaware were competitors, but the geographical advantages of the Columbus site and the terms offered by them prevailed. Their proposal was to give to the State two separate batches of land of ten acres each—one lot for the State House and one lot for the Penitentiary—the foresighted and impartial founders of the capitol realizing that equal and immediate quarters should be provided alike for the law makers and the law breakers. In addition they agreed to build (at their expense) the capitol and penitentiary and "such other buildings as should be directed by the legislature to be built, not to exceed a total cost of \$50,000."

On St. Valentine's Day, 1812, the legislature, then at Zanesville, accepted the proposition and passed a law establishing the capital of Ohio at Columbus. On the 18th of June following, 1812, the same day Congress declared war on Great Britain, Columbus, the site of which was then an unbroken forest, was laid out, and the primeval wilderness and native untrodden soil awoke to its initial real estate boom.

The town was platted with streets running at right angles and nearly due north and south, or east and west. High street was made 100 feet wide; Broad, 120, all others 82½, and all alleys 33. The town lots were 62½ feet by 187½ feet deep. At the time of the first sale of lots there was but one cleared spot, that on the corner of Front and State. Naturally after the platting of the town and its establishment as the capital, improvements and growth advanced rapidly; immigrants came and business began to bustle. Among the first settlers, or as early as 1813, were George M'Cormick, Geo. B. Harvey, Jno. Shields, Michael Patton, Alex. Patton, Wm. Altman, John Collett, Wm. M'Elwain, Daniel Kooser, Peter Putnam, Jacob Hare, Christian Keyl, Jarvis, Geo. and Benj. Pike, Wm. Long and Dr. John M. Edmiston.

The association, or as we should now term it "the syndicate," more than fulfilled their obligations. In 1813 a penitentiary was erected, and the north grave-yard, for which one and a half acres were set apart, began to receive tenants. The following year, 1814, the first church was built, the first school opened and the first newspaper was issued. The first church was a cabin, on Spring street, on a lot of Dr. Hoge's, which was used by the Presbyterians. Rev. Dr. Hoge was its pastor. It was not long occupied for that purpose; that denomination then worshipped in the Franklinton meeting-house until 1818, when the first Presbyterian church was organized in Columbus, and a frame meeting-house erected on Front street, where Dr. Hoge preached until the erection of "the 1st Presbyterian church," about 1825. In 1814 the Methodist church of Columbus was organized; and the same year they erected a small, hewed log-house, which served the double purpose of school-house and church until about 1824, when a permanent building was erected on the same site.

The first newspaper is historic, and worthy a passing notice. It originated in Worthington as the Western Intelligencer, was transplanted to Columbus, when it

became known as the Western Intelligencer & Columbus Gazette. From it sprung the present widely known and influential Ohio State Journal. It continued to be published weekly, however, as the Columbus Gazette until 1884, when its future fell into the hands of the writer of these lines, who after a praiseworthy effort to revive its pristine glory and power, transferred it to the party led by the apostles

of temperance; it then soon disappeared entirely.

The State-house was erected in 1814; the brick of this edifice was partly made from a beautiful mound near by, which has given the name to a street. It stood until destroyed by fire on Sunday morning, April 1, 1852. On the 10th of February, 1816, the town was incorporated as "the borough of Columbus." The first board of councilmen elected were Henry Brown, Michael Patton, Jarvis Pike, Robt. and Jeremiah Armstrong, John Kerr, John Cutler, Caleb Houston and Robt. M'Coy. About the year 1819 the United States or old court-house was erected.

In 1815 was taken the first census, enumerating the population at 700, with 6 stores, 1 printing office and 4 lawyers. In 1816 a subscription of \$200 was raised to remove the stumps from High Street, and the town was incorporated as the borough of Columbus with nine prominent citizens as the first board of councilmen. One of the first acts of the council was to authorize the corporation to issue money in the shape of small bills to the amount of \$555.75 in the following quantities and denominations: 120 bills of 75 cents, 464 of 50 cents, 464 of 25 cents, 836 of $12\frac{1}{2}$ cents, 212 of $6\frac{1}{4}$ cents. In December, 1816, the legislature arrived in Columbus and took up its quarters in the old, red brick State-house and began that continuous and monotonous grind of passing laws one winter and remodeling and repealing them the next. In two respects Columbus doth resemble Rome. The Scioto is as muddy and majestic as the time-honored Tiber, and Ohio's capital "was not built in a day." But the little city grew apace until 1819, when the enterprise and energy that had founded it and made it flourish succumbed to the check of business reaction. A year or two of depression and failure set in. Real estate shrunk and fell, and full city lots were forced on the market as low as eight and ten dollars. In 1824 Columbus was made the countyseat of Franklin county, and ten years later, in 1834, it was incorporated as a city, having at that time 4,000 inhabitants, who elected the first mayor, one John Brooks, there being five candidates and 449 voters. From this time on Columbus rapidly advanced and the era of public improvements began. The canal and national turn-pikes and State plank-roads came along, opening Columbus to the leading cities of this and other States.

On July 4, 1825, was commenced the Ohio canal, 307 miles long, from Cleveland to Portsmouth, connecting the Lake Erie with the Ohio river. It was finished in 1838. The Columbus outlet known as the "feeder," leading from Columbus to Lockbourne, a distance of eleven miles, was opened in September, 1831, when the first canal boat, Gov. Brown, arrived from Circleville and was received with peals of artillery, martial music and the huzzas of the delighted citizens.

In 1836 the famous National Road—the Via Appia of our capital—a magnificent piece of engineering and construction, a graded surface, with a stone bed, reaching from Wheeling, W. Va., to Indianapolis, Ind., passed in its construction through Columbus. In 1840 the population was 6,000, with five ministers to prepare the good people for the finishing touches of twelve distinctive doctors. Then came the age of railways and telegraphs, the latter opening an office in August, 1846. The first railroad begun in Ohio was in 1841, and on February 20, 1850, the first passenger train steamed into Columbus on the Columbus & Xenia. True to its immutable instincts, the legislature without delay got passes and took an excursion.

Aside from what we have recorded, little of conspicuousness occurred except perhaps an occasional invasion of the cholera and periodic amusement epidemic among the people, which usually took the nature of a balloon ascension. In

January, 1857, was celebrated the opening of the present capitol building, representing fifteen years work, and a cost of \$1,359,121. It was a stupendous festival, in which every inch of interior was packed with a seething, panicky, perspiring mass of humanity squeezed almost to speechlessness. The music could not be heard, and the elaborate menu invariably spilled upon the dress suits of the beaux and the decollete shoulders of the belles. However, it was the greatest ball of the season, inaugurating the greatest State capitol building then in the United States. It occupies just two acres, and is the centre of an area of ten acres. It was built of limestone from Sullivant hill by convict labor.

Thus much in the way of a retrospect of the past. Of Columbus at this writing we speak with pardonable pride. The population in 1850 was 18,000;

THE OHIO STATE UNIVERSITY.

in 1870, 31,000; in 1880, 52,000; and the centennial year, 1888, from 90,000 to 100,000. It is now increasing at the rate of 5,000 a year. For some years an average of 1,000 buildings per year have been erected. The city to-day has an area of 7,040 acres, or 11 square miles, and a corporated circumference of 18 miles. It extends north and south 6 miles, east and west 3½ miles. It has 165 miles of streets; 109 miles of these are either graveled, bouldered, macadamized or surfaced in asphalt, stone-block or fire-brick. It has 30 miles of street railway, 70 miles of water mains, 75 miles of main and 75 miles of distributing gas pipes. It has 195 acres of parks and public grounds, not including the State fair grounds of some 125 acres. This is the city's size by measurement, but these figures convey no idea of its beauty, industry, wealth and influence. That Columbus owes its importance, as it does its existence, to the fact that it is the capital of the third State in the Union, is an erroneous and exploded notion; and though not in a particularly picturesque locality, Columbus is admirably placed near the geographical centre of the State, in the midst of a magnificent agricultural country, and within two or three hours ride by rail of the inexhaustible coal and iron region of Southeastern Ohio. Its railway and shipping facilities are unsurpassed, for it is the radiating centre of fifteen railroads, thus making it a most advantageous point for jobbing and manufacturing. For financial solidity and commercial importance it is conspicuous throughout the country. It has seventeen sound and well-managed banks, and its clearing-house transactions the past year (1887) amounted to \$112,543,461.

It is now rated as the wealthiest city in the Union, per capita of population. The tax duplicate for this year (1888) will show about \$30,000,000 in realty and some \$12,000,000 in personalty. This return indicates an actual city wealth upwards of \$100,000,000. The amount of business done in 1887 aggregated \$60,000,000. Its location, as before indicated, makes Columbus a great lumber, coal and iron market. In the year 1887 2,000,000 tons of the 9,000,000 mined in Ohio were consumed in the city.

It is estimated that the capital invested in business and in manufacturing in Columbus is near two hundred millions of dollars. The three greatest interests are coal, iron and the building of buggies. The greatest is coal; the capital invested in the business is \$20,000,000, and that in iron \$18,000,000. Twenty-one firms and corporations are in the city engaged as miners and shippers of coal and acting as wholesale dealers, which give employment to at least 10,000 men. It is claimed that coal, iron and lumber can nowhere else be obtained more cheaply than In the manufacture of buggies and carriages are 18 establishments, employing about 2,500 men and 300 women, and the number sold in the past year amounted to over 20,000, or one for every nine minutes, counting the working hours daily ten in number. But tempering the enterprise, energy and magnitude of the business interests of Columbus is a sort of old-time conservatism. city is capital so cautious and so steady. The speculative element is almost entirely eliminated from all transactions. There are no gamblings on "margins" and no bubble real estate "booms" with subsequent shrinkages; and the city has from foundation to the last finishing touches pursued the even tenor of a moderate But it has always progressed, and has safely survived the storm of panics and shocks of depressions better than any city of its magnitude. It is a pleasant reflection that the working people of the city are thrifty and largely own their homes, which are mostly cottages built of brick made from Columbus clay.

Columbus in a marked degree represents the commercial "push" of the progressive West and the culture and refinement of the East. Its public schools are second to none; indeed, it is a school city. The census of 1887 gave 23,440 children within the school age of six to twenty-one; 11,000 of these are registered in the public schools, for which twenty-two spacious and modern-equipped buildings, representing \$1,260,550 in value, are provided. The Roman Catholics, who are numerous, aggressive, influential, and indeed liberal and public-spirited, support a number of parochial schools, colleges, and seminaries, in which they educate their own children. Among their institutions is the "Academy of St. Mary's of the Springs" for the education of young ladies. It was incorporated in 1868, and is in the midst of pleasant surroundings, about two miles east of the city limits; it is under the direction of the Dominican Sisters.

St. Joseph's Cathedral, on Broad street, in its vastness and splendor reflects great credit upon the enterprise and devotion of the Catholic population. In a vault beneath rests the remains of its founder, Bishop Rosecrans.

The State University, two and one-half miles north of the State-house, with its handsome grounds of 325 acres and commodious buildings, and excellent equipment and efficient faculty, affords the best opportunity for higher academic and scientific education. The Lutherans maintain a flourishing college—Capital University—with theological annex. Two medical colleges—the Starling and the Columbus—mould medical proficients, and each year send at large some fifty each of the devotees of Æsculapius. In connection with these institutions are two well-conducted hospitals. Then there is the usual quota of commercial colleges, kindergartens, private schools, etc.

Literature and the arts are neither primitive nor obscure in the capital city. The good citizens slake their insatiate intellectual thirst at the Pierian founts of the State Library with 52,000 volumes, or the City and School Library with 22,000, and the Law Library with 10,000. The sort of mental pabulum that the Columbusters delight to devour should arouse the admiration and envy of brain-

crammed Boston. The interesting and instructive reports of the city librarian reveal that of the books drawn and read, over sixty per cent. are biography, science, and history, while only thirty-four per cent. are novels and fiction. This is the best intellectual average reported by any miscellaneous circulating library in the country. In Boston, where the cranial gray matter is claimed to be at the highest state of cultivation, the issue of the library shows seventy-four per cent. of fiction.

Columbus is afflicted with the great American contagion and nuisance—the base-ball nine; but the "muses nine" circulate freely in the "best society." Art and music flourish in no mediocre manner. The work accomplished in the art department of the public schools in two late annual national exhibits was accorded a rank second only to the incomparable modern Athens. The Art School, with its ten years of age and experience and success, and its 200 pupils, is one of the best in the West. Professional art is not enormously profitable as yet, but a goodly number of painters haunt the halls of the public buildings, and at times frighten or delight the passer-by with the display in the shop windows of their glowing colors upon the canvas backs. Music, too, indulges copiously in its "voluptuous swells," and has its clubs and societies and concerts to make the welkin ring, and soothe with its charms the unstrung nerves of the busy burgesses.

As cities go, Columbus, though owing to the character of its population, which is one-third foreign, can hardly be set down as Puritanic, is nevertheless peaceful and religious. It numbers some fifty churches having buildings of their own, embracing a total membership of 35,000, including Catholics, who reckon by families. The aggregate property owned by these church organizations reaches easily a value of \$2,000,000. To offset the religious influences, "the world, the flesh, and the devil" offer some 600 saloons and places where internal fires and eternal damnation are dispensed.

In the matter of public charity the city makes a noble showing. It has a numerous category of benevolent associations, missions, homes, and asylums. In no city is this kind of work better organized, better equipped or executed.

Washington City alone takes precedence of Columbus in the size and number of public institutions, all of which present architecturally attractive buildings that make the State capital the Mecca of thousands of sight-seeing visitors. The State Asylums for the Deaf and Dumb, the Feeble-Minded, the Blind, and the Insane are all vast edifices, palatial in appearance, and models of the best forms of construction for the purposes to which they are devoted.

The Insane Asylum, the largest in the world, cost \$2,000,000, and accommodates 1,300 patients. The Asylum for Feeble-Minded Youth employs 150 persons, cares for 800 inmates, at an annual cost to the State of \$125,000. The Blind Asylum was erected at a cost of \$600,000, and shelters some 300 pupils, who require the care of about 70 attendants. It costs \$50,000 a year to maintain this institution. The Deaf and Dumb Asylum cost \$800,000, cares for 500 pupils, and expends \$80,000 a year. The Ohio Penitentiary, built by convict labor, at a cost of \$800,000, entertains about 1,400 persons, at an annual expense of \$250,000. Most of these buildings have picturesque grounds, that add beauty and fresh air to the localities in which they are situated.

In addition to the State institutions, Columbus is embellished by a number of buildings pertaining to the national, county, and municipal government. The GOVERNMENT BUILDING, opposite the State Capitol, recently erected at a cost of \$500,000, contains the Post-Office, United States Court-Room, and Pension Office. The United States War Department maintains within the city limits a military post and recruiting station. It is nothing short of an attractive park of eighty acres, artistically laid out, and adorned with shrubbery, shade-trees, grass-lawns, walks, miniature lake, and ample parade-grounds, about which are grouped the barracks, arsenal, hospital, grand-house, and officers' quarters.

The "BARRACKS," as the place is called, is the favorite resort of the citizens, who, of evenings, drive or walk thither to listen to the military music and witness the evolutions of the soldiers, who are mostly beardless recruits in their teens and

newly donned trappings.

The other "grateful breathing spots" of the city are the Franklin Park of ninety acres, the Goodale of forty-four, and the City of twenty-three, all well cared for and much enjoyed by the nature-loving people. The County Court-House, completed in 1887, at a cost of \$400,000, is one of the most magnificent buildings of its kind in any State. In architecture, elegance of finish, and

THE FRANKLIN COUNTY COURT-HOUSE, COLUMBUS.

spaciousness, in convenience and perfection for the admission of light and ventilation it would be difficult to find its superior. It is justly the pride of the city and county. It was dedicated July 13, 1887, the dedicatory address being by Hon. Henry C. Noble, President of the Court-House Commission. The CITY-HALL Building, in which the municipal offices are quartered, is a massive, striking structure, to say the least. The CITY JAIL, a lately built and a large, Bastileappearing structure, with all the modern conveniences, is highly spoken of by those who have stopped there. The rooms are airy, the bill-of-fare, if not containing all the delicacies of the season, is wholesome and inexpensive to the guests. The hotel is complete; for though there are no liquors allowed on the premises, there are excellent "bar attachments." The Union Depot is one of the largest and best arranged in the West, and 100 passenger trains come and go each day. The railroads, of course, run their tracks where they please—across streets and thoroughfares, without regard to the comfort or cost to the city; but, as railroads go, they are considerate, and when they run over a street-car, a cab, or a citizen they usually express regret. The new BOARD OF TRADE BUILDING, now in process of erection, will be one of the architectural features of the city, and one of the chief adornments of the Capitol Square. It is built by the leading organization of the city—the Board of Trade, organized a few years ago, and comprising in its membership over 500 of its leading business-men of the city. It is the avowed mission of the Board of Trade to stimulate the motive and suggest the means for the development and improvement of Columbus; and much of the progress and growth made by the city in the past few years is due to the weight and wisdom of this organization. This Board of Trade does not deal in wheat and corn that never grew, nor in stocks that are floated in water.

Finally, Columbus is not merely wealthy and wise, as we have indicated, but she is healthy. Her climate is what the geographers call "salubrious." She is admirably located for good drainage, as the land slopes on the east and on the west to streams of water, thus giving her sewage very easy outlet. The city is clean; good water is supplied by a reservoir at the junction of the Scioto and the Whet-

stone. The death-rate is phenomenally low, being but 10 53-100 to the 1,000; twice this ratio—20 to the 1,000—is not regarded as excessive in our cities. These are the facts, figures, and features that pertain to the mind, body, and estate of the good capital of Ohio—an honor to the State and the pride of her people.

TILE DRAINAGE IN OHIO.

Drainage is all important to the welfare of an agricultural region, alike vital to the fertility of its soil and the health of its inhabitants.

A large tract of the Northwestern Ohio long known as "the Black Swamp Re-

THE APPLE DALE TILE WORKS.

[The Apple Dale Tile Works, the property of Mr. S. J. Woolley, is one of the pioneer tile factories of Ohio. It is near the village of Hilliards, about thirteen miles northwest of Columbus, in Franklin county.]

gion," covering the area of several counties, has been reclaimed by a system of open ditches and converted into an area of surprising fertility; of this we give details elsewhere. We here present an article from Frank Henry Howe upon the Tile Drainage of the State. The magnitude of this industry and its value to the commonwealth is such that by so doing we think we do a public service and enhance the value of this work.

Although drain tile was made by hand in Rome, and in France some two centuries since, Ohio was one of the first States in the Union to develop to any extent this valuable industry.

About the year 1810 drain tile was made at Netherby, in Northumberland, England. It was called horseshoe tile, being shaped like a horseshoe, instead of cylindrical, and was laid with the opening at the bottom. This was then considered the *ne plus ultra* of drain tile, and for thirty years there was no improvement on this pattern.

At a very early date Mr. Johnston, in New York State, did much to call the attention of the farmers to the value of tile draining, by his published writings,

and experiments on his own farm. He is frequently called "The Father of Tile Drainage in America."

Some time previous to Mr. Johnston's efforts Dr. N. S. Townshend, then a youth in his teens, who had seen during his boyhood days spent in England the benefits derived from drainage, succeeded in introducing it in Lorain county.

In 1832 horseshoe tile were made by hand at Avon, Lorain county, Ohio. In 1843 a machine for the manufacture of pipe tile was invented by John Read and exhibited by him at the county fair of Derbyshire, England.

About 1857 Mr. Canfield, who made the best horseshoe tile in Connecticut, removed to Milford Center, Union county, Ohio, and there manufactured horseshoe tile until his decease about 1869. Å Mr. Miner also operated a small tile

factory at Columbus.

The only tile machines made at this date were those manufactured by A. La Tourette, of Waterloo, New York, and Mattice & Penfield, of Willoughby, Ohio, who also manufactured tile. These men did not meet with any great success financially, but they were the pioneers in educating the people.

At the close of the rebellion W. S. Postle, of Prairie, and S. J. Woolley, of Brown township, Franklin county, Ohio, were the first to establish tile factories, which have been run successfully ever since, and are now large establishments.

Since their establishment many others have been started in different parts of the State until at the present time there are over five hundred factories in successful operation in Ohio.

The first improvement over the horseshoe pattern was made by adding a bottom piece, called the sole tile, to the opening in the horseshoe. These improved tile were extensively used until superseded by the cylindrical pattern, which is the only kind of drain tile now manufactured. Improvements in machinery, kilns and manipulation have brought these to a high degree of perfection and at a very low cost.

The output of these five hundred factories per annum is six and a half million

rods, worth at the present low prices about two million dollars.

In 1880 J. J. W. Billingsley, of Indianapolis, commenced the publication of the *Drainage Journal*, and distributed a large amount of literature on drainage, which has had a very great influence in extending the use of tile, educating the

people on this important subject of drainage.

It is somewhat singular that with the material developments which have taken place within the last half century that the remarkable value of drainage from an economical as well as sanitary standpoint has not sooner attracted the attention of the people. Its first disciples met with opposition and ridicule, but they soon turned the laugh on their tormentors, as its value was so apparent in the results that the unbelievers hastened to benefit by the example. Nevertheless, although the developments of drainage within the past decade have been remarkable, it is but in its infancy as yet. Mr. J. M. Harrison, of Scio, Ohio, in an able article on the "Past, Present and Future of Tile Drainage in Ohio," read before the Ohio Tile and Drainage Association, and published in the Drainage Journal, says. "No accurate estimate of the number of tile used in Ohio has ever been made, We estimate that between two hundred and fifty and three hundred millions of tile have been used. This seems like a vast sum, yet it is only large enough to drain a little over three hundred thousand acres of land, or about one-eightieth of the entire State. It would seem then that tile drainage was only in its infancy, for these figures show that all the drainage that has been done would only be equal to about one county, leaving the other eighty-seven counties to be drained. must bear in mind, however, that a considerable portion of our State is naturally underdrained. Then the woodland and other portions which it is safe to assume will never be drained reduce the above figures to about one-half. If we assume that one-fortieth of the draining is done and that we have been thirty years in doing it, the figures would indicate that we would be twelve hundred years in

completing the work in Ohio. The fact is, however, that nearly all the draining in the State has been done since 1880. The *Drainage Journal* estimates that there was as much draining in 1882 as had been done in all the years prior to 1880. The most reasonable conclusion is that there will be plenty of work for a few tile factories in every county in the State for the next fifty years.

Much of the draining is so poorly done that it will be necessary to do it over again in the future. It is evident from a study of the agricultural reports of this State that tile drainage has been in progress in a few counties for quite a number of years, and we also find in a great many counties tile drainage has only been very recently introduced, and that there are a few counties that have no tile factories at all."

While it is generally supposed that only wet and swampy lands are benefited by drainage it has been clearly demonstrated that the productiveness of almost all land is so increased as to more than pay within a few seasons for the cost. Land with a gravelly subsoil has more or less natural drainage and is not benefited to the same extent as land with a clayey subsoil.

The remarkable fertility of the soil of England, "the garden spot of the world," is largely due to the extensive system of drainage there in use.

Ditching is a primitive method of draining, which in its results falls far short of the efficiency of tile, and in itself prevents its extended use by preventing the cultivation of a considerable part of the land intended to be benefited; therefore all reference to drainage in this article relates to the use of tiles.

Upon the invitation of its proprietor we visited the tile factory of S. J. Woolley near Hilliards, to learn something of the methods of manufacture. The material used is a slate-colored fire-clay, of which abundant quantities are found throughout the State of Ohio adapted to the manufacture of drain tile, although differing somewhat in quality. When taken from the bank it contains more or less moisture according to the location of the bank and the humidity of the season. The clay used at Mr. Woolley's factory when taken from the bank has about the consistency of putty and requires neither drying out nor moisture, excepting in very dry seasons, when it is sometimes necessary to make it sufficiently pliable The clay is taken from the bank to the factory near by, and fed for working. into the hoppers of the large tile machines, which are run by steam-power. From the hopper it passes into a large iron cylinder in which revolve a series of blades which cut and knead the clay, forcing it out at the base in the shape of a continuous clay cylinder, varying in diameter according to the size of the die then in use in the machine. These dies range in size from three to eighteen inches. The cylinder of clay as it is forced from the machine comes out horizontally, and is cut off with a wire in lengths of from twelve to fifteen inches.

One of Mr. Woolley's tile machines, however, forces out the clay cylinder perpendicularly; this is a recent improvement and prevents the collapsing of the soft clay tile as sometimes occurs with large sizes by reason of their own weight. After the tile come from the machine they are placed on a tram car and run into long wooden buildings; here they are placed on a series of slatted shelves, which are so arranged as to allow a free circulation of air, as from one to two weeks drying out is necessary, depending upon the weather, before they can be burned in the kilns. The smaller or three-inch tile are placed horizontally, but the larger sizes all stand on end.

When the tile have dried out sufficiently they are conveyed by tram car to the kiln preparatory to burning or, more properly, firing. These kilns are huge bee-hive-like structures, built of fire-brick and similar to those used in pottery establishments. Projecting from the base at regular intervals are four stubs, as they are called; these stubs consist of a fire-place, grate and ash-pit, and are the furnaces from which the heat passes into the kiln. About five feet from the base of the kiln is an opening large enough for the easy entrance of a man, through which access is had to the interior of the kiln. The tram car loaded with the unbaked

tile is run up to this entrance and the tile passed in for packing. The floor of the interior is made of fire-brick and constructed like **a** grate, so that the flame, heat and smoke pass upward through the kiln. The tile are packed closely together, standing on end and nested; that is, the small tile are placed within those of larger diameter. Layer after layer of tile are placed on top of each other until the kiln is filled, when the entrance is built up with brick and plaster and the fires started. The fires, which are fed with either wood or coal, are kept low and allowed to smoke and smoulder until such moisture as remains in the tile after the atmospheric drying has been driven out; when this has been accomplished they are freely plied with fuel, and when a white heat has been reached, usually in about forty-eight hours, and discernible by means of small apertures in the sides of the kiln, the firing is complete and the fires are allowed to burn out.

The smoke, flame and heat pass up through the kiln, come into direct contact with the tile, and are then conducted by means of flues down to the base and into a smoke stack some thirty or forty feet high and built a few feet apart from the kiln. This arrangement allows of a more perfect combustion of fuel and more equal distribution of heat. After the fires have died out several days elapse before the kiln is opened, that the contents may cool gradually, as a sudden cooling would crack the tile. When taken from the kiln the tile are a bright red in color, with a metallic ring when struck, and almost as durable as time itself, inasmuch as there has been no product of man which has stood the test of time as fire-baked clay.

The farm of Mr. Woolley, on which his factory is situated, is a fine example of the efficacy of tile drainage. Originally a wooded swamp, upon a large part of which water stood the whole year round, it is now one of the most productive farms in Franklin county. When Mr. Woolley first purchased this farm his friends doubted his sanity, others pitied his folly, but now none doubt his wisdom, and the tile factory, originally built for his own private uses, supplies the country for miles around and has converted what was formerly looked upon as waste land into about the most fertile in the county. "He who makes two blades of grass to grow where but one grew before is a benefactor to his race." How much more must one be "who makes two blades of grass to grow where none grew before."

That drainage is a benefit to low marshy lands is evident to the commonest understanding, but that it should be of any great value to land already surface dry is not very comprehensive to a very large proportion of our population.

The soil is the medium for the growth of plants, but does not in itself furnish all of the elements which develop their growth. Carbonic acid and ammonia, which are diffused in small quantities through the atmosphere, are brought down to the soil by rain. Upon undrained land these plant foods pass off with the surface water; on drained and porous soils they are abosrbed. Drain the land and give these elements free access to the plants. When rain falls on elevated land it packs the surface of the soil, finds its way to its lowest level and, unless it can penetrate through the soil, runs off in streams and rivulets; the sun comes out, dries, then bakes and hardens the surface of the soil which the water has not penetrated because it could find no outlet beneath it.

To a certain degree we overcome this with the plowand harrow; but, in raising a crop on this land, the roots of the plants only penetrate to about the depth the plow has furrowed and only draw sustenance from that part of the soil. Let us drain this land. Now the rain falls, percolates through the soil and finds an outlet through the drain, the soil becomes porous like sponge and like a sponge holds a large part of the moisture, the sun shines again and, when the surface moisture has been absorbed, a fresh supply is drawn from the porous soil by capillary attraction, so that, instead of baking the surface, the soil is kept moist, is lifted by the capillary forces set into action by the sun and becomes mellow and easily worked. Less water has flowed from this land during the rain since it was

HAYDEN FALLS.

[These Falls are some twelve miles northwest of Columbus, about a mile below Dublin, on a little stream that empties into the Scioto. It is a wild, picturesque spot in the heart of the State, which is enhanced by contrast with the prairie-like country around it.]

drained than before; a larger part of it remains in the soil, which has now become a reservoir from which to draw as the plants require. That this is the effect of drainage has been proven in every case where drainage has been tried.

In a valuable article on the "Philosophy of Tile Drainage" read by Mr. W. J. Chamberlin before the Ohio Tile Convention held at Columbus, Feb. 8, 1881, he thus summarizes the benefits of tile drainage:

1. Tile drainage deepens the soil, and gives the roots more feeding ground.

- 2. It helps pulverize the ground and thus to unlock its fertility so that the minute roots may drink it in.
 - 3. It prevents surface wash and consequent and often great waste of fertility.
- 4. It dispenses with open ditches, which are not so good and are a great hindrance in cultivating and harvesting crops.
- 5. It lengthens the season of tillage and matures the crop before frost. It largely prevents winter-killing of wheat and the heaving of clover and other roots by frost.
 - 6. It saves labor by making tillage and pulverization easier.
- 7. It supplies air to the roots and promotes the absorption of vapor and of fertilizing matters from the air and the rains and the snows.
- 8. It prevents the chilling effects from the thawing of ice and the evaporation of water, and in this and other ways warms the soil. Water warms rapidly when heat is applied from beneath, but very slowly when it is applied from above. Hence it is impossible for the sun from above to warm a saturated soil. (It has been ascertained by experiment in England that soil tile-drained is ten degrees warmer seven inches below the surface than the same kind of soil without drains.)
- 9. Drainage improves the quality as well as quantity of crops. Especially is this true of apples and of root crops like potatoes.
- 10. It is a great help in the harvest of corn, and especially of root crops in a wet fall. Without tile drainage, indeed, it is almost impossible on clayey soil.
- 11. It improves the health of crops and even prevents potato rot, which may occur on undrained soil.
 - 12. It greatly improves the health of man and beast in many localities.
 - 13. It greatly increases the crops, other things being equal.
- 14. But it should not be forgotten that tile-drainage is not needed on lands that have a gravel or porous sub-soil, and that even on soils that do need it drainage is only the basis for good farming, and will not pay unless followed by good farming."

THE STATE INSTITUTIONS AT COLUMBUS.

Asylum for the Insane—Institution for the Education of the Deaf and Dumb—Institution for the Education of the Blind—Institution for the Education of Feeble-Minded Youth—The Ohio Penitentiary.

By the Constitution of the State the Legislature is authorized to provide at the public expense for the entire support of these varied benevolent institutions, and does not take cognizance of the pecuniary position of any of the inmates who are alike supported by the Commonwealth. Herein the insane or blind millionaire and the insane or blind pauper are on the same footing. It is on the same principle as with the Public Schools where education is universal and free to all alike, and because it tends to the moral and material progress of the whole body of the people.

The following historical and descriptive sketches were written for this work by Mr. Charles T. Howe, after a visit to each institution for this object. They

embody a large amount and variety of valuable information.

THE INSANE ASYLUM.

In response to a memorial adopted and sent to the Legislature by the State Medical Convention, held in Columbus, January, 1835, an act was passed the same year to establish a lunatic asylum for the State of Ohio.

The First Asylum.—In July, 1835, thirty

The First Asylum.—In July, 1835, thirty acres of land in the northeastern part of Columbus were purchased and foundations laid for a building to accommodate one hundred and twenty patients, which was completed in November, 1839. Then twenty-seven acres were added to the original tract of land and in 1845 about seven more, making a total of sixty-four acres. In 1845–46–47 respectively, three further additions were made to the orig-

inal main building.

Destruction by Fire.—On the evening of November 18, 1868, the entire structure was destroyed by a fire, which originated in the east wing, presumably through the mischievousness of one of the patients. Through the efficient efforts of the officers and employees all the patients were rescued excepting six females who perished from suffocation. The rescued patients were temporarily quartered in the deaf and dumb asylum and in the hospital, which escaped destruction, standing apart from the main building. The patients were eventually cared for in different asylums throughout the State.

The Present Asylum Built.—It was determined not to rebuild on the old site, and that property was sold in May, 1870, and the present location decided upon for the erection of a new building. On July 4, 1870, the corner-stone of the present immense structure was laid with Governor Hayes presiding, the officers of the Grand Lodge of Ohio and other Masonic bodies taking a prominent

part

Vast Size of the Structure.—The site selected lies some two miles west of the State house, and consists of three hundred acres of elevated land, commanding a fine view of the city. The grounds have been beautifully laid out with walks, drives, and shrubbery. In fact, so extensive and charming are the surroundings to this institution that it is but a short flight of fancy for the visitor to imagine himself in one of the grand old parks of the nobility of England. An idea of the enormous dimensions of the asylum can be formed when it is stated that the building was seven years in the course of erection, and at a cost of one and a half million dollars, and the distance around the outside wall is a mile and a quarter. That this is the largest institution of its kind in the world is well known, but the beauty and grandeur of the building and its surroundings, its perfect system of management and the work accomplished in behalf of this unfortunate class can only be fully appreciated by the intelligent and observing visitor.

Modern Methoas of Treatment.—Many well-informed peocle know comparatively little of the modern methods employed in the care and treatment of those bereft of reason and harbor the groundless belief that hospitals for

the insane partake largely of the character of prisons, with raving maniacs confined in cells, the corridors resounding with cries and yells.

"Thoughtless he raves his sleeping hours away,
In chains all night, in darkness all the

In chains all night, in darkness all the day."

These ideas, however, are the result of the treatment of the insane in times long past, and it is gratifying to be able to say that the management of the insane at the present time stands in happy contrast to that of the past, the result of great scientific discoveries and the accumulated experience of years.

the accumulated experience of years.

Employments of the Insane.—Mechanical restraint beyond occasional confinement of violent patients in the strong room is now entirely dispensed with. In addition to medical treatment various plans are adopted to divert the mind and lead it as far as possible away from self, and especially from the crushing forebodings common to the insane. Every effort is made to promote the happiness of the patients; a high moral discipline is exercised with pure beneficial influences, that seldom fail to tranquilize and lighten the burden of their affliction. In addition to providing for their comfort a systematic effort is made to furnish bodily and mental recreation. To accomplish this there is maintained a system of daily outdoor exercises, such as walking, riding, playing, and marching when the weather permits. Carriage riding for the feeble has been a leading feature and is practiced daily. A large number have been encouraged to perform different kinds of manual labor. Men are employed on the farm, garden, barn, boiler-room. They are not coerced, but left free to do so or not; and it being a matter of choice their work is done cheerfully

and to their profit.

Benefit of Labor.—While on a visit to this Central Insane Asylum we were shown a patient in the clothes drying-room who was busily engaged hanging wet sheets on a clothes horse. He took great pride and pleasure in his work and would brook no advice or interference. The official who conducted us through the institution informed us that he silently and faithfully performed his daily task and would not hesitate to do bodily injury to any one who dared to assist or interfere with him. Each person employed works on an average about four hours a day. The benefit of daily labor as a curative agent has long been acknowledged by the best experts. Being employed in light labor the mind is occupied, which with the fresh air and healthful exercise do much to promote happiness, good temper, and content-

ment.

Their Laberties.—Those persons who are under the impression that in the worst cases of insanity the patients are in constant confinement and are dangerous to themselves and those around them would find their ideas on the subject greatly exaggerated

if they could have accompanied us through the wards occupied by this class of patients. We found them promenading up and down engaged in conversation with each other and occupied in various ways. Many of them seemed quite happy and contented. When their periodical fits of violence come on it becomes necessary to confine them in the strong room until the fit wears off, usually in a short time. They are liberated as soon as their condition permits and allowed to mingle with the others in their ward; and every effort consistent with safety is made to have them feel that they are under no restraint. This, combined with kind treatment, the best medical skill and attention to comfort, health and happiness, improves the condition of all and in many cases results in an entire cure.

Interesting Anecdotes.—The prejudices and notions that take root in a diseased brain are manifested in many ways. While we were being conducted through one of the wards one of the inmates, a short stout man about fifty years of age with slightly stooping shoulders, long gray beard, a large hooked nose and most repulsive cast of countenance, followed close behind the official who accompanied us, imitating our gait, muttering in a low tone of voice, and steadfastly gazing at our attendant with expression so threatening and sinister as to fill a timid person with terror. Whenever we stopped he did likewise, always keeping the same distance from us, and we were not rid of his unwelcome presence until the outer door of his ward was shut and locked between us. Our attendant said that the man imagined him an enemy and invariably went through the same programme whenever the official had occasion to enter his ward. The man is waiting for a favorable opportunity to attack his supposed enemy, but the official told us he was not at all alarmed for his safety, for when attacked it is only necessary to place the hand over the mouth and nose of the patient when suffoca-tion ensues and subdues them. In resisting the most violent patients it is never necessary to resort to blows. So skillful do the attendants become in the management of the vioiently insane that two attendants can easily manage an insane person when four inexperie red persons would find it a difficult task.

We had a practical illustration of this during our visit. A new patient who was suffering from acute mania was being brought in by two robust-looking men, evidently inexperienced, as was shown by the great difficulty they had in managing their charge, when they were met by two of the attendants, who, placing themselves one on each side of the patient, grasped with one hand each shoulder and with the other each wrist, and with the patient's arms stretched out at full length, marched him through the corridor with seeming ease.

Use of Narcotics.—What is known as chemical restraint, or the use of powerful narcotic drugs in order to reduce a violent patient to a state of quiescence is never resorted to except in cases where the health of

the patients would not admit of any other

Suicidal Tendencies.—The officers and attendants are made familiar with the history of every new patient where possible, and in that way learn their special hobbies and peculiarities, and are governed accordingly in their treatment of them. We were informed that those patients of suicidal intent would never attempt self-destruction in the presence of others, and for that reason four or five of them would be placed in the same apartments, and effectually guarded each other. This class of insane persons consume much time in making preparations for suicide, so that they are always prevented from accomplishing their purpose before their preparations are completed by the vigilant watchfulness of the attendants. Never having any weapon, every precaution being taken, they are rendered harmless.

An Amusing Incident is related of two females who had agreed to kill each other, and had managed to detach the iron grating from the register, which was to be the weapon used. It was agreed between them that one was to strike the other a blow on the head, but not so hard as to kill instantly, so that the one struck would have sufficient strength left to strike the uninjured one in return. They then entered into an animated discussion as to which one should strike first, when the arrival of the attendant put a stop to the

The Evidences of Insanity are not discernible in the personal appearance of many of the patients, but a few moments conversation is all that is necessary to convince the most skeptical that the mind is diseased. A case of this kind was that of a large, benevolentlooking old lady who politely invited us into her room with an apology for the smallness of her quarters. She gave intelligent answers to our questions, but upon her trying to convince us that she was 2,882 years of age and was the mother of 400 children, we came to the conclusion that she had an original method of computation or was where she properly belonged. And we had no doubt remaining as to the correctness of the latter conclusion when we were informed that she was passionately fond of smoking dried onions

The Ball Room Recreation.—Every Thursday evening a ball is given in the handsome entertainment hall in the asylum which is attended by about 400 of the patients. They all look forward to the evening with bright anticipations of pleasure and seem to fully realize them. The beneficial results of this recreation are apparent. The excitable are entertained and the melancholy cheered, while the excellent deportment of all excites the wonder of visitors. Concerts, dramatic entertainments and lantern exhibitions are also given and are greatly enjoyed. Everything in fact is done to divert the patients' minds from their condition and inspire them with that greatest cordial of the mind, hope.

The Great Secret of Success in the treat-

ment of the insane lies in taking advantage of lucid intervals and at such times endeavoring by every means at command to prolong their duration. Hence the employment of frequent and varied amusements, the object being to beget freshness, vividness and sane consciousness. The result is a full realization of the morbid fantasies of the past and firm resolves to keep in subjection outbreaks of temper, anxious and perverted thoughts, bewildering illusions and free the mind of

"A whirling gulf of phantasy and flame."

The Asylum Life not Gloomy.—A visit to the Central Ohio Insane Asylum would at once correct the erroneous idea that asylum life is of necessity one of gloom and depres-While there is much that is saddening and pitiful indeed, the many cures effected, the improvement in the majority, and the kindly care and constant efforts that are made for the physical and mental welfare of the inmates cheers instead of depressing the spirits of the visitor.

The Religious Welfare of the patients is not neglected. Chapel services are held regularly on Sabbath evenings and to congregations which are an interesting study. All degrees of mental departure are represented, yet their behavior and attention would set a good example for many who boast superior intelligence. The congregation, with books in hand, join in singing, and the whole effect of the services is to greatly improve the mental condition of the patients.

The Statistics of the institution show that those persons engaged in occupations requiring heavy bodily labor, such as farmers, laborers, housewives, housekeepers and domestics, furnish a large proportion of the inmates. Farmers and farmers' wives abound more than any other single class in these institutions. This is owing to the monotonous lives led by them and consequent inactivity of the brain, which, becoming weakened from lack of proper exercise of its functions, is the first organ to succumb when disease attacks the system. This showing is in direct opposition to the general impression that insanity is usually the result of excessive mental activity. The statistics give further proof that the general impression is erroneous in this regard, by showing that the proportion of insane among the educated class of people is very small. This also proves that the laws of health require proper exercise for the brain as well as the body.

The statistics of this asylum for the year 1887 show that 140 males were admitted, of whom 60 were farmers, 25 laborers, and the rest were scattering, the highest being carpenters, 4 in number. Of females 144 were admitted, of whom 85 were housewives. 28 housekeepers and 15 domestics, the next highest being farmers' daughters, 3 in num-

The report also states that the daily average number of inmates was 863, of whom 410 were males and 453 females. The report also says: "Special attention is called to the number of recoveries, being 90 males and 52 females, total 142, and also to the low death rate, which was 30 males, 23 females, total 53. This will compare very favorably with any institution in the country. The percentage of recoveries, based upon the admissions, is, for males, 64.28 per cent., and for females, 36.11 per cent., and for both 55.69 per cent. The percentage of deaths, based upon the whole number treated, is, for males, 5.36 per cent., and for females 3.89

males, 5.36 per cent., and for females 3.89 per cent., and for both, 4.71 per cent."

The Objective Libertee Asylum is not

The Ohio Central Insane Asylum is not the only State institution providing for the insane; others are located at Athens, Cleveland, Carthage and Dayton. There is also under the patronage of the State the Northwestern Asylum, which, containing a yearly average of about 100 patients under a contract with the State, is a county institu-tion under control and direction of county commissioners.

The total number of persons in Ohio State Hospitals for Insane on Nov. 15, 1887, was 3,687, of whom 1,775 were males and 1,912

THE INSTITUTION FOR THE EDUCATION OF THE DEAF AND DUMB.

Rev. Dr. Hoge, of Columbus, was a man of great force in Ohio, shown by his successful efforts at an early date in influencing its Legislature to found beneficent institutions. Largely through him it was that an institution for the education of the deaf and dumb was founded during the legislative session of 1826–27. Gov. Morrow in his annual message recommended the measure, and the result was the passage of an act in accordance with the recommendation.

The school was opened October 16, 1829, in a small building on the corner of High and Broad streets. Only three pupils were present, but the number steadily increased, and larger quarters became necessary. In February, 1829, ten acres of land, lying half a mile east of the State-House, were purchased, at a cost of \$300. On this site the first building for the use of the school was erected, and ready for occupancy at the opening of the fall term of 1834. A wing was added in 1845-46 to the south end of the original building. The continued increase of applicants in time rendered a larger building necessary, and in pursuance of an act of the Legislature passed March, 1864, in October of the same year the corner-stone for the present large and commodious structure was laid with appropriate exercises.

The Original Ideas of the Mute.—When we compare the average graduate from such an institution properly conducted with the candidate for admission its great usefulness is apparent. The mute presents himself

before his teacher as nature formed and left him: his mental faculties undeveloped, and with vague and undefined notions of what is going to be done for him. The world is to him a blank; his pleasures are mere animal pleasures, nor does hope, as it does for others, hold up a brilliant future for him. He looks at the stars as mere openings in the azure canopy of night, or as a few moons broken up and in disorder upon its surface. He supposes the sun a small ball of fire at a little distance from the earth, and a new one formed for daily use, or the old one by stealth finds its way to the east while people are asleep, ready on each successive morning to commence again its daily course.

These and similar ideas are the struggling efforts of an imprisoned mind unaided and thrown back upon its own native resources attempting to account for some of the usual phenomena of nature. He finds himself a foreigner at home, a stranger at his father's fireside; though in the midst of society, he is isolated from his fellow-men, entirely ignorant of the past history of the world, of the rise and fall of nations, of the wars which have deluged the earth in blood, or of the great principles of the world; nor has he the least conception of the crimes and virtues of men, or knows that he is a social and intellectual being; and does not dream of the immortality of the soul, or of the existence of a Supreme Being, until the effects of education begin to show upon his darkened intellect.

The object of the institution is to educate the mute, and fit him to occupy a position in the world where he will be of use to himself and his fellow-men; give him the benefit of education and moral cultivation, and as nearly as possible place him on terms of equality with others more favored by providential circumstances. There have been cases where the deaf and dumb were entirely cured, but they are extremely rare, and only where the cause of the infirmity has been some obstructions in the outer ear, and which are removable, that there is much probability of a

In the method of instruction great use is made of the countenance; in fact, the mutes could not be taught without it, as it is needed to modify and accentuate the sign-language. The happy results obtained in the five years' course of study are astonishing, from the first dawn of knowledge obtained from the study of the manual alphabet down through a course of instruction including those studies that are taught to advanced pupils in our high schools and colleges, as well as in teaching various trades.

A very strong attachment springs up between the teacher and deaf and dumb scholar. An instance of this is now a matter of history: In France, during the reign of terror, the Abbé Sicard, the celebrated teacher, while engaged in his benevolent avocation of maturing his system of educating the deaf and dumb, was arrested in his school-room, and hurried from among his mute pupils

to prison. A mock trial, a mere prelude to the guillotine, had been held, when his pupils in a body, of their own accord, it is believed, appeared at the prison gates, and besought the release of their more than father. So powerful a demonstration of grief did they make, that the populace was moved in their behalf and Sicard liberated. These people were small deaf and dumb children, collected by Sicard, and for whose moral and intellectual salvation he had consecrated his days

The industrial department of this institution is one of its most important features, and gives employment to the inmates outside of the school-rooms. This department includes a carpenter-shop, shoe-shops, printing-office, where a weekly paper is printed, and a large bookbindery, where regular contract-work gives employment to many of the mutes. The females are also taught to sew, and make many necessary articles of wearing apparel, as well as do all of the mending of the clothes of the inmates.

. The institution, which now has accommodations for 425 pupils, is located in the midst of spacious grounds, handsomely laid out with walks, shrubbery, and flowers, to give the inmates the benefit of pleasing surroundings.

THE INSTITUTION FOR THE EDUCATION OF THE BLIND.

The Institution at Columbus is the only State institution of the kind, excepting the Working Home for the Blind at Iberia, Morrow county, which differs somewhat in its aims and purposes.

It is somewhat doubtful as to the real character of the Working Home of the Blind, as it sustains a peculiar relationship in the list of the organized charities of the State. It was organized under State law, money was appropriated for its proper equipment, with a view to establishing a home where the blind capable of performing skilled work could find a home and employment, and be assured of a competence for their support from the results of their labor.

It was the understanding with those who conceived the plan and urged the consideration of the General Assembly to the project, that after the institution would be fairly started no further aid would be asked from

The opening exercises of the Ohio Institute for the Blind were held in the Presbyterian church in Columbus, on July 4, 1837, in the presence of the teachers and scholars of the city Sunday-schools, who, to the number of 900, had assembled to celebrate Independence day. The teacher and five pupils were present, which number was increased to eleven by November.

The first building was erected in 1838, upon beautiful grounds on the north side of the

National road near the city, and the pupils removed there in October. So rapid was the progress of the pupils in one year's instruction at the institute that during the last vacation they were able to give interesting exhibitions, in company with their instructors,

in several cities of the State.

The Present Building.—The demands for larger quarters becoming apparent, a law authorizing the erection of a new building was passed May 6, 1869, but owing to the scarcity of labor the building was not completed and occupied until May 21, 1874. This imposing structure is in the old English or the later period of Elizabethan style of architecture, and has accommodations for 250 pupils and about 65 additional persons, including officers, teachers, servants, etc. The building is fireproof, and is arranged with the strictest regard for the health, convenience, and happiness of the inmates.

Devices for Instruction.—One cannot fully appreciate or understand the wonderful results obtained from a course of instruction at the institute until he has paid it a visit. There are to be seen specimens of the most beautiful handiwork in embroidery, etc., by the female pupils, and a library of books with raised letters, from which the blind can while away many a pleasant hour, deriving pleasure and instruction from reading by the sense of feeling. Maps and charts are also used, with the rivers, countries, mountains, cities, etc., marked out by raised lines and by indentations, by which the pupils are enabled to obtain a most accurate knowledge of geography.

The Happy Device of Valentine Havy.— Previous to the year 1774 the method of instruction in all blind institutions was entirely oral, when owing to an incident, trivial in itself, a discovery which has been most wonderful in its results, and opened a new world to the blind, was made by Valentine Hauy, a Frenchman and brother to the celebrated Abbé Hauy, by which the blind were enabled to read. In an evening walk M. Hauy's attention was attracted by the sound of music proceeding from one of those houses of refreshment so common in Europe along the public promenades. Approaching the spot he discovered eight or ten blind persons, "spectacles au nez," seated behind a long desk, which was covered with music books, executing in concert various airs on different musical instruments, much to the amusement of the bystanders. The parade of music-books was of course a mere farce; but the active and benevolent mind of Hauv converted this otherwise ridiculous circumstance into an event most important in its

The blind, thought he, readily distinguish objects by the diversity of their forms; why then may they not distinguish fa from sol, or an A from an F, if these characters should be rendered palpable? The result of this random thought was the invention of books, music, charts, etc., with raised characters. This method of instruction invented and adopted by M. Hauy has undergone but few

alterations since his day, and though his system is undoubtedly susceptible of large improvement, it is yet a matter of astonishment that so much has actually been accom-

plished.

The Blind Leading the Seeing.—The ability of the blind to become even more familiar with their surroundings and the location of different objects is shown in many instances. Visitors to the institution are shown through the building by a blind young lady, who rather reverses the order of things by leading those who can see up and down stairs, through long corridors and different apartments with perfect ease and familiarity, explaining to them the uses of the various departments and objects with never failing

accuracy

Entertainment Hall.—Perhaps not the least interesting apartment is the entertainment hall, which is beautifully frescoed and decorated, and is fitted up with a fine church organ, grand piano and stage, where exhibitions, concerts, etc., are given, showing the proficiency of the pupils in literature, science and the arts to audiences who are filled with astonishment and delight at the wonderful results obtained by an education at the institute. Music has always been an essential branch in the system of instruction because of their peculiar aptitude for it. The susceptibility of the ear and the powers of the voice seem augmented by the deprivation of sight, though it is physiologically certain that this apparent improvement of the auditory and vocal organs is owing merely to increased exercise. Another strong reason why the blind have so much talent for music is their great love for an art which their infirmity does not prevent them from deriving as much enjoyment from as those who see. By the cultivation of music the blind are furnished with means always at command not only of innocent and beneficial recreation, but also of a pleasant and respectable livelihood. They are in general remarkable for facility both in the acquisition and communication of ideas. The object of the institution in educating a class of people who have been poor, unhappy creatures, almost helpless and in the majority of cases dependent upon charity for their daily sustenance, is indeed most successfully accomplished. Although deprived of sight the deficiency is supplied to a certain extent by the natural acuteness of intellect and powers of memory which, comwith the educational advantages derived from the institution, develop them into useful, intelligent citizens, not only capable of self-support but in many cases they have risen to prominence in literary, mechanical and art circles.

The Blind Philosopher.—Genius surmounts all obstacles and we have many such examples among the blind, proving the practicability of communicating instruction to these people. A striking instance of this is shown in the account of Nicholas Saunderson, a distinguished philosopher at the University of Cambridge, England, in the last

century. Saunderson lost his sight at a very early age, from small-pox. This man became one of the professors at the university, and lectured most admirably upon mathematics and every subject connected there-He was a man of most extensive erudition, and a great philosopher; but what most astonished those who knew him was the perfection to which he brought his remaining senses; his hearing was so acute that he could detect the minutest intonations of the voice, and judge very shrewdly of the character of any one with whom he conversed ten minutes; on coming into his room he could tell by the sound of his cane on the floor, or by the echo of his voice, whether any of the large furniture of the room had been removed, or changed from one side of the room to the other. The perfection of his touch was often tested in the examination of ancient coins; for he could run over a cabinet of Roman medals with his fingers, and distinguish the genuine from the counterfeit, when the difference was so slight as to puzzle connoisseurs with both eyes to find it out. Saunderson enjoyed the friendship of Sir Isaac Newton. The Royal Society of London elected him a member of that body, and after his death the University of Cambridge published his mathematical works.

The inmates of the Ohio institution are an apt illustration of the maxim that work and occupation is the soother of all sorrows, for they are evidently very happy. They have the continued consciousness that they are fitting themselves for lives of usefulness and independence, and when the community at large see and realize the beneficial effects of the education derived from this and other institutions they should no longer say "Helpless are the blind," but rather "Help-

less are the ignorant."

Trustees.—John L. Atwood, Ripley; H. C. Drinkle, Lancaster; John H. Hudson, Sandusky; David L. Wadsworth, Wellington; Edward Pagels, Columbus. Superintendent, C. H. Miller. Steward, R. W. Bell.

THE INSTITUTION FOR THE EDUCATION OF FEEBLE-MINDED YOUTH.

In March, 1850, the Hon. Pinckney Lewis, of the Ohio Senate, secured the passage of a resolution directing Dr. Hanbury Smith, superintendent of the Ohio Lunatic Asylum, to report to the next general assembly the number of imbecile youth in the State, and the propriety of making provision for their support and education. No such report was

presented.

Its Origin.—In 1853 Dr. N. S. Townshend, then a senator elect, who had previously studied medicine in Paris, and learned what had been done there for imbeciles, meeting Gov. Medill on the street approached him with the remark, "Governor, have you anything in your forthcoming message on the education of imbeciles?" "What!" was the reply, "fools! why you can't teach fools anything, can you?" "Oh, yes," he replied, and then went on to explain what had been

accomplished elsewhere. As a result of the conversation Gov. Medill in his next message brought the subject before the general assembly. This portion of the message being referred to a select committee of which Dr. Townshend was chairman he presented a report detailing what had been done for this unfortunate class in Europe and in our country. A bill for the establishment of an institution for imbeciles was introduced, but

failed to pass.

The Institution Established.—In the winter of 1856 Dr. Wilbur, superintendent of the New York Imbecile Asylum, passed through Columbus, gave a lecture, and exhibited two pupils before the general assembly. In 1857 Hon. Heman Canfield, of the senate, introduced a bill to establish an Ohio Asylum for Idiots, which passed both branches of the Legislature, and became a law April 17, 1857. A board of trustees wan promptly appointed by Gov. Chase, consisting of William Dennison, Asher Cook, and N. S. Townshend. Upon the organization of the N. S. Townshend, secretary; and Pr. R. J. Patterson, superintendent. At the time of making the first report in November, 1857, the building on E. Main street, now used for the home of the friendless, had been secured and fifteen pupils received, a number soon afterward increased to 40. In 1859 the office of assistant superintendent was created, and Dr. G. A. Doren chosen to fill that position. In 1860 the office of superintendent becoming vacant, Dr. Doren was elected superintendent pro tem. by the board of trustees. So faithful and efficient was this gentleman in the discharge of his duties that he was unanimously re-elected at the close of the year, and has been continued from that period to this, in all twenty-eight years. The old quarters were occupied for ten years, with a yearly average of between forty and fifty pupils, which was the largest number the building could accommodate. The increasing number of applicants becoming greater each year, in accordance with an act of the Legislature appropriating the necessary amount, the present site was purchased, and in 1864 a suitable building for the accommodation of 300 pupils and the necessary officers, teachers, etc., was commenced. In July, 1868, the new building was completed and occupied. Before the end of the first school year the number of inmates in the new building had increased to nearly 300. The practicability and value of the institution having been satisfactorily demonstrated, additions were constantly being made to the original building to accommodate the increasing number of applicants for admittance until in the year 1881 there were 614 inmates and every available space in use.

Destruction by Fire.—Upon the morning of November 18, 1881, fire was discovered in the cellar of the main building. Its location was so dangerous that an order was given that the children be removed at once, which was safely accomplished. So rapid was the progress of the flames that in spite of the

most praiseworthy efforts of the officers and employees, the main building was totally destroyed, and several of the side wings greatly damaged. One hundred of the 614 inmates were sent home owing to this calamity, and the remainder were crowded into the buildings which had escaped destruction, where the good work of the institution was carried on, notwithstanding the inconvenience of insufficient room, for three years before the work of rebuilding had been completed. Profiting by the experience of this disaster, fire proof materials were used in the construction of the new building; and additional security for the safety of the inmates in case of fire, provided by iron stairways erected on the outside walls of the building leading from each story and extending several feet away from the outside walls of the lower windows to the ground. Electric bells also communicate with the main office from every quarter of the building, so that a fire alarm can be instantly given and the fire located.

Objects of the Institution.—At the close of the last school year, July, 1888, the institu-tion contained 725 inmates, and it is a sad fact to record that only 125 had homes to visit during the vacation season, leaving 600 idiots without any home except that provided

by the State.
"The important objects of the institution are the amelioration of the condition of the imbecile, the accompanying relief of the family of the burden of care and anxiety for them and their future, by so training them that they may attain the greatest possible degree of self-helpfulness and even usefulness; the obtaining of such information as will reduce as far as possible the hereditary and accidental cases of idiocy and imbecility by so informing the world in regard to the conditions liable to their production that they may be avoided. The first is accomplished by the careful training and development of the child, surrounding it with the most efficient influence for the unfolding of a capacity for usefulness in its station. The second, by the careful study of the cases individually, as near as possible, to the events that have reduced them to the condition, and which will offer a better opportunity to arrive at reliable conclusions, no matter how patiently the histories may be pursued at a later age.

Fortunately, the rights of the child to its opportunity for education go hand in hand with the sympathies of all in this case; indeed, they have the double right as enjoined by the people, not only of special means of education, but of the care and custody of those of minds diseased. If the duty of caring for them at all is enjoined, then, certainly, the doing of it in the best manner is not to be questioned. There is no excuse for neglecting them as children, that they may be taken charge of when of adult age and size, to be cared for frequently in all respects as infants whose infancy has been prolonged by neglect. Nor is there reason for the admission to an institution of an adult imbecile for simple care and custody, to the

exclusion of a young and improvable child from a family of young children, who may be saved from the depressing influence of being reared with such associations, and from which they never recover, the parents from the discouragements and depression which frequently causes pauperism of the whole

family.

The duty of the public to provide for all is clear, but in making provision for them it should be done in an intelligent and efficient manner, with the view of lessening the burden to the utmost by the highest possible development of them as children, in order that they may, when of adult age and strength, contribute to the extent of their ability to-ward their own support. To the State it matters little whether a helpless case is in an institution or in the family; if there should be any difference it would be in favor of the institution, even granting the best of care possible in the family. In the institution their care is associate and with proper facility. ties. In families they are single and do not have these facilities, and are expensive to the State in the proportion that their helplessness withdraws from the general body of workers and producers to attend upon them; their condition frequently requiring the public to support a whole family on account of one imbecile member consuming the energies of those who should give it support while sustaining all others dependent upon them. The object of the institution is to prevent this condition of things by assuming the care and development of the child.

Beauty of the Location.—A ride of about two miles directly west from the state house at Columbus brings the visitor to the site of the present institution. Passing through the entrance gate one cannot fail to be impressed with the beauty of the grounds. A broad avenue, shaded on each side by overhanging branches of rows of trees, leads to the main building, which is upon a rising knoll, about one-eighth of a mile from the main entrance. Immediately in front of the buildings is a magnificent park of many acres and covered with grand old trees, under which the inmates pass many a happy hour deriving the benefit of healthful exercise in the air and bright sunlight. In the woodland beyond the park are about thirty Shetland ponies, which are the property of the superintendent and have been provided for the amusement of the juveniles of the establishment.

We were conducted through the buildings and grounds by Miss Harriet F. Purple, who has been the able and efficient matron of the institution for nearly thirty years. Every department gave evidence of a system of management which only years of experience, devotion and intelligence on the part of those

in charge could produce.

The educational department is under the charge of twenty-five teachers and graded according to the capabilities or mental condition of the pupils. School hours are from 9 A. M. to 12.30 P. M. and 2 to 4 P. M. While it seems a hopeless task to attempt to instruct

these unfortunates, the results obtained by persistent effort and great patience on the part of the teachers is most beneficial in the majority of cases, while the proficiency obtained by some of the pupils excites the wonder of visitors.

Devices for Instruction.—In the department containing low-grade pupils the work of instruction is necessarily slow and laborious. Many on entering are unable to talk, and the teacher considers that much has been accomplished when the pupil's mind and attention has been concentrated upon one special object. Many ingenious devices have been invented for this purpose. Bright-colored toys, strings of beads and similar articles are given to the children, who finally learn to separate and fit together the different parts. When evidence is thus given of the possibility of advancement it is taken advantage of and the especial point reached opens an avenue for further development.

In the high-grade department the pupils are taught geography, arithmetic, history, penmanship, calisthenics, etc., and while considerable difficulty is experienced owing to weak memory the results accomplished by patient and persistent effort are remarkable when a comparison is made between the condition of the pupil before and after receiving the benefits of the institution. Examples in arithmetic of no little difficulty are solved, the specimens of penmanship are remarkably well done, while considerable proficiency is

shown in geography and history.

An Exhibition in Calisthenics.—We were favored with an exhibition of calisthenics, which was most skilfully executed, the pupils going through the different movements to musical accompaniment and without an error. Their leader was a boy about seventeen years of age, whose display of memory in leading the pupils through a long series of movements was most remarkable. When the performance was over the class went through several intricate marching figures, each in turn depositing their dumb-bells in the space designed for them at the end of the hall, and marched out of the door, the sound of their footsteps marking perfect time to the music as it gradually died away in the distance.

The Imbeciles' Band of Music.—We were next favored with a performance that excited wonder and surprise, that such results could be obtained in an art that requires not only many long hours of faithful, laborious study, but also intelligence and natural aptitude. We refer to the concert by the band of the institution. This organization is composed of about thirty-five performers and is what is known as a military reed band, the leading instruments being composed of wood or reed wind instruments, such as clarionets, flutes, piccolos, oboes, bassoons and saxaphones. Good performers on the last three named instruments are very rare everywhere, owing to the difficulty in mastering them.

Standard overtures, operatic selections, and even classical compositions of the old masters are performed by this band and in a style that would do credit to professional musicians. Only those who have studied the beautiful art of music can fully appreciate what an immense amount of labor and perseverance it requires to go through the many intricate steps that are necessary to bring a band of musicians of normal intelligence to a degree of proficiency. That so much has been accomplished by this band of feebleminded musicians is another evidence of the efficient work that is being accomplished at this institution toward the improvement, development and happiness of this unfortunate class of our fellow-citizens.

While permanent cures of idiocy are sel-

dom effected, yet there are instances in the history of this institution where they have occurred and the patients became useful citizens. We were told of one man who, having learned the carpenters' trade at the institution, is now earning \$2.50 a day working at his trade and has saved sufficient money to buy a home. While cures are only possible when idiocy is caused by disease, the improvability of all is practicable to a greater or less degree, except with the class known as Some of these latter are concretins. genital cases, deformed in body as well as in mind, and are generally small in stature, with large, flat heads, thick necks and short limbs.

Their Gratitude.—While physically they

are capable of improvement, little can be done to advance their mental condition. Sometimes they are taught to say a few words, and they also understand some things that are said to them, but their condition is more like that of the lower order of dumb animals than of human beings. The kindness and humanity that governs all the officers and teachers in their treatment of the inmates is fully appreciated by the "cretins," who show affection and gratitude for their attendants similar to that of a dog for his master. Generally the inmates are feeble and stunted in body as well as under Children apparently ten or twelve years of age we found to be on inquiry sixteen to eighteen. In going through the institution it seems as the home of one huge

family. Consanguinity, or the inter-marriage of persons of the same kin, contrary to the general public impression, is not a prolific source of imbecility. The records of this institution, for all that period of time from its foundation to the date of the fire of 1881, showed that comparatively few cases could be charged to consanguinity. That these records were destroyed by the fire is a great misfortune, as much valuable matter, from which to form a basis of calculation as to the causes of idiocy and its prevention, was thereby

lost

Employments.—Many of the inmates are employed in various ways, and it has proven of great physical as well as mental benefit to them. The girls are taught to sew, and become sufficiently skillful to do all the mending for the asylum. The laundry work is done entirely by the inmates, and many become very good shoemakers, tailors, carpenters, and plumbers, and not only do all necessary work of this kind for the institution, but thus obtain a means of livelihood upon leaving it. One man is employed in the plumbing department who has shown remarkable mechanical skill in the building of a working miniature engine. Although almost a hopeless idiot, the constructive faculty has been developed when other faculties of the mind were totally deficient.

The beautiful and extensive surroundings, consisting of 188 acres, contribute not a little toward the mental as well as physical improvement of the inmates. The garden supplies all of the vegetables used here. Milk is furnished by a fine herd of cows, fifty in number, who have been trained to enter the barn at certain hours, walking in single file, each one stepping out of the line into its own accustomed feeding-place as it comes to it.

They are milked night and morning by the

inmates

Healthfulness.—That there is so little sickness in an institution filled with persons, whose infirmities cause weak and delicate constitutions, is owing to the perfection of its sanitary regulations. In its entire history there has been but one epidemic which was attended with serious results: that was in November, 1882, when there were 183 cases of scarlet fever. The death-rate was the largest since the foundation of the asylum. The school-rooms and dormitories were converted into hospital-rooms, and the teachers and attendants became nurses. Every precaution was taken to prevent the spread of the disease, which finally disappeared after twelve weeks of self-sacrificing devotion, courage and fortitude of the attendants, during which time they were constantly exposed to the dangers of a disease, the results of which are fearful even when death does not ensue.

The General Results.—The reports show that 69 per cent. of its inmates learn to work, 74 per cent. to read and write, 43 per cent. make useful progress in arithmetic, while all

are improved in personal habits.

A Public Duty.—With the increase in population of the State, and consequent larger number of this unfortunate class, the necessity for making permanent provision, and enabling them to make the best possible use of such faculties as they already possess, together with the necessity for placing them under such restrictions as will prevent the increase and perpetuation of their kind, must be apparent to every thoughtful citizen; and this the spirit of humanity demands of the State.

Except in very few cases this class is not fitted to go out into the world; yet under proper management a large proportion could not only earn sufficient to support themselves, but largely aid in the support of their kind. There is at the present time a large number of adult imbeciles who have arrived at maturity since entering this institution, and this number is constantly increasing. They have

no place to go except to the county infirmaries, or to wander at large through the community, dependent upon the charity of the public for support; no longer under improving influences, but relapsing into their former helpless condition, to become criminals or paupers. The institution is at present crowded far beyond its capacity, and between 300 and 400 applications for admission were refused least are compact to this fact.

last year owing to this fact.

An Outlook for the Future.—For the permanent provision of this class it has been suggested that an appropriation should be made by the General Assembly to purchase a large tract of land at a convenient distance from the institution, on which should be erected plain and substantial farm-buildings, with all needful appliances for the various industries of the farm and workshop. As there are in the asylum at the present time a sufficient number of unemployed inmates to work 1,000 acres of land, the value of such an arrangement needs no argument. The sale of the products of the farm and workshops would realize enough to pay all its expenses, thereby utilizing what has been heretofore a public expense and burden, and permitting the asylum to carry out the objects of its foundation.

The education of the feeble-minded youth in Ohio has been unusually successful, and it is the largest institution of the kind on the globe. Its success is largely owing to the ability and efficiency of both past and present trustees and officers, and the untiring energy and zeal of its superintendent, Dr. G. A. Doren, who, having held this position since 1859, has made the bettering of the condition

of this class his life-work.

The officers and trustees in 1888 are: Trustees—Silas A. Conrad, Massillon; Robert Mehaffey, Herring; Benjamin B. Woodbury, Chardon; Edward Squire, Defiance; Ross J. Alexander, Bridgeport; superintendent, G. A. Doren; steward, George Evans

THE OHIO PENITENTIARY.

The penitentiary system was introduced into Ohio in 1815. Previous to that date certain crimes, afterward punishable by imprisonment in the penitentiary, were punished by whipping. For instance, upon conviction of larceny the offender was sentenced to be whipped; not exceeding thirty stripes on the naked back for the first offence, and not exceeding fifty stripes upon a second conviction for a like offence.

In 1815 was enacted the first Ohio statute for the punishment of larceny by imprisonment in the State prison. It provided that conviction of larceny of the value of ten dollars and upward should be punishable by imprisonment at hard labor for not less than one nor more than seven years. In 1821 the amount of larceny to constitute a State-prison offence was increased to fifty dollars, but, in 1835, was 'reduced to the present amount—thirty five dollars.

thirty-five dollars.

The first penitentiary in Ohio was built in

1813, on a ten-acre lot in the southwest corner of Columbus, which was conveyed to the State for that purpose by the original proprietors of the town. It was a brick building fronting on Scioto street; the dimensions were sixty by thirty feet and three stories in height, which included the basement partly below ground. The basement contained the living-rooms of the prisoners, and could only be entered from the prison-yard. The second story was the keeper's residence. The third or upper story contained the prisoners' cells, thirteen in number, nine of which were light and four dark cells.

The prison-yard, about 100 feet square, was enclosed by a stone wall from fifteen to

eighteen feet high.

In 1818 a new brick building was erected, and the prison-yard enlarged to about 400 by 160 feet, enclosed by stone walls twenty feet high and three feet thick, with a plank floor and hand-railing on the top. Workshops vere arranged within the yard. The new building was 150 by 34 feet, two stories high, and formed a connecting-line with the old building, which was remodelled as a residence for the keeper.

The dining-room, kitchen, and fifty-four cells occupied the ground floor of the new building; below ground, accessible only by a trap-door in the hall, were five dark and solitary cells, and on the second floor two adjoin-

ing rooms served for a hospital.

Until 1819 the keeper or warden was appointed by five inspectors chosen by the Legislature. That year, however, the office of State agent was created, and both agent and keeper elected by the Legislature for a term of three years. It was the State agent's duty to receive from the keeper all manufactured articles, make sales, collect debts, and pay over to the State treasurer all cash receipts. The office of State agent was abolished in 1822.

The first warden or keeper of the penitentiary was James Kooken. At that time the prison contained but few convicts, the keeper was kind-hearted and as lenient as was consistent with official duty, and, there being at times but little work for the prisoners, they were permitted to indulge in various amusements, one of which was ball-playing; and when, as sometimes happened, the ball was knocked over the prison walls, a dog they had trained for the purpose would run to the main entrance, summon the guard, pass out, get the ball, and return with it to the players.

The labor of the prisoners was employed in blacksmithing, cabinetmaking, gunsmithing, wagon-making, shoemaking, coopering, weaving, and tailoring, the manufactured articles being sold or exchanged for provisions or raw

materials.

Attempts at Escape.—There were more or less individual attempts to escape, but only one outbreak at all general in its character. One day, during the year 1830, about a dozen prisoners, under the leadership of a daring fellow. Smith Maythe by name, secreted

themselves near the outer door of the prison, and, when the turnkey unlocked the door, Maythe sprang upon him, securing a firm hold, while his companions rushed out. Then, releasing the turnkey he bounded out, and joining his fellow-conspirators fled to some woods a short distance southeast of the prison. Their liberty was short-lived, however, for soon they were all recaptured and returned to the prison. Maythe, the leader, was eventually hung by a mob in Kentucky for an attempt at robbery and murder.

Liberties to Convicts.—Previous to 1836 convicts were frequently taken out to work in different parts of the town, and sometimes without a guard. Among others who were allowed great liberties in this respect was one Scott, a printer, who was permitted to earn money, a part of which he was allowed to keep for himself, by working at his trade outside the prison. On one occasion he got uproariously drunk, and, meeting Gov. Lucas on the street, he besought him to grant him a pardon, and, backed up by the whisky he had imbibed, became very urgent, much to the governor's discomfiture. Perhaps it is needless to state that Mr. Scott served out his full term, and with restricted privileges.

The Asiatic Cholera.—In the summer of

The Asiatic Cholera.—In the summer of 1833 the cholera broke out in Columbus, and soon became epidemic within the penitentiary. Out of 303 convicts few were exempt from sickness. One hundred were confined in the hospital, forty of them with pronounced genuine cholera, and there were eleven deaths

before the disease disappeared.

In 1849, the prison having been removed to its present quarters, the cholera again made its appearance, and with a fatality that was appalling; and notwithstanding every precaution, more than one-fourth of the

inmates became its victims.

Heroic Devotion.—It broke out in the prison on the 30th day of June, having previously prevailed in Columbus and surrounding towns for eight or ten days. The first day there were two fatal cases, and the daily mortality increased to five on July 7, eight the day following, and twelve on the 9th of July. Dr. Lathrop, the regular prison physician, was attacked by the disease July 3; fifty to sixty new cases were occurring daily, and, although Dr. Trevitt was in attendance, having been called the first day the epidemic broke out, Dr. Lathrop felt that his duty was at his post; and although advised by his physicians to keep his bed, totally unfit for any labor, on the 6th of July he was again at work administering to the sick and dying. His heroic devotion cost him his life five days later.

July 8, nine days after the first appearance of the disease, 396 out of 413 prisoners had been attacked by cholera, 21 had died, and the next day 12 more died. The condition and prospect of affairs was horrible to contemplate. The directors called to the aid of Drs. Lathrop and Trevitt other physicians in the city, as Drs. B. F. Gard, Robert Thompson, J. B. Thompson, Norman Gay, and J.

Morrison. Medical students and citizens were also engaged as attendants and nurses.

Distressing Scenes and Panic.—The hospital being crowded the abandoned workshops were divided into wards, nurses and attendants assigned, and they were soon filled with the sick and dying. Just at this time, when their services were most needed, the guards fled, panic-stricken. Necessarily discipline was very much relaxed. For sixteen days and nights the cell doors remained unlocked and the prisoners commingled

freely. Some of them were stoically indifferent to their surroundings, others were manly, heroic, and rendered very efficient service in ministering to the sick, while another class of prisoners were filled with nervous fear and trembling, imploring physicians, attendants and nurses, with piteous cries, to speak to the governor and have them pardoned out.

Governor Ford acted with great discretion in this emergency. An article written by Hon. Charles B. Flood and published in

Drawn by Hemy Howe in 1846

THE OHIO PENITENTIARY.

[The above view was drawn from the west bank of the Scioto. Since then the front has been changed and the institution greatly enlarged, while the vicinity has been made black and girm with iron works and other hives of solid labor.]

Cincinnati long after the incidents occurred, describes his action: "When the cholera broke out in the Ohio penitentiary Gov. Ford was absent from Columbus. To be used in extraordinary cases, he had left a small number of blank pardons with Mr. Samuel Galloway, the secretary of state. The scene in the penitentiary and in the city was fearful. Galloway could not withstand the piteous appeals for liberty, and he soon exhausted the pardons and wrote to Ford at his home in Burton, Geauga county, for more. This the governor refused, but wrote Mr. Galloway that he would come down to Columbus immediately. He did so; went to the prison, examined the hospital and patients, assembled the convicts and told them that no pardons would be issued while the cholera was in the prison; that to those who behaved well, nursed the sick and aided in cleaning the prison, pardons on the recommendations of the officers would be freely granted when the danger was passed; even those who had homes to go to could not be half as well nursed or attended to as in the prison hospital, and that the appearance of a single man in the neighborhood who was known to have been in prison and pardoned because of the cholera would create alarm and perhaps produce the much-dreaded disease. The men were satisfied. The effect in the city was good, and the heroism and good sense of Gov. Ford were much commended. At the risk of his life he personally went among the sick and personally attended to their wants.

July 10th the epidemic reached its height, the number of deaths being twenty-two, a greater mortality than on any other single day. On that day Dr. Gard was attacked and Dr. Lathrop again stricken down by the disease. The two heroes both died noble sacrifices on the altar of professional zeal and large-hearted humanity. On July 11th Dr. G. W. Maris filled the vacancy caused by Dr. Gard's fatal sickness, and from this date the virulence of the epidemic gradually declined until July 30th, when the last death from cholera occurred.

Number of Deaths.—During the thirty days of the epidemic 116 prisoners had died from cholera, and out of 413 convicts, the number had been reduced by deaths and pardons to 273. With the subsidence of the disease the prison discipline was gradually resumed.

When the cholera prevailed in Columbus between August 30th and November 29th of the year 1850 there were twenty-two deaths attributed to dysentery and other disease by the regular prison physician, but since then the prison has been exempt from epidemic diseases.

The Present Penitentiary.—In October, 1832, the legislature passed an act for the selection of a site and the erection of a new penitentiary, and a site in the western part of Columbus, on the banks of the Scioto, selected; but there being some complications with regard to a perfect title, five public-spirited citizens of Columbus—Joseph Ridg-

way, Jr., Otis Crosby, Samuel Crosby and D. W. Deshler—succeeded in securing the property for the State and guaranteed a perfect title. The property consisted of fifteen acres of land, to which was added a small strip purchased of John Brickell for \$50 by the directors of the penitentiary.

whole site cost the State but \$800.

Work was started on the building in 1832 by the preparation of much of the material, but the structure itself was not commenced until the following spring, and operations were suspended during the summer owing to the cholera epidemic. Convicts were employed in the work. When the building of the new penitentiary was begun, convicts whose time would not expire before its completion were promised a pardon when the building was finished if they would faithfully perform the tasks assigned them and make no attempt to Those making this promise were employed accordingly, and in no case was there a violation of the terms.

New Rules and Regulations.—In 1834 the

new building was occupied; and in 1835, with a new building, new officers, new rules and regulations, the old system of barter was abandoned and the present system of hiring the convicts by the day to contractors and manufacturers, who employed them in the prison workshops, was inaugurated. Rules of great severity were rigidly enforced which have been relaxed of late years and kindness and humane treatment substituted, with the object of reformation as well as punishment of the offender. Solitary confinement instead of the "shower bath" and the "cat" is now used to bring the refractory convict into subjection.

In 1837, at the east end of the main building, an addition was constructed which contained eleven cells, with capacity for twice that number. This addition was used as a separate apartment for female prisoners.

The cost of the new penitentiary, when completed, was \$93,370, besides 1,113,462 days of convict labor expended upon it. The buildings and prison walls formed a hollow square containing about six acres of land, which was increased in 1868 by the addition and enclosure of ten acres of land lying north of the prison. These ten acres of land were purchased from the representatives of Dr. Lincoln Goodale at a cost of \$20,000.

New Humanizing Features.—Many improvenients have been made in the labor system since the adoption of the contract plan; a recent one is that of having piece-work given out to the convicts, who are thus stimulated to greater industry, and many of them, by increased application to their labors, often leave the prison upon the expiration of their sentences with sufficient money saved by working extra time to start them in useful callings. During our visit mention was made of one prisoner who will shortly leave with \$540 earned in that way. The habits of industry thus acquired, with the consciousness of possessing the reward of faithful efforts, cannot fail to have a beneficial effect upon

criminals and do much toward making them honest and industrious citizens.

All prisoners who are physically able are employed in the different labor departments. Those who are experienced in any particular trade upon entering the prison are given work in their specialty; but the majority of the convicts have never learned trades when

first imprisoned.

In the female department a number of the inmates are employed making stogies, and we were informed during a recent visit to the institution that in every instance the trade was learned in the prison. The cooking and laundry work in this department is all done by the female prisoners. At the present time there are only about thirty-five females in the department, who are entirely separated from the rest of the prisoners. It has two dark cells or dungeons, which are seldom used, as the women generally are well behaved.

The Reformatory Principle.—Every effort is made to improve the moral and religious condition of the convicts, and to carry out the reformatory principle as far as possible. Religious exercises are held every Sunday, in which the prisoners take an active part. The prison Sunday-school is divided into classes that are taught by different teachers from the city. Convicts who are members of the Catholic denomination have a large chapel devoted to their special use. The uneducated are obliged to attend night-school for a few hours every evening, with the exception of a few vacation months in the summer. The prison library, which contains over 2,000 volumes, besides a large number of monthly magazines, furnishes another means for intellectual improvement, and is a great aid to moral reformation. Humanity and kindness is shown in every possible way in the treatment of the prisoners, every incitement to good behavior given them. As a result of the influences, out of over 1,200 convicts there are not over six or seven daily infractions of the rules

The Suit of Honor.—The prisoners are graded by different-colored clothing. The wearing of a suit of clothes striped gray and white instead of striped black and white is a badge of good behavior. The plan was suggested by the prisoners themselves, originated here, and works so well that this "Ohio idea" is being copied in other States. To ' Ohio entitle the prisoner to don the gray he must sign a special agreement to implicitly obey all the rules and regulations in spirit as well as in letter, and must for six months receive the highest possible rating for good behavior. With these conditions fully met, the convict becomes entitled to his mark of honor—the suit of gray. The plan works well as a re-

formatory measure.

A mail department has been established within the prison, where convicts are allowed to receive letters or papers from their relatives or friends. One day of each month a prisoner is allowed to receive visits from friends and relatives.

In the insane department of the penitentiary there are at present about twenty-five inmates, who are given the best medical treatment, and owing to their unfortunate condition of mind are allowed many privileges. Being incapacitated from work of any kind they exercise in the yard adjoining, and are only locked in their cells at night. Many of the convicts feign insanity with the hope of being sent to this department to enjoy its freedom and idleness; but such attempts at imposition are soon discovered. There are also numerous applications for admittance to the hospital by those who are perfectly well and under the plea of sickness hope to escape work.

Hopefulness of Life Convicts.—At present about 125 convicts are serving life sentences, and we were surprised to learn that this class of prisoners, instead of giving way to the hopelessness of their position, are generally in a cheerful frame of mind, and seldom realize that the remainder of their lives are to be spent in prison; they invariably expect that through some unforeseen good fortune or a pardon they will regain the liberty of which their crimes have deprived them.

The cells are built of stone and have iron barred doors; they are about 4 x 7 feet in size, and are not occupied by the prisoners during the day, as they are then engaged in the workshops. Each cell contains a bed or cot, which can be turned up against the side wall, and the furniture is of the simplest kind, although they are permitted to furnish them more expensively if they or their friends have the means to do so. There are two stories or tiers of cells in each section of the prison; they face the outside walls of the buildings in which they are located, having wide corridors between them and the walls. Dampness in the lower cells is avoided by an air-duct, which runs under the stone flooring.

When Gen. Morgan escaped from the Ohio penitentiary, during the war, he discovered the existence of this air-passage by sounding the floor of the cell; and having secretly obtained a case-knife, he cut through the stone flooring until this passage was reached and the hole made large enough to admit his body to the space below, when he crawled through the passage to the outside of the prison, and thus gained his freedom. The cell occupied by this famous rebel raider still shows the marks of his work, but the air-passage now opens inside instead of outside

of the prison-walls.

The Condemned Murderers' Quarters.—In the east end of the penitentiary is located the annex which has recently been constructed for the accommodation of criminals condemned to death. It consists of three rooms, one of which is called the cage, because one side of it is protected by an iron lattice-work partition. It is the place of confinement for the condemned criminal, who for several days previous to his execution has what is called the death-watch set upon him; this vigil is kept by guards on the outer side of the lat-

ticed partition; here also is a large alarmclock, which rings a bell every half hour of the night, so as to insure wakefulness on the

part of the guard on duty.

The Execution Room.—On the south side of the cage and guard-room is built a stairway, which the prisoner ascends when going to execution. A door at the top of this stairway opens on a balcony built in the adjoining execution room. On this balcony, which is about seven feet above the floor of the execution room, is the death-trap. The doomed prisoner stands upon the trap, a cap is drawn over his head, the rope adjusted, and at a given signal a spring is touched, which opens the trap, and the prisoner falls about six feet, when the rope tautens with a jerk and the neck is broken by the force of the fall. Most criminals condemned to death declare their innocence to the last, but they rarely meet death with calm demeanor.

So superior is the management of the Ohio penitentiary, that convicts are sent here both by the United States and also by some of the Territories, their expenses being paid by the government sending them. At present there are ten Apache Indians sent here by the United States authorities to serve sentences of from ten to thirty years for manslaughter. These prisoners have been employed in weaving chair-seats, no difficulty having been experienced in making these representatives of a wild and savage race maintain the best behavior. We were informed that they had killed a number of their own race, members of a hostile tribe, in revenge for some injury

The Parole System.—In 1885 a parole system was inaugurated at the Ohio penitentiary, in pursuance of an act passed by the Legislature on May 4th of that year. Sec-

tion 8 of that act is as follows:

That said Board of Managers shall have power to establish rules and regulations under which any prisoner who is now, or hereafter may be, imprisoned under a sentence other than for murder in the first or second degree, who may have served the minimum term provided by law for the crime for which he was convicted, and who has not previously been convicted of a felony, and served a term in a penal institution, may be allowed to go upon parole outside the buildings and enclosures, but to remain, while on parole, in legal custody and under the control of the board, and subject at any time to be taken back within the enclosure of said institution; and full power to enforce such rules and regulations, and to retake and reimprison any convict so upon parole, is hereby conferred upon said board, whose written order, certified by its secretary, shall be a suffi-cient warrant for all officers named therein, to authorize such officer to return to actual custody any conditionally released or paroled prisoner, and it is hereby made the duty of all officers to execute said order the same as ordinary criminal process.

This system of parole has proven to be a wise measure. Of the 254 prisoners paroled since the passage of the law, but sixteen have violated their parole and but ten have been returned for its violation.

Bertillon's Method for Identification.—In 1887 the penitentiary management adopted what is known as the Alphonse Bertillon's new method for the identification of criminals by anthropometic descriptions. This system looks more directly to the detection of recidivists—a term applied to confirmed criminals—and, when carefully applied, renders their identification as certain as can be made.

It consists of certain measurements and "notation of various bone dimensions which remain unchangeable on the same subject, and which are recorded in a uniform way. These are principally the stature or height of the figure, the length and width of the head, the length of the foot, middle finger, etc."

The measurements are by the metric system and has, with its corresponding classification, been carried on in France for the past four years, during which time, from 1882 till April, 1886, eight hundred and seventy-three (873) criminals

under assumed names were recognized.

Warden R. W. McClaughry, of the Joliet, Illinois, State Penitentiary, who presented this subject in a thoroughly comprehensive paper, with practical illustrations of methods employed, at the late Prison Congress, held at Toronto, Canada, quotes Mr. Bertillon as saying, that, in respect to the "identification of a criminal under an assumed name is, as far as the general welfare is concerned, equivalent to his direct arrest on the public highway for some other crime." Under the existing law of our State relating to "habitual criminals," the system of identification of recidivists—a second or third termer—who appears under an assumed name, becomes a matter of the first importance. The method of taking measurements is entirely simple and expeditious—"an operation requiring two or three minutes of time, and within the range of the intelligence of an ordinary man." This system is now employed in our State Penitentiary, and has the approbation of the entire management, and will be carefully applied, and will, no doubt, in time yield satisfactory results.

The State Board of Pardons was created; in 1888. Section 2 of the act providing for this board reads as follows:

SEC. 2. Every applicant for the granting of a pardon, commutation of sentence, or reprieve, of a person duly convicted of crime, shall be made directly to said board, which shall carefully consider the same, and shall thereupon recommend in writing to the governor, the advisability of granting or rejecting said application. They shall also transmit to the governor, with their recommendation, a full and concise statement of the facts in each case, together with all papers and documents pertaining thereto.

This board consists of Lorenzo D. Hagerty, President, Henry Kahlo, Thomas T. Thompson, Nathan Drucker and Charles E. Prior, Secretary, ex-officio.

The statistics of the penitentiary furnish some very interesting facts. For the year ending Oct. 31, 1887, the number of convicts enrolled was 649, of whom 636 were males, 13 females; 579 of these were whites and 70 colored. Seventeen were under 17 years of age, 296 were between 21 and 30, and 18 between 60 and 76 years of age. One hundred and five cannot read, 275 have a common school education, 17 have a high-school education, and 8 a collegiate education. Four hundred and five confess to intemperate habits. Number of first convictions 567; second convictions, 69; and third convictions, 10.

The present management of the institution is most efficient. Dr. A. G. Byers, Secretary of the Board of State Charities, in his twelfth annual report to the General Assembly, says:

annual report to the General Assembly, says: The Management.—"Having been familiar for nearly a quarter of a century with the management of the penitentiary, I feel it due to the present Board of Managers, without any reflection upon preceding boards, to say that in the selection of officers, in the supervision of prison labor, in patient investigation of disciplinary measures, and in the exercise of official and personal interest in individual prisoners, the board has manifested an unusual interest and a wise discrimination in the discharge of its duty, that has brought the institution to a higher standard of prison management than was ever attained before.

The warden (E. G. Coffin) has developed more than ordinary qualifications for his position, attributing the success of his administration to the wise counsel and generous support of the Board of Managers and to the efficient co-operation of his deputy, W. B. Cherrington, and subordinate officers. This modest appreciation of his own service is possibly the best indication of a capacity to command the service of others.

Earnings.—Just what the financial operations of the year have been cannot now be stated, but it is probable that the earnings of the year have fully equalled the expenditures. If this end has been attained there can be no just grounds of complaint.

No public interest demands a revenue to the State from prison labor."

Board of Managers.—Jacob J. Johnson, New Lexington; Isaac D. Smead, Toledo; Thomas Murphy, Zanesville; Robert M. Rownd, Columbus; William R. Phipps, Cincinnati; J. W. Clements, Secretary, Hamilton.

BIOGRAPHICAL SKETCHES.

In Franklinton is now standing the birthplace of Gen. IRVIN McDowell, who in the period of the war of the rebellion, as Whitelaw Reid says, "was one of the best military scholars of the army and one of the most unsuccessful of its officers.

. . . His place in the sure judgment of coming times is secure. He will not be reckoned brilliant or great; but his ability and devotion will be recognized. His

manifold misfortunes, the amiability with which he encountered personal reverses, the fortitude with which he endured calmmy will be recounted. Men will do justice to the services he rendered us in our darkest hours, and he will leave an enduring and an honorable fame."

Irvin McDowell was of Scotch-Irish descent, and the branch from whence he

sprang were early emigrants to Kentucky. He was born in 1818, was educated at West Point, served in the Mexican war, and died in San Francisco in 1885, having been retired in 1882 from the army and the position of major-general, in command of the Division of the Pacific.

The great misfortune of his career was, that it fell to his lot to command the Union troops at the first great battle of the war—that of Bull Run—and he was made the scapegoat of that mortifying disaster. Of his generalship there Mr. Reid says: "His plan was excellent, and though there were innumerable faults of execution,

Frank Henry Howe, Photo BIRTHPLACE OF GEN. McDowell.

they arose more because of the materials with which he had to work than from his own inexperience or lack of judgment. After all the display of ability which the war has called out, we would be puzzled to-day if called upon to name any officer who, if then put in McDowell's place, would have done better. We may doubt, indeed, if there are any who would have done so well."

The long and full narrative of his career, as given by Mr. Reid, is a pitiful tale of cruel wrong against a high-minded and patriotic soldier made the victim of calumny. It is one of the peculiarities of war that while it often develops the most noble and heroic qualities of patriotism and self-sacrifice the diabolical and atrocious has its fullest scope. "No jealousies," wrote the late Col. Charles Whittlesey, "are equal to those between military men," and history records innumerable instances of multitudes slain through the exercise of this passion against a brother officer.

Lucas Sullivant, the leading pioneer in Franklin county, was born in Mecklenburgh county, Va., in 1765. Losing his parents in youth, he learned surveying, and first went to practise his art in the new lands of Kentucky, then an outlying county of Virginia. Col. Richard C. Anderson, surveyor-general of the Virginia military land district of Ohio, appointed him as deputy. With a party of twenty men he advanced into the wilderness of Ohio, and in the summer and fall of 1797 laid out the town of Franklinton; there he resided the remainder of his life. He died in 1823, in his fifty-eighth year. He was a man of high character; kind, courteous, eminently public-spirited, benevolent and helping, with strong natural powers, and left a large fortune, the just fruits of a spirit of daring, useful enterprise. He left three sons—William Starling, Michael L., and Joseph. WILLIAM S. SULLIVANT, his oldest son, was born at Franklinton in 1803, graduated

WILLIAM S. SULLIVANT, his oldest son, was born at Franklinton in 1803, graduated at Yale College, returned home, and although immersed in the active business of life while yet in early manhood, he found time to acquaint himself with the flora of Central

Ohio, discovering in his researches several species hitherto unknown, to one of which by his Eastern botanical associates was given the

name "Sullivantia Ohioensis."
The distinguished botanist, Dr. Asa Gray, said of him: "As soon as the flowering plants of his district ceased to afford him novelty he turned to the mosses, in which he found abundant scientific occupation of a kind well suited to the bent of his close, patient observation, scrupulous accuracy, and nice discrimination His works have laid such a broad and complete foundation for the study of bryology in this country, and are of such recognized importance everywhere that they must always be of classic authority. Wherever mosses are studied his name will always be honorably remembered. country it should long be remembered with peculiar gratitude." On noticing his death, which occurred in 1873, the annual report of the Council of the American Academy of Arts and Sciences said: "In him we lose the most accomplished bryologist which this country has ever produced.

MICHAEL L. SULLIVANT, the second son, was born in 1807, was educated at Athens and Centre College, Ky., and, inheriting a large body of land, became on an immense scale a grazier and stock feeder. At an early day, owing to a want of market, the grain was largely fed to stock driven to the Scioto valley from various quarters—even as far as from the prairies of Illinois—in the fall and winter months, where they were what is termed "stall-fed," i.e., fattened and driven over the mountains and sold on the seaboard. To purchase and feed cattle for sale East was extensively practised in the valley. Mr. Sullivant was one of the originators of the Ohio Stock Importing Company and of the Ohio State Board of Agriculture, of which he was twice the president. In 1854 he sold out his Ohio possessions, and moving to Illinois, bought two immense tracts at government prices, called respectively "Broadlands" and "Burr Oak." The first named was in Champaign county, and each comprised tens of thousands of acres. On these he commenced farming on an immense scale. The newspapers of the time were full of notices of his stupendous experiment, which involved a small army of retainers as laborers. The experiment, however, failed, and proved a great financial loss. He died in 1879.

Joseph Sullivant, the youngest son, was born in 1809, received a collegiate education, and lived an honored life. He interested himself in varied public matters, literary, scientific, and material education, agriculture, and projects for the general welfare. He wrote a pamphlet on "A Water Supply for Columbus," and projected "Greenlawn" cemetery, etc., etc. His bust is in the hall of the "Sullivant School," a contribution from the teachers and scholars, as evidence of their high regard for his useful services. He died in 1882.

Dr. Lincoln Goodale was born in Worcester, Mass., and, in 1788, when a child of six years, came with his father to Marietta. In the war of 1812, while acting as assistant surgeon, he was taken prisoner at Hull's surrender. In 1814 he came to Columbus, engaged in merchandising, acquired great wealth, and died in 1868, aged eighty-seven years. He gave the beautiful Goodale Park to the city, wherein was placed, in 1888, his bust in bronze, a fine piece of work by J. Quincy A. Ward.

The most prominent of the four men who founded Columbus was LYNE STARLING, and it was by a mere ruse that they succeeded. Col. James Kilbourne was actively at work for his town, Worthington, and had a majority of one pledged in the Legislature in his favor. As Worthington was almost the exact geographical centre of the State, and his proposals liberal, success seemed assured. When the time came for voting two of Kilbourne's supporters could not be found, and so the colonel lost by one majority. Those two missing members had been su cessfully hived in a secure retreat with cards and wine.

Mr. Starling was born in Mecklenburgh

county, Va., in 1784 and died at his lodgings in the American Hotel in 1848. In 1806 he came from Kentucky to Franklinton, and assisted his brother-in-law, Lucas Sullivant, who was clerk of court for Franklin county. Later he held the office, and for many years; was also a successful merchant and trader. "He was a warm-hearted, eccentric, honored, and useful citizen, and to-day 'Starling Medical College,' founded through his munificence, perpetuates his name."

It was fortunate for the beginning of Columbus that it had for its first clergyman a man of such marked character for usefulness as Rev. Dr. James Hoge. He was born in Moorfield, Va., in 1784, of Scotch-Presbyterian stock, and was the son of a famous Presbyterian divine, Rev. Dr. Moses Hoge. The father was president of Hampden Sidney College, author of "Christian Panoply," an answer to Paine's "Age of Reason," and noted for his pulpit oratory. John Randolph said of him, he was the most eloquent preacher he had ever heard.

James Hoge being licensed to preach by the Presbytery of Lexington, Va., in 1805, when just twenty-one years of age, came out as itinerant missionary to Ohio. In 1806 a Presbyterian church was organized in Franklinton, and he was soon called to be its pastor. In 1812 a brick building was erected there for a church. It was destroyed by a tornado. In 1814 a church built of logs was erected in Columbus on land belonging to him. He continued in this charge until 1858, when, after a pastorate of over half a century, age and infirmity compelled his resignation.

Dr. Hoge was the pioneer of the temperance movement in Ohio, and, although born in a slave State, was an ardent abolitionist. He was instrumental in establishing the State Deaf and Dumb and Insane Asylums, was a trustee of two educational institutions, and a founder of the Ohio Bible Society.

Hon. ALFRED KELLY, son of Daniel Kelly,

ALFRED KELLY.

was born in Middletown, Conn., November 7, 1789. When nine years of age his father removed with his family to Lowville, N. Y. Alfred was educated at Fairfield Academy, N. Y., and studied law with Jonas Platt, a judge of the Supreme Court of that State.

In 1810 he removed to Cleveland, was ad-

mitted to the bar and appointed prosecuting attorney on his twenty-first birthday, to which office he was continuously appointed until 1821. In 1814 Mr. Kelly was elected to the Ohio House of Representatives; and was the youngest member of that body, which met at Chillicothe, then the capital of the State.

From a very valuable and interesting sketch of "Reminiscences of Alfred Kelly," by Judge Alfred Yaple, who was his friend and a member of the last Legislature in which he served, we have made copious extracts

throughout this article.

"At an early day during one of the sessions, he prepared and introduced a proposition to reform the practice in our courts. His proposition looked to the lopping off of all the formalities and verbiage of the old system of pleading and to simplify it. This proposition was the forerunner of our code, which came some thirty years later. It also provided for the abolishment of imprisonment for debt, except in cases of fraud. This was the first time, as I have heard him say, such a measure was ever seriously urged in any

legislative body in the civilized world.
"Dickens' flaming pen had not then flashed light into the gloomy recesses and revealed the sufferings and wretchedness within the walls of the 'Old Marshalsea,' and aroused the English people to apply the plowshare to turning over the ground upon which its foundations had stood. Three years after he introduced it in Ohio, Kelly's bill was passed by the Legislature of one of the States, New York,—I think—but not in Ohio until about 1837 or 1839. At the time he introduced it, it was considered so impracticable and radical that it defeated his entire plan of judicial reform. He introduced it, as he said, because he held that property should be the basis of credit, and property alone taken for debt; that to discharge debt, the person could not be sold, and for debt, personal liberty should not be restrained. This principle is now, I believe, incorporated in the Constitution of every State, and is upon the Federal statutebook of the United States, and has been enacted by the Parliament of England.

"He was the master spirit, whether in or out of the Legislature, of our canal policy. He urged it as a necessary means of developing the resources of the State, and to the extent that he advocated and aided it, it was eminently a success. Instead of three bushels of wheat being required to purchase a bushel of salt, one bushel of the former would purchase three of the latter. The same thing happened in the prices of iron and all other imported heavy articles. We got them no

longer by pack-saddle.
"When the system was finally decided upon, it was generally supposed that the con-templated works could not be completed within the lives of any then living, and certainly not within the limits of the estimated cost. He, having been the prime mover in the undertaking, having framed the statutes authorizing and governing these works, was made an active canal commissioner, the Legislature thus, in effect, saying: 'You claim that this work can be done with a given amount of money; now do it. He accepted the trust, abandoned his profession, sacrificed his health by exposure to the wet and malaria of the valleys, and accomplished the work.

And the work was well done."

To make sure that everything was honestly done he personally inspected the work, living at one time in a cabin on the line of the canal with his family. He used a long iron rod with which he was accustomed to probe the embankments to discover the tricks of contractors who were apt to fell huge tree bodies, cover them with earth, and then draw pay

therefor at so much a cubic yard.

Mr. Kelly had that peculiar quality of mind which could not only grasp large enterprises in their entirety but at the same time direct the perfecting of every detail without

losing hold on the main purpose.
Once having undertaken any matter, he assumed entire responsibility, and with indomitable will and perseverance exacted implicit obedience to orders from all under him. His was the mind that projected the methods, his subordinates' duties were to execute orders. His opinions and plans were formed after careful thought, and when formed he was sure he was right, would brook no opposition, and was therefore impatient of criticism. This sometimes caused him to be considered despotic toward those in his employ, but as long as his orders were strictly obeyed he was an easy taskmaster. An illustration of this is given in the following anecdote: A gentle-man, Mr. John J. Janney, an old citizen of Columbus, as he informs us, calling at his house, saw two men, one on the roof apparently making some change in a chimney top, the other sitting on a stone on the ground. Inquiring if Mr. Kelly was in the house, Mr. Janney was told that he might be found at a certain designated point with some men who were at work in a ditch. Upon reaching it, Mr. Kelly was found at the bottom of the ditch laying drain tile, not the modern tile for they had not yet come into use, but the flat paving tile; two hired men were standing by looking on. Mr. Kelly would not trust them to do the work even under his own personal supervision, but was as much besmeared with dirt and mud as either of his hired laborers.

Upon returning to the house Mr. Janney found that the two men who had been engaged on the chimney were quietly resting on the ground. Being accosted with the salutation that they seemed to be earning two dollars and a half a day very easily, one of them replied, "That is so, but we have gone just as far as Mr. Kelly told us how to go, and while we think we know exactly what we ought to do next, when you have worked for Mr. Kelly as long as we have you will know better than to do anything which he has not told you how to do. He will be perfectly satisfied to have us sit here all the afternoon and do nothing, if he does not come back and tell us what to do next. He is a capital man to work for if you know how to obey his directions exactly, but if you don't do that

he will not want you.'

Another anecdote illustrates Mr. Kelly's character, and shows how great an interest he took in the property and business interests of the State: While on a tour of inspection, the boat he was on came to a lock; Mr. Kelly got off the boat and while examining the lock discovered a lot of brush lodged against one of the gates; he called up the against one of the gates; he caned up the division inspector—a recent appointe who did not know Mr. Kelly by sight—and pointing to the brush, said, "Why don't you remove that brush? it is liable to cause damage if not removed." The inspector replied, "Well, I've been trying to get a man to go in there and take it out but have not found. in there and take it out, but have not found one as yet." Without another word Mr. Kelly, clothes and all, plunged into the canal and cleared out the brush. Then, dripping with muddy water, he went up to the aston-ished inspector and said, "My name is Alfred Kelly; some political influence secured your appointment to this position, but we shall have no further use for your services. I will send another man to fill your place immediately.

The Ohio canal was the great life-work of Mr. Kelly, and although a public work, Mr. Kelly gave so much of himself both to its origin and construction, was so devoted and untring in its behalf, surmounting all difficulties, and was with all so economical in its management that when in 1835 the Ohio canal, connecting the Ohio river with Lake Erie, was completed, the actual cost did not

exceed the estimate.

During the memorable financial crash from 1837 to 1841 he, then living at Columbus, where he resided until his death, was appointed fund commissioner. While holding this responsible position during that critical period the State of Mississippi repudiated her debt. Pennsylvania, Indiana, Illinois, and perhaps other States, had failed to pay the interest on their bonds. The State of New York and the government of the United States were in the New York market seeking in vain to raise money. The Ohio treasury had not enough money to pay her January interest. He was in New York endeavoring to raise money for that purpose by the sale of bonds and prevent the disgrace of bank-ruptcy. In the midst of it, resolutions were introduced and backed by certain Solons in our legislature, to follow the example of Mississippi and repudiate our debt; and in Illinois the same disgrace was being urged for adoption. Communication was slow, the mails being carried by stage coach.

Capitalists in New York, in view of these resolutions and the character of the times, refused to lend the State of Ohio a single dollar on its credit. But at last and just in time to save the State, Kelly backed Ohio by giving his own individual notes for it, to an amount more than twice what he was then worth, risking the impoverishment of himself and his family; but he raised the money and paid the interest. Some of these notes

are now in possession of his family, or were at his death, which occurred at the beginning of our late war.

Through his financiering, his system by this time having become known and appreciated, Ohio's bonds went up from fifty cents on the dollar to much above par, and have ever since remained there. Those who bought them at a low figure became, and justly and fairly so, enriched by the investment.

After saving the State's credit in New York by pledging more than twice the aggregate of his own life-accumulations, and before the marked advance in Ohio bonds, he made an expose of the State finances, and fore-shadowed the necessity for the adoption of a new system of taxation. These considerations led to his being sent again to the State Senate. There he introduced and carried through the tax law of 1846, the principle of which was—saving a blunder, which the Supreme Court has held prevents the deduction of debts from credits—incorporated into our present constitution, and which, by letting the "blunder" part of the constitution "slide," is our present tax law, passed in 1859.

Through the influence of ex-Governor Dennison, the Kelly system has been adopted for the District of Columbia, and the fierce opposition against its introduction there enables us to realize the difficulties with which Kelly, on its first introduction, had to contend in Ohio. Men who invest \$100,000 in one kind of business, and are free from taxation, will look with complacency upon the \$100,000 of their neighbors, invested in real estate, taxed to bear all the expenses of government to protect both; and will strenuously object to being compelled to pay an equal share. But after one year no one will attempt or desire to return to the former partial and unjust

system.

At the same session of 1846 the currency of the State was worthless. The people were suffering from losses entailed by the Bank of Gallipolis, the new Bank of Circleville, etc. Kelly then introduced and procured the passage of the State Bank and Independent Bank Laws, requiring them to redeem their issues, dollar for dollar, in gold, at the will of the holder, without loss; and made each branch of the State Bank liable for the issues of every other branch. This was the banking system in force at the beginning of the late war, and which was superseded by our present national banking system; the federal statutes governing which were copied from Kelly's law. Kelly's system was the best the State ever had, and as good as that ever possessed by any State in the Union. This is proved by the fact that it was taken as the model to frame the national system.

Any enterprise in which Mr. Kelly became interested was considered almost certain of success; so great was the confidence he inspired, that when in 1847 the prospects of the Cleveland, Columbus and Cincinnati Railroad became so dark that it was almost

determined to abandon the attempt to construct the road, its friends made a last desperate rally, and Mr. Richard Hilliard, of Cleveland, came to Columbus to induce Mr. Kelly to take charge of its affairs. Hilliard represented the almost hopeless condition of the enterprise and that unless he came to their rescue the venture would be Although the interview was likely to fail. prolonged until late in the night he was compelled to retire with a negative answer. next morning Mr. Kelly went to him and told him that he had reconsidered the matter, that it was of such great importance to the interests and welfare of the State that he felt it his duty to accede to his propositions. He accepted the presidency of the road, and from that moment its success was assured. He entered upon the work with an energy and vim only exceeded by his exertions in behalf of the Ohio canal. With his own hands he dug the first spadeful of dirt and laid the last rail.

In stature Mr. Kelly was between five feet seven and eight inches; he was compactly built, neither broad nor slender; his head was set firmly, his appearance being that of a man carved out of a block of marble. He neither affected popular manners nor sought popularity. He possessed, emphatically, the fortiter in re, with but little or none of the suaviter in modo. His mind worked with the accuracy of the geometric lathe, and his action and conduct adhered strictly to the line of his ideas. This made him unpopular with all who sought, from personal interest or supposed better information, to induce him to depart from or vary plans or purposes he had formed; to such he listened with impatience, and showed them but little respect, but adhered firmly to his purpose and moved straight toward the object he had in view. This enabled him to construct the canals within the time and for the sums estimated. He would not vary the proper line of the work to accommodate any local interests, and this caused many people to feel hardly toward him; but feeling that he was right, he was heedless of their clamor and opposition.

"He despised cant and hypocrisy. An incident related to me, and occurring before I knew him, but which I am certain occurred, well illustrates this. One session, when he was urging some measure in caucus, a member, who was opposed to it, but who could not answer Kelly's arguments, began to talk of obeying the dictates of his conscience, and all that. Kelly settled his neck and head stiffly on his shoulders, buttoned his coat up to the throat, and arose almost choking with wrath. Said he: 'Mr. Chairman, when a mere politician comes here, and in place of good sense and sound argument begins, by a formal parade, to set up his conscientious scruples and tender piety, I set him down for a rascal right from the start—right from the start.' The scrupulous member subsided.

"Kelly tried in every way to get the Legislature to adopt his plan for the semi-

annual collection of taxes—finally tacking it on the general appropriation bill; but he failed, because the House voted it down. When that vote was taken, the end of the session and the time for adjournment was at hand. It was after midnight—a night dark, blustering, and stormy; snow and rain commingled, and falling thick and fast. Kelly listened with stern anxiety to the roll-call and the responses of the members. The 'No,' as uttered by many, was not only emphatic, but delivered in a tone and manner as if intended for him to hear and see that he was aimed at, and indicated intentional insult to him. The result was announced, the measure declared lost, and Kelly buttoned his coat up to his throat, drew tightly around his neck his fur collar, adjusted his head squarely and firmly upon his shoulder, and started for the door. Feeling mortified at the disrespect shown him I sought his side and expressed my regret for what had transpired. 'Oh,' said he, 'I am used to it. It don't trouble me. These are honest, well-meaning men enough; but I do wonder how many of them were ever able to find their way from home to Columbus. I hope they will find their way back in safety, and turn their attention to something they know more about than legislation. Sir, said he, 'remember this: I would rather deal with fifty scoundrels than one fool; the rascal knows when you have him, but the fool knows nothing. then, with a manner that spoke his assurance of the adoption of the law for the semiannual collection of taxes at no distant day, in spite of the action of that Legislature, the old man disappeared in the darkness of the street, in that midnight storm, his living voice to be heard no more forever in the councils of the State.

After retiring from public life he gradually declined in vitality and strength, broken in health by his arduous labors in behalf of the people of the State. On December 2, 1859, he passed away, after having lived a life of as great if not greater usefulness to his fellow-citizens of Ohio than that of any other one man the State has had.

One of the most elegantly courtly men known to the legal profession in Ohio was Henry Stanbery. He was in stature about six feet, erect, with dignified bearing and a very pleasant face. His features were large and strongly marked, and when suffused with the light of his genial spirit nothing could be more captivating. Indeed he was grace itself and seemed as a prince among men. The memory of his fine presence is to many living a valued lifetime possession. And he was deserving of the regard which his presence inspired, for he was the soul of honor and integrity; scorned to mislead a court or jury, or to deceive an opponent by any misstatement of law or fact.

He was kindness itself, never lost his control nor indulged in petulance nor passion. He was one of the first lawyers in the United States and entitled to the highest veneration

and regard. He was a member of the Episeopal communion and in all his deportment and career showed his love for justice, truth and beauty.

Henry Stanbery was born in New York

HON, HENRY STANBERY.

city, and in 1814, when a lad of eleven years, came with his father, a physician, to Zanesville. He was educated at Washington College, Pennsylvania, studied law at Zanesville, and was admitted to the bar in 1821, when he was invited by Hon. Thomas Ewing to begin the practice at Lancaster and ride the circuit with him, which offer he accepted and for many years resided there.

When, in 1846, the office of attorney-general of Ohio was created he was elected by the General Assembly to be its first occupant. He then removed to Columbus, where he resided during his entire term of five years In 1850 he was a member of the Constitutional Convention from Franklin county, and was conspicuous in its debates.

On leaving Columbus he for several years practised law in Cincinnati. In 1866 he was appointed Attorney-General of the United States by President Johnson, which office he accepted from a desire to assist in carrying the government safely through the perilous times following the war. He resigned this office to become one of the counsel of the President upon his impeachment. His health at that time was so delicate that most of his arguments on that trial were submitted on paper. He died in New York in 1883, aged 80 years.

Hon. Henry C. Noble, now of Columbus, who in his boy-days knew him at Lancaster, Noble's birthplace, and later was his pupil in the law, gave in a personal sketch this synopsis of his professional qualities:

"He was from the first a most accurate lawyer, fond of technicalities and ready in applying every refinement of pleading and all the nice rules of evidence and practice.

It was, however, in the discussion of the general principles of the law which arose in his cases in which he generally delighted. Upon all young men who studied the law he would urge the essential importance of mastering general principles in order to attain the highest success. He was especially fond of the Latin maxims, which he regarded as the very embodiment of terse wisdom.

In his manner as a practitioner Mr. Stanbery was a model. Always courteous and dignified, he was nevertheless as alert and ready as a soldier on guard. He was quick to perceive the slightest weakness of an opponent's cause, and on it dealt his blow with overwhelming suddenness.

His manner in the examination of witnesses was admirable. He never bullied nor attempted to mislead them, but with sincere frankness and winning address would secure from the reluctant or the unfair witness often full and true answers to his questions.

His language was of the purest English and his style free from all the glitter of mere words. To court and jury alike his speeches were clear. His arguments on the law were models of orderly arrangement and logical force, often eloquent from these very qualities. His addresses to the jury were masterly discussions of the facts, ingeniously mustered to sustain his views, and were exceedingly attractive.

In writing he was a marvel of accuracy. Often his manuscripts were printed from the original draft, with scarcely a correction. He was systematic and thorough as a worker, never putting off anything for a more convenient season, but at the earliest moment analyzing his case and settling the law and the facts which would control it."

WILLIAM DENNISON, the first of Ohio's trio of war governors, was born at Cincinnati, Nov. 23, 1815. His father was the proprietor of the highly popular and widely known "Dennison House" in that city, and a grand specimen of the old style of Western landlords. He graduated from Miami university, and entered upon the study of law in Cincinnati in the office of Nathaniel G. Pendleton and Stephen Fales. In 1840 he was admitted to the bar; shortly afterward he married a daughter of William Neil, of Columbus, the famous stage proprietor in the days of stages, and removed to that city.

He practised law until 1848, when he was elected to the Ohio Senate by the Whig party. About this time he became interested in banking and railroads, was made president of the Exchange Bank and also of the Columbus and Xenia Railroad Company. In 1856 he was a delegate to the convention which inaugurated the Republican party, and the same year took a prominent part in the convention which nominated John C. Fremont for the Presidency. In 1860 he was elected governor of Ohio by the Republicans. He was elected chairman of the Republican convention at Baltimore which in 1864 renominated President Lincoln, and was by him appointed Postmaster-General, hold-

ing that position until 1866, when President Johnson began to assail the Union party and he resigned his portfolio. In 1880 he was a leader of the friends of Senator John Sherman in the effort to secure his nomination in the National Republican Convention of that year. Governor Dennison accumulated a handsome fortune in his private business and contributed largely to Dennison College at Granville, Ohio. He died at his home in Colum-

bus, June 15, 1882.

Governor Dennison was a man of fine social connections, tall, courtly and elegant in manner, with a foresight and ability unsuspected by those not intimately associated with him, but which was fully demonstrated during his administration as Governor of Ohio, during which the true, pure metal of the man rang out with a resonance that should have left no doubt as to its composition. Notwithstanding that in his political debates he had given evidence of ability and unex-pected reserve power, the general public with singular pertinacity held to the opinion that he was superficial and of mediocre ability, and even after he had clearly shown by the valuable results of his measures that he had been misunderstood and his ability underestimated the Ohio public were slow to acknowledge his merits and give him due credit for his valuable services to the State and nation.

In the confusion and excitement at the outbreak of the war almost every citizen felt that he knew just what ought to be done. Troops should be raised and sent to the front at once. Such matters as equipment, organization, etc., did not enter into their calculations, and because this was not done by the saying of it the governor must be inefficient. The critics having prejudged Governor Dennison said so, and it seemed as though each citizen had received a special commission to join the critics and malign Every step he took brought down senseless abuse from every quarter. Dennison bore it nobly, not a word of reproach escaped him, and when for some months the newspapers of the State were abusing him for mismanagement at Camp Dennison he uttered no complaint, but generously kept silence, when in truth he had at that time no more to do with the management of Camp Dennison than any private citizen of the State, it being under the control of the national government. A word from the officer in command at Camp Dennison would have shown the injustice of this abuse. Whitelaw Reid, in his comprehensive and valuable work on "Ohio in the War," says in reference to this unjust criticism: "To a man of his sensitive temper and desire for the good opinion of others the unjust and measureless abuse to which his earnest efforts had subjected him was agonizing. But he suffered no sign to escape him, and with a single-hearted devotion and an ability for which the State had not credited him he proceeded to the measures most necessary in the crisis.

He succeeded in favorably placing the loan

authorized by the Million War bill. Having secured money, the "sinews of war," he then looked around for arms, of which Ohio had a very meagre supply, and learning that Illinois had a considerable number, he secured five thousand muskets from thence and proposed a measure for uniting all the troops of the Mississippi valley under one majorgeneral.

It was through Gov. Dennison that West Virginia was saved to the Union. He assured the Unionists of that State that if they would break off from old Virginia and adhere to the Union, Ohio would send the necessary military force to protect them. And when afterward it became necessary to redeem this pledge Gov. Dennison sent Ohio militia (not mustered into the United States service at all), who, uniting with the loyal citizens, drove the rebels out of West Virginia.

His course in dealing with Kentucky at the commencement of the war, although afterward proven to be a mistaken one, was the same as that adopted by the general govern-

ment.

One action of Gov. Dennison's during his administration as governor shows him to have been a man courageous enough to meet almost any emergency. When the general government was about to refund to Ohio money used for military purposes the State auditor and the attorney-general decided that this money could not legally be used again for military purposes. Dennison therefore, by means of his personal agents, caused it to be collected from the United States government and used it for military purposes instead of turning it into the Ohio State Treasury. It was again refunded to Ohio, his agents again collected it, and it was thus used over and over again, so that he intercepted in all \$1,077,600. The measure was a highhanded one, but thoroughly justifiable upon the ground of public necessity. For every dollar he presented satisfactory accounts and vouchers to the Legislature, and not a shadow was ever cast upon the integrity of the governor or his officers through whom it was disbursed.

Reid's "Ohio in the War" sums up his administration as follows: "Without practical knowledge of war, without arms for a regiment, or rations for a company, or uniforms for a corporal's guard at the outset, and without the means or the needful preparations for purchase or manufacture, the administration had, in less than a month, raised, organized and sent to the field or to the camps of the government an army larger than that of the whole United States three months before. Within the State this wonderful achievement was saluted with complaints about extravagance in rations, defects in uniforms, about everything which the authorities did, and about everything which they left undone. Without the State the noise of this clamor was not heard, and men saw only the splendid results. The general government was therefore lavish in its The governor under whom these praise.

things were done grew to be the most influential of all the State executives at Washington at the very time when at home he was the most unpopular of all who had within the memory of a generation been elevated to that office.

It was his misfortune that the first rush of the war's responsibilities fell upon him. Those who came after were enabled to walk by the light of his painful experience. If he had been as well known to the State and as highly esteemed two years before the outbreak of the war as he was two years afterward, his burdens would have been greatly lightened. But he was not credited with the ability he really possessed, and in their distrust men found it very 'easy to assure themselves that he was to blame for everything.

. . . . He met the first shock of the contest, and in the midst of difficulties which now seem scarcely credible organized twenty-three regiments for the three months' service and eighty-two for three years, nearly one-half the entire number of organizations sent to the field by the State during the war. He left the State credited with 20,751 soldiers above and beyond all calls made by the President upon her. He handled large sums of money beyond the authority of law and without the safeguard of bonded agents, and his accounts were honorably closed."

His fate was indeed a singular one. The honest, patriotic discharge of his duty made him odious to an intensely patriotic people. With the end of his service he began to be appreciated. He was the most trusted counsellor and efficient aid to his successor. Though no more than a private citizen, he came to be recognized in and out of the State as her best spokesman in the departments at Washington. Those who followed him on the public stage, though with the light of his experience to guide them, did not (as in the case of most military men similarly situated) leave him in obscurity. Gradually he even became popular. The State began to reckon him among her leading public men, the party selected him as President of the great National Convention at Baltimore and Mr. Lincoln called him to his Cabinet."

coln called him to his Cabinet."

Joseph R. Swan, jurist, was born in Westernville, Oneida county, N. Y., in 1802, and in 1824, after studying law with his uncle, Gustavus Swan, in Columbus, he was admitted to the bar. In 1854 the opponents of the repeal of the Missouri Compromise elected him Supreme Judge by over 77,000 majority, and he eventually became Chief-Justice. His prominent characteristic on the bench was great conscientiousness, so that neither personal interest nor sympathy could in any manner influence his judgment of right or law. He prepared a number of elementary law books which stand very high with the profession and have been of widespread utility, as "Swan's Treatise," an indispensable companion for every justice of the peace; "Guide for Executors and Administrators," "Swan's Revised Statutes,"

"Pleading and Practice," etc. He died December 18, 1884.

The late NOAH H. SWAYNE, Judge of the Supreme Court of the United States, was born in Culpeper county, Virginia, in 1804, of Quaker parentage. When nineteen years of age he was admitted to the bar and, disliking slavery, came to Ohio. At the age

NOAH H. SWAYNE.

of twenty-six he was appointed by Gen. Jackson United States Attorney for Ohic, when he removed from Coshocton, where he was settled, to Columbus. In 1839 President Van Buren appointed him United States District Attorney. He soon acquired high reputation as a jury lawyer, his peculiar forte being the examination of witnesses and in skilful analysis of testimony. On retiring from this office he took no part in politics until 1856, when in the Fremont campaign he made speeches against the extension of slavery.

In February, 1862, after the decease of Justice McLean, of the Supreme Court, he was appointed by President Lincoln his successor. This was by the unanimous recommendation of the Ohio delegation in Congress and in accordance with the oft-repeated expressed desire of Justice McLean, in his lifetime, that in the event of his decease he would be the best person for his successor. This opinion of Judge McLean was coincided in by the leading members of the bar in Washington City, who had witnessed his display of eminent ability in some cases which he had argued before the Supreme Court and which also had a like effect upon the judges before whom he had appeared. He left several sons, the oldest of whom is the eminent Gen. Wager Swayne, now of New York city, whose first name was the family name of his mother, a Virginia lady. Wager Swayne was at one time a partner with his father in the practice of the law. Another son, F. B. Swayne, is now a law partner with a son of ex-President Hayes in Toledo.

ALLEN G. THURMAN was born the son of a clergyman, Rev. P. Thurman, in Lynchburgh, Va., November 13, 1813. The next year the family removed to Chillicothe. He was educated at the Chillicothe Academy, and studied law with his uncle, William Allen, later governor, and Noah H. Swayne, afterward judge of the United States Supreme Court. In 1835 he began the practice at Chillicothe. In 1844 he was married to Mary Dun, of Kentucky, and also elected to Congress. In 1851 he was elected a judge of the superior court of Ohio, and from 1854 to 1856, the date of the expiration of his term, was chief-justice. The "Ohio Reports" containing his decisions gave him a wide reputation as a lawyer and jurist. In 1853 he removed to Columbus, and on leaving the bench resumed his law practice. "His opinions on important legal questions were much sought after and relied upon by the bar all over the State, and he was retained as counsel in the supreme court in many of the most He has always been a important cases. laborious student; indefatigable in the preparation of his cases, and a forcible and direct speaker, who wastes no time on immaterial

In 1868 he was first elected to the United States Senate, and was a leading member for many years, where he became chairman of

the judiciary committee.

"In the session of 1877-78 he reported the bill commonly called the 'Thurman Bill,' to compel the Pacific railroads to secure their indebtedness of nearly seventy millions to the government, and supported it by a written report sustaining its constitutionality and propriety, and also by elaborate and able arguments in the debate that followed. The constitutionality of the bill was relentlessly assailed by its opponents, but the law has been sustained by the Supreme Court.

Judge Thurman has always been a Democrat of the strictest sect, and not inclined to run after temporary expedients in politics. He firmly believes that the welfare of the country depends upon the preservation of the Democratic party," and to a singular degree he has the respect of the public, irrespective of parties, for integrity and uprightness. In selecting him as their candidate in the can-vass of 1888 for the high office of Vice-President the Democratic party is widely judged to have especially honored themselves.

Prof. Leo Lesquereux, palæo-botanist, was born in 1806, in Fleurier, canton of Neuchatel, Switzerland. His ancestors were Huguenots, fugitives from France after the Edict of Nantes. He was destined for the church, but, at nineteen years of age, when he entered the Academy of Neuchatel, he met Arnold Guyot, and together they became much interested in natural science, toward which Lesquereux's tastes and disposition had always inclined. 'Completing his course in the Academy of Neuchatel, he went to Eisenach, and taught the French language while perfecting himself in the German language, preparatory to entering the University of Berlin.

In 1829 he returned to Switzerland as principal of the College of La Chaux-de-Fonds, canton of Neuchatel, but, becoming deaf, he gave up this position, and for twelve years supported himself by engraving watch-cases and manufacturing watch-springs; in the meanwhile, however, he continued his studies and researches in natural science, devoting his attention particularly to mosses and fossil botany. In 1832 he married Baroness Sophia von Wolffskeel, daughter of Gen. von Wolffskeel, of Eisenach, Saxe-Weimer.

His researches on peat-formations led to his being commissioned in 1845 by the Prussian government to make explorations on the peat-bogs of Europe. In 1848 he removed to the United States, first locating at Cambridge, Mass., and later at Columbus, Ohio, where he now resides. Appleton's "Biographical Cyclopædia" says of his career in

the United States:

"He became associated with William S. Sullivant in the study of American bryology. Together they published 'Musci Americana Exsiccati' (1856; 2d ed., 1865), and subsequently he assisted Mr. Sullivant in the examination of the mosses that had been collected by Capt. Charles Wilkes on the South Pacific exploring expedition and by Lieut. Amiel W. Whipple on the Pacific railroad exploration, and finally in his Icones Muscorum' (Cambridge, 1864). His own most valuable researches, beginning in 1850, were studies of the coal formations of Ohio, Pennsylvania, Illinois, Kentucky, and Arkansas, on which he contributed memoirs to the reports of the State surveys. His investigations on the coal flora of Pennsylvania are of He prepared a 'Catalogue special value. of the Fossil Plants which have been Named or Described from the Coal Measures of North America' for the reports of Henry D. Rogers in 1858, and in 1884 furnished 'The Coal Flora' (3 vols. of text, with an atlas) for the second geological survey of Pennsylvania, which is regarded as the most important work on carboniferous plants that has thus far appeared in the United States. Since 1868 parts of the material in fossil botany have been referred to him by the various national surveys in the field, and he has contributed to their reports the results of his investigations. He is a member of more than twenty scientific societies in the United States and Europe, and in 1864 was the first member that was elected to the National Academy of Sciences. The titles of his publications are more than fifty in number, and include twelve important volumes on the natural history of mportant volumes on the natural history of the United States, besides which he has pub-lished 'Letters Written on Germany' (Neu-chatel, 1846) and 'Letters Written on Amer-ica' (1847-55). He has also published with Thomas P. James, 'Manual of the Mosses of North America' (Boston, 1884)." A few years since a leading New York

journal made the statement that it was somewhat remarkable that a city like Columbus should be the home of three such eminent scientists as Prof. Leo Lesquereux, William S. Sullivant, and Dr. T. G. WORMLEY. Of the first two sketches have already been given; the latter, now of the University of Pennsylvania, but formerly professor of chemistry and toxicology in the Starling Medi-

ical College at Columbus, is the author of "the most valuable contribution to toxicology and medical jurisprudence that America has ever made to medical science, and in many of its features is unsurpassed by any contribution to these departments from European science."

Mrs. T. G. Wormley ad nat, del. et sculp.

FORMS OF POISON CRYSTALS.

[The above are copies of two of the seventy-eight engravings in the "Micro-Chemistry of Poisons," which show the exact appearance of the Poison Crystals after doing their work of death upon cats and dogs with different poisons, and were obtained by analysing their blood and the contents of their stomachs.]

This work is an elaborate chemical and microscopical analysis of the nature and operation of many different poisons in their relation to animal life. It is the result of years of patient experimenting, and at the cost of the lives of some 2,000 cats and dogs of the city of Columbus, whose blood and contents of whose stomachs were analyzed to determine the exact appearance of the poison-crystals after producing death.

That the exact appearance of these poisoncrystals should be reproduced with the utmost accuracy was absolutely necessary to give to the world the benefits of Dr. Wormley's researches.

Throughout the course of his experiments he had been assisted by his wife, who, with remarkable accuracy and delicacy, had made drawings of the crystalline forms. This was a work requiring the most patient and persevering labor, the difficulty of which was immeasurably increased by the volatile character of the forms to be represented, which could only be seen under the microscope, and then but for a few seconds at a time, necessitating their reproduction again and agair antil the drawings were completed.

When the work was ready for publication the most distinguished engravers in the country were consulted as to the engraving of the drawings. They all agreed that it would take years of labor, almost a fortune of money, and that there were but one or two engravers in America possessed of the skill necessary to do the work properly. One of them engraved a plate but it was not acceptable.

Among other engravers consulted was Mr. F. E. Jones, of Cincinnati, long connected with the Methodist Book Concern. Impressed by the exceeding delicacy of the drawings, he said to Dr. Wormley, "Whoever made the drawings must engrave the plates." "Impossible," replied the doctor, "for the person who drew the figures knows nothing of engraving." "Whoever can draw like that on paper," said Mr. Jones, "can etch on steel." "It was my wife," said the doctor, beginning almost to despair of having his plates engraved, "and she knows nothing of etching or any other part of engraving." From an article published in the Ladies'

From an article published in the Ladies' Repository for January, 1868, we quote the following: "The doctor was at length persuaded to procure a steel plate and points. The artist prepared the plate, gave a few items of instruction and explanation to the doctor who was to carry his message and instructions home to his wife.

The indefatigable wife accepted the responsibility and went to work, and in a few weeks came to the artist's office with her etched plate, the product of her own hand, being the

first she had ever seen. She had no knowledge how to take an impression from the plate, nor an engraver's press with which to do it if she had. She was delighted and encouraged when she saw a proof of her first effort which was then taken for her by Mr. Jones. It was so good that with a little correction it might have been used; but she felt that she could do better, and the plate was cancelled. The number of steel plates necessary for the whole work was then ordered. Mrs. Wormley began the labor and in less than a year finished the etching of thirteen plates, containing in

all seventy-eight figures.

Encouraged by her success in the use of the point, Mrs. Wormley thought she would try the graver, a tool she had not yet used, and necessary in the finishing of the plates. Her success in that was equal to her etching. She then requested permission to use the ruling machine, of which she knew as little as she had known of the point or graver. In a little while she was mistress of the ruler, and presented to her husband the whole series of plates, the delicate touches of which defy criticism, even under the scrutiny of a microscope! Indeed, the details of many of the figures can only be obtained by means of the lens. They have been pronounced by competent judges the finest set of microscopic plates ever produced in Europe or America. We look upon the result as one of the most wonderful achievements of womanly patience, skill, and perseverance, the full greatness of which it is impossible to make apparent to those who are unacquainted with the difficulties and mysteries of the engraver's

Dr. Wormley, although born at Carlisle, Pa., was a resident of Ohio for about a quarter of a century. He has been elected to honorary membership in many of the most prominent scientific societies of Europe and America. His wife is a native of Ohio, a daughter of Mr. John L. Gill, one of the oldest residents of Columbus, and first president of the Columbus board of trade, and to whom the city is more indebted than to any other citizen for the development of its manufacturing interests.

PHINEAS BACON WILCOX was born in 1798 on "Forty Rod Hill," his father's farm near Middletown, Conn., and died at Columbus in 1863. He was educated at Yale, came to Columbus in 1824, and became eminent as a land and also as a chancery law-

yer. He was by turns prosecuting attorney, reporter for the Supreme Court and United States commissioner, which last office he resigned rather than be made instrument in remanding a fugitive slave to bondage. He was a fine classical scholar, and had one of the finest law libraries in the West. He had deep religious convictions and was said by a friend to have lived upon Coke and the Bible. He prepared various law works, as "Ohio Forms and Practice," "Practical Forms Under the Code of Civil Procedure," etc. With politics he would have nothing to do, other than voting, although a staunch Republican. He never doubted but that the rebellion would be squelched, but the great peril would come after the war from want of loyalty of the South to the General Government.

Samuel Galloway was born of Scotch-Irish stock in 1811 at Gettysburg, Pa., and died at Columbus in 1872. He graduated with distinguished honor at Miami university in 1833; was for a time a professor there and at South Hanover, Indiana; later was admitted to the bar at Chillicothe, where he became a partner of Nathaniel Massie. In 1843, being chosen secretary of state, he removed to Columbus. In the session of 1854-5 he represented the Columbus district in Congress, being elected by the Republicans. His speech there on the Kansas bill was a theme for widespread eulogy, alike in this country and in Europe. During the war he was judge advocate for the examination of the prisoners at Camp Chase, and was in constant private correspondence with Mr. Lincoln, who set a high value upon his advice and statesmanlike qualities. He was the trustee for several of the State benevolent institutions and took a prominent part in the councils of the Old-school Presbyterian church. As a lawyer he had great power with a jury, and in wit and humor on the political arena he had scarcely an equal His reputation in this respect anywhere. was late in life a source of regret to him, as the same was with Thomas Corwin. Both gentlemen found that the gathering crowds when they spake came to be amused rather than instructed, which each in turn experienced was an injury to his reputation for the possession of the solid qualities of mind and character which along can bring respect and confidence.

We here insert a curiosity from the *Columbus Gazette* of Aug. 20, 1822. At an early day there was a law offering a bounty for the scalps of squirrels. Whether in force at that time we do not know; if so, it must have made quite a draft upon the public treasury.

Grand Squirrel Hunt!—The squirrels are becoming so numerous in the county as to threaten serious injury, if not destruction, to the hopes of the farmer during the ensuing fall. Much good might be done by a general turnout of all citizens whose convenience

will permit, for two or three days, in order to prevent the alarming ravages of these mischievous neighbors. It is therefore respectfully submitted to the different townships each to meet and choose two or three of their citizens to meet in a hunting caucus, at the house of Christian Heyl, on Saturday, the 31st inst., at 2 o'clock P. M. Should the time above stated prove too short for the townships to hold meetings, as above recommended, the following persons are respectfully nominated and invited to attend the

meeting at Columbus:

Montgomery, Jeremiah McLene and Edward Livingston. Hamilton, George W. Williams and Andrew Dill. Madison, Nicholas Goetschius and W. H. Richardson. Truro, Abiathar V. Taylor and John Hanson. Jefferson, John Edgar and Elias Ogden. Plain, Thomas B. Patterson and Jonathan Whitehead. Harrison, F. C. Olmstead and Capt. Bishop. Sharon, Matthew Matthews and Bulkley Comstock. Perry, Griffith Thomas and William Mickey. Washington, Peter Sells and Uriah Clark. Norwich, Robert Elliott and Alanson Perry. Clinton, Col. Cook and Samuel Henderson. Franklin,

John McIlvain and Lewis Williams. Prairie, John Hunter and Jacob Neff. Pleasant, James Gardiner and Reuben Golliday. Jackson, Woollery Coonrod and Nicholas Hoover. Mifflin, Adam Reed and William Dalzell.

In case any township should be unrepresented in the meeting those present will take the liberty of nominating suitable persons

for said absent township.

RALPH OSBORN, GUSTAVUS SWAN, CHRISTIAN HEYL, JOHN A. McDOWELL.

A subsequent paper says: "The hunt was conducted agreeably to the instructions in our last paper. On counting the scalps it appeared that 19,660 scalps were produced. It is impossible to say what number in all were killed, as a great many of the hunters did not come in. We think we can safely challenge any other county in the State to kill squirrels with us."

Franklin county at the period of this squirrel-hunt must have been in the course of an army of emigrating squirrels. The exodus of squirrels was an occasional sight in the early part of this century in "the new country," as the West was generally termed. A personal experience is in place here. Early on a November morning of 1844, after a night's rest in the cabin of a mountaineer, while on a pedestrian tour through Western Virginia, passing through an open forest, we suddenly found ourselves in the midst of an immense multitude of squirrels. The woods were fairly alive with them. Thousands must have been under our view without turning our head. Their tameness was surprising—close, thick around us, almost under our feet were the graceful, nimble, little creatures, hopping around and evidently enjoying themselves.

They were of various colors, gray, red and black. The gray was the predominant color, and those were the largest and most plump. Only about one in twenty was black, and he was black as ink. Later we were told they had been for a day or two previously swimming the Kanawha, and therein multitudes in the

high wind that had prevailed had perished.

The theory of their emigration was that in their old homes the "mast," as beech nuts, walnuts, chestnuts, etc., were termed, had given out, and they were moving north to find a more prolific region for their sustenance during the cold of the approaching winter. They were evidently under some leadership and knew where to go; perhaps might have sent out advance couriers on tours of exploration and, guided by their reports, had gathered as a mighty host with banners and under some chosen Moses among them were moving toward the promised land.

HAYDEN FALLS are situated some 12 miles northwest of Columbus, on a small creek which empties into the Scioto river, about 100 rods from the falls. The rock formation thereabouts is of limestone, and the water coming over the rocky ledge has a fall of about sixty feet; the amount of water is not large and, like all western streams, the quantity varies according to the season of the year. Owing to the remoteness of the falls from any of the public highways and railways, it has not been much visited by the people, who have little idea of the wild, picturesque beauty of the spot, which is enhanced by contrast with the general prairie formation of this part of the State.

Westerville, 14 miles north of Columbus, on the C. A. & C. R. R., in the centre of a fine agricultural country, is the seat of Otterbein University. Newspaper: *Public Opinion*, A. R. Keller, editor and publisher. Churches: 1 United Brethren, 1 Methodist, 1 Presbyterian, 1 Evangelical, and 1 African Methodist Episcopal. Bank of Westerville, O. H. Kimball, president, Emery J. Smith,

cashier.

Industries.—People's Mutual Benefit Life Association, Farmers' and Stock-Breeders' Live Stock Insurance Association. Population in 1880, 1,148. School

census in 1886, 393; Thos. M. Foutz, superintendent.

CANAL WINCHESTER is 16 miles southeast of Columbus on the C. H. V. & T. R. R. and Ohio canal, and is a substantial and thrifty village. Newspapers: Winchester Times, Independent, B. F. & O. P. Gayman, editors and publishers. Churches: Reformed, Methodist Episcopal, United Brethren and Lutheran.

Industries.—C. B. & D. H. Cowan, flour and feed; N. C. Whitehurst, flour and feed; Geo. Barries, doors, sash, etc.; Geo. Powell, drain tile, also manufacturer of force pumps and wood and wire fences. Population in 1880, 850. School census

in 1886, 288; W. H. Hartsough, superintendent.

Franklin County Indian Story.—An interesting anecdote, illustrating the peculiar characteristics of the Indians as our first settlers of Columbus found them, is related of Keziah, the youngest daughter of John and Mary Hamlin.

In 1804 Mr. Hamlin built the first cabin east of the Scioto river, on the spot where Hoster's brewery now stands, and here, Oct. 16, 1804, his daughter Keziah,

the first white child in Columbus, was born.

At this time a tribe of Wyandot Indians were located near a bend in the river just below the present Harrisburgh bridge. They were very friendly to the Hamlins, and were specially fond of Mrs. Hamlin's freshly baked bread. On bread-baking days they would come to the cabin, and lifting aside the curtain which served for a door, enter and help themselves to the contents of the larder without asking permission or saying a word to the occupants. Upon leaving they would throw a hunk of venison or whatever game they had upon the floor as

compensation, and then silently take their departure.

One day when Mrs. Hamlin was attending to her household duties with nobody present save her infant daughter, who was calmly sleeping in her crib, several of the Indians entered the cabin, and without saying a word deliberately took up the sleeping infant and carried her away with them to their village, leaving Mrs. Hamlin trembling with fear and anxiety for the safety of her child. As the hours passed by and the child was not returned, she suffered the greatest mental anguish and suspense, until, toward the close of day, her sufferings were relieved by the reappearance of the Indians bringing with them the child, which wore a beautiful pair of beaded moccasins upon her little feet, and which the Indians had been industriously working upon all day, and had felt the necessity of having the child with them so as to insure a perfect fit. This token of the appreciation of a savage race for the kindness and hospitality shown them by early pioneers was preserved until a few years ago, when the scion of a younger generation of the same house unfortunately destroyed them when too young to appreciate their value.

Miss Keziah Hamlin, the heroine of this pleasing anecdote, married Dec. 19, 1822, David Brooks, of Princeton, Mass., and died Feb. 4, 1875, leaving a family of three sons and two daughters, one of whom, Mr. David W. Brooks, of the banking firm of Brooks, Butler & Co., kindly furnished us with the facts given

herein.

FULTON.

FULTON COUNTY was formed February 28, 1850, from Lucas, Henry, and Williams counties. Its surface is pleasantly undulating, and it is drained by tributaries of the Maumee. Its soil is fertile. Being originally heavily wooded, its early settlement was slow. Its area is 400 square miles. In 1885 the acres cultivated were 124,300; pasture, 25,032; woodland, 53,834; lying waste, 2,632; produced in wheat, 375,532 bushels; oats, 362,327; rye, 12,132; corn, 680,014; butter, 531,773 pounds; cheese, 452,240; wool, 188,294; sheep owned, 40,992. School census 1886, 6,696; teachers, 142. It has 33 miles of railroad.

TOWNSHIPS AND CENSUS.	1850.	1880.	TOWNSHIPS AND CENSUS.	1850.	1880.

Population in 1850 was 7,780; in 1860, 14,043; 1870, 17,789; 1880, 21,053, of whom 14,907 were Ohio-born; 1,485, New York; 902, Pennsylvania; 185,

Indiana; 569, British Empire; 731, German Empire.

Wauseon, named from an Indian chief, is thirty-two miles west of Toledo, on the L. S. & M. S. R. R., in the centre of a fine agricultural region. County officers in 1888: Probate Judge, Levi W. Brown; Clerks of Court, Albert D. Smith, James C. King; Sheriff, Daniel Dowling; Prosecuting Attorney, Mazzini Slusser; Auditor, Abram W. McConnell; Treasurer, John B. Schuetzler; Recorder, Harrison E. Randall; Surveyor, Lucius B. Fraker; Coroner, Levi E. Miley; Commissioners, James C. Vaughn, Daniel T. Biddle, Sylvester W. Baum. Newspapers: Northwestern Republican, Sherwood & Williams, editors; Democratic Expositor, J. C. Bollmeyer, editor; Fulton County Tribune, Republican, Smith & Knoft, editors and publishers. Churches: 1 Methodist, 1 Congregational, 1 Baptist, 1 Disciples, 1 United Brethren, and 1 Catholic. Bank of Wauseon, Barber & Callender, E. S. Callender, cashier.

Workshops and Employees.—Philip Schletz, jacks and cider-mill screws; H. H. Williams & Co., butter tubs and lumber, 18 hands; Meeks & Cornell, saw mill; W. J. Harper, Rugg machine; Wauseon Roller Mills, flour and feed, 18.—State Report for 1887. Population in 1880, 1,905. School census 1886, 576; W. S.

Kennedy, superintendent.

Wauseon was platted in 1854. The first building was erected by E. L. Hayes as a store and dwelling in April of that year. In 1870 it became the county-seat. Col. D. W. Howard, of this county, has given us the following valuable and interesting reminiscences of early experiences among the India's and pioneers of Fulton and adjoining counties:

My grandfather, Thomas Howard, with my father Edward, an uncle Richard Howard, with their wives and a sister, Mrs. Sidney Howard Nelson, left Yates county, N. Y., early in May, 1821, with two emigrant wagons. Arrived at Buffalo, grandfather, my mother and two Hunts, with a girl cousin and myself, the only children, shipped on board a thirty-two ton schooner, commanded by Capt. Anson Reed, for Fort Meigs; the men driving the teams (with three or four cows and a few

sheep) along the shore of Lake Erie; a trip of many weeks duration and of much hard-ship, as there were scarcely any roads much of the way.

The little vessel arrived safely after a very rough voyage of more than a week, entered the dark waters of the Maumee on the morn-ing of June 17, and in the dusk of the same evening anchored in the bay under the walls and frowning pickets of Fort Meigs.

The next morning the sight of the Indian

villages which lined either bank of the river, with the yells and boisterous revelry of the inhabitants at their sports, filled us with dismay who had never before beheld the face or heard the hideous yells of the native redman.

The principal settlement on the river at this time was "Orleanes," on the river flats, immediately under the fort, on the northwest bank, and was largely composed of Canadian French. Business was almost entirely confined to the Indian fur trade, which was

carried on by John and Frank Holister, Gen. John E. Hunt, Robert A. Forsyth and Judge Wolcott, whose wife was the daughter of the Indian chief Little Turtle.

The agriculture of the country was at this time so limited, that it scarcely produced sufficient for the support of the inhabitants; but the wild game of the country (such as wild turkey, venison and bear meat), which was abundant, made up for the deficiency. A little settlement was started at Waterville,

F. C. Blackman, Photo , Wauseon.

CENTRAL VIEW IN WAUSEON.

six miles above Maumee City, in 1818, by John Pray, Deacon Cross, Whitcomb Haskins and a few others; a few families, Elisha, Elijah, and Richard Gunn, Mr. Bucklin Scribner and Samuel Vance, settled at Prairie Damascus, on the north bank of the river, six miles above the head of the Grand Rapids (twenty-five miles above Fort Meigs), about 1818, and Pierce Evans, the Indian trader, at old Fort Defiance, at the mouth of the Auglaize river. The Indian mission was established ten miles above Fort Meigs on the right (south bank) of the river in 1821, and my father, Edward Howard, with two brothers, built their cabins at the head of the Rapids, during the winter of 1822-23, and were the first settlers above the mission (eight miles) on the south bank, with Uncle Pete Menard (Menor), a French trader, on the Indian reservation, on the south bank.

the Indian reservation, on the south bank.

The first settlers within the present limits of Fulton county were Valentine Winslow (whose wife was Celia Howard, a cousin of mine), Col. Eli Phillips and David Hobart, who came in the summer of 1833, all of whom have long since passed to the other shore except Col. Phillips, who is still living, hale and hearty, on the farm on which he built the first cabin. The old pioneer was active at the rearing of our Pioneer Cabin, several years ago, to commemorate the events of the early pioneers.

The Old Maumee Mission.—The Presbyterian Mission was established on the south bank of the Maumee, ten miles above Fort Meigs and eight below the head of the Rapids, in the year 1821 or 1822, about the time that my father and his two brothers moved to their lands at the head of the Rapids of the Maumee.

At the time of its establishment there was no settlement on the south side of the river above what is now the village of Waterville, and my father and his two brothers with the aid of the mission people cut the first wagon track, from opposite Waterville to the head of the Grand Rapids, winding up and over deep gullies, and across several considerable streams, such as the Tone-tog-a-nee (named from the great chief of the name, whose village was at its mouth), Kettle creek and Beaver creek, which had to be crossed by fording in order to reach their destination.

There were several large villages in this vicinity. Tone-tog-a-nee (at the mouth of the creek), Na-wash village on the Indian island immediately opposite the mission, and on the opposite side of the river Awp-a-to-wa-jo-win, or Kin-jo-a-no's Town, on the Indian reservation (opposite my father's at the head of the Rapids), San-wa-co-sack, on the Auglaize above Fort Defiance, and a large village at the mouth of the river and along the bay, with numerous smaller towns of less

note located on the banks of all the streams

in the country.

Rev. Isaac Van Tassel was the principal of the mission; Mr. Sackett and Rev. Mr. Coe, assistants, with their wives and several maiden ladies as teachers, and together with a few mechanics and laborers forming the community of white people that established and carried forward the enterprise successfully for many years; in fact sustained it in its work of Christianizing and civilizing the Indians until the tribes were by degrees moved to their far-off homes in the West and Northwest, on the Missouri, the Kansas and the Osage rivers and on the bays and rivers of the Straits of Mackinack.

Mission Schools.-I had a long acquaintance with these good missionary people and have no words but kindness for them. they may have accomplished but little in Christianizing the Indians, they did the best they could for them and with the best intentions. Their work was one of great difficulty: white men and half breeds sold whiskey to the Indians, used all efforts against their patronizing the institution, and hired the Indians to keep their children from school. It is easy for any one to appreciate the difficulty of establishing a school among these wild, fierce people—boys and girls who had never been restrained, or their freedom abridged in the least. To gather together one or two hundred boys and girls of all ages, from six or seven to twenty years, was no easy task; to ask them to come in out of the free woods, to close their Indian sports of fishing and hunting and paddling in their canoes, of riding on horseback, running races and other pastimes, was of course requiring great effort on the part of these young savages, and after a few days' experience in the school-room, with all its attendant restraints, it cannot be wondered that many of them took the trail back to their villages. having had enough of civilization.

I appreciate the situation, as I had the same experience and have not forgotten it to

this day.

After the Indians became acquainted with the mission people, and knew that they were true friends, their children were sent to the school and most of the time they had from eighty to one hundred and fifty in attendance.

The society bought a large and valuable tract of land, including an island of about three hundred acres, upon which they opened a farm, built a large mission house, and a commodious school-room; where the teachers held forth to us for six long hours every day except Sunday, when we had two good long old-fashioned Presbyterian sermons.

I have said we, and I do so for the reason that I had (what I then thought) a sad experience at the old mission. When I was between seven and eight years old my father placed me in the care of the Rev. Van Tassel, at the mission school. I was taken like the Indian boys from the woods, away from my sports and associates at the Indian village opposite my father's, where I had spent most

of my time, as free as the Indian boys and, like them, as wild as a partridge or wild

We spent the time at the village in summer, shooting bow and arrows, fishing or swimming in the river, and in many other plays and sports peculiar to young Indian boys, and you can imagine that it was almost death to shut us away from all these pastimes; and shut up to in a school-room (where the presiding genius was a sanctimo-nious old maid of the hard-shell, stiff-backed Yankee Presbyterian persuasion), where long prayers were said morning and evening, and not a smile or whisper allowed.

Many of the Indian boys brought to the school after a few days experience left between two days, and forever after kept at such a distance that they could never be caught or tempted back. I would have gladly followed their example and hid in the Indian villages, among which I had many friends, but Indians were too honest and would not have kept me

hid from my father and mother.

Every effort was made by these earnest missionaries, and always with the kindest manner, to induce these wild and untutored people to believe in the Bible and its teachings, but with limited success; they took education readily, but religion sparingly and doubtingly. Although the great end originally anticipated was not gained the mission did a good work; it educated many hundreds of the youths of these tribes, of whom many in after years in their new homes west of the Mississippi became good farmers and me-chanics and some of them are still living in Kansas and Indian Territory.

Sports of Indian Children.—We enjoyed our Saturday half holiday. In the winter season, when the river was frozen over, we skated on the ice, both boys and girls, and when there was snow we enjoyed ourselves sliding down the long hill on the bank of the

The sled was made of a strip of white elm bark about one foot wide and six or seven feet long, with a bark rope or string fastened to the forward end, in order to raise it above the uneven surface and guide it down the steep and slippery path. This was placed smooth side down, giving us the rough outside bark for a foothold. We would start this *Indian* shute at the top of the hill with as many boys and girls as could stand upright on the bark and a leader on the front holding the string to guide it down the slippery track. With lightning speed it would fairly fly down the hill and far out on the ice on the river if successfully guided; if not, you might be able to see a load of boys and girls piled up in the snow, or scattered along the hill. It took a brave boy with a steady hand to ride this Indian sled down those steep hills, for after the snow was packed and the path beaten it became as slippery as glass.

Another Indian game was to take two pieces of freshly peeled bark, a foot wide and three or four feet long, place the two insides together and then place them on the ground.

Now the game was to run and jump on the bark, the feet striking the rough bark of the upper piece, and unless well practised in the art, the upper bark would fly from under the moment the feet struck it. I have seen many a novice in the art fly off when his feet struck the bark as if he had taken his departure for some other planet. It took long and careful practise to be able to strike the slippery bark and not go down. This exercise created a great deal of amusement in our summer

Nut Gathering.—But the great enjoyable seasons were the maple sugar making in the spring, and gathering hickory nuts in the fall of the year. The latter always commenced in the Indian summer days in the fall, usually in November. After the frosts had loosened the nuts, they were showered down by every wind, and the ground would be white with them, all free from the shell, lying ready to be gathered by the Indian children or the coon and bears, that were very fond of these rich thin shelled nuts. These animals grew very fat on them, as there was always an abundance,

it being a great hickory country.

The abundance of the "shellbark" hickory in the woods at that day (a very few of which still remain) was a source of profit as well as pleasure. Many thousands of bushels were annually gathered by the Indians, purchased by the traders and shipped to eastern

Rev. Isaac Van Tassel, the head of the mission, was one of the kindest and purest of men, always just and generous. His wife, the daughter of Rev. Badger (one of the earliest missionaries of the West), was equally well fitted by her universal kindness of heart and manner to aid her husband in this noble Elder Coe was one of the active workers and became a great friend of the Indians; they in return gave him their full confidence and from his exceeding kindness called him the "Tender Heart." Mr. Thomas Mackelrath, one of the teachers, was always kind to us; Miss Riggs, one of the "old maid" teachers, was as kind to us as any mother could be, too good and noble a woman to remain an "old maid," which I believe

Mr. Van Tassel removed to a farm near Bowling Green, where he died about 1850. Mrs. Van Tassel survived her husband many years, dying in Maumee City a few years ago, the last survivor of the mission teachers. The kind-hearted old man, "Uncle Coe," as my father called him, died many years before Mr. Van Tassel. When the mission broke up, in 1835 or 1836, many of those still living returned to their homes in the East.

Dayton Riley.—Prominent in my memory of the characters of that time was Dayton Riley, a brother of the well-known William Riley, who was taken in Algiers and was a slave of the Arabs for a number of years. This man Dayton Riley wandered into this wilderness country about the time of the founding of the mission, and being a carpenter and handy at all work, was employed and

made his home at the mission until it broke He followed the life of a trapper and hunter, and after a hard and weary season of trapping would find his way back to the mission to rest and recruit his failing strength during his declining years. He became somewhat dissipated, as most of his occupation do sooner or later, but lived to quite an

advanced age.

Waseon and Ottokee were noble red men. Finer or more perfect specimens of the human physique, or of natural mental ability. are seldom found anywhere. Ottokee, the older of the two brothers (or half brothers, as they really were), was a man six feet high, weighing about two hundred pounds, and when speaking on the floor of the Council Lodge was as dignified and as noble in demeanor as a Clay or Webster, and had as much force and eloquence as their limited language would permit.

Wa-se-on (which signifies far off) was .not so fleshy, but had a heavy frame and was quite as large a man as his older brother Ottokee, yet not so great an orator, but a very intelligent man and a good speaker.

There were two other brothers of this family named No-tin-no (or the calm) and Wa-sa-on-quet. The latter was at one time the head chief of the Ottowas of the Maumee valley, but through dissipation and debauchery, consequent upon his intercourse with the white traders, he was "broken" of his office and reduced to a private member of the tribe. He was one of the most eloquent speakers I ever heard. He died from the effects of whiskey soon after being removed west of the Mississippi.

No-tin-no, the oldest of the four brothers, was living the last I knew of him. He was a good speaker, but not as eloquent as either of his brothers. These men were the sons of the noted Ottawa chief, O-to-sah, if I remember correctly, by different mothers. two of them, I think, were full brothers, polygamy being a legalized institution among all the Indian tribes with which I have been

personally acquainted.

Aw-pa-to-wa-jo-win, or "half way," was about half way from the mouth of the river to Fort Defiance, and also half way from Detroit to Fort Wayne, the then two principal trading points of the country. The presiding chief of this village was an old man whose active life had long since passed but who was always received in the councils of the tribe with great respect. His name was Kin-jo-a-no. This chief had but one son, a very intelligent young man, whose name was Muc-cut-a-mong. He was killed, however, while yet a young man, by the hand of his own cousin (Pe-way) at one of the corn-dances held by this tribe.

There were many other noted chiefs of these tribes inhabiting at this time the valleys of the Maumee, Auglaize, St. Maries and St. Joseph. Among them were Charlow, Shaw-wun-no, Pe-ton-i-quet, Nac-i-chewa, Oc-que-nox-ie, the latter chief having his village on the Auglaize. This man was a natural-born savage, and really the only Indian I was ever much afraid of when a boy, for he was ugly either drunk or sober, and always manifested a desire or disposition to take somebody's scalp. He had great influence with the tribe, especially in their councils of war. All the other chiefs and head men that I came in contact with, without a single exception (when not crazed and maddened by whiskey, or "fire-water), were kind-hearted, generous and always honorable.

The very last speech made by an Indian in the country in council was made by Ottokee at a treaty or council with the United States government agents, for the purpose of their removal West. Many did not come into the council and consent to be removed, but remained in the deep forests of the Maumee and Auglaize valleys for a few years, wandering from place to place and camping wherever they found a white man who was kind enough to allow them to do so.

Ottokee and Waseon were among the last to remove from this county, having gone west in the spring of 1838. These chiefs lived but a few years in their new homes and died comparatively young, Waseon being not over forty-five years old.

The lands which were assigned to these Indians, and to which they were removed, lie upon the Osage river in Kansas, about sixty miles south of Kansas City and not far from the flourishing village of Ottawa.

The old block-house is gone! It took fire from the chimney on Monday, May 20, 1879, and was burned down. One by one the relics of a past generation pass away, and this was almost the last one of any note in northwestern Ohio.

The land was purchased of the United States government, and the post established in the year 1831 or '32. It was put up as an Indian trading house, used as a magazine, or in the French trader's parlance a store and fort, for the safety of the trader and the protection of his furs and goods. They were usually built of hewn logs of great size, as this one was, and when completed with heavy split puncheons for roof, made a building that was a perfect protection against the assault of any ordinary band of drunken Indians or their more vicious associates, renegade white men and half-breed Indians, who were often ugly from a too free use of the white man's Schoo-ta-ne-be or fire-water, which was always furnished them by the less sensitive or unscrupulous trader.

Indian Trading House.—In the spring of 1832 my father engaged two white men, whose names I have forgotten, to build an "Indian Trading House," as such buildings were called at that day on the frontier. The house was located near the site of the village of the chief Winameg, furnished a stock of Indian goods early in the winter, and a regular Indian trading establishment opened.

A young man by the name of Wilkinson, nephew of old Capt. Dave Wilkinson, the veteran captain of the Lakes, was put in

charge, as the French frontiersman would say, the Boorzwa of the concern, my father judging that I was a little too wild to be at the head, and might shut up the block-house, mount my pony and ride away to some Indian village where a big dance was going on, and say, as my old friend Frank Holister said on such occasions, that it was a poor store that couldn't tend itself sometimes.

Indian Goods.—The stock of Indian goods mainly consisted of red and green blankets, with the pure white marked with broad black stripes across the end, and always of British manufacture, Turkey red calicoes and Merrimac blue, with a few light patterns, blue and green English broadcloths, large cotton handkerchiefs and shawls (used almost entirely for the head as turbans), guns, tomahawks. butcher-knives, powder, lead shot and lead balls, brass trinkets, rings, beads, wampum, small bells to ornament the sides of leggings, silver brooches, rings for the nose and ears, with Turkish vermilion to paint the face. Fine saddles and highly ornamented bridles, trimmed with silver-plated bits, tinsel and

colored leathers, were great articles of trade.

The Fur Trade. — Many of the roving traders sold whiskey to the Indians; but as a rule the principal traders did not sell it to them, for it destroyed the ability of the Indian to make much of a hunt, and of course was not in the interest of the trader whose aim was the procuring of furs and skins, which mainly constituted the trade

which mainly constituted the trade.

Bear, wolf, otter, mink, muskrat, raccoon, fisher, the red cross and silver gray fox were the principal furs taken, the beaver having nearly all disappeared. The last beaver caught in the county was taken on the Little St. Joseph, near the present village of Pioneer, in 1837, by a Pottawatomie chief named Mete-ah, for which I paid in goods twenty dollars, it being a very large one, and the last that had been taken for many years.

The prices of these furs at that time were \$3 to \$4 for bear, the same for otter, 40 cents for rat, 30 cents for mink, 50 cents for fox, \$2 for fisher, coon 25 cents, deer-skins 75 cents to \$1.25, wolf 25 cents, silver-gray fox from \$25 to \$75. In exchange for these we sold blankets (according to size) from \$2 to \$6, Turkey calicoes 75 cents to \$1 per yard, blue 50 cents to 75 cents, and all other goods at about the same rates. Lead was 50 cents and powder \$1 per pound.

We had a very good trade for a year or two at this post, and then the general government began to agitate the removal of the Indians. The business of the old house was changed to a country tavern, and was patronized solely by the white man. The dusky form of the Indian was seen no more about the spring and the camping ground, and his familiar whoop and drunken song were no more heard passing the old post, for he had taken up his line of march toward the setting sun.

The Old Council Elm.—This noble old tree, a monarch of the forest, has a history connected with the incidents of the Maumee

valley. The tree was a white elm, standing on a beautiful spot on the north bank of the river, being four or five feet in diameter, and fifty feet to the first limb. It was crowned with an immense top that covered with its shade a number of square rods of beautiful green sward. The spot where it stood being at a point very near and overlooking the "Grand Rapids" (the grandest of the entire succession of rapids from Fort Meigs), and within sound of its never ceasing murmur, it was selected long ago by the Indians as a favorite council ground, and consequently this tree became known in the early days by the traders and settlers as the "Council Elm."

It was destroyed by a severe storm in July, 1879. While the canal basin and dam were being constructed at Grand Rapids, young Jackson, at that time a very young man, was the Assistant Engineer of the Public Works of Ohio, in charge of this part of the public work. He was somewhat acquainted with the tradition and more recent history and was a great admirer of the noble old tree, and loved to sit under its cooling shade and enjoy the cool breeze during his leisure hours. On one occasion one of the workmen kindled a fire on the roots of the old tree; the young engineer, highly incensed, first put out the fire, and then calling up the man who had built it, gave him to understand that any future aggressions upon the old elm would cause the perpetrator such chastisement as he would not readily forget. This Jackson was well able and ready to give, for he had without doubt some of the ''Old Hero's'' blood in his veins, as I have often heard him express himself in strong language, using "By the Eternal" with the variations, and woe be to him who fell under his displeasure, for cause.

The once large and populous village of Kinjo-a-no, or Ap-a-to-wa-jo-win, was situated at the foot of the Grand Rapids, nearly a mile below the old elm, and as the tree was isolated from the noise and turmoil of an Indian village, it was frequently selected as the council-ground for many important gatherings of the chiefs and head men of the Ottawas

and Pottawatomies.

The great council which impressed me most was the last council of any importance ever held under its spreading branches.

Bad White Men.—It was some time after the lands had been ceded to the general government, the Indians still retaining possession of the lands.

After the treaties had been made the valley renegade white hunters and trappers, whiskey-sellers, and bee-hunters (for the hollow trees were filled with wild honey) destroyed the Indians' traps, often stole their horses, and run them far out of the reach of their owners.

I was then a mere boy, but all my sympathies were with the much abused Indians, and I was rather in hopes that some dark night these intruders and renegades would be wiped out. But the better and wiser counsels of

Wa-se-on, Ottokee, Pe-ton-i-quet, Nac-i-chewa, and other noted chiefs prevailed, and the Indians bore their wrongs with a grace and patience unparalleled among civilized people.

Uncle Peter Menard, my father, and Col. George Knaggs, being great friends of the Indians, were importuned to intercede for them with the government agent, that these abuses might be stopped and redress made for losses already inflicted.

The Indian Council.—Col. Jackson, the kind-hearted agent, was ready to co-operate with his friends in giving the redress asked for, promised that the matter should be laid before the authorities at Washington, and called a council to be held under the big

elm.

Some days previous to the day set for the council the Indians began to arrive; by the morning of the council-day the chiefs and head men were nearly all present in the village, and at ten o'clock the assembled braves were ready for the grand smoke and talk with the white chief, O-ke-maw-wa-bush-ke. It was a warm day, and all enjoyed the shade of the old tree. Seated upon a log sat the dignified Col. Jackson, and on his left Uncle Peter Menard and my father. The Indians composing the council sat on the ground in a semicircle in front of the white men, and the younger warriors and hunters not admitted to the charmed circle sat in groups under the shade of the old elm, silent but interested spectators. Although a boy, I had been chosen by Col. Jackson to act as interpreter.

Speech of Ottokee.—At a signal from the agent that the council was convened the head chief, Ottokee, lit the pipe of kinnekanick; it was passed from mouth to mouth, the white men participating in the ceremony, and it was not until several pipesful of the fra-grant weed had been exhausted that the council was ready to proceed with the "big talk." Col. Jackson then said that "his ears were open, and he would listen to the words of the chiefs." After a few minutes of perfect silence Ottokee rose to his feet—a noble specimen of a native orator—and, with the dignity of a prince, his arms folded across his breast, he commenced the delivery of the great speech of the occasion. He portrayed in glowing colors the situation of his people, the faith they had kept with their white brothers and with their great father, the President of the United States; that they believed his words when he said he would protect them in their rights while remaining in their old homes from the intrusions of white men until he should be ready to move them to their new homes west of the great river (Mississippi), but he was so far away that he could not see or hear his red children when they called to him in their distress. They had called many times to have him drive away the bad white men, but he did not hear them.

The Great Father is good, but the white men fill his ears, and he cannot hear the red men call. My white brother sitting before me is the half-brother of the Great Chief at the Big House, and he has heard us and now listens to what we say. The bad white men have killed our deer, trapped our otter and mink, have stolen our horses and abused our women, have camped on our land and call it their own, and when we tell them to go they hold up their rifles and say they will shoot. What must we do? We have waited many, many moons, very long, for our Great Father to drive these bad men from our land, but he has not done it, and if we drive them he will be angry with us. He has women, he has children; will he let bad men abuse them? No! he will not! Our Great Father is great chief; he was at the great river when our British brothers from across the big water tried to take the country away from him, but he would not let them land. Our Father is a great chief; he is brave; will he protect his red children? I have spoken," he con-cluded; "my brother will speak."

Col. Jackson answered this speech by saying that his heart was good and his ears were open, and he would let the President hear all the words of the great chief, Ottokee. "Let the other chiefs speak," he said. "I will

Speech of Nack-i-che-wah.—One after another the chiefs rose in their places and spoke much in the same spirit as Ottokee, some more vehement than others, some with moderation; all, with one exception, counselling peace. Nack-i-che-wah, the most active of the chiefs, and the greatest orator of his tribe, or his nation, or in fact of the neighboring tribes, was more bold and outspoken. He said they had listened to the sweet words of the Great Father and believed them, but they were like the singing bird: sweet while you listened, but it flew away; it did not come back, and you heard its voice no more, and did not answer when you called it to come back. Our Great Father had sent his chief to tell us his words of honey; our ears were open, we heard what he said, and we believed them, but our Father has for gotten his words, and his red children are Shall we, too, forget that we sorrowful. signed the paper, ton-ga-nun-me-gwan, and draw the tomahawk and drive these dogs of pale-faces from our hunting-grounds?

We have called to the Great Father many times and he does not hear us. Are his ears closed to the complaints of his red children?

I have done.

So earnest the manner of speaking and so deep the interest that all felt on this momentous occasion, no one had taken notice of time, and it was late in the afternoon when the last speaker took his seat amid the monotonous guttural sounds of acquiescence in the arguments presented by the chiefs in their defence of the rights of their usually quiet

Col. Jackson, the agent, then arose to his feet and in a very dignified manner spoke to the Indians. He said the President, the Great Father, had a big heart and he loved his red children, that his ears were open and he heard the complaints of his people, but the pale faces were as many as leaves upon the trees, and he must listen to all, and he could not answer all at the same time. He had many, many more red children to listen to, who must be heard, his ears were open and

all should be heard in their time.

"My white brother," he said, referring to my father, who was acting secretary for the council, "has taken the words of the Great Chiefs and put them on the paper; they will be sent to the Great Father and he will read them; his heart is good and he will answer his red children. He will pay them for the losses of their horses and their traps and the killing of their game. I will call the chiefs together when his word comes back and tell them what he says. Have my brothers anything more to say?"

A murmuring sound of satisfaction, "Waho," went through the council, and Ottokee answered that his people were satisfied with their brother's words and that they were done. Col. Jackson took his seat, the tomahawk pipe of kinnekanick was again lighted and passed around, and after all, both white men and Indians, had participated the council broke up and the Indians repaired to the adjoining village where they partook of a boun-tiful feast of beef, pork, and corn prepared for them by the order of the agent, a custom always adopted by the government, when holding treaties or councils with the Indians.

The council broke up with perfect understanding and good feeling among all the Indians present, with a perfect reliance that government would remunerate them for the losses they had sustained and drive the intruders from their lands, and for once the government kept its word with the Indians.

Fayette, near the border line of Ohio and Michigan, is surrounded by a fine farming section. It is on the W. St. L. & P. and L. S. & M. S. Railroads. Newspaper: *Record*, Independent, Lewis & Griffin, publishers. Churches: 1 Methodist Episcopal, 1 Disciple, and 1 Christian Union. Bank of Fayette, C. L. Allen, cashier. Industries: 2 saw, 1 planing, and 1 grist mill, 1 creamery, and 2 novelty manufacturing establishments. Population in 1880, 579. Is the seat of the Fayette Normal Music and Business College, a growing institu-

Delta, on L. S. & M. S., 35 miles west of Toledo, surrounded by a fine agricultural country. Newspapers: Atlas, Independent, E. L. Waltz, editor; Avalanche, Republican, J. H. Fluhart, editor. Churches: 1 Presbyterian, 1 Methodist Episcopal, 1 United Brethren, 1 Free Methodist. Bank of Delta, William E. Ramsey, cashier. *Industries:* Delta Oval Wood Dish Company, 1 grist, 2 saw, and 1 planing mill, brick and tile works, 3 wagon and carriage shops, large pearlash factory, 1 cheese, 1 washing machine, and 1 broom factory. Population in 1880, 859.

ARCHBOLD is 8 miles west of Wauseon, on the L. S. & M. S. Railroad. It has newspaper: *Herald*, Non-partisan, W. O. Taylor, editor. Churches: 1 Catholic, 1 German Reformed, 1 German Lutheran, and 1 Methodist Episcopal. Population in 1880, 635. School census 1886, 260.

GALLIA.

Gallia is the ancient name of France, from Washington, April 30, 1803. The word Gallia is the ancient name of France, from whence it was originally settled. The surface is generally broken, excepting in the eastern part, and on the Ohio river and Kiger creek, where it is more level and the soil fertile. Much of the county is well adapted to wheat, and a great part covered with a sandy loam. Area, 430 square miles. In 1885 the acres cultivated were 69,775; in pasture, 86,973; woodland, 48,880; lying waste, 6,298; produced in wheat, bushels, 44,552; oats, 84,035; corn, 654,383; tobacco, pounds, 153,325; butter, pounds, 461,471.

School census 1886—pupils, 5,359; teachers, 260. It has 41 miles of railroad.

The population of the county was, in 1820, 7,098; in 1830, 9,733; in 1840, 13,445; in 1860, 20,453; in 1870, 22,743; in 1880, 25,178, of whom 22,763 were Ohio-born; 2,470 Virginia; 505 Pennsylvania; 323 German Empire; 398 England and Wales; 92 Ireland; 27 France.

The first settlement in Gallia county was at Gallipolis. It was settled in 1791, by a French colony sent out under the auspices of the "Scioto Company." This was an association formed in Paris, the project of Col. William Duer, of New York, Secretary of the United States Board of Treasury, a large operator and a man of speculative turn. He was of English birth and had been a member of the Continental Congress. While Dr. Manasseh Cutler was negotiating for the passage of the ordinance of the Ohio Company's Purchase Mr. Duer went to him and proposed to connect with it an outside land speculation and colonization scheme. The passage of the ordinance seemed hopeless without Duer's influence

and as he offered generous conditions Cutler acceded. With his influence its success was certain. The matter, however, was to be kept a profound secret. The generous conditions on the part of Duer to the Ohio Company for permitting the contract to be made under cover of its petition was a loan of \$143,000 in securities, to enable it to complete the first payment to the Board of Treasury, many shareholders of the Ohio Company having failed to respond promptly to the call.

In October, 1787, Dr. Cutler and Sargent closed two contracts with the Board of Treasury. One with Manasseh Cutler and Winthrop Sargent, as agents for the directors of the "Ohio Company of Associates, so called," was an absolute purchase of 1,500,000 acres, lying between the Ohio river, the 7th and 17th ranges of townships, and extending north from the river till a line due west from the 7th to the 17th range should, with the reservations stated in the contract, include the whole amount. The other with Manasseh Cutler and Winthrop Sargent, "for themselves and associates," was an option to pur-

chase all the lands lying between the Ohio and Scioto rivers and the 17th Range, extending north to the line of the 10th Township, and also all the land east of this tract, west of the 7th Range, south of the 10th Township, and north of the Ohio Company's purchase. The whole tract of land included in the last contract was estimated to be from 3,000,000 to 3,500,000 acres. In each contract the line of the 17th range is recognized as yet to be determined. The price of the land was one dollar per acre, subject to a reduction of one-third for bad land, to be paid in gold, silver, or securities of the United States.

From the above it is seen that Dr. Cutler and Major Sargent made an absolute purchase from the Board of Treasury for the direct use of the Ohio Company, and a contract for the right of purchase or pre-emption right of the three millions and a half or thereabouts wanted by Duer and associates. Having done this they ceded to the latter the pre-emption right. Cutler and Sargent, members of the

Ohio Company, were included as associates with Duer.

What we may term the Scioto tract was divided into thirty shares, of which Duer took 13, Cutler and Sargent jointly 13, and the remaining four were to be sold in Europe. Cutler and Sargent assigned interests to Generals Benjamin Tupper, Rufus Putnam, S. H. Parsons, and Royal Flint. Joel Barlow was also given an interest by Duer of one-sixtieth of the tract, he being selected as agent to go to Paris and sell the four shares. He arrived there the last of June, 1788. He could, however, sell only the "right of pre-emption." Barlow took with him a copy of a pamphlet by Dr. Cutler entitled "An explanation of the Map which delineates that part of the Federal lands comprehended between Pennsylvania, the Rivers Ohio, Scioto, and Lake Erie." This pamphlet was reprinted in Paris, in 1789, with the endorsement of Capt. Thomas Hutchins, the geographer of the United States, as to its accuracy.

At first Barlow met with indifferent success, but early in 1789 he got acquainted with William Playfair, whom he describes as an "Englishman of a bold and en-

terprising spirit and a good imagination."

In July of that year the Bastile was taken and all France was in an uproar. The times were propitious for schemes of emigration. Barlow and Playfair issued "Prospectus for an Establishment on the Rivers Ohio and Scioto." In preparing this they used the pamphlet of Dr. Cutler and Capt. Hutchins descriptive of the Ohio country, with additions and embellishments wherein Playfair's "good imagination" was displayed, as is shown by the annexed extract:

A climate wholesome and delightful, frost even in winter almost entirely unknown, and a river called, by way of eminence, the beautiful, and abounding in excellent fish of a vast size. Noble forests, consisting of trees that spontaneously produce sugar (the sugar maple) and a plant that yields ready-made candles

(myrica cerifera). Venison in plenty, the pursuit of which is uninterrupted by wolves, foxes, lions or tigers. A couple of swine will multiply themselves a hundredfold in two or three years, without taking any care of them. No taxes to pay, no military services to be performed.

Volney, who came to America in 1795, in his "View," where we find the above, says:

These munificent promisers forgot to say that these forests must be cut down before corn could be raised; that for a year, at least, they must bring their daily bread from a great distance; that hunting and fishing are agreeable amusements, when pursued for the sake of amusement, but are widely different when followed for the sake of subsistence. And they quite forgot to mention that, though there be no bears or tigers in the neighborhood, there are wild beasts infinitely more cunning and ferocious, in the shape of men, who were at that time at open and cruel war with the whites.

In France, in Paris, the imagination was too heated to admit of doubt or suspicion,

and people were too ignorant and uninformed to perceive where the picture was defective and its colors too glaring. The example, too, of the wealthy and reputedly wise confirmed the popular delusion. Nothing was talked of, in every social circle, but the paradise that was opened for Frenchmen in the western wilderness, the free and happy life to be led on the blissful banks of the Scioto. At length Brissot published his travels and completed the flattering delusion. Buyers became numerous and importunate, chiefly among the better sort of the middle class. Single persons and whole families disposed of their all, flattering themselves with having made excellent bargains.

Volney here refers to the travels of Brissot de Warville. Brissot published several volumes relating to America, as we infer from his preface to his "New Travels in America," a work issued in the spring of 1791, and consisting in part of a series of letters written from this country in 1788. In his preface to the last, he says: "The third volume was published in 1787 by Mr. Claviere and me." In the last, he refers to the charges against the Scioto Company in this wise: "This company has been much calumniated. It has been accused of selling lands which it does not possess, of giving exaggerated accounts of its fertility, of deceiving the emigrants, of robbing France of her inhabitants, and of sending them to be butchered by the savages. But the title of this association is incontestable; the proprietors are reputable men; the description which they have given of the lands is taken from the public and authentic reports of Mr. Hutchins, geographer of Congress. No person can dispute their prodigious fertility." He elsewhere speaks, in this volume, in high terms of the company.

With the proposals they issued a map copied from that of Capt. Hutchins, but with a fraudulent addition in the statement that the country east of the Scioto tract was cleared and settled when, indeed, it was a wilderness, the first settlement within it, that at Marietta, having been made only the year before.

The engraved map annexed was inserted in the first edition of this work. It was copied by us in 1846 from the map of Barlow and Playfair in the possession of Monsieur J. P. R. Bureau, one of the settlers who was then living in Gallipolis, and who came out in 1799 from Paris. The original was sixteen inches long and twelve wide.

It was in French, handsomely engraved and colored, with the lands of the two companies and the tract east of them, all divided into townships of six miles square. It represents the Scioto Company's tract as extending about 100 miles north of the mouth of the Kanawha, and including more or less of the present counties of Meigs, Athens, Muskingum, Licking, Franklin, Pickaway, Ross, Pike, Scioto, Gallia, Lawrence, Perry, Jackson, Hocking and Fairfield. This tract, on the map, is divided into 142 townships and thirty-two fractions. The north line of the Ohio Land Company's tract is eighteen miles south of the other, and included the present county of Morgan and parts of Washington, Meigs, Athens, Muskingum, Guernsey and Monroe, there divided into ninety-one townships and sixteen fractions. The tract east of that of the Ohio Company extends forty-eight miles farther north. Upon the original are the words, "Sept rangs de municipalite acquis par des individues et occupes depuis, 1786;" i. e., "Seven ranges of townships acquired by individuals and occupied since 1786."

It was in November, 1789, that Barlow, as agent, concluded the sale to a company formed in Paris under the firm-name of the "Company of the Scioto," the principal members of which were M. Gouy de Arsy, M. Barond, St. Didier, Maheas, Guibert, the Chevalier de Coquelon, William Playfair and Joel Barlow. He used no deception with the company, showing them the exact terms of the grant to his principals.

The Society of the Scioto Company sold their lands rapidly, but the deeds did not give a perfect title nor claim to do so. They conveyed "all the right, title, interest and claim of said society," but many persons accepted the deeds as conveying and warranting a perfect title. The warranty clause in the deeds guaranteed against "every kind of eviction or attack."

Barlow exceeded his powers in allowing the Scioto Company to give deeds. He, however, expected that from the proceeds of sales they would be enabled to

"PLAN OF THE PURCHASE OF THE OHIO AND SCIOTO LAND COMPANIES."

perfect the title. His associate, Playfair, withheld the funds, and Barlow, it seems, was duped by him.

The upshot of the matter was that the Scioto Company and Col. Duer failed, and the failure of the latter was so great that it was said to have been the very first financial shock of any moment from speculation New York city ever received.

A full history of the Scioto Company is given in thirty pages of the "Life of Manasseh Cutler," published by Robert Clarke & Co., to which the reader is referred.

The result of the operations of the Scioto Company was to colonize a spot in Ohio with French people in 1790, who thus made the third permanent regular settlement within its limits at Gallipolis, the others preceding being Marietta and Cincinnati. The first party of French emigrants arrived at Alexandria on May 1, 1790; about 500 in all left their native country for the promised land, and about October 20th the first boat-load arrived at Gallipolis.

The terms to induce immigration were as follows: the company agreed to take the colonists to their lands and pay the cost, and the latter bound himself to work three years for the company, for which he was to receive fifty acres, a house and a cow. Not all came on these terms, for among them were men of wealth and title.

GALLIPOLIS, i. e., CITY OF THE FRENCH, IN 1790.

who paid their own passage and bought land on their own account. They were persons ill fitted for such an enterprise. Among them were not a few carvers and gilders to his majesty, coach and peruke makers, friseurs and other artistes, about equally well fitted for a backwoods life, with only ten or twelve farmers and laborers.

On the map is shown the "first town," i. e., "Premiere Ville," lying opposite the mouth of the Kanawha. It was laid out by the Ohio Company, under the name of Fair Haven; but as the ground there is low and liable to overflow, Gallipolis was located four miles below, upon a high bank, ten feet above the flood of 1832.

The location was made a few months before the arrival of the French. Rufus Putnam sent for that purpose Major Burnham, with forty men, who arrived here on the 8th of June by river from Marietta. They made a clearing and erected block-houses and cabins. Col. Robert Safford, who died here June 26, 1863, a very aged man, was of this party and was the first to spring ashore from the boat and signalize his landing by cutting down a sapling, which he did with a camp hatchet, which was the first blow towards making a settlement.

On the public square Burnham erected eighty log-cabins, twenty in each row. At each of the corners were block-houses, two stories in height. In front of the cabins, close by the river bank, was a small, log-breastwork, erected for a defence while building the cabins. Above the cabins, on the square, were two other parallel rows of cabins, which, with a high stockade fence and block-houses at each of the upper corners, formed a sufficient fortification in times of danger. These upper cabins were a story and a half in height, built of hewed logs, and finished in better style than those below, being intended for the richer class. In the upper cabins was a room used for a council chamber and a ball room.

The Scioto Company contracted with Putnam to erect these buildings and furnish

the settlers with provisions, but failed of payment, by which he lost a large amount. It was a dense little village, the cabins close together, and in its *personelle* a piece of Paris dropped down on the banks of the Ohio. According to well-authenticated tradition one of the cabins had out the sign, BAKERY & MIDWIFERY.

We continue the history of Gallipolis in the annexed extract from a communication in the American Pioneer, made about the year 1843 by Waldeurard Meulette, one of the colonists.

At an early meeting of the colonists, the town was named Gallipolis (town of the French). I did not arrive till nearly all the colonists were there. I descended the river in 1791, in flat boats, loaded with troops, commanded by Gen. St. Clair, destined for an expedition against the Indians. Some of my countrymen joined that expedition; among others was Count Malartie, a captain in the French guard of Louis XVI. General St. Clair made him one of his aide-de-camps in the battle, in which he was severely wounded. He went back to Philadelphia, from whence he returned to France. The Indians were encouraged to greater depredations and murders, by their success in this expedition, but most especially against the American settle-From their intercourse with the French in Canada, or some other cause, they seemed less disposed to trouble us. Immediately after St. Clair's defeat, Col. Sproat, commandant at Marietta, appointed four spies for Gallipolis—two Americans and two French, of which I was one, and it was not until after the treaty at Greenville, in 1795, that we were released.

Notwithstanding the great difficulties, the difference of tempers, education and professions, the inhabitants lived in harmony, and having little or nothing to do, made themselves agreeable and useful to each other. The Americans and hunters, employed by the company, performed the first labors of clearing the township, which was divided into lots.

Although the French were willing to work, yet the clearing of an American wilderness and its heavy timber, was far more than they could perform. To migrate from the Eastern States to the "far west" is painful enough now-a-days, but how much more so it must be for a citizen of a large European town! even a farmer of the old countries would find it very hard, if not impossible, to clear land in the wilderness. Those hunters were paid by the colonists to prepare their garden ground, which was to receive the seeds brought from France; few of the colonists knew how to make a garden, but they were guided by a few books on that subject, which they had brought likewise from France.

The colony then began to improve in its appearance and comfort. The fresh provisions were supplied by the company's hunters, the others came from their magazines. When on the expeditions of Generals St. Clair and Wayne many of the troops stopped at Gallipois to take provisions, which had been deposited there for that purpose by government;

the Indians, who no doubt often came there in the night, at last saw the regulars going morning and evening round the town in order to ascertain if there were any Indian traces, and attacked them, killing and wounding several—a soldier, besides other wounds, was tomahawked, but recovered. A French colonist, who had tried to raise corn at some distance from the town, seeing an Indian rising from behind some brushwood against a tree, shot him in the shoulder; the Indian hearing an American patrole, must have thought that the Frenchman made a part of it; and sometime afterward a Frenchman was killed, and a man and woman made prisoners, as they were going to collect ashes to make soap, at some distance from town.

After this, although the Indians committed depredations on the Americans on both sides of the river, the French had suffered only by the loss of some cattle carried away, until the murder of the man above related. The Scioto Company, in the mean time, had nearly fulfilled all their engagements during six months, after which time they ceased their supply of provisions to the colonists, and one of their agents gave as a reason for it, that the company had been cheated by one or two of their agents in France, who, having received the funds in France for the purchased lands, had kept the money for themselves and run off with it to England, without having purchased or possessing any of the tract which they had sold to the deceived colonists. This intelligence exasperated them, and was the more sensibly felt as a scarcity of provisions added to their disappointment. The winter was uncommonly severe; the creek and the Ohio were frozen; the hunters had no longer any meat to sell; flat boats could not come down with flour to furnish as they had done before. This produced almost a famine in the settlement, and a family of eight persons, father, mother, and children, was obliged to subsist for eight or ten days on dry beans, boiled in water, without either salt, grease or bread, and those had never known, before that time, what it was to want for anything. On the other hand, the dangers from the Indians seemed to augment every day.

The colonists were by this time weary of being confined to a few acres of land; the result of their industry was lost; the money and clothes which they had brought were nearly gone. They knew not to whom they were to apply to get their lands; they hoped that if Wayne's campaign forced the Indians to make a lasting peace, the Scioto Company

would send immediately, either to recover or to purchase those promised lands; but they soon found out their mistake. After the treaty of Greenville, many Indians passing through Gallipolis, on their way to the seat of government, and several travellers, revealed the whole transaction, from which it was ascertained that the pretended Scioto Company was composed of New Englanders, the names of very few only being known to the French, who, being themselves ignorant of the English language, and at such a distance from the place of residence of their defrauders, and without means for prosecuting them, could

get no redress. Lonely Condition of the Colonists.—Far in a distant land, separated forever from their friends and relations—with exhausted means, was it surprising that they were disheartened, and that every social tie should have been loosened, nearly broken, and a great portion of the deceived colonists should have become reckless? May the happy of this day never feel as they did, when all hope was blasted, and they were left so destitute! Many of the colonists went off and settled elsewhere with the means that remained to them, and resumed their trades in more populous parts of the country; others led a half-savage life, as hunters for skins: the greater part, however, resolved, in a general assembly, to make a memorial of their grievances, and send it to The memorial claimed no rights from that body, but it was a detail of their wrongs and sufferings, together with an appeal to the generosity and feelings of Congress; and they did not appeal in vain. One of the colonists proposed to carry the petition; he only stipulated that his expenses should be paid by a contribution of the colonists, whether he succeeded or not in their object; but he added that if he obtained for himself the quantity of land which he had paid for, and the rest had none, he should be repaid by their gratitude for his efforts.

The French Grant.—At Philadelphia he met with a French lawyer, M. Duponceau, and through his means he obtained from Congress a grant of 24,000 acres of land, known by the name of the French grant, opposite to Little Sandy, for the French, who were still resident at Gallipolis. The act annexed the condition of settling on the lands three years before receiving the deed of gift. The bearer of the petition had his 4,000 acres; the rest was divided among the remaining French, amounting to ninety-two persons, married and single.

Each inhabitant had thus a lot of 217½ acres of land; but before the surveys and other arrangements could be made, some time was necessary, during which, those who had reclaimed the wilderness and improved Gallipolis being reluctant to lose all their labor, and finding that a company, owning the lands of Marietta, and where there was a settlement previous to that of the French colony, had met to divide lands which they had purchased in a common stock, the colonists sent a deputation for the purpose of proposing to the company to sell them the spot where Gallipolis was and is situated, and to be paid in proportion to what was improved, which was accepted. When at last the distribution of the lots of the French grant was achieved, some sold their share, others went to settle on it, or put tenants, and either remained at Gallipolis, or went elsewhere; but how few entered again heartily into a new kind of life, many having lost their lives and others their health, amid hardships, excess of labor, or the indolence which follows discouragement and hopeless efforts! Few of the original settlers remain at Gallipolis: not many at the French grant.

Breckenridge, in his "Recollections," gives some reminiscences of Gallipolis, related in a style of charming simplicity and humor. He was at Gallipolis in 1795, at which time he was a boy of nine years of age.

The Little French Doctor.—Behold me once more in port, and domiciliated at the house, or the inn, of Monsieur, or rather, Dr. Saugrain, a cheerful, sprightly little Frenchman, four feet six, English measure, and a chemist, natural philosopher, and physician, both in the English and French signification of the word. This singular village was settled by people from Paris and Lyons, chiefly artisans and artists, peculiarly unfitted to sit down in the wilderness and clear away forests. I have seen half a dozen at work in taking down a tree, some pulling ropes fastened to the branches, while others were cutting around it like beavers. Sometimes serious accidents occurred in consequence of their awkwardness. Their former employment had been only calculated to administer to the luxury of highly polished and wealthy societies. There were carvers and gilders to the king, coach-makers, friseurs and peruke-makers, and a variety of others who might have found some employment in our larger towns, but who were entirely out of their place in the wilds of Ohio. Their means by this time had been exhausted, and they were beginning to suffer from the want of the comforts and even the necessaries of life.

The country back from the river was still a wilderness, and the Gallipotians did not pretend to cultivate anything more than small garden spots, depending for their supply of provisions on the boats which now began to descend the river; but they had to pay in cash and that was become scarce. They still assembled at the ball-room twice a week; it was evident, however, that they felt disappointment, and were no longer happy. The predilections of the best among them being

on the side of the Bourbons, the horrors of the French revolution, even in their remote situation, mingled with their private misfortunes, which had at this time nearly reached their acme in consequence of the discovery that they had no title to their lands, having been cruelly deceived by those from whom they had purchased. It is well known that Congress generously made them a grant of 20,000 acres, from which, however, but few of them ever derived any advantage.

As the Ohio was now more frequented, the house was occasionally resorted to, and especially by persons looking out for land to purchase. The doctor had a small apartment which contained his chemical apparatus, and I used to sit by him as often as I could, watching the curious operation of his blow-

pipe and crucible. I loved the cheerful little man, and he became very fond of me in return. Many of my countrymen used to come and stare at his doings, which, they were half inclined to think, had a too near resemblance to the black art. The doctor's little phosphoric matches, igniting spontaneously when the little glass tube was broken, and from which he derived some emolument, were thought by some to be rather beyond mere human power. His barometer and thermometer, with the scale neatly painted with the pen, and the frames richly carved, were objects of wonder, and probably some of them are yet extant in the west. But what most astonished some of our visitors was a large peach in a glass bottle, the neck of which would only admit a common cork

THE FRENCH SETTLERS AT GALLIPOLIS, DIRECT FROM PARIS, CUTTING DOWN TREES.

this was accomplished by tying the bottle to the limb of a tree, with the peach when young inserted into it. His swans which swam around basins of water amused me more than any wonders exhibited by the wonderful man

The French Philosophers and the Savages.—The doctor was a great favorite with the Americans, as well for his vivacity and sweetness of temper, which nothing could sour, as on account of a circumstance which gave him high claim to the esteem of the backwoodsmen. He had shown himself, notwithstanding his small stature and great good nature, a very hero in combat with the Indians. He had descended the Ohio in company with two French philosophers who were believers in the primitive innocence and goodness of

the children of the forest. They could not be persuaded that any danger was to be apprehended from the Indians. As they had no intentions to injure that people, they supposed no harm could be meditated on their part. Dr. Saugrain was not altogether so well convinced of their good intentions, and accordingly kept his pistols loaded. Near the mouth of the Sandy a cance with a party of warriors approached the boat; the philosophers invited them on board by signs, when they came rather too willingly. The first thing they did on coming on board of the boat was to salute the two philosophers with the tomahawk, and they would have treated the doctor in the same way but that he used his pistols with good effect—killed two of the savages and then leaped into the water, div-

ing like a dipper at the flash of the guns of the others, and succeeded in swimming to the shore with several severe wounds whose scars

were conspicuous.

Madame Saugrain.—The doctor was married to an amiable young woman, but not possessing as much vivacity as himself. As Madame Saugrain had no maid to assist her, her brother, a boy of my age, and myself, were her principal helps in the kitchen. We brought water and wood and washed the dishes. I used to go in the morning about two miles for a little milk, sometimes on the frozen ground, barefooted. I tried a pair of sabots, or wooden shoes, but was unable to make any use of them, although they had been made by the carver to the king. Little perquisites, too, sometimes fell to our share from blacking boots and shoes. My companion generally saved his, while mine would have burned a hole in my pocket if it had remained there. In the spring and summer a good deal of my time was passed in the garden, weeding the beds. While thus engaged I formed an acquaintance with a young lady of eighteen or twenty on the other side of the palings, who was often similarly occupied. Our friendship, which was purely Platonic, commenced with the story of Blue Beard, recounted by her, and with the novelty and pathos of which I was much interested. This incident may perhaps remind the reader of the story of Pyramus and Thisbe, or perhaps of the hortical ecologue of Dean Swift, "Dermot and Shela."

Connected with this lady is an incident which I feel a pleasure in relating. One day, while standing alone on the bank of the river, I saw a man who had gone in to bathe and who had got beyond his depth without being able to swim. He had begun to strug-gle for life, and in a few seconds would have sunk to rise no more. I shot down the bank like an arrow, leaped into a canoe which fortunately happened to be close by, pushed the end to him, and, as he rose, perhaps for the last time, he seized it with a deadly, convulsive grasp and held so firmly that the skin afterward came off the parts of his arms which pressed against the wood. I screamed for help. Several persons came and took him out, perfectly insensible. He afterwards married the young lady and raised a numerous and respectable family. One of his daughters married a young lawyer who now represents that district in Congress.

Sufferings of the Settlers.—Toward the latter part of summer the inhabitants suffered severely from sickness and want of provisions. Their situation was truly wretched. The swamp in the rear, now exposed by the clearing between it and the river, became the cause of a frightful epidemic, from which few escaped, and many became its victims. I had recovered from the ague, and was among the few exempted from the disease; but our family, as well as the rest, suffered much from absolute hunger, a most painful sensation, as I had before experienced. To show the extremity of our distress, on one occasion the brother of Madame Saugrain and myself pushed a light canoe to an island above town, where we pulled some corn, took it to mill, and, excepting some of the raw grains, had nothing to eat from the day before until we carried home the flour and made some bread, but had neither milk nor meat. I have learned to be thankful when I had a sufficiency of wholesome food, however plain, and was blessed with health; and I could put up with humble fare without a murmur, although accustomed to luxuries, when I have seen those who have never experienced absolute starvation turn up their noses at that which was a very little worse than the best they had ever known.

General Wilkinson and Suite.—I had been nearly a year at Gallipolis, when Capt. Smith, of the United States army, came along in advance of the barge of Gen. Wilkinson, and, according to the request of my father, took me into his custody for the purpose of bringing me once more to my native place. He remained two or three days waiting for the general, and in the meanwhile procured me hat, shoes and clothes befitting a gentleman's son, and then took me on board his boat. Shortly after the general overtook us I was transferred on board his barge as a playmate for his son Biddle, a boy of my The general's lady and several own age. ladies and gentlemen were on board his boat, which was fitted up in a style of convenience and even magnificence scarcely surpassed even by the present steamboats. It was propelled against the stream by twenty-five or thirty men, sometimes by the pole, the cordelle, and often by the oar. There was also a band of musicians on board, and the whole had the appearance of a mere party of pleasure. My senses were overpowered— it seemed an elysium! The splendor of the furniture—the elegance of the dresses—and then, the luxuries of the table, to a halfstarved creature like me, produced an effect which can scarce be easily described. Every repast was a royal banquet, and such delicacies were placed before me as I had never seen before, and in sufficient abundance to I was no satiate my insatiable appetite. more like what I had been than the cast-off skin of the blacksnake resembles the new dress in which he glistens in the sunbeam. The general's countenance was continually lighted up with smiles, and he seemed faire le bonheur of all around him; it seemed his business to make every one happy about him. His countenance and manners were such as I have rarely seen, and now that I can form a more just estimate of them, were such as better fitted him for a court than a republic. His lady was truly an estimable person, of the mildest and softest manners. She gave her son and myself a reproof one day which I never forgot. She saw us catching minnows with pin-hooks, made us desist, and then explained in the sweetest manner the cruelty of taking away life wantonly from the humblest thing in creation.

In 1807 Breckenridge again saw Gallipolis.

As we passed Point Pleasant and the island below it, Gallipolis, which I looked for with anxious feelings, hove in sight. I thought of the French inhabitants—I thought of my friend Saugrain; and I recalled, in the live liest colors, the incidents of that portion of my life which was passed here. A year is a long time at that period—every day is crowded with new and great and striking events. When the boat landed, I ran up the bank and looked around; but alas! how changed! The Americans had taken the town in hand, and no trace of antiquity, that is, of twelve years ago, remained. I hastened to the spot where I expected to find the abode, the little loghouse, tavern, and laboratory of the doctor, but they had vanished like the palace of Aladdin. After some inquiry I found a little Frenchman, who, like the old woman of Goldsmith's village, was "the sad historian of the deserted plain."—that is, deserted by one

race. to be peopled by another. He led me to where a few logs might be seen, as the only remains of the once happy tenement which had sheltered me—but all around it was a common; the town had taken a different direction. My heart sickened; the picture which my imagination had drawn—the scenes which my memory loved to cherish, were blotted out and obliterated. A volume of reminiscences seemed to be annihilated in an instant! I took a hasty glance at the new town, as I returned to the boat. I saw brick houses, painted frames, fanciful enclosures, ornamental trees! Even the pond, which had carried off a third of the French population by its molaria, had disappeared, and a pretty green had usurped its place, with a neat brick court-house in the midst of it. This was too much; I hastened my pace, and with sorrow once more pushed into the stream.

Gallipolis in 1846.—Gallipolis, the county-seat, is pleasantly situated on the Ohio river, 102 miles southeasterly from Columbus. It contains 1 Presbyterian, 1 Episcopal, and 1 Methodist church, 12 or 14 stores, 2 newspaper printing offices, and by the census of 1840 had 1,221 inhabitants, and now has about 1,700. A part of the population is of French descent, but they have in a great measure lost their national characteristics. Some few of the original French settlers are yet living. The engraving of the public square shows the market and court-house near the centre of the view, with a glimpse of the Ohio river on the left.—Old Edition.

Gallipolis is on the Ohio, 4 miles below the mouth of the Kanawha, 102 southeast of Columbus, and on the C. H. V. & T. R. R. County officers in 1888: Auditor, Anthony W. Kerns; Clerk, Robert D. Neal; Coroner, Fred. A. Cromley; Prosecuting Attorney, D. Warren Jones; Probate Judge, John J. Thomas; Recorder, James K. Williams; Sheriff, Valentine H. Switzer; Surveyor, Ira W. Jacobs; Treasurer, D. S. Trowbridge, I. Floyd Chapman; Commissioners, S. F. Coughenour, Daniel J. Davies, William H. Clark. Newspapers: Bulletin, Democratic; Gallia Tribune, Republican; Journal, Republican. Churches: 3 Episcopal Methodist, 1 Colored Methodist, 1 Baptist, 1 Colored Baptist, 1 Catholic, 1 German Lutheran, 1 Universalist, 1 Presbyterian, 1 Episcopalian. Banks: First National, R. Deletombe, president, J. S. Blackaller, cashier; Ohio Valley, A. Henking, president, C. W. Henking, cashier. Industries and Employees: Gallipolis Steam Tannery, 14 hands; Morrison & Betz, lumber; James Mullineaux, doors, sash, etc., 24; Vanden & Son, A. A. Lyon, carriages; Martin McHale, brooms, 19; Fuller & Hutsinpiller, furniture, 75; The Fuller and Hutsinpiller Company, finishing furniture, 64; Treasure Stove Works, stoves, etc., 21; Kling & Co., stoves, etc., 24; T. S. Ford & Co., flooring, etc., 12; Enos, Hill & Co., machinery, etc., 25; Gatewood Lumber Company, furniture, etc., 22.—State Report for 1887.

Population in 1880, 4,400. School census in 1886, 1,868; Miron E. Hard, superintendent.

TRAVELLING NOTES.

In my original visit to Gallipolis I failed of learning that the extraordinary specimen of humanity known as Mad Ann Bailey passed the latter part of her days in its vicinity. In my travels over Virginia in the years 1843–

44 taking pencil sketches and collecting materials for my work upon that State, I learned of her and inserted therein this account.

"There was an eccentric female, who lived in the Kanawha region towards the latter part of the last century. Her name was Ann Bailey. She was born in Liverpool, and had been the wife of an English soldier. She generally went by the cognomen of Mad Ann. During the wars with the Indians, she very often acted as a messenger, and conveyed letters from the fort, at Covington, to Point

Pleasant. On these occasions she was mounted on a favorite horse of great sagacity, and rode like a man, with a rifle over her shoulder, and a tomahawk and a butcher's-knife in her belt. At night she slept in the woods. Her custom was to let her horse

PUBLIC SQUARE, GALLIPOLIS.

go free, and then walk some distance back on his trail, to escape being discovered by the Indians. After the Indian wars she spent some time in hunting. She pursued and shot deer and bears with the skill of a backwoodsman. She was a short, stout woman, very masculine and coarse in her appearance, and seldom or never wore a gown, but usually had on a petticoat, with a man's coat over it, and buckskin breeches. The services she rendered in the wars with the Indians endeared her to the people. Mad Ann, and her black pony Liverpool, were always welcome at every house. Often, she gathered the honest, sim-

Fenner, Photo , 1883

ON THE PUBLIC SQUARE, GALLIPOLIS.

ple-hearted mountaineers around, and related her adventures and trials, while the sympathetic tear would course down their cheeks. She was profane, often became intoxicated, and could box with the skill of one of the fancy. Mad Ann possessed considerable intelligence, and could read and write. She died in Ohio many years since." I have this notice of her death which is kindly copied for me by Mr. James Harper, from the Gallia Free Press, of December 3, 1825, published by his father. In a note with it he wrote to me: "I saw Ann Bailey a short time before she died—the first and only time—and she made a lasting impression upon my six-year-old mind. She wore a hat, and her

accoutrements were tomahawk and scalping-

knife." The account was published under the caption "Longevity." "Died, in Harrison township, Gallia county, Ohio, on Tuesday, November 22, 1825, the celebrated Ann Bailey. From the best account we have had she must have been at least 125 years of age. According to her own story her father was a soldier in Queen Anne's wars; that on getting a furlough to go home, he found his wife with a fine daughter in her arms, whom he called Ann, after the Queen, as a token of respect. In 1714 she went from Liverpool to London with her mother on a visit to her brother—while there, she saw Lord Lovett beheaded.

She came to the United States the year after Braddock's defeat, aged then forty-six years. Her husband was killed at the battle of Point Pleasant in 1774; after that, to avenge his death, she joined the garrison, under the command of Col. Wm. Clendenin, where she remained until the final departure of the Indians from the country. She has always been noted for intrepid bravery. Col. Wm. Clendenin says, while he was commander of the garrison where Charleston, Kanawha, is now located, an attack by In-dians was hourly expected. On examination it was believed that the ammunition on hand was insufficient to hold out a siege of any length; to send even two, three or four men

ANN BAILEY, the Heroine of Point Pleasant.

to Lewisburg, the nearest place it could be had, a distance of 100 miles, was like sending men to be slaughtered; and to send a larger force was weakening the garrison. While in this state Ann Bailey volunteered to leave the fort in the night and go to Lewisburg. She did so—and travelled the wilderness, where not the vestige of a house was to be seen—arrived safe at Lewisburg, delivered her orders, received the ammunition, and returned safe to her post, amidst the plaudits

of a grateful people."

In the April number, 1885, of the Magazine of Western History is a sketch of Mad Ann by Wm. P. Buell. It states she was born in the year 1700, in Liverpool, England, and named in honor of Queen Anne, and was present with her parents at her coronation in 1705. She was of good family; the name Sargent. At the age of nineteen, while on her way to school with books on her arm, she was kidnapped, as was common in those days, and brought to America and landed in Virginia, on James river, when she was sold to defray her expenses. At the age of thirty she married John Trotter, who was killed at the battle of Point Pleasant in 1774. The loss of her husband filled her with rage and,

swearing vengeance upon the entire savage race, she entered upon a career as a scout and spy. She hunted, rode and fought like a man. She had a fine black horse called Liverpool, in honor of her birthplace, an animal of great beauty and intelligence. On one occasion, when she was pursued by Indians, she came to an impenetrable thicket where she was obliged to dismount and leave him for their capture. She then crawled into a hollow sycamore log. The Indians came and rested on the log, but without suspecting her concealment within. After they had gone she followed their trail, and in the darkness of night recaptured the animal, and, mounting him, when at a safe distance from being shot or taken gave a shout of defiance and bounded away. The Indians eventually became afraid of her, regarding her as insane and therefore under the special protection of the Great Spirit.

After sixteen years of widowhood she married John Bailey, a soldier, and went with him to Fort Clendenin, on the site of Charleston, Kanawha river. This was in 1790, and when she had attained to the ripe, mellow age of ninety years. Her second husband was murdered, when she went to live with

her son, William Trotter. In 1818 Trotter moved into Gallia county, became a large landowner and was justice of the peace for twenty-one years, and a highly respected man.

A Chat with James L. Newsom about Mad Ann Bailey and others was a wholesome entertainment for me while in Gallipolis. Newsom lived in a little cottage a stone's throw from the Ohio. He was rather tall, cheeks rosy, and life appeared to have gone well with him; and was a boy of fourteen when Mad Ann Bailey died. He told me that he had eleven children, eight boys and. three girls; that not one of the eleven had ever tasted ardent spirits, and the eight boys always voted the Republican ticket, which I

concluded was a good thing for that ticket,

but bad for the distilling business.
"I knew Ann Bailey well," he said, "and heard her say she was five years old when, in 1705, Queen Anne was crowned, and her mother took her up to London to see the event. She was a low-set, heavy woman, not over five feet two inches high, dressed in a petticoat with a man's coat over it, wore a hat, and loved whiskey in her old age; often saw her come to town with a gun and a shot-pouch over her shoulder. She would not live with her son and grandchildren—was too wild. Her home was a cabin, or rather pen, four miles below town, high on the Ohio river She built it of fence rails, which

CABIN OF ANN BAILEY.

It was on the Ohio River Hills, below Gallipolis, and built by her of fence rails.

lapped at the corners. It was made like a shed, had one door and a single window, a small, four-pane affair. The roof was without nails, of black oak clapboards say four feet long, held to their places by weight poles. The chimney was merely an excuse for a chimney; was, outside, about four feet high; the fireplace would take in sticks four or five feet long. The interstices of the cabin were stuffed with straw and old rags and daubed with mud. The only floor was the earth; she had no furniture, not even a bedstead. Mad Ann was passionate, high spirited, had excellent sense, would allow no trifling with her, and hated Indians.

She was very particular in the observance of the Sabbath; gathered in the children and taught them Sunday lessons. Her voice was coarse, like the growl of a lion, and she chewed tobacco like a pig, the saliva coming down the corners of her mouth. I often saw her in town; she sometimes walked and sometimes paddled up in a canoe, and always with a gun and shot-pouch over her shoulder in

hunter fashion.

Although spoken of as Mad Ann, no one ever had the temerity to so address her; the people fairly idolized her, treated her with great kindness, loaded her with presents and

plied her well with whiskey. She died from old age, never was sick—only gave out.

She looked tough as a mule and seemed about as strong. I was a stout boy of fourteen, and one day she laid down her bundle of things which people gave her. We boys were afraid of her, as she was disposed to be a little cross, but as her back was turned I tried to lift it, but was unable. She lifted it with ease, and walked all the way to her home with it, four miles away."

Mr. Newsom brought out a picture, which he gave me, saying he had kept it for years because it was an excellent likeness of Mad Ann, although not taken for her, and this is reproduced in these pages. That of the cabin is from the imagination of an artist, who being a city man has made it altogether too palatial; Mad Ann would have scorned to

have lived in so pretentious a mansion.

Gen. Edward W. Tupper, an officer of the war of 1812, lived in a house now standing, which faces the public square in Gallipolis. In 1812 he raised, mainly from Gallia, Jackson and Lawrence counties, 1,000 men, marched to the northwest and had a skirmish with the enemy at the foot of the Maumee Rapids. He was a large, fine-looking man, continued Mr. Newsom, and when our people attempted to establish a ferry to Point Pleasant, the inhabitants there arose in opposition. The jurisdiction of Virginia extended over the Ohio, and they threatened to kill the first passenger who crossed. Hearing this, Tupper buckled on his sword and pistols and mounting his old war horse ordered the ferryman to take him over. He landed and galloped to and fro through the village. No one ventured to molest him, and thus was the ferry established.

Mr. Newsom also related this anecdote of Col. Robert Safford, who, as stated, cut the first tree on the site of Gallipolis. "One time, said Safford to me, after the defeat of St. Clair, I was in the neighborhood of Raccoon creek with a brother scout, one Hart, when we discovered an Indian seated on a hillock mending his moccasins. I told Hart we must shoot together and I would give the word by counting one, two, three, four. When I said 'four' he must answer 'four,' then we would shoot together. I did so, but Hart not responding I looked behind me where Hart was and saw him running away. I again looked at the hillock and saw not one, but four Indians; so I followed suit."

Gallipolis was the life-home of SIME NASH, one of the learned jurists of Ohio; he died in 1879. He aided me on the first edition by a valuable contribution. He was one of those plain, sensible, industrious men who generally go direct for their facts and get them. He was born in Massachusetts in 180!, educated at Amherst; was a member of the Constitutional Convention of 1850, and for many years Judge of the Seventh District. Judge Nash was author of various law works, as: "Digest of Ohio Reports," in twenty volumes; "Morality and the State," "Crime and the Family," etc.

CHAMBERSBURG, CROWN CITY and PATRIOT are small villages in this county, neither of which have over sixty families.

Joseph Drouillard, now living, at the age of ninety-two years, with his son-in-law, Mr. James Harper, editor of the Gallipolis Journal, is a son of the "Peter Druyer" (as the name has been wrongly spelled) who rescued Simon Kenton from being burnt at the stake by the Indians. He was clerk of the court here for twenty-three years and is a highly respected citizen.

The cemetery at Gallipolis is unique from having so many monuments to French people. One of these is to the memory of John PETER ROMAINE BUREAU. I met him here on my first visit; a little, vivacious, old gentleman, very urbane, graceful and smiling; evidently wanting everybody to feel as joyous as himself. A daughter of his, Romaine Madelaine, married Hon. Samuel F. Vinton, one of Ohio's most distinguished statesmen. (See Vinton county.) Their daughter, MADE-LAINE VINTON DAHLGREN, for her second husband married Admiral Dahlgren. As early as 1859 she published "Sketches and Poems," under the pen-name of Corinne. Her reputation as an authoress and a lady of the highest culture, wealth of information and efficiency in the circles of Washington is too well known for other than our allusion. The Chapel of "St. Joseph's of the Sacred Heart of Jesus," at South Mountain, Md., her summer home, was built through her munificence. One of her works received the compliment of a preface from James A. Garfield, and another the thanks of Pius IX., and still another the thanks of the illustrious Montalembert. Her summer home overlooks the famous battlefield, and resembles a castle of the Middle Ages. Mrs. Dahlgren has published various works on various subjects; essays, pcems, biography, magazine and newspaper articles, and nearly a dozen novels.

GEAUGA.

Geauga County was formed in 1805 from Trumbull, since which its original limits have been much reduced. It was the second county formed on the Reserve. The name Geauga, or Sheauga, signifies in the Indian language Raccoon. It was originally applied to Grand river, thus: "Sheauga sepe," i. e., Raccoon river. The surface is rolling and the soil generally clay. Its area is 400 square miles. In 1885 the acres cultivated were 62,698; in pasture, 103,077; woodland, 45,541; lying waste, 2,703; produced in bushels, wheat, 148,178; oats, 383,891; corn, 253,691; potatoes, 171,760; hay, tons, 41,393; butter, 460,807 pounds; cheese, 1,550,382. School census, 1886, 3,984; teachers, 240. It has 25 miles of railroad.

The population in 1820 was 7,791; in 1840, 16,299; in 1860, 15,817; in 1880, 14,251, of whom 10,380 were Ohio-born; 1,241, New York; 372, Penn-

sylvania; 719, foreign-born.

This county, being at the head-waters of Chagrin, Cuyahoga and part of Grand rivers, is high ground, and more subject to deep snows than any other part of the Reserve. In its early settlement it was visited by some high sweeping winds or tornadoes, but perhaps no more than other counties around them. In August, 1804, John Miner was killed at Chester. He had lately moved from Burton, with part of his family, into a log-house which he had built at that place. A furious storm suddenly arose, and the timber commenced falling on all sides, when he directed his two children to go under the floor, and stepped to the door to see the falling timber. At that instant three trees fell across the house and killed him instantly. The children remained in the house until the next morning, when the oldest made her way to a neighbor, about two miles distant, and related the sad tidings.

The first settlement in Geauga was at Burton, in the year 1798, when three families settled there from Connecticut. This settlement was in the interior of the country, at a considerable distance from any other. The hardships and privations of the early settlers of the Reserve are well described in the annexed article from the pen of one who was familiar with them.

The settlement of the Reserve commenced in a manner somewhat peculiar. Instead of beginning on one side of a county, and progressing gradually into the interior, as had usually been done in similar cases, the proprietors of the Reserve, being governed by different and separate views, began their improvements wherever their individual interests led them. Hence we find many of the first settlers immured in a dense forest, fifteen

or twenty miles or more from the abode of any white inhabitants. In consequence of their scattered situation, journeys were sometimes to be performed of twenty or fifty miles, for the sole purpose of having the staple of an ox-yoke mended, or some other mechanical job, in itself trifling, but absolutely essential for the successful prosecution of business. These journeys had to be performed through the wilderness, at a great

expense of time, and, in many cases, the only safe guide to direct their course were the township lines made by the surveyors.

The want of mills to grind the first harvests was in itself a great evil. Prior to the year 1800 many families used a small handmill, properly called a sweat-mill, which took the hard labor of two hours to supply flour enough for one person a single day. About the year 1800 one or two grist-mills, operating by water power, were erected. One of these was at Newburg, now in Cuyahoga county. But the distance of many of the settlements from the mills, and the want of roads, often rendered the expense of grinding a single bushel equal the value of two or three.

The difficulties of procuring subsistence for a family, in such circumstances, must be obvious. Often would a man leave his family in the wilderness with a stinted supply of food, and with his team or pack-horse go perhaps some twenty or thirty miles for provisions. The necessary appendages of his

journey would be an axe, a pocket compass, fireworks, and blanket and bells. He cut and beat his way through the woods with his axe, and forded almost impassable streams. When the day was spent he stopped where he was, fastened his bells to his beasts, and set them at liberty to provide for themselves. Then he would strike a fire, not only to dissipate, in some degree, the gloom and damps of night, but to annoy the gnats and mosquitos, and prevent the approach of wolves, bears and panthers. Thus the night passed, with the trees for his shelter. At early dawn, or perhaps long before, he is listening to catch the sound of bells, to him sweet music, for often many hours of tedious wanderings were consumed ere he could find his team and resume his journey. If prospered, on reaching his place of destination, in obtaining his expected supply, he follows his lonely way back to his anxious and secluded family, and perhaps has scarce time to refresh and rest himself ere the same journey and errand had to be repeated.

Geauga suffered much from the "Great Drouth" in the summer of 1845, the following brief description of which was communicated to Dr. S. P. Hildreth, by Gov. Seabury Ford, and published in "Silliman's Journal."

The district of country which suffered the most was about one hundred miles in length, and fifty or sixty in width, extending nearly east and west parallel with the lake, and in some places directly bordering on the shore of this great inland sea. There was no rain from the last of March, or the 1st of April, until the 10th of June, when there fell a little rain for one day, but no more until the 2d of July, when there probably fell half an inch, as it made the roads a little muddy. From this time no more rain fell until early in September. This long-continued drouth reduced the streams of water to mere rills, and many springs and wells heretofore unfailing became dry, or nearly so. The grass crop entirely failed, and through several counties the pasture grounds in places were so dry, that in walking across them the dust would rise under the feet, as in highways. So dry was the grass in meadows, that fires, when accidentally kindled, would run over them as over a stubble-field, and great caution was required to prevent damage from them. The crop of oats and corn was nearly destroyed. Many fields of wheat so perished that no attempt was made to harvest them. Scions set in the nursery dried up for lack of sap in the stocks, and many of the forest trees with-ered, and all shed their leaves much earlier than usual. The health of the inhabitants was not materially affected, although much sickness was anticipated. Grasshoppers were multiplied exceedingly in many places, and destroyed every green thing that the drouth had spared, even to the thistles and eldertops by the roadside.

The late frosts and cold drying winds of the spring months cut off nearly all the fruit, and what few apples remained were defective at the core, and decayed soon after being gathered in the fall. Many of the farmers sowed fields of turnips in August and September, hoping to raise winter food for their cattle, but the seed generally failed to vegetate for lack of moisture. So great was the scarcity of food for the domestic animals, that early in the autumn large droves of cattle were sent into the valley of the Scioto, where the crops were more abundant, to pass the winter, while others were sent eastward into the borders of Pennsylvania. This region of country abounds in grasses, and one of the staple commodities is the produce of the dairy. Many stocks of dairy cows were broken up and dispersed, selling for only four or five dollars a head, as the cost of wintering would be more than their worth in the spring.

Such great losses and suffering from the effects of drouth have not been experienced in Ohio for many years, if at all since the settlement of the country. As the lands become more completely cleared of the forest trees, dry summers will doubtless be more frequent. In a region so near a large body of water we should expect more rain than in one at a distance. The sky in that district is, nevertheless, much oftener covered with clouds than in the southern portion of the State, where rains are more abundant; but the dividing ridge, or height of land between Lake Erie and the waters of the Ohio, lacks a range of high hills to attract the moisture from the clouds and cause it to descend in showers of rain.

TRAVELLING NOTES.

An Amusing Old Lady.—On leaving Painesville on this the last morning of September, my attention was arrested at a little

depot on the outskirts by an old lady, evidently a character. She was seated on a box; an eight-year-old boy was by her side, and she was smoking a pipe. Changes were being made in the gauge of the track, with consequent confusion at the depot, with scant accommodation for waiting passengers. She was virtuously indignant. "All the railroad men care for is to get our money," she said; then puffed away. After a little the locomotive came up drawing a single car; in a twinkling it was filled with a merry lot of rural people, laughing and chatting, exhilarated by the air of a perfect September morning, sunny and bracing.

I object.—While waiting for the start something was said about smoking in the car, whereupon a gentleman exclaimed: "If any person objects we must not smoke." Instantly came from a distant corner, in the shrill, screaming tones of some ancient woman: "I object." The announcement was received with a shout of laughter, in which everybody seemed to join. It was evident that every soul in that car felt that "I object" had such an abhorrence of tobacco smoke, that if the man in the moon got out his pipe she would know it after a few puffs; that is, if the wind was right.

My sympathy was excited for the old lady at the deprivation of her pipe-smoke, and so tried, as we started, to relieve her mind by conversation. As is not unusual with humanity, herself was an interesting topic. She was, she told me, fifty-five years old; her parents born in Connecticut, she in "York State," but from five years old had lived in Geauga county. In turn I told her what I was doing, travelling over the State to make a book. "Make money out of it?" inquired she. "Hope so." As I said this she dropped into a brown study, evidently thinking what a grand thing, making money! That thought having time to soak in, she broke the silence with: "My husband died twelve years ago;" then putting her hand on the shoulder of the boy, as if joyed at the thought, added: "This is my man; took him at five months—first time seen the kears."

As we were passing some sheep, I inquired: "Sheep plenty in this country, madam?" "Yes. I've got some, but no such poor scrawny things as those," she said, smirking her nostrils and pointing so contemptuously at the humble nibbling creatures, scattered over a field below us, that I felt sorry for them. Soon after crossing a country road whereon was a flock of turkeys, it came my turn to point, as I said: "How bad those turkeys would feel if they knew Christmas was coming." "What?" said she. She had got a new idea: Turkeys dreading Christmas when everybody else was so glad.

Burton.—The ride over from the depot to Burton is a little over two miles westerly. Burton stands on a hill, and it loomed up pleasantly as I neared it, reminding me of the old-time New England villages. It was

largely settled from Cheshire, Connecticut, which also stands on a hill. The prospect from the village is beautiful and commanding in every direction, takes in a circuit of sixty or seventy miles, including points in Trumbull and Portage counties; north I discerned over a leafy expanse spires in Chardon, eight miles distant; and south the belfry of Hiram College at Garretsville, fourteen miles away. As I look the one makes me think of Peter Chardon Brookes, its founder; and the other of James Garfield, for there he went to school. The county is charmingly diversified with hills and valleys. About ten miles from the shore of Lake Erie and nearly parallel to it is the dividing ridge, on which are points nearly 800 feet above the lake, as Little Mountain and Thompson Ledge; the mean surface of the county is about 500 feet above the lake.

The New Connecticut People. — General Garfield in a speech at Burton, September 16, 1873, before the Historical Society of Geauga County, drew a pleasant picture descriptive of the character of the people, a large majority of whom are descendants of emigrants from Connecticut. He said: "On this Western Reserve are townships more thoroughly New England in character and spirit than most of the towns of New England to-day. Cut off from the metropolitan life that has been molding and changing the spirit of New England, they have preserved here in the wilderness the characteristics of New England as it was when they left it in the beginning of the century. This has given to the people of the Western Reserve those strongly marked qualities which have always distinguished them."

When the Reserve was surveyed in 1796 by Gen. Cleveland there were but two white families of settlers on the entire lake shore region of Northern Ohio. One of these was at Cleveland and the other at Sandusky. By the close of the year 1800 there were thirtytwo settlements on the Reserve, though no organization of government had been established. But the pioneers were a people who had been trained in the principles and practices of civil order, and these were transplanted to their new homes. In New Connecticut there was little of that lawlessness which so often characterizes the people of a new country. In many instances a township organization was completed and a minister chosen before the pioneers left home. Thus they planted the institutions of old Connecticut in their new wilderness homes.

The pioneers who first broke ground here accomplished a work unlike that which will fall to the lot of any succeeding generation. The hardships they endured, the obstacles they encountered, the life they led, the peculiar qualities they needed in their undertakings, and the traits of character developed by their work, stand alone in our history.

These pioneers knew well that the three great forces which constitute the strength and glory of a free government are—the family, the school and the church. These three they

planted here, and they nourished and cherished them with an energy and devotion scarcely equalled in any other quarter of the

world. The glory of our country can never be dimmed while these three lights are kept shining with an undimmed lustre.

Burton is about 30 miles east of Cleveland, 8 south of Chardon, about 20 miles from Lake Erie, and $2\frac{1}{2}$ miles westerly from the P. & Y. R. R. It is a finely located village, and the seat of the county fair grounds. Newspaper:

OLD-TIME WAY OF MAKING MAPLE SUGAR.

Geauga Leader, A. R. Woolsey, editor and proprietor. Churches: 1 Methodist Episcopal and 1 Congregational. Bank: Houghton, Ford & Co. Population in 1880, 480.

THE MAPLE SUGAR INDUSTRY.

The peculiar industry of Geauga county is the making of maple sugar. Forty-five counties in the State make maple sugar, but Geauga, one of the smallest, yields nearly a third of the entire product, beside very large amounts of syrup of excellent quality; but no other county in the Union equals its amount of maple sugar. The entire amount for the year 1885 was a trifle less than 2,000,000 pounds, of which Geauga produced 631,000 pounds, and Ashtabula county, the next largest, 253,000 pounds. Improvements in this have taken place as in other manufactures, and the quality here made is of the very best. Where poorly made its peculiarly fine flavor is lost. Our cut, showing the old-time way, is

copied from that in Peter Parley's "Recollections of a Lifetime." The article which here follows is by Henry C. Tuttle, of Burton, who wrote it for these

pages:
"The undulating and somewhat hilly character of Geauga county seems especially adapted to the growth of the sugar maple and productive of a large supply of sap. Not only does it make the largest quantity, but also the best quality of maple sweet. From using troughs hollowed out of split logs in which to catch the sap and boiling it in big iron kettles in the open air to a thick, black, sticky compound of sugar, ashes and miscellaneous dirt, which had some place in the household economy, but no market value, sugar-makers to-day use buckets with covers to keep out the rain and dirt, the latest improved evaporators, metal storage tanks, and have good sugar-houses in which the sap is quickly reduced to syrup. All this has been done at a large outlay of money, but the result proves it to have been a good investment, as the superior article made finds a ready market and brings annually from \$80,000 to \$100,000.

The season usually opens early in March, when the trees are tapped and a metal spout inserted, from which is suspended the bucket. When the flow of sap begins it is collected in galvanized iron gathering tanks, hauled to the sugarhouse and emptied into the storage vats, from which it is fed by a pipe to the evaporator. The syrup taken from the evaporator is strained, and if sugar is to be made, goes at once into the sugar-pan, where it is boiled to the proper degree, and caked in pound and one-half cakes. If syrup is to be made, it is allowed to cool, and is then reheated and cooled again, to precipitate the silica. It is then

drawn off into cans and is ready for market.

The greatest care and cleanliness is required to make the highest grade of sugar and syrup, and the fragrant maple flavor is only preserved by converting the sap into sugar or syrup as fast as possible. If the sap stands long in the vats or is

boiled a long time the flavor is lost and the color becomes dark.

The groves or "bushes" vary from 300 to 3,000 trees each, the total number of trees tapped in 1886 being 375,000. The industry is still growing, and there are probably enough groves not yet worked to make a total of 475,000, which, if tapped, would increase the output about one-third. The sugar and syrup is mostly sold at home. The principal market is Burton, centrally located, and from there it is shipped to consumers in all parts of the country, the larger proportion going to the Western States."

TRAVELLING NOTES.

Burton is a pleasant place for a few days' rest. It has a ten-acre square with homes, churches and academy grouped around it, and on it is a band-stand where, on evenings, the village band gives excellent music. The Here place has had some n ed characters. Here lived, at the time of my original visit, two especially such, Gov. Slabury Ford, be n in Cheshire, Connecticut, in 1801, and Juage PETER HITCHCOCK, born in the same place in 1781. Mr. Ford came here whom a child.

He was educated for the law, was again political life, serving as speaker or branches of the State Legislature, and was governor of the State in 1849-51, and died soon after from paralysis. He was an ardent Whig and greatly instrumental in carrying

the State for Henry Clay.

In 1820, with a companion, Mr. D. Witter, he travelled through an almost unbroken wilderness to New Haven, Conn., for a four years' absence to obtain an education at Yale College. They both graduated, and were the

very first to do so from the young State of Ohio. While there he was elected the college "bully." This was an office for which the physically strongest man was generally chosen, to preside at class meetings and to lead in fights against the "town boys," so called, the rougher elements of the city, with whom there were sometimes conflicts. one dark night, the latter, a mob of town boys, went so far as to draw up a cannon loaded to its mouth with missiles, in front of the college and applied the torch. It simply flashed, having been secretly spiked on the hither. The office of "college bully" has long since become obsolete from the absence of a low-down class of people to cherish enmity against students.

Seabury Ford was one of the most efficient men known in and legislative history of the State. He gave in excellent piece of advice in a letter to his son Secoury, so characteristic of the man and so likely to be of use to some reader, that I know nothing more fitting for a close here than its quotation: "Avoid politics and public life until, by a careful and industrious attention to a legitimate and honorable calling, you have accumulated a fortune sufficiently large to entitle you to the respect and confidence of your fellow-men as a business man and a man of integrity, and sufficiently large to render you thoroughly and entirely independent of any official sal-

I walked about a mile from the village on the Chardon road to visit the old home of Peter Hitchcock, who has been defined as "Father of the Constitution of Ohio," so largely was his advice followed in framing it. I wished to see how this man of mark had lived, and was greatly pleased to find it was with full republican simplicity. It seemed like an old-time Connecticut farmhouse set down here in Ohio. Vines nestled over the attached kitchen building, and a huge milk-can, tall as a five-year-old urchin, was perched on the fence drying in the sun preparatory to being filled against to-morrow morning's visit of the man from the cheese factory. Both are shown in the engraving.

Peter Hitchcock, in 1801, graduated at Yale at the age of 20, was admitted to the bar, and in 1806 moved to Ohio and took a farm here and divided his time between clearing the wilderness, teaching and the law practice. Four years later he went to the Legislature; in 1814 was speaker of the Senate; in 1817 a member of Congress; in 1819 was a Judge of the Supreme Court, and with slight intermissions held that position until 1852, part of the time being Chief Justice. He was a leading member of the Constitutional Convention of 1850. In 1852, at the age of 70 years, after a public service of over forty years, like Cincinnatus, he retired to his farm and died in 1854.

He is described as having been finely proportioned, erect, strong-chested, with a large head full of solid sense; his expression sedate and Puritanic. He was profound in law, his judgment almost unerring, in words few but exact to the point. He was revered by the bar and beloved by the people, and his decisions considered as models of sound logic. Unconscious of it himself, he was great as a man and a judge.

great as a man and a judge.

The history of Mortimer D. Leggett, one of Ohio's efficient generals in the rebelion, is identified with this county. He was born in Ithaca, New York, in 1821, and in 1836 came with his father's family on to a farm at Montville. He worked on the farm and studied at intervals, then went to the Teachers' Seminary at Kirtland, later studied law and was admitted to the bar in 1844, but did not until six years after begin the practice, for he became deeply interested in the subject of common schools and labored arduously with Dr. A. D. Lord, Lorin Andrews and M. F. Cowdry for the establishment of Ohio's present system of public instruction. These three gentlemen, with young Leggett, stumped the entire State at their own expense in favor of free schools.

Those two warm friends of education,

Judge Worcester, of Norwalk, and Harvey Rice, of Cleveland, fortunately were in the Legislature, and uniting their efforts in the fall of 1846, accomplished the passage of a special school law for the village of Akron, whereupon young Leggett, then but 25

PETER HITCHCOCK HOMESTEAD.

years of age, went thither and organized the first system of free graded schools west of the Alleghenies, under what is known as the "Akron School Law." The good Judge Worcester, whom I well knew—and who, by the way, was the brother of the scholar who made the dictionary—passed away many years since. Harvey Rice I found at his home in Cleveland in 1886, and although born in the last year of the last century, he was then erect, his hearing perfect, and his vision so good as to enable him to read without glasses. Moreover, he was active in instituting measures for the erection of a monument to the memory of the city's founder, now accomplished. Gen. Leggett is to-day a practising lawyer in Cleveland. His example of what a young man without experience, but enthused with a beneficent idea, can do for the public welfare, is too valuable not to have a permanent record.

not to have a permanent record.

In Burton I made the acquaintance of an ex-soldier of the Union army, Mr. E. P. Latham, whose history is a wonderful example of pluck and will power. He was early in the war in the Cumberland mountains, under the command of Gen. Morgan, where, while assisting in firing a salute from a cannon, both of his arms were blown off above the elbow. Yet Mr. Latham feeds himself, drives a fast-going horse in a buggy around Burton, keeps the accounts of a cheese factory, writes letters, manages a farm, and superintends a Sabbath-school.

At table his food is prepared for him, and he feeds himself with a fork or spoon strapped to his left stump, his right stump being paralyzed; he drives with the reins over his shoulder and back of his neck, guiding his horse, turning corners, etc., by movements of his body; and writes with his mouth.

As he wrote the specimen annexed in my presence I describe it. 1. He placed himself at the table, and with his stump moved paper and pen to the right position. 2. Picked up the pen with his mouth and held it in his teeth, pointing to the left. 3. Dipped it in

the ink. 4. Brought his face close to the table and wrote, dragging the pen across the

E. P. LATHAM, EX-SOLDIER, O. V.

paper from left to right. He had such control of it that by the combined use of his lips and teeth he turned the point so as to bring

the slit to its proper bearing for the free flow of the ink. In the engraving it is reduced one-third in size from the original.

His right stump is useless, being without sensation; he cannot feel a pin prick. It is, indeed, an inconvenience. "In winter," said he, "before retiring I am obliged to heat it by the fire, otherwise it feels in bed like a clog of ice—chills me. I have not been free from pain since my loss; I don't know what it is not to suffer; but I won't allow my mind to rest upon it—what is the use? I have now lived longer without my hands than with them, yet to-day I feel all my fingers." Then he bared his left stump and showed me the varied movements necessary for picking up and grasping things in case the remainder of his arm and hand had been there.

I persuaded him to give me a specimen of his handwriting, saying that he ought not to withhold the lesson of his life from the public; that it would be of untold benefit to the young people as an illustration of the principle never to despair, but to accept the inevitable and work with what was left; that these seeming disasters were often of the greatest benefit. "Yes," said he, "I know

it; but for this, I might to-day be in the

penitentiary.'

Mr. Latham is rather tall, erect, slender, with an intellectual and somewhat sad expression, the result I presume of never ceaseing pain. I once met while travelling a young man, a stranger, whose every breath was in pain, one of his lungs having when diseased become attached to his ribs; his expression was like that of Mr. Latham's.

Mr. Latham has a family and enjoys life because his mind is fully occupied with pleasant duties. A French author, in writing a book

entitled "The Art of Being Happy," finally summed it in three words, "An absorbing pursuit;" and this Mr. Latham has. Then he can pride himself on being original; does things differently from anybody else. A lady said to me, "I was one day walking behind Mr. Latham, when a sudden gust of wind blew off his hat; with his foot he turned it over, bent down and thrust in his head, arose and then walked away independent, as though he felt that was the proper way to put on a hat." And it was for Mr. Latham.

Chardon in 1846.—Chardon is the county-seat, 170 miles northeast of Columbus, and twenty-eight from Cleveland. It was laid out about the year 1808, for the county-seat, and named from Peter *Chardon* Brookes, of Boston, then proprietor of the soil. There are but few villages in Ohio that stand upon such an elevated, commanding ridge as this, and it can be seen in some directions for several

Drawn by Henry Howe in 1846.

VIEW ON PUBLIC SQUARE IN CHARDON.

miles: although but fourteen miles from Lake Erie, it is computed to be 600 feet above it. The village is scattered and small. In the centre is a handsome green, of about eleven acres, on which stands the public buildings, two of which, the court-house and Methodist church, are shown in the engraving. The Baptist church and a classical academy, which are on or face the public square, are not

E. D. King, Photo., Chardon, 1887.

BUSINESS BLOCK ON PUBLIC SQUARE, CHARDON.

shown in this view. Chardon has six stores, a newspaper printing office, and in 1840 had 446 inhabitants.—Old Edition.

Chardon, county-seat of Geauga county, is on the P. & Y. R. R. It is beautifully situated on a hill, and together with Bass Lake, three miles, and Little Mountain, seven miles distant, is somewhat of a summer resort. County officers

in 1888: Auditor, Sylvester D. Hollenbeck; Clerk, Brainard D. Ames; Coroner, Will J. Layman; Prosecuting Attorney, Leonard P. Barrows; Probate Judge, Henry K. Smith; Recorder, Charles A. Mills; Sheriff, Wm. Martin; Surveyor, Milton L. Maynard; Treasurer, Charles J. Scott; Commissioners, David A. Gates, Lester D. Taylor, Joseph N. Strong. Newspapers: Republican, Republican, J. O. VIEW IN KING'S CHEESE FACTORY, CHARDON.

The term "Cheesedom," as applied to the Western Reserve, has led strangers to suppose that the dairy was the great source relied upon for the support of the farmers. This is an error, for in no part of the Union is mixed husbandry more prevalent, and when grass fails the farmers fall back upon their cultivated crops and great variety and abundance of fruits. It is true cheese and butter making are the most important industries.

The pioneer women were skilled in cheese-making in their Eastern homes, and when the settlers had enclosed and

seeded their pastures, cheese-making increased. In the Centennial year 1876, the dairy productions of the county were, butter, 672,641 pounds; cheese, 4,136,-231. Only three counties in Ohio made more, but those were much larger in territory. In 1885, in this county was made, butter, 686,207 pounds, and cheese, 1,550,832 pounds. Ashtabula, Lorain, Portage and Trumbull now exceed it in cheese-making, though none of them come up to within three-quarters of Geauga's figures for 1876.

In 1862 began the great revolution in the manufacture of cheese, dairymen sending their milk to factories to be worked up by the co-operative system. In a few years every township had its one or more cheese factories, until they summed up about sixty in the county—a wonderful relief to the domestic labor of the women. Butter and cheese is now shipped direct from this county to Liverpool.

Process of Cheese Manufacture.—The milk is brought to the factory at morning and evening of each day. Here it is weighed and strained into large vats surrounded by running spring water. It is cooled to about 60° F. and a sufficient quantity of rennet added to set the curd. The curd is then cut with knives made for the purpose, into small cubes and heated by steam to 90° F. Then the whey is drawn off and the curd salted, two and a half to three pounds of salt to 100 pounds of milk. The curd is then put into hoops and pressed for two hours, then the bandages of cheese cloth are put on and the cheese again goes to press for twenty-four hours, when it is taken out and goes to the curing-house, where it is rubbed and turned every day for thirty to forty days, when it is ready for market.

TRAVELLING NOTES.

Oct. 5.—I came with a load of passengers early this morning in a public hack from Chardon to Painesville, distance ten miles. Chardon being on high table land, the clouds are apt to gather there, and so we started in mists which the sun dispelled and warmed us up and we went through a rich country of gentle hills and valleys. We passed orchards

and had the pleasant sight of men and boys in the trees gathering the many-colored apples and stowing them away in bags hanging from the branches. I observed some noble hickories, and was pointed to a tree from which at a single season four and a half bushels had been gathered. The maples were but just beginning to blush. Geauge

is the favorite home of the maple and its maple sugar industry the greatest in the Union, and the sugar excelling in qual-

Trout Streams.—Geauga has, with Erie, the distinction of being the only one of two counties that I know of in Ohio that has a stream of water so pure and cold as to be the native home of the speckled brook trout. In Erie the source is a cold spring at Castalia gushing forth from a prairie. In Geauga it to-day, below the conglomerate rock, at the base of which the filtered pure water gushes forth in streams, forming the head-waters of

Chagrin river.

Past and Present on the Reserve.—Travelers by rail see comparatively little. My ride by hack was a refreshing change, an eye feast. In my original journey on horseback through the Reserve I was continually reminded of the Connecticut of that time by the large number of red houses, red barns and little district school-houses by the roadside, also red. Gone are these red things, and gone mostly are the people, and gone the country taverns with their barroom shelves filled with liquor bottles. The boys and girls of that time now living are largely grand-parents. Now the farmhouses are white or a neutral tint, many of them ornate, the creations of skilled architects; all of those hereabouts have porches either upon the main building or upon the addition. Labor-saving machines and implements and conveniences, both on the farm and in the dwelling, have saved much untold back-aching drudgery and given leisure for the more delicate things. Farmers' wives can any time pick up Harper's Weekly or Monthly and read an article on entomology, maybe an instructive one on the habits of the bumble-bee, and not feel as though they were committing a sin-encroaching on valuable time that ought to be given to melting snow in a huge kettle hanging over backlogs, whereby to get water and worry through the week's washing.

The dreadful isolation and loneliness of farm-life is a thing of the past. Good roads have overcome this and brought town and country together shaking hands. Most families have representatives in some neighboring city or on farms farther west, and they often visit the old homestead, bringing their children, and renew the old ties. The cricket still sings somewhere around the premises, the doves still coo from the eaves; the clover, fragrant as ever, finds them out and steals into their noses. Books, magazines are in every dwelling and education general; and social intercourse has changed and broadened their lives. Noah Webster lies alongside the Family Bible with the photographic album, wherein are absent friends and the latest arrival by the "limited express"—limited by the capacities of maternity. "Was there by the capacities of maternity. ever such a pretty baby?" The genus gawkey is no more and no longer one hears uncouth speech and expressions, such as: "I want ter kneow!" "Dew tell," "I

kinder reckon," "Stun wall!" "Pale the keow!" etc.

Stage-Coach Talk.—Nearing Painesville, our way over the height of land was through winding ravines with their running streams, and one spot was pointed out to me by a gentleman by my side, where was nestled in a nook a homestead that seemed as a sort of paradise: "I had rather live there," he said, "as those people live in these surroundings than on Euclid avenue." He was of the law, a large man from Chardon; reminded me of Tom Corwin, whom I knew, and like him had a dark complexion and run to adipose; and, as Corwin would have done, beguiled the way with amusing stories, and

his budget was running over.

As we started out of the village, he said: "Some of us have been making a sort of social census of Chardon; the result is: three bachelors, four old maids (that is, counting girls over 35 as such), five widowers and seventy widows." Thought I, if that is a quiz, I admire your ingenuity. If a fact, it is astounding as an earthquake. My courtesy led me to apparently take the shock, and so I put in "Why does Chardon so run to widows? Was the town gotten up for them?" "No," said he, "not exactly that; they all have children and come from the country around to educate them, the schools and morals of the people are so excellent, and it is such a healthy pretty spot, with such abundance of everything and living so cheap."

Dropping the widows, we launched on to other subjects; one was the false idea that young and inexperienced people have of men of high station and reputation. "I was," he said, "bred on a farm and knew nothing of the world. When a young man I journeyed to Columbus and called upon the Government is bloomed to the control of the world." ernor in his audience chamber in the State House. Ushered into his presence, I trembled as an aspen. He invited me to a seat, and I was in the act of sitting down in a chair, when a leg slipped out of its socket. "Hold on," said he, "let me fix that." Then he stooped to his knees and slipped the chair leg in its place. In a twinkling my awe vanished. I saw the Governor of Ohio, kneeling before me, was as other men; so when he arose I was as calm as a May morning. The governor was R. B. Hayes.

The timid, sensitive boy is of all others to be admired, for he has the first requisition of genius and heroism—impressibility. The old Athenians, that lovable people, had it to a superlative degree; and how heroic and intellectual were they and how exquisite their art, their architecture and statuary. Those creations of their genius seen under the tender blue skies of that soft, delicious climate, amid the moving figures of the beautiful Athenians arrayed in their simple loose garments of white that swayed in graceful folds around their persons, must have completed a landscape that touched the rude Scythian brought into their presence with a sense akin to the celestial. The greatest, no matter how high their station, at times may be timid.

Nothing is so dreadful to man as man. It is the world of intellect that at times awes the strongest. Intellect is of God, and its possession makes man godlike. One who had been a cabinet minister, a governor of a great State, and a soldier of national reputation, recently to a question of mine replied: "Yes, to this day I at times suffer from sensitiveness, even just before I begin such a simple duty as questioning a witness in court." As he thus spake, my regard for him, which was high before, increased.

If the young nervous boy, who shrinks on hearing his name called in school, could real-

ize the grand truth, that when a sense of duty impels, that with action timidity vanishes, and that he of all others will prove the most capable of heroic things, a great point would be gained for the world into which he would be gained for the world into which he has arrived for the express purpose of developing himself and helping to make it better. "Why do you tremble so?" said an old officer to a young lieutenant of Wellington's army just at the opening of a battle. "Do you feel bad?" "Yes, sir, I do," he rejoined; "and if you felt as bad as I do you would run away."

MIDDLEFIELD is about 30 miles east of Cleveland and about 25 miles south of Lake Erie, on the P. & Y. R. R. Newspaper: Messenger, Independent, C. B. Murdock, editor. Churches: 1 Methodist Episcopal and 1 Wesleyan Methodist. Industries: 1 grist, 2 saw and woodworking mills, brick and tile, cheese factories, Population in 1880, 325. The vicinity abounds in mineral springs. Geauga has several other small villages, as Parkman, 16 miles S. E. of Chardon; Huntsburg, 6 miles east, and Chester Cross Roads, in the northwestern corner of the county.

GREENE.

Greene County was formed from Hamilton and Ross, May 1, 1803, and named from Gen. Nathaniel Greene, of the revolution. The soil is generally clayey; the surface on the east is flat and well adapted to grazing, the rest of the county is rolling and productive in wheat and corn. Considerable water-power is furnished by the streams. It has some fine limestone quarries, and near Xenia, on Cesar's creek, is a quarry of beautifully variegated marble. The principal productions are wheat, corn, rye, grass, grass seed, oats, barley, sheep and swine. Area, 450 square miles. In 1885 the acres cultivated were 131,197; in pasture, 35,693; woodland, 34,544; lying waste, 6,668; produced in wheat, 362,749 bushels; oats, 183,639; corn, 2,560,852; flax, 72,500 pounds; wool, 129,355; horses owned, 10,703; cattie, 18,986; sheep, 33,411; hogs, 30,191. School census, 1886, 9,027; teachers, 183. It has 87 miles of railroad.

Population in 1820 was 10,509; 1840, 17,753; 1860, 26,197; 1880, 31,549, of whom 23,747 were Ohio-born; Kentucky, 1,645; Virginia, 1,377; Pennsylvania, 854; Indiana, 340; New York, 230; Ireland, 729; and Germany, 384.

The Shawnee town, "Old Chillicothe," was on the Little Miami, in this county,

about three and a half miles north of the site of Xenia: it was a place of note,

and is frequently mentioned in the annals of the early explorations and settlements of the West. It was sometimes called the Old Town.

In the year 1773 Capt. Thomas Bullit, of Virginia, one of the first settlers of Kentucky, was proceeding down the Ohio river, with a party, to make surveys and a settlement there, when he stopped and left his companions on the river, and passed through the wilderness to Old Chillicothe, to obtain the consent of the Indians to his intended settlement. He entered the town alone, with a flag of truce, before he was discovered. The Indians, astonished at his boldness, flocked around him, when the following dialogue ensued between him and a principal chief, which we derive from Butler's "Notes on Kentucky:"

Indian Chief. What news do you bring? are you from the Long Knife? If you are an

ambassador, why did you not send a runner?

Bullit. I have no bad news. The Long Knife and the Red men are at peace, and I have come among my brothers to have a friendly talk with them about settling on the other side of the Ohio.

Indian Chief. Why did you not send a

Bullit. I had no runner swifter than myself, and as I was in haste, I could not wait the return of a runner. If you were hungry and had killed a deer, would you send your squaw to town to tell the news, and wait her

return before you would eat?

This reply of Bullit put the bystanders in high humor; they relaxed from their native gravity and laughed heartily. The Indians conducted Bullit into the principal wigwam of the town, and regaled him with venison, after which he addressed the chief as fol-

Brothers:—I am sent with my people, whom I left on the Ohio, to settle the country on the other side of that river, as low down as the falls. We came from Virginia. I only want the country to settle and to cultivate the soil. There will be no objection to your hunting and trapping in it, as heretofore. I hope you will live with us in friendship.

To this address the principal chief made

the following reply.

Brother: You have come a hard journey through the woods and the grass. pleased to find that your people in settling our country are not to disturb us in our hunting; for we must hunt to kill meat for our women and children, and to have something to buy powder and lead, and procure blankets and other necessaries. We desire you will be strong in discharging your promises to-wards us, as we are determined to be strong in advising our young men to be kind, friendly and peaceable towards you. Having finished his mission, Capt. Bullit returned to his men, and with them descended the river to the

Some of this party of Bullit's shortly after laid out the town of Louisville, Kentucky.

The celebrated Daniel Boone was taken prisoner, with twenty-seven others, in Kentucky, in February, 1778, in the war of the revolution, and brought to Old Chillicothe. Through the influence of the British governor Hamilton, Boone, with ten others, was taken from thence to Detroit.

The governor took an especial fancy to Boone, and offered considerable sums for his release, but to no purpose, for the Indians also had taken their fancy, and so great was it that they took him back to Old Chillicothe, adopted him into a family, and fonly caressed him. He mingled with their sports, shot, fished, hunted and swam with them, and had become deeply ingratiated in their favor, when on the 1st of June, they took him to assist them in making salt in the Scioto valley, at the old salt wells, near, or at, we believe, the present town of Jackson, Jackson county. They remained a few days, and when returned to Old Chillicothe, his heart was agonized by the sight of 450 warriors, armed, painted and equipped in all the paraphernalia of savage splendor, ready to start en an expedition against Boonesborough. To avert the cruel blow that was about to fall upon his friends, he alone, on the morning of the 16th of June, escaped from his In-dian companions, and arrived in time to foil the plans of the enemy, and not only saved the borough, which he himself had founded, but probably all the frontier parts of Ken-

tucky, from devastation.

Boone told an aged pioneer that when taken prisoner on this occasion, the Indians got out of food, and after having killed and eaten their dogs, were ten days without any other sustenance than that of a decoction made from the oozings of the inner-bark of the white-oak, which after drinking, Boone could travel with the best of them. length the Indians shot a deer and boiled its entrails to a jelly of which they all drank, and it soon acted freely on their bowels. They gave some to Boone, but his stomach refused it. After repeated efforts, they forced him to swallow about half a pint, which he did with wry face and disagreeable retchings, much to the amusement of the simple savages, who laughed heartily. After this medicine had well operated, the Indians told Boone that he might eat; but if he had done so before it would have killed him. They then all fell to, and soon made amends for their long fast. At Detroit, he astonished the governor by making gunpowder, he having been shut up in a room with all the materials.

Col. John Johnston, who knew Boone well, says in a communication to us:

It is now (1847) fifty-four years since I first saw Daniel Boone. He was then about 60 years old, of a medium size, say five feet ten inches, not given to corpulency, retired, unobtrusive, and a man of few words. My acquaintance was made with him in the winter season, and I well remember his dress was of tow cloth, and not a woollen garment on his body, unless his stockings were of that material. Home-made was the common wear

of the people of Kentucky, at that time: sheep were not yet introduced into the country. I slept four nights in the house of one West, with Boone: there were a number of strangers, and he was constantly occupied in answering questions. He had nothing remarkable in his personal appearance. His son, Capt. N. Boone, now an old man, is serving in the 1st regiment United States Dragoons.

In July, 1779, the year after Boone escaped from Old Chillicothe, Col. John Bowman, with 160 Kentuckians, marched against the town. The narrative of this expedition is derived from Butler's Notes.

The party rendezvoused at the mouth of the Licking, and at the end of the second night got in sight of the town undiscovered. It was determined to await until daylight in the morning before they would make the attack; but by the imprudence of some of the men, whose curiosity exceeded their judgment, the party was discovered by the Indians before the officers and men had arrived at the several positions assigned to them. As soon as the alarm was given, a fire com-menced on both sides, and was kept up, while the women and children were seen running from cabin to cabin, in the greatest confusion, and collecting in the most central and strongest. At clear day-light it was dis-covered that Bowman's men were from seventy to one hundred yards from the cabins, in which the Indians had collected, and which they appeared determined to defend. Having no other arms than tomahawks and rifles, it was thought imprudent to attempt to storm strong cabins, well defended by expert warriors. In consequence of the warriors collecting in a few cabins contiguous to each other, the remainder of the town was left unprotected, therefore, while a fire was kept up at the port-holes, which engaged the attention of those within, fire was set to thirty or forty cabins, which were consumed, and a considerable quantity of property, consisting of kettles and blankets, were taken from those cabins. In searching the woods near the town, 133 horses were collected.

About 10 o'clock Bowman and his party commenced their march homeward, after

having nine men killed. What loss the Indians sustained was never known, except Blackfish, their principal chief, who was wounded through the knee. After receiving the wound, Blackfish proposed to surrender, being confident that his wound was dangerous, and believing that there were among the white people surgeons that could cure him, but that none among his own people could do it.

The party had not marched more than eight or ten miles on their return home, before the Indians appeared in considerable force on their rear, and began to press hard upon that quarter. Bowman selected his ground, and formed his men in a square; but the Indians declined a close engagement, only keeping up a scattering fire. It was soon discovered that their object was to retard their march until they could procure reinforcements from the neighboring villages.

As soon as a strong position was taken by Col. Bowman, the Indians retired, and he resumed the line of march, when he was again attacked in the rear. He again formed for battle, and again the Indians retired, and the scene was acted over several times. At length, John Bulger, James Harrod and George Michael Bedinger, with about 100 more mounted on horseback, rushed on the Indian ranks and dispersed them in every direction; after which the Indians abandoned their pursuit. Bowman crossed the Ohio at the mouth of the Little Miami, and after crossing, the men dispersed to their several homes.

In the summer after this expedition Gen. Clark invaded the Indian country, an account of which is related under the head of Clark County. On his approach the Indians burnt Old Chillicothe.

The article relating to early times in Greene county is slightly abridged from a communication by Thomas C. Wright, Esq., the county auditor.

After Abdolonymus had been taken from his humble station in life, and made king of

Sidonea, it is said he kept a pair of wooden shoes near his throne, to remind him of his former obscurity, and check the pride which power is so apt to engender in the heart of man. The annexed drawing is deemed worthy of preservation, not only as a memento of early times, and serving as a contrast to the present advanced state of improvement, but on account of the historical associations it raises in the memory of the first judicial proceedings and organization of Greene county.

The house, of which the engraving is a correct representation, is yet (1846) standing, five and a half miles west of Xenia, near the Dayton road. It was built by Gen. Benj. Whiteman, a short distance south of the log cabin mill of Owen Davis, on Beaver creek. This mill, the first erected in Greene, was finished in 1798. A short distance east were erected two block-houses, and it was intended, should danger render it necessary, to connect them by a line of pickets, and include the mill within the stockade. This mill was used by the settlers of "the Dutch Station," some thirty miles distant, in the centre of Miami county.

On the 10th of May, 1803, the first court for organizing Greene county was held in this house, then the residence of Peter Borders. Wm. Maxwell, Benj. Whiteman and James Barret were the associate judges, and John Paul, clerk. The first business of the court was to lay off the county into townships, and after transacting some other business, they adjourned "until court in course," having been in session one day.

The First Court for the trial of causes was held in the same house, on Tuesday, Aug. 2, 1803, with the same associate judges, and Francis Dunlavy, presiding judge, and Daniel Simms, prosecuting attorney. "And there Simms, prosecuting attorney. "And there came a grand jury, to wit: Wm. J. Stewart, foreman, John Wilson, Wm. Buckles, Abrm. Van Eaton, James Snodgrass, John Judy, Evan Morgan, Robt. Marshall, Alex. C. Armstrong, Joseph C. Vance, Joseph Wilson, John Buckhannon, Martin Mendenball and Harry Martin, who were sworn a hall and Harry Martin, who were sworn a grand jury of inquest, for the body of Greene After receiving the charge "they county.

FIRST COURT-HOUSE IN GREENE.

retired out of court;" a circumstance not to be wondered at, as there was but one room in the house. Their place of retirement, or jury room, was a little squat-shaped pole hut, shown on the right of the view.

And now, while their honors, with becoming gravity, are sitting behind a table ready for business, and the grand jury making solemn inquest of crimes committed, the contrast between the state of the county then and at present, naturally presents itself to the mind. Since then, forty-four years ago
—a period within the recollection of many
of our citizens—and what a change! Then it was almost an entire wilderness-a primeval forest, planted by the hand of naprime var forest, planted by the little of ture. The first house in Greene county was built by Daniel Wilson, who is now living near Centerville, Montgomery county. It was raised on the 7th day of April, 1796, about four miles from where Bellbrook has long since been laid out, in Sugarcreek township. In 1798 Thomas Tounsley settled near the falls of Massie's creek, some eight miles from Xenia. The same year James Galloway, Sr., settled on the Little Miami, two miles north of Oldtown. Isaiah and Wm. Garner Sutton erected the first house in Cæsar's Creek township, in 1799, about five miles south of Xenia, near where the Bullskin road crosses Cæsar's creek. Cæsarsville was laid out by T. Carneal, in 1800, and the first house in it was built the year following. It was expected to become the county-seat, but was finally rejected in favor of Xenia. Cæsarsville, at the time of this court, contained a few log-cabins, and so scattered about, miles apart, the traveller might find one of these primitive dwellings sending up its smoke from a mud and stick chimney among the giants of the forest, each cabin with a little patch of a corn-field, thickly dotted over with girdled trees. A bridlepath, or blazed trees, led the traveller from

one to the other. But they were the abodes of contentment, simplicity of manners, whole-hearted hospitality and generosity of soul, which does honor to human nature and

gives a charm to existence.

But to return to the court. From a careful examination of the records and other sources of information I cannot learn there was any business for the grand jury when they retired. But they were not permitted to remain idle long: the spectators in attendance promptly took the matter into consideration. They, doubtless, thought it a great pity to have a learned court and nothing for it to do: so they set to and cut out employment for their honors by engaging in divers hard fights at fisticuffs, right on the ground. So it seems our pioneers fought for the benefit of the court. At all events, while their honors were waiting to settle differences according to law, they were making up issues and settling them by trial "by combat"—a process by which they avoided the much complained of "law's delay," and incurred no other damages than black eyes and bloody noses, which were regarded as mere trifles, of course. Among the incidents of the day, characteristic of the times, was this: A Mr. —, from Warren county, was in attendance. Owen Davis, the owner of the mill, who, by the way, was a brave Indian fighter, as well as a kind-hearted, obliging man, charged this Warren county man with speculating in pork, alias stealing his neighbor's hogs. The insult was resented -a combat took place forthwith, in which Davis proved victorious. He then went into court, and planting himself in front of the judges, he observed, addressing himself particularly to one of them, "Well, Ben, I've whipped that d—d hog-thief—what's the damage—what's to pay?" and thereupon, suiting the action to the word, he drew out his buckskin purse, containing eight or ten dollars, and slammed it down on the table then shaking his fist at the judge, whom he addressed, he continued, "Yes, Ben, and if you'd steal a hog, d—n you, I'd whip you, He had, doubtless, come to the contoo. clusion, that, as there was a court, the luxury of fighting could not be indulged in gratis, and he was for paying up as he went. Seventeen witnesses were sworn and sent before the grand jury, and nine bills of indictment were found the same day—all for affrays and assaults and batteries committed after the court was organized. To these indictments the parties all pleaded guilty, and were fined-Davis among the rest, who was fined eight dollars for his share in the transactions of the day.

The following is the first entry made on the record after the grand jury retired: "The court then proceeded to examine the several candidates for the surveyor's office, and James Galloway, Jr., being well qualified, was appointed surveyor of said county." On the second day of the term Joseph C. Vance (father of ex-Gov. Vance, of Champaign county) was appointed to make the necessary arrangements for establishing the

seat of justice, who, with David Huston and Joseph Wilson, his securities, entered into a bond, with a penalty of \$1500 for the faithful performance of his duties. He surveyed and laid out the town of Xenia (which, by the way, is an old French word, signifying a new-year's gift) the same season, for at the next December term he was allowed \$49.25 for laying off the town of Xenia, finding chainmen, making plots and selling lots." On the third day of the term Daniel Symmes was allowed twenty dollars for prosecuting in behalf of the State. The presiding judge then left the court, but it was continued by the associate judges for the transaction of county business. In addition to the duties now pertaining to associate judges, they discharged the duties now performed by the board of county commissioners. Archibald Lowry and Griffith Foos were each licensed to keep a tavern in the town of Springfield, on the payment of eight dollars for each license. A license was also granted to Peter Borders to keep a tavern at his house, on the payment of four dollars, "together with all legal fees." So our old loghouse has the honor of having the first learned court held within its rough walls; and, in addition to that, it was, in fact, the first hotel ever licensed in the county in which hog and hominy and new corn whiskey could be had in abundance. Perhaps the court was a little interested in granting the license. Like old Jack Falstaff, they might like "to take their own ease in their own inn." James Galloway, Sr., was appointed county treasurer. The court then adjourned, having been in session three days.

On the 19th day of the same month (August), the associate judges held another court for the transaction of county business. They continued to meet and adjourn from day to day, waiting for the lister of taxable property to return his book, until the 22d, when they made an order, that fifty cents should be paid for each wolf killed within the bounds of the county, and "that the largest block-house should be appropriated to the use of a jail;" and Benjamin Whiteman, Esq., was appointed, in behalf of the county, to contract for repairing it-a decisive mark of civilization. Among the allowances, at this term, there was one of six dollars to Joseph C. Vance, for carrying the election returns of Sugar Creek township to Cincinnati; and a like sum to David Huston, for returning the poll-book of Beaver Creek. He afterwards held the office of associate judge twenty-one years, and twice represented Greene county in the State legislature. He lived the life of an honest man—was beloved and respected by all who knew him. He died in 1843. The clerk and sheriff were allowed twenty dollars each for ex-officio fees, and Jacob Shingledecker, nine dollars and fifty cent, for preparing the block-house to serve as a jail—a great perversion from the original design of the building, as it was intended at first to keep unwelcome visitors out, and ended in keeping

unwilling visitors in. It was ordered by the court, that the inhabitants of Mad River township should be exempted from the payment of taxes, or rather, their taxes were reduced two cents on each horse and one cent on each cow. The reason assigned for this favor was "for erecting public buildings." As we have seen no public buildings yet but the two block-houses, and the one which figures at the head of this communication, the reader would, doubtless, be much surprised that the erection of these should be deemed sufficiently meritorious as, in part, to exempt the inhabitants from the payment of taxes. But these public buildings were situated in Cincinnati. We apprehend that but few of our citizens are aware of the fact, that the first settlers in this county contributed to the erection of public buildings in Cincinnati-the old stone court-house, we suppose, which was burnt down while used as barracks in time of the last war, and the hewed log jail which stood on the north side of the public square.

The first supreme court was held in the same house, on the 25th day of October, 1803, by their honors Samuel Huntingdon and Wm. Spriggs, judges; William Maxwell, sheriff, John Paul, clerk, and Arthur St. Clair, Esq., of Cincinnati, prosecuting attorney. Richard Thomas was admitted an attorney and counsellor at law. Nothing more was done, and the court adjourned the

same day.

At the November term of the court of common pleas, the first thing was to arraign Thomas Davis, a justice of the peace, for misconduct in office. He pleaded guilty, was fined one dollar, and ordered, in the language of the record, "to stand committed until performance." But what the misconduct was for which he was fined, the record sayeth not; neither is it known whether he raised the dollar, or was made familiar with the inside of the block-house. On the first day of this term, the Rev. Robert Armstrong received a license to solemnize the rites of He and the Rev. matrimony. Fulton were sent, by the general associate synod of Scotland, as missionaries to Kentucky, and arrived at Maysville, in 1798; but, not liking the institution of slavery, Mr. Fulton went to the neighborhood where South Hanover now is, Indiana, and Mr. Armstrong came to Greene county, Ohio. This was the commencement of the Seceder denomination in this county. From this small beginning it has become the most numerous, perhaps, of any other in the county. They form a large portion of an orderly, law-abiding and industrious population—strict in observing the Sabbath and in discharge of their religious duties, and correct in moral conduct. They are mostly farmers, in independent circumstances. Mr. Armstrong was a small man, of vast learning, with the simplicity, in some things, of a child. An anecdote is told of his being at a log-rolling, assisting to carry a log, and having but a few inches of handspike, the weight of it resting mostly on him. The person with whom he was lifting, seeing his situation, said, "Stop, Mr. Armstrong—let me give you more handspike." "No," said the Rev. gentleman, "no more stick for me; I have already as much as I can carry." He was universally esteemed and respected. He died in 1818. He brought a very large library of books with him, and was very liberal in lending them. To this circumstance, perhaps, may be attributed the fact, that more books have been sold and read in this county than in any other of the same population in the State.

At this term, in the case of Wm. Orr vs. Peter Borders, leave was given to amend the declaration, on payment of costs—an indication that some attention began to be paid to special pleading. The first civil ease that was tried by a jury was that of Wallingsford vs. Vandolah. A verdict was rendered for the plaintiff of twenty-four cents, upon which

"he paid the jury and constable fees."

At the December term of the common pleas four cases of assault and battery were tried by jury, which took up the first day. The day following, this entry was made: William Chipman vs. Henry Storm, "judgment," confessed for one cent damages and costs." But such is the imperfect manner in which the records were kept, that it is impossible to ascertain what the subject matter of the controversy was in which such heavy damages were admitted. The court decided that the fee paid to the State's attorney, at the August term, was illegal, and should be refunded. This was the result of "sober second thoughts" of the court about that twenty dollar fee, for which the attorney came from Cincinnati, more than fifty miles, through the woods, and drew nine bills of indictment and attended to the cases. At this term Andrew Read, an early settler near where the beautiful village of Fairfield now is, took his seat on the bench as associate judge, to fill the vacancy occasioned by the election of William Maxwell to the office of sheriff. The first view and survey of a new road route was granted at this term. It was to commence at Springfield, pass the Yellow spring and intersect the Pinkney road near Isaac Morgan's. Wm. Maxwell, Lewis Davis and Thomas Tounsley were appointed viewers, and James Galloway, Jun., surveyor. So our fellow-citizen, Maj. Galloway, was the first county surveyor, surveyed the first road by order of the court and afterwards made a map of the county, in its present metes and bounds, showing all the surveys and sections of the land, with their divisions and subdivisions into tracts. Tavern licenses were granted to Thomas Fream, William Moore, and James M'Pherson to keep taverns in their houses for one year, and so ended the term.

The June term of 1804 was the last court ever held in the old log-house. It was composed of the same judges, clerk and sheriff, with Arthur St. Clair, Esq., of Cincinnati, prosecuting attorney. The writer of this has been informed he wore a cocked hat and a

William M'Farland was foreman of the grand jury. A singular incident took place at the opening of this court. There was a shelf in one corner, consisting of a board on two pins inserted in the wall, containing a few books, among which counsellor St. Clair searched for a Bible, on which to swear the jury. At length he took down a volume, and observed, with his peculiar lisp, "Well, gentlemen, here is a book which looks thist like a testament." The foreman of the grand jury was accordingly sworn upon itbut the book, which so much resembled a testament in external appearance, turned out in fact to be an old volume of The Arabian Nights Entertainment! From this mistake, or some unknown cause, the practice of swearing on the Evangelists, has gone entirely out of use in this county being substituted by swearing with the uplifted hand, or affirming. The grand jury found several bills of indictment, and were discharged the same day

In proportion as cases of assault and battery begin to decrease, a sprinkling of civil suits make their appearance on the docket. Fourteen cases were called the first day, and all continued, except one in which judgment was confessed and stay of execution granted until next term. The entry of continuance was in this form: A. B. vs. C. D. E. F. and G. H. pledges for the defendant in the sum the amount being more or less, according to the subject matter in controversy. Wednesday of this term Joseph Tatman produced his commission as associate judge, and took the oath of office. He afterwards, in 1816, in company with Samuel and William Casad, laid out the town of Fairfield, not far from the site of an old Indian town, named Piqua, at which Gen. George R. Clark defeated the Indians in 1780. On this day 22 cases were called: 11 continued, 2 settled, 1 judgment, 5 ruled for plea in 40 days, 1 in 10 days, 1 discontinued and 1 abated by death. This was certainly a pretty fair beginning, and quite encouraging to the learned profession.

The total amount of taxable property returned by the "listers" was \$393.04, and this levy included houses and mills, if any. As to houses, there was but one returned, and that was valued for taxation at one dollar! Considering the sparseness of population and small amount of property in the county, the proportion of litigation was greater then than at this time, 1847, when the total amount of taxable property is \$6,583,673. So much of a change in forty-three years. They fought less and lawed more. In newly settled counties, there appears to be a peculiar fondness among the people for lawsuits. After a court has been organized in a new county, they still continue to settle their difficulties by combat,

until fines become troublesome. The court then becomes the arena in which their contentions and quarrels are carried and finally disposed of. If one cannot afford the fine or imprisonment which would be incurred, by taking personal satisfaction, he can bring a suit, if any cause of action can be found, and no matter how small the amount claimed, or frivolous the matter, if he can only cast his adversary and throw him in the costs, he is as much gratified as if he had made him halloa "enough—take him off." It is this spirit which gives rise to so many trifling and vexatious lawsuits.

And now we take leave of our primitive dwelling-house, court-house and tavern. It is still standing, and occupied as a residence. While our drawing was being taken, an oldfashioned long-handled frying-pan was over the fire—its spacious bottom well paved with rashers of ham, sending forth a savory odor, enough to make a hungry person's mouth water. What scenes it has witnessed—what memories it recalls! It has witnessed the organization of the county, the first administration of law and justice, the first exercise of the right of suffrage through the ballot-box, and the first legal punishment of crimi-Near it the first corn was ground into meal for the use of the settlers, and here they rallied to build block-houses to protect them from the hostile attacks of the Indians. As a tavern many a weary traveller, through the tall and lonely forest, has been sheltered and refreshed beneath its humble roof. many buckeye lads and lasses have been reared within its walls—for

> "Buirdly chiels and clever hizzies Are bred in sic a way as this is!"

How many jovial dances have been had on its puncheon floor! While we may suppose some lame or lazy fellow seated on a stool in a corner, prepared with an awl or Barlow knife, to extract splinters from the heels of the dancers, as fast as the sets were over. How many courtships have been carried on during the long winter nights—the old folks asleep, and the young lovers comfortably toasting their shins over the decaying embers—happy in present love, and indulging in bright anticipations of housekeeping in a cabin.

Long mayest thou stand, old relic, as a memento of pioneer life, primitive simplicity and good old-fashioned konesty, to remind the rising generation of the hardships and privations our pioneer fathers encountered in first settling the county, and to show by this humble beginning, compared with the present state of improvement, how much honest-labor, painstaking industry and thrifty management can accomplish.

JOSIAH HUNT, THE INDIAN FIGHTER.

Josiah Hunt resided in this county in the time of the last war with Great Britain. He was a stout, well-formed, heavy-set man, capable of enduring great

hardships and privations, and was then a member of the Methodist Episcopal church. There was a tone of candor and sincerity, as well as modesty, in his manner of relating the thrilling scenes in which he had been an actor, which left no doubt of their truth in the minds of those who heard him. He was one of Wayne's legion, and was in the battle of the Fallen Timber, on the 20th of August, 1794.

At the commencement of the onset, just after entering the fallen timber, Hunt was rushing on and about to spring over a fallen tree, when he was fired at by an Indian concealed behind it. The latter was compelled to fire in such haste that he missed his aim. It was, however, a close shave, for the bullet whizzed through the lock of his right temple, causing that ear to ring for an hour after. The Indian's body was entirely naked from the waist up, with a red stripe painted up and down his back. As soon as he fired he took to his heels. Hunt aimed at the centre of the red stripe, the Indian running zig-zag "like the worm of a fence." When he fired, the Indian bounded up and fell forward.

had fought his last battle.

He was an excellent hunter. In the winter of 1793, while the army lay at Greenville, he was employed to supply the officers with game, and in consequence was exempted from garrison duty. The sentinels had orders to permit him to leave and enter the fort whenever he chose. The Indians made a practice of climbing trees in the vicinity of the fort, the better to watch the garrison. If a person was seen to go out, notice was taken of the direction he went, his path ambushed and his scalp secured. To avoid this danger, Hunt always left the fort in the darkness of night, for said he, "when once I had got into the woods without their knowledge, I had as good a chance as they." He was accustomed, on leaving the fort, to proceed some distance in the direction he intended to hunt the next day, and bivouac for the night. To keep from freezing to death, it was necessary to have a fire; but to show a light in the enemy's country was to invite certain destruction. To avoid this danger he dug a hole in the ground with his tomahawk, about the size and depth of a hat crown. Having prepared it properly, he procured some *roth*, meaning thick white-oak bark, from a dead tree, which will retain a strong heat when covered with its ashes. Kindling a fire from flint and steel at the bottom of his "coal pit," as he termed it, the bark was severed into strips and placed in layers crosswise, until the pit was full. After it was sufficiently ignited it was covered over with dirt, with the exception of two air holes in the margin, which could be opened or closed at pleasure. Spreading down a layer of bark or brush to keep him off the cold ground, he sat down with the "coal pit" between his legs, enveloped himself in his blanket, and slept catdozes in an upright position. If his fire became too much smothered, he would freshen it up by blowing into one of the air holes. He deciared he could make himself sweat whenever he chose. The snapping of a dry twig was sufficient to awaken him, when, uncovering his head, he keenly scrutinized in the darkness and gloom around—his right hand on his trusty rifle "ready for the mischance of the hour." A person now, in full security from danger, enjoying the comforts and refinements of civilized life, can scarcely bring his mind to realize his situation, or do justice to the powers of bodily endurance, firmness of nerve, self-reliance and courage, manifested by him that winter. A lone man in a dreary, interminable forest swarming with enemies, bloodthirsty, crafty and of horrid barbarity, without a friend or human being to afford him the least aid, in the depth of winter, the freezing winds moaning through the bare and leafless branches of the tall trees, while the dismal howling of a pack of wolves—

"Cruel as death, and hungry as the grave; Burning for blood, bony, gaunt and grim,"

might be heard in the distance, mingled with the howlings of the wintry winds, were well calculated to create a lonely sensation about the heart and appall any common spirit. There would he sit, nooding in his blanket, undistinguishable in the darkness from an old stump, enduring the rigor of winter, keeping himself from freezing, yet showing no fire,—calm, ready and prompt to engage in mortal combat, with whatever enemy might assail, whether Indian, bear or panther. At day-light he commenced hunting, proceeding slowly and with extreme caution, looking for game and watching for Indians at the same time. When he found a deer, previously to shooting it, he put a bullet in his mouth, ready for reloading his gun with all possible dispatch, which he did before moving from the spot, casting searching glances in every direction for Indians. Cautiously approaching the deer, after he had shot it, he dragged it to a tree and commenced the process of skinning with his back toward the tree, and his rifle leaning against it, in reach of his right hand. And so with his rear protected by the tree, he would skin a short time, then straighten up and scan in every direction, to see if the report of his rifle had brought an Indian in his vicinity, then apply himself to skinning again. If he heard a stick break, or any, the slightest noise indicating the proximity of animal life, he clutched his rifle instantly, and was on the alert prepared for any emergency. Having skinned and cut up the animal, the four-quarters were packed in the hide, which was so arranged as to be slung on his back like a knapsack, with which he wended his way to the fort. If the deer was killed far from the garrison, he only brought in the four-quarters. One day he got within gun-shot of three Indians unperceived by them. He was on a ridge and they in a hollow. He took aim at the foremost one, and waited some time for a chance for two to range against each other, intending, if they got in that position, to shoot two and take his chance with the other in single combat. But they continued marching in Indian file, and though he could have killed either of them, the other two would have made the odds against him too great, so he let them pass unmolested. Amidst all the danger to which he was constantly exposed, he passed unharmed.

Owing to the constant and powerful exercise of the faculties, his ability to hear and discriminate sounds was wonderfully increased, and the perceptive faculties much enlarged. He made \$70 that winter by hunting, over and above his pay as a soldier. At the treaty at Greenville, in 1795, the

Indians seemed to consider Hunt as the next

greatest man to Wayne himself. They inquired for him, got round him, and were loud and earnest in their praises and compliments: "Great man, Capt. Hunt—great warrior—good hunting man; Indian no can kill!" They informed him that some of their bravest and most cunning warriors had often set out expressly to kill him. They knew how he made his secret camp-fire, the ingenuity of which excited their admiration. The parties in quest of him had often seen him—could describe the dress he wore, and his cap, which was made of a raccoon's skin with the tail hanging down behind, the front turned up and ornamented with three brass rings. The scalp of such a great hunter and warrior they considered to be an invaluable trophy. Yet they never could catch him off his guard—never get within shooting distance, without being discovered and exposed to his death-dealing rifle.

Many years age he went to Indiana, nor has the writer of this ever heard from him since, nor is it known among his old friends

here whether he is living.

Mr. T. C. Wright, who supplied the foregoing sketch of Josiah Kunt for our first edition, also gave the annexed historical sketch of Xenia, which name is said to be from a Greek word signifying friendship.

Xenia was laid off in the forest, in the autumn of 1803, by Joseph C. Vance, on the land of John Paul, who gave the ground bounded by Main, Market, Detroit and Greene streets, for the public buildings. The first cabin was erected in April, 1804, by John Marshall, in the southwest corner of the town. The first good hewed log-house was erected for the Rev. James Fowler, of the Methodist persuasion, from Petersburg, Va.: it is still standing, and is now the hatter's shop, a short distance west of the old bank. David A. Sanders built the first frame house, on the spot occupied by the new bank; it is yet standing on Main street, in Gowdy's addition.

The first supreme court was held Oct. 3, 1804. The grand jury held their deliberations under a sugar tree in the rear of the present residence of James Gowdy.

The first court of common pleas in Xenia was on the 15th of November, 1804, and was held by the associate judges. A license was granted to "William A. Beatty, to keep a tavern in the town of Xenia for one year, on the payment of \$8.00!" This was The first tavern ever licensed in the place. It was a double hewed log-house, two stories high, and was in progress of erection at the same time with Fowler's house. It stood on the south side of Main street, opposite the public square, on the spot where there now is a two story brick house, occupied as a drug store. In the west room, above stairs, the court was held. The first election in the place was held in this house. It continued to be a tavern until after the last war with Great Britain, and, until Mr. James Collier built his brick tavern on Detroit street, was the grand hotel of the place. In a corner of the west room there was an old-fashioned bar—the upper part enclosed with upright slats of wood, with a little wicket, through which the grog was handed out in half pint glass cruets. In

time of the war the recruiting officers put up at this house; and here might be seen the recruiting sergeant rattling dollars on a drum's head, and calling for half pints, appealing to the patriotism of the bystanders, tempting them with jingling dollars, and adding thereto the potency of whiskey, to enlist recruits for the army. Court continued to be held in this house for the years 1804 and 1805, and until a new court-house was built.

In 1804 the building of the first jail was let to Amos Durough; it was received from the contractor in October. It stood on ground now covered by the new court-house, and was constructed of hewed logs. It was burnt down the year following; and in April, 1806, a new jail was accepted from William A. Beatty. It stood on the site of the present market house —was a rough log-building; two stories high, with a cabin roof, and was burnt down in time of the war with England. The building of the first court-house was let on the 8th day of April, 1806, to William

Kendall, who was allowed six dollars for clearing the timber from the public square. The house was built of brick, forty feet square and twenty-eight feet high, with a cupola in the centre of the roof, ten feet in diameter and fifteen feet high. It was finished, and on the 14th day of August, 1809, accepted.

On the 6th of April, 1806, "a license was

granted to James Gowdy, for retailing merchandise, on his complying with the law!" He opened his goods in a log-house, with a mud and stick chimney, which stood on Greene street, at the north end of where Mr. John Ewing's store now is. He was the first merchant in the place.

The first punishment for crime was in 1806. The person was convicted for stealing leather,

Drawn by Henry Howe in 1846.

STREET-VIEW IN XENIA.

to half-sole a pair of shoes. There was a sugar tree on the public square, which served as a whipping-post. He was tied up to the tree, and underwent the sentence of the court, which was to receive one stripe on his bare back, which was inflicted by James Collier. The sugar tree served as a whipping-post for the last time on the 8th of October,

1808. A man was convicted for stealing a shovel-plow and clevis, and the sentence was that he should receive eight lashes on his bare back, "and stand committed until performance." He drank a pint of whiskey just before hugging the tree, though it did not prevent him from halloaing lustily, while receiving the eight stripes.

Wm. M. Gatch, Photo., Xenia, 1886.

VIEW IN XENIA.

[Both views were taken near the same stand-point, but showing different sides of the same street, and in time taken 40 years apart. The court-house is yet standing. A fine bank building now seen on the right side of the new picture occupies the site of the two-story store shown in the old view.]

XENIA IN 1846.—Xenia, the county-seat, is on the Little Miami railroad, 64 miles north of Cincinnati, and 61 from Columbus. It is a handsome, flourishing and well-built town, with broad streets, and some fine stores and elegant dwellings. The engraving represents a part of the principal street: the court-house, shown on the left, is the most elegant, as yet built, in Ohio.

Xenia contains 1 German Lutheran, 1 Methodist Episcopal, 1 Methodist Protestant, 1 Seceder, 1 Associate Reformed and 1 Baptist church, beside 2 churches for colored persons—two church edifices are erecting, one by the Presbyterian and the other by the Associate Reformed denomination—17 mercantile stores, 1 foundry, 2 newspaper printing offices, 1 bank, a classical academy in fine repute, and in 1840 had 1,414 inhabitants, and in 1847 about 2,800.—Old Edition.

Xenia is 55 miles southwest of Columbus and 65 miles north of Cincinnati, on the line of the P. C. & St. L. and D. & I. R. R. It is the county-seat of Greene county. County officers in 1888: Probate Judge, John H. Cooper; Clerk of Court, John A. Cisco; Sheriff, Clement W. Linkhart; Prosecuting Attorney, J. N. Dean; Auditor, William R. Baker; Treasurer, F. E. McGervey, James A. Johnston; Recorder, S. N. Adams; Surveyor, Levi Riddle; Coroner, Addison S. Dryden; Commissioners, Moses A. Walton, Alfred Johnson, Henry H. Conklin.

Newspapers: Democrat-News, Democrat; Republican, Republican, O. W. Marshall, editor; Gazette, Republican; Torchlight, Republican; Boss Painters' Journal, Trade. Churches: 2 Methodist, 3 United Presbyterian, 1 Reformed, 1 Lutheran, 1 Baptist, 1 Episcopal, 1 Catholic, 1 Old School Presbyterian, 2 Colored Methodist, 2 Colored Baptist, and 1 Colored Christian. Banks: Citizens National, J. D. Edwards, president, W. R. McGervey, cashier; Second National, Thomas P. Townley, president, Robert Lytle, cashier; Xenia National, John B. Allen, president, A. S. Frazer, cashier.

Factories and Employees: J. P. & W. P. Chew, newspaper, 14 hands; N. F. Copenhaver, lumber, 5; Upham & Clayton, builders, wood work, 4; Leonard Smith & Co., linseed oil, 12; The Xenia Paper-Mill Company, brown paper, 25; The Field Cordage Company, 183; The Xenia Twine and Cordage Company, 94; Hoover & Allison Cordage, etc., 111.—State Report 1887. Population in 1880, 7026. School census in 1886, 2107. Edwin B. Cox, superintendent. Xenia is sometimes termed "the Twine City;" its three twine factories are said to be the largest west of the Alleghenies.

In Xenia are two extensive gunpowder companies which do a large business—the Miami Powder Company, whose mills are on the railroad five miles north of the city, and King's Great Western Powder Company, whose works are near Foster's Crossings on the Little Miami.

THE POWDER MILL EXPLOSION.

Notwithstanding the care taken the history of all powder works is marked by explosions of greater or less frequency. One of the heaviest of these occurred on the morning of March 1, 1886, at the works of the Miami Powder Company. Several had taken place at the same works in the intervals of years. A large dry house containing 50,000 pounds of powder at this time exploded, from some undiscovered cause. It was completely demolished; the fields about were strewn with débris, none of it larger than a man's hand. A car to which a horse had been harnessed could not be found; one of the large wheels was thrown to the other side of the Miami river, 500 yards distance. Of three men at work there the largest part found was a piece of backbone; other fragments being scattered necessitated the gathering up of the remains in bags and baskets. Part of an arm with other débris was found at Oldtown, a distance of two miles. Houses were injured and débris scattered for miles away. The scene among the families of the employees who flocked to the ruins was heartrending; as husbands, fathers

and brothers came out uninjured, their families gathered about them and wept tears of joy. But to three women and their children the fathers and husbands came not.

At Xenia every building was badly shaken and many windows broken. The people rushed out of their houses into the street fearing that the buildings were about to fall; while north of the city could be seen an immense white cloud of smoke and débris hanging over the scene of devastation. The cloud was photographed from Xenia. Reports of the explosion were heard 100 miles distant. A house three miles from the explosion was completely demolished and the covered bridge on the Yellow Springs turnpike, half a mile distant, was blown in; while a number of people in the vicinity were so prostrated by the shock that they were confined to their beds for several days after.

THE XENIA FLOOD.

In May, 1886, the southern and western parts of Ohio were visited by perhaps the most severe storm or tornado known in the history of the State. The destruction of property was very great throughout several counties, but the greatest damage to life and property prevailed in Greene county, in and about Xenia.

On the evening of Friday, May 14, 1886, between 8 and 9 o'clock, a violent storm of wind, rain and hail struck Xenia and grew in violence until about 12 o'clock. The wind came in a continual gale. At 10 o'clock the fire-bells rang an alarm, and the people came forth from their houses to assist in the rescue of the unfortunate. Owing to the dense darkness and the severity of the storm, they could only grope around and were not able to do much. Above the roar of the elements came frantic cries for help.

It was found that Shawnee creek had burst its banks and was rising at the rate of one foot in every five minutes. The stream became a torrent and threatened to submerge the entire southern part of the town, through which it passed; houses on its banks were most all swept from their foundations or floated down the stream. The house of Aaron Ferguson was carried away and lodged against the Detroit street bridge, where nine persons were rescued from it.

From this point to the Second street bridge the flood swept everything in its way. The dwellings were mostly occupied by poor people and the waters rose so rapidly that it was with the utmost difficulty that any were rescued. Screams and cries for help came from every quarter, and many acts of heroism were performed by the rescuers. Ladders and lanterns were procured to aid in the work, and huge bonfires kindled that the workers might see.

Alongside the Springfield Railroad, in Barr's Bottoms, the destruction was terrible; of twenty houses only three remained. The gas works were flooded and coal-oil lamps were in use all over the town.

The flood seemed to start at a small culvert on the Little Miami Railroad, where the water formed an immense lake rising to the top of the embankment, when it suddenly broke through and swept down upon the town. In some places where the houses were carried away the ground was washed as smooth as a floor, leaving not a vestige of plank or timber.

It was prayer-meeting night in Xenia, and many people had attended the meetings, leaving their children at home alone; the storm detained them in the churches, but when they learned its disastrous results they rushed forth in an agony of apprehension for the safety of their children, who had, however, mostly been taken to places of safety by rescuing parties. Their anguish while searching for the missing little ones was heartrending to see. Strong men wept and women wrung their hands while rushing hither and thither, and were filled with doubt, hope and dread.

A house containing Orin Morris and family was seen floating down the stream, and the screams of the family could be heard above the roar of the relentless

waters. Then the house struck the solid masonry of a bridge, sank, and all was still. Afterwards two of his children were saved.

Among many others whose heroic efforts saved many lives that horrible night were six young men, named Watson, Tarbox, Byres, Morris, Paxton and Eyler. (The town of Xenia presented these young men with medals commemorative of their bravery.)

Byres made three attempts to swim to the Ferguson house (which lodged against the Detroit street bridge) with a rope around his waist, but was swept away each time by the swift current. Finally Tarbox succeeded in reaching the house by going farther up stream and allowing the current to carry him against the house, from which the family was rescued, the house going to pieces just as the last person was taken out.

A colored boy named Booker, who was rescued with his mother from one of the buildings, could have saved himself but would not leave his mother, whom he placed with great difficulty on top of some furniture; then groping his way around, with the water up to his neck, he found a rope and after great effort succeeded in fastening the floating house to a tree, where the two remained until rescued. Rev. Mr. Yorkey and Homer Thrall succeeded in rescuing Mrs. John Burch from her house; she was found with the water up to her neck, holding her baby above her head.

The scene at the mayor's office next morning was a sad one; here were brought the bodies of those who had lost their lives; some were in night-clothes, having been swept away while in bed, others were partially dressed. Side by side lay the bodies of the Morris family, seven in number. In all there were twenty-three bodies, although the total number of lives lost was about thirty, as other bodies were afterward found one or two miles below the town, carried there by the powerful current. The dead included the young and old, white and colored.

The mayor and city authorities took active measures for the relief of the sur-

viving sufferers, and aid was generously forthcoming from other cities.

The loss of lives by this storm was confined to the town of Xenia, but the loss of property extended throughout a large district of territory into many counties. Railroad bridges were destroyed and tracks washed away throughout many parts of Southwestern Ohio. In Greene county nearly every bridge in the county was destroyed, while the pikes were so washed out that access to Xenia was almost entirely cut off. The day after the flood the correspondent of the Cincinnati Commercial Gazette, from whose communication to that journal most of these facts are gathered, was five hours going from Dayton to Xenia (16 miles), being compelled to walk, make use of boat, farm wagons, railroads, hand-car and carriage.

TRAVELLING NOTES.

To have chats with old gentlemen has been to me in my years of historic travel a great source of amusement and instruction. Such grow mellow and sweet under the revival of memories of events and characters of their early days. I always found they ran largely to anecdote, and the humorous rather than the sad formed the burden of their talk.

In Xenia two elderly gentlemen ministered to my entertainment—Dr. Geo. Watt and James E. Galloway. The first named was born in the county in 1820, was surgeon in the One hundred and fifty-fourth Ohic, and is an invalid from an injury to the spine, a direct result of his love for the old flag.

Feeding Joe Hooker's Soldiers.—The first point of our talk was the passing of Joe Hooker's army corps of some 30,000 men through Xenia. They were on their way from the sea-board to the mountains of

Georgia. It was a mighty host, and it was days in passing; and these boys in blue had to be fed. The whole town was alive in the good work, women busy cooking and all ministering to the blue-coated host, a free offering of hospitality on the altar of patriotism. Such were the scenes and the common sacrifices of that period in Ohio on the lines of transportation. It helped to ennoble the people, but is one of those minor matters illustrating the spirit of the times that rarely finds a place in formal history.

Indian Anecdote.—The Doctor's memory went back to the time "when the Indians were about," and so he told me this. About the year 1825 Father Mahin, a local preacher of the Methodist church living in the eastern part of the county, having lost his wife, and his children being properly cared for, went as a self-supporting missionary to the Wyandot Indians near Upper Sandusky.

He had a mechanical turn and made himself especially useful in giving them, with moral and religious instruction, a knowledge of the arts of civilized life, as blacksmithing, shoemaking and the like. I well remember a scene occurring when I was about five years of age. Six Indians, the first I ever saw, came to my father's, having been sent to see why Father Mahin, who was at home on a visit, had not returned to them at the expected time, and if needed to aid him in the

My mother gave them their dinner, and when they asked the way to Father Mahin's she replied it was about a mile distant in a direct line and two miles by the road. "I she replied it was about a finite distant in a direct line and two miles by the road. "I advise you," she said, "to go by the road as you may miss the way." "What!" replied the leader, "must Indian keep out of the woods? Indian get lost? Point to Father's wigwam and tell what it like." She pointed the direction and gave instructions, and they set out across the fields, fences and woods, going direct, as she afterward learned.

An Eccentric Character.—On the preceding pages are amusing accounts of early times, in this county, contributed to our first edition by Thomas Coke Wright, at the time county auditor. He was, I think, the most eccentric as well as the most beloved man of his time in Greene county, and when I knew him was about sixty years of age. He was nearly six feet in stature, very fleshy, face florid, and he was excessively deaf. His voice was light, pitched upon a high key, and he was a complete specimen in his simplicity of a childman, susceptible and quickly responsive to every shade of emotion. At one moment speaking of something sad, his face would put on the most lugubrious aspect, and his fine high voice crying tones: then in a twinkling, as something droll flitted across his memory which he would relate, there would come out a merry laugh. The expression of his face when at rest was sad, as is usual with very deaf people of strong social natures, being in this respect different from the blind, who are generally happy. It is because the first, by the use of vision, are constantly reminded of their infirmity, while the last can

have no conception of their great deprivation.

Mr. Wright was indeed what they term "a character," one worthy of the pen of a Dickens, and, like the Cheeryble brothers, superabounding in benevolence and sociality. He was a native of Virginia, and when a young man had been a teacher under Father Finley, the missionary to the Wyandots. He later studied law, but becoming too deaf to practice, the people gave him the position of county auditor. He was a poor accountant, but he got along with an assistant. His deficiencies made no difference, his superabounding affection for everybody was such that the plain farmers, irrespective of politics, would have given him any office he wanted, he was such a warm friend to everybody and so anxious to do everybody some good. was a Republican, loved his old native Virginia, and told me some excellent anecdotes

illustrative of the affection some of the oldtime slave-holders had for their old servants, with whom they had begun life as children

playing together.

Dr. Watt related an amusing incident of Mr. Wright, who died shortly after the war, at an advanced age. Said he: "A few years before his death, the late Dr. Joseph Templeton, of Washington, Pa., but a former resident of Xenia, visited here, and the late Dr. S. Martin and myself were entertaining him. As we walked with him to the railroad station we met Mr. Wright. The two men, equally deaf, cordially saluted each other, when this dialogue ensued:

Templeton.—Xenia has greatly improved

Wright.—It is a great misfortune, but the best thing for us is a short tin trumpet.

Templeton.—Some very fine business blocks

have been built.

Wright.—I'd show you mine, but a tinner has it for a pattern while making a new one for a friend.

Templeton.—Some of my old friends now

reside in very fine houses.

Wright.—I'll have one made and send it

to you if you will give me your address.
"And in twenty minutes' conversation," continued Dr. Watt, "they got no nearer. As we went on, Dr. Templeton cordially thanked us for waiting to let him have such a pleasant conversation with his old friend Coke Wright. Coming back we met Mr. Wright, who still more cordially thanked us for our patient waiting, as he had not had such a pleasant chat for years.

Mr. Galloway I found living in his rooms over some stores in the centre of the town, alone among his books and papers and oldtime relies. Among these, over the door, were the horns of the last deer killed in Greene county. The year of Mr. Galloway's birth I know not, but evidently it was so far back that he must have been born in some cabin in the woods, or perhaps in one near their leafy margins, among the girdled trunks of the skeleton monsters of a once luxuriant forest:

The Bullet Barometer.—His grandfather, James Galloway, Sen., a native of Pennsylvania, was the first settler in his part of the county. In 1797 he came from Kentucky, and built a cabin on the Little Miami, near the site of the Miami Powder Mills. During the revolutionary war he was in the service of the United States in the capacity of hunter to procure game for the army. "My hunter, to procure game for the army. "My grandfather," said he, "was in the Blue Lick fight in Kentucky and during the campaign of 1792 he was shot by the renegade Simon Girty, whom he well knew. He had met Girty while on horseback going through the woods face to face, who, perceiving that he was unarmed, said: "Now, Galloway, d—n you, I have got you," and instantly fired three small bullets into his body. Girty supposed he had killed him. Although in a fainting condition, Galloway wheeled his horse and made good his escape. One bullet passed through his shoulder and stopped in the back of his neck. He carried it there for many years, and brought it with him to Ohio. It was a great source of annoyance, which varied much with the state of the weather. It served one useful purpose—acted as a barometer; so much so that when anything important was to be done requiring good weather, the neighbors would send to him to learn the prospect. Finally grandfather con-

THE GALLOWAY CHAIR.

cluded that he must part with his barometer; it was getting altogether too demonstrative. There was no surgeon about, so one day he sent for a cobbler and seating himself in his big arm-chair the cobbler extracted it, using his shoe knife and awl."

his shoe knife and awl."

Having told me this, Mr. Galloway took me into his attic and brought out the identical old arm-chair in which his grandfather had sat when the cobbler had turned surgeon. I found it the most comfortable of seats. It

was hand-made, very strong, the wood maple and hickory, and a great deal of thought with faithful workmanship had gone into its construction. The seat was very elastic. It consisted of a network of deer-thongs covered with buckskin, so that it yielded gently to every varying pressure or movement of the person. The back slats were each curved with a due regard to exactly fitting the part of the form leaning against it, the lowest having, as it should, great curvature. The chair arms were a curiosity, inasmuch as each terminated in a knob in which were cut grooves to admit the spreading fingers of a sitter, while resting in comfort.

Tecumseh Smitten with Rebecca Galloway.

—Having shown me the arm-chair, Mr. Galloway gave me some anecdotes of the great Indian chief. "Tecumseh," said he, "was a young man of about thirty years when my grandfather first moved into Greene county. He lived some fifteen or twenty miles away. They became great friends, Tecumseh being a frequent visitor. Whether the chief was attracted by friendship for grandfather or his fancy for his daughter, my aunt Rebecca, was at first a matter of conjecture; it was soon evident, however, that he was smitten with the "white girl," but according to the Indian custom he made his advances to the father,

who referred him to his daughter.

Although Tecumseh was brave in battle he was timid in love, and it was a long time before he could get his courage up to the sticking-point, which he did finally and proposed, offering her fifty broaches of silver. She declined, telling him she did not wish to be a wild woman and work like an Indian squaw. He replied that she need not work, as he would make her a "great squaw." Notwithstanding his rejection, he ever remained friendly with the family.

Tecumseh on a Spree.—The books speak of Tecumseh having been a large man; but this, I can assure you, was not so; he was but a moderate-sized Indian. He was fond of "fire-water," and would go on a spree sometimes, when he would become very troublesome and provoking. On one occasion, when at the shop of "Blacksmith" James Galloway (a cousin of my grandfather's who lived on the banks of Mad River), Tecumseh, being on one of his big "drunks," became very insulting and annoying. Galloway grew angry, and being a very powerful man took him, much to his disgust, and tied him up to a tree until he became more sober and quiet.

THE SOLDIERS' AND SAILORS' ORPHANS' HOME.

This noble institution of the State is located at Xenia. The Home farm consists of 275 acres, on a healthful site a mile southeasterly from the centre of the town and about three-quarters from the depot of the Little Miami railroad.

The buildings consist of an administration building with large dining-room attached, the two forming an Egyptian cross; twenty cottages, ten on each side of the administration building, a school-house, chapel, hospital, laundry, industrial building, engine room, gas houses and all necessary farm-buildings. The build-

ings are substantial brick structures, except the industrial and farm-buildings and

green houses.

The administration building has three stories, and is occupied by the officers and teachers; the cottages are two stories high, and are arranged to accommodate thirty-four children each; the school-house is three stories high, and will accommodate nearly 700 children. The chapel has a seating capacity of 700; the hospital is well arranged for the care of the sick. The building annexed to the administration building, known as the Domestic building, is three stories in height, the basement being occupied by the kitchen and bakery; the second story is the children's dining-room, with a seating capacity of nearly 700; the third story contains sleeping apartments for certain of the employees, and the linen and store The children all sleep in the cottages, each cottage being under the charge The principal buildings are heated by steam, lighted by gas and supplied with water from the water-tower in the rear. This water originally came from Shawnee creek, which runs through the grounds.

The large view was taken from a standpoint in the forest north of the cottages. It shows just half of them and the administration building, the other half being on the other side of that building. They are about 1800 feet from the road to Xenia, and form a continuous line of 1500 feet. The ground in front is a grassy lawn, sloping down through an open forest, beyond which, on a little lower ground near the road, winds Shawnee creek, a mere rivulet which is crossed by a bridge. On the path side, as the visitor enters the ground, he is greeted by a floral design speaking from the ground itself, a single word only—"Welcome."

It was a morning late in the autumn when we entered the place, and found the children scattered on the lawn enjoying themselves, playing at games in the bright sunshine. It was our second visit, after a lapse of a year and a half. later, while adjusting the camera for the picture, the music sounded from the boys' band in the distance near the school-house, summoning them to school. Looking up we saw the boys in their neat military costumes arranged in companies in front of the cottages as shown in the picture. In one place was a platoon of urchins in zouave costumes: red leggings and red fez. In another, one girl in the bright garb of a vivandier, at the end of a platoon of boys. It was indeed a charming picture. A few minutes elapsed; we were too busy to look up. When we did, not a soul was to be seen; not a sound was heard. It was a surprise to us, the sudden change. The whole, some 600 strong, boys and girls, had been hived in the school-house seen in the extreme distance.

It is the custom of the superintendent, Maj. Noah Thomas, an armless ex-soldier who carries an empty sleeve, to take a stand on the steps of the administration building on these occasions, and as the companies of boys march by they give him the military salute.

Historical Sketch.—The initiatory steps toward the establishment of a Soldiers' And SAILORS' ORPHANS' HOME were taken in 1869 by the Grand Army of the Republic. Its purpose was to secure necessary funds through private beneficence, believing that having placed the project well on foot the State would take it up and carry it to its consummation. On June 21, 1869, a meeting was held in the city hall at Xenia to devise the ways and means for perfecting the plan. On July 13th a second meeting was held therein and addressed by Gov. Hayes, Congressman Winans, Capt. Earnshaw and othwere guaranteed, Eli Millen, Lester Arnold and J. C. McMillen subscribing \$1,000 each.

In the meantime the citizens of Xenia and

representatives of the Grand Army of the Republic were actively at work; a desirable location in the vicinity of Xenia was selected, and the press advocated the immediate erection of buildings.

The Grand Army of the Republic appointed a board of control consisting of Gen. Geo. B. Wright, Maj. M. S. Gunckel, Col. H. G. Armstrong, Eli Millen, Judge White, Mrs. R. B. Hayes, Mrs. H. L. Monroe and Mrs. Ann E. McMeans, which met October 11th and agreed to accept the location offered by the people of Xenia.

Contracts were made for the erection of four cottages. In anticipation of the early establishment of the "Home," a number of children had been gathered at Xenia and temporary provision made by leasing quarters

on Main street. Mrs. A. McMeans was elected superintendent in January, 1870, but resigned in a short time and Maj. M. S. Gunckel was appointed acting superintendent, with Mrs. Edington, of Chicago, as matron and four others as assistants and teachers. January 23, 1870, it was decided to construct at once a large frame building as a dormitory and dining-room, and contracts were made for the erection of five more cottages. Children were now coming in rapidly; there were about one hundred in the temporary quarters and numerous applications on file. Contributions and donations, principally wearing apparel and bedding, were sent in from all parts of the State.

A committee from the State Legislature visited the "Home." February 28th a public meeting was held in the City Hall, attended by the children in a body, and one of them. Master Howard E. Gilkey, of Cleveland, delivered a touching speech, pre-senting the claims of the orphaned children upon the State. The entire audience was much affected by his speech, and after other speeches the committee returned to Columbus, thoroughly convinced that it was the duty of the State to at once assume the care of the orphaned children of its soldiers and sailors. A bill was introduced in the Legislature to "establish Ohio Soldiers' and Sailors' Orphans' Homes." The bill provided that such institutions should be under the control of a board of managers, consisting of seven citizens appointed by the Governor; that there should be received into the Homes the children residing in Ohio, not beyond sixteen years of age, of deceased, indigent and permanently disabled soldiers and sailors who served during the rebellion. Thirteen thousand dollars was appropriated, and such part of the property of the State at White Sulphur Springs in Delaware county as was not necessary for the Reform and Industrial School for Girls, already located at that place, should be set apart for the establishment of a "Home." The bill also provided that in case the orphans could not be comfortably and well accommodated at White Sulphur Springs without interfering with the efficiency of the Industrial School for Girls, that the Board of Managers should have authority to accept by donation or bequest a suitable tract of land at a convenient point, with necessary accommodations, buildings and equipments, for two hundred and fifty children. This bill was passed April 14, 1870, and the following gentlemen were appointed a Board of Managers by the Governor: R P. Buckland, Fremont; James Barnett, Cleveland; J. Warren Keifer, Springfield; Benj. F. Coate, Portsmouth; M. F. Force, Cincinnati; J. S. Jones, Delaware; H. G. Armstrong, Cincinnati. There was much objection to its requirement that the Home should be established at White Sulphur Springs; but, as that property could not be made available for the purpose of the law, at a meeting of the Board of Managers held in Delaware, May 13th, they

resolved that they would accept a suitable tract of land with buildings, etc., at some other point, as provided by the act of the

Legislature.

May 25th the Board of Managers accepted the proposition of Gen. Geo. B. Wright, Maj. M. S. Gunckel and Col. H. G. Armstrong, representing the Board of Control of the Xenia Home, which was to complete the work already commenced under their auspices, and have the same ready for occupancy by June 1st. A large force of men at once resumed work on the buildings, and on August 16, 1870, they were ready for presentation to the State. Dr. I. D. Griswold was elected superintendent and Mrs. Griswold matron. During this month the children were transferred to the three cottages and the large frame building (now occupied as the workshop). The Board passed upon application for more than two hundred and fifty children, including those already collected, who numbered one hundred and twenty-three at an average age of nine years. The whole number of children in the State entitled to the benefits of the "Home" was estimated at 800. Of these 350 had already made application for admission, and another appropriation was made in May, 1871, to increase the accommodations.

The plan of dividing the children into families in cottages, separating the sexes, was found to work excellently, thereby rendering government easier and less liability to sickness and epidemic. A main building served to provide a suitable dining-hall, culinary department, school-rooms, etc. Many of the larger children were required to work, the boys on the farm and the girls in the do-

mestic department.

In 1872 additional land was secured to enlarge the farm, and many improvements made on the grounds and buildings, and the following spring a large number of fruit trees and vines were planted. In 1874 a system of industrial education was inaugurated. Shops were established to teach printing, telegraphing, tailoring, dressmaking, knitting, carpentering, blacksmithing, shoemaking and tinning. Gentlemen well versed in the different branches were placed at the

head of each department.

The inmates now numbered nearly 600, and although the general health had been good, the prevalence of sore eyes was noticeable, and Dr. C. B. Jones, the physician, upon investigation discovered that the trouble arose from the manner in which the inmates washed their hands and faces. This was done in tin wash-basins, three to each cottage, the drying being done with one large towel. Fixtures were introduced so that the washing was done in running water, and the drying with separate towels, and the epidemic soon disappeared. The measles and scarlet fever had also appeared simultaneously with the coming of every winter season. Investigation into the cause of this showed that every spring the heavier winter bed clothing had been stored away in closets

without airing or washing. Washing, airing and drying before storing in the spring prevented a recurrence of these diseases.

Further appropriations by the Legislature and a steady improvement in the system of management brought to the institution a high degree of efficiency in accomplishing the

objects for which it was founded. On February 16, 1879, the destruction of the administration and domestic buildings by fire involved a loss to the State of nearly \$75,000, and to the employees and officers of sums ranging from \$100 to \$500. The Legislature speedily authorized the rebuilding of the destroyed structures, and plans were adopted for making the new buildings fireproof.

On the 27th day of April, 1884, the institution was visited by a most terrific cyclone. The storm did not rage to exceed one minute, but with force indescribable, tearing away the roofs of the laundry, hospital and other buildings, completely demolishing the barn, wagon and tool sheds, carrying away the roof of the hospital a distance of five hun-

dred feet, in an almost unbroken condition until it struck the earth, driving slates into the trees with such force as that it was impossible to remove them with the hand; removing a large part of the east veranda from its foundation, tearing down timber, fences, and other structures, and carrying a portion of the wreck miles away, and yet there was no human being injured, except two em-ployees slightly, although there were at the time within the institution about seven hundred and fifty men, women and children; the children all being at supper.

The damages resulting from the cyclone were repaired, at a cost of \$7,500, a large portion of the money used for that purpose having been procured by Governor George Hoadly and Hon. John Little, they having given their joint promissory note for \$5,152.-50, and Mr. Little his individual note for

\$508.75.

This was the same cyclone which visited Jamestown in this county, with such disastrous results, an account of which is given on another page.

In 1888 the institution was under the superintendence of Major Noah Thomas, with Mrs. Alice Thomas matron, Leigh McClung physician, George H. Harlan financial officer. The Educational Department, with Horace A. Stokes as principal, had sixteen lady teachers. The cottage matrons numbered twenty, also a hospital matron, Mrs. Ephraim Hardesty, and Miss Rosa Bauerle supply matron and teacher. The number of children November 15, 1887, were 668, of whom 242 were girls, 426 boys.

The occupations taught are domestic economy, stenography, shoemaking, farming, carpentering, painting, girls' sewing, printing, tinning, gardening, engineering, baking, tailoring, dressmaking, blacksmithing, cutting and fitting dress-

making.

Board of Trustees.—Charles H. Grosvenor, Athens; Nelson A. Fulton, Xenia; William C. Lyon, Newark; John S. Jones, Delaware; and Andrew Schwarz, Columbus.

The average age of the children is about eleven years, and were it double its capacity the Home would speedily be filled with orphans of the class contemplated by the law. The annual expense is for each orphan about \$140. This is about what it is with the inmates of the other charitable institutions, as the Deaf and Dumb, Blind, Imbecile and Insane.

TRAVELLING NOTES.

"The Soldiers' and Sailors' Orphans' Home" at Xenia is one of the bright places in the State. It pays the people largely to sustain I was a guest over night March 17, 1886, and then, passing there a few hours of the next day, saw much to admire and nothing to condemn. It is as one great household where system and order and a conscientious spirit everywhere prevails.

The Food and Health.—At these various State charitable institutions the inmates all live well. The food is of the very best, much fruit, vegetables and milk; with no dishes of flummery for cloyed appetites, but all simple, well cooked, and healthy; far better than in most private families or hotels. sleeping apartments are well ventilated, am-

ple washing facilities are supplied and a healthy temperature maintained by good heating facilities. Aside from this comes the element of uniform employment without the fret, worry and hurry and idleness that often attend life elsewhere. Hence the health of the inmates generally surpasses that of any like number of people outside of such institutions. Only one death had occurred here in the three years prior to my visit.

The Ages.—Children are here of all ages from the infant of nineteen months to those of sixteen years. Beyond the sixteenth birthday none are allowed by law to remain. Places where they can earn their own living are generally found against the arrival of the sixteenth birthday, and by that time they have been taught some industry to help them do so. Some who have been bred here are among the teachers, and in time the entire supply may come from the institution itself.

I visited the various shops, among them the printing office, where they print a weekly newspaper, the fruit and vegetable store-house, and the greenhouse, with its array of flowers. The hospital I did not enter; it is not much used, as there are rarely many inmates.

Uses of Children.—A school-room, especially if filled with very small children, is always attractive. A world without children would be a stupid spot. They make things lively, are the best sort of instructors, their ignorance, helplessness and trustful leaning so developing to our own high good, often so warming the heart in delightful emotion, that, even before the Master himself came to utter the words, "Suffer little children to come unto me," multitudes of our race must have experienced the angelic glow that comes from their appealing presence.

Beauty of the Dawning Intellect.—No flower opens with more beauty to sip the morning dew as it glistens upon its fragile petals, than the heart of the young child to the reception of kindness and love, while it literally hungers and thirsts after knowledge, finding itself in this great storehouse of creation, with everything around new and strange,

made for its use and development.

Yes, everything: the glory of the earth by day; the glory of the vast dome by night; time, that never was, but ever is; space, with its immensity that has no bounds; and, moreover, the qualities of justice, truth and love, higher than all material things, which always were, before anything was, ready existing for their exercise whenever sentient life could spring into creation.

And then a Supreme Intelligence and Supreme Power over all, that creates, bringing these qualities into the uses of the thinking life he has created, and to fill it with joy and gratitude as it learns to discern more and more, through all time, through all eternity, the full perfection and superlative beauty of the universe, of which not the least wonder will be that he finds himself a part. It is in this view to what children are the heirs, that to supply their highest wants, to give to them the noblest, purest development, is among the highest, most bliss-filling of duties.

An Exhibition of the Little People.—I entered the far building in the picture, the school-house. The first room I went in was for small children, about eight years of age. There were forty boys and girls under the charge of Miss Dix. The room was on the ground floor, spacious, and lighted on two sides by nine windows. These gave a pleas-ing outlook upon green fields and noble trees, with the early buds of a spring morning unfolding in the sunlight. I now state what happened.

1st. School opened with the Lord's Prayer. 2d. With folded hands and bowed heads

the children repeated:

"I thank thee, Lord, for quiet rest, And for Thy care of me,

3d. A hymn was sung by the children, "Gentle Saviour," followed by one entitled "Little Ones," "Jesus, when He Left the Skies," etc.
4th. Recitation. The noted poem of Alice

Carey, beginning with—

"Among the beautiful pictures That hang on memory's wall, Is one of a dim old forest That seemeth the best of all."

5th. Recitation:

"Do your best, your very best; Do it every day," etc.

6th. Recitation:

"One step and then another, And the longest walk is ended," etc.

After these preliminaries they went through exercises on the blackboards, and their pro-

ficiency was surprising.

I then arose to go into some of the other rooms, when the teacher called out a little one as a guide. As the midget came to me I lifted him up under the arms. He was as light as a kitten, and as his little legs dangled in the air I kissed him, whereupon the other thirty-nine midgets burst forth with a simultaneous laugh, in which their teacher, Miss Sarah Belle Dix, joined—making forty laughs as the product of a single kiss.

The Cottages.—A little later I went exploring the twenty cottages, each cottage with its family of thirty-four, presided over by a matron or cottage mother, thirteen cottages occupied by boys and seven by girls, and sixteen cottages in a straight line, facing the town of Xenia a mile away, with two others at each

end facing at right angles.

A plank walk passes in front of the cottages, over which is a continuous roof, as shown in the engraving. This is a shelter from the rain and the sun when the children march out from their cottages to the great dining-hall in the main building.

The dining-hall has four long tables, with seating capacity for 700 children. They a seating capacity for 700 children. march in with military tread, accompanied by the matrons. When seated, they repeat the Lord's Prayer in concert. The matrons wait on and serve the children under their con-

troi.

When I approached the doors of the cottages I found them all open and no persons present but the matron of each, the children being at school and some in the shops at work. One matron after another invited me in, as I came to their open doors. None of the matrons are teachers in the school. Each matron simply has charge of her cottage as a mother does of her children at home; in each the children are of about the same age. The matrons are fully occupied in school hours, having the rooms to look after and the children's clothing to mend. The older girls largely assist them, and learn housewifery after the very best kind of instruction.

The larger picture shows the form of each cottage, which are all on the same model. The general sitting-room is on the ground floor. I describe one of the several I entered, and they are mainly all alike. The

room was about thirty-three by eighteen feet. It was carpeted, with two rows of chairs running lengthwise. On the walls hung pictures; a table was in the centre, with a few books upon it. In front of this was a doll's table, with play-dishes and dolls sitting around. One mother doll was in a pleasure carriage on the floor, holding a baby doll in each arm. The toys for the children are supplied by

Frank Henry Howe, Photo., 1888.

SITTING-ROOM OF A COTTAGE, SOLDIERS' ORPHANS' HOME.

the Grand Army. Last Christmas there was a great celebration here, and a deputation from them who distributed presents. The pictures and ornaments on the walls are paid for by saving the rags and old papers of the Institution.

In the small picture are shown three doors. That in the centre leads up-stairs. That on the left is to the sitting-room of the matron; on the right is the children's store-room, where each child's clothes are laid away in a series of drawers against the walls, a drawer to a child, and each one with its name or number. Over these rooms is the wash-room and the matron's bed-room. The children's dormitory is over the sitting-room, and of the same size. The floor is uncarpeted, the walls white, the coverlets to the beds white; the bedsteads are of oak, seventeen in number, arranged in rows. Two children occupy a single bed. Everything there is neat, sweet and clean, as it indeed is about everything connected, with the Hone. Many house connected with the Home. Many housekeepers might learn much in these regards by visiting the various State Institutions. The general tone of the bed-rooms is a snow-like whiteness and purity, with floods of light from ample windows.

The Matrons welcome visitors and take a just pride in showing them through their cottages. Among them one sees a variety of character. There is the large, fleshy

woman with rosy cheeks, who has charge of the smallest troop of boys. Her face is redolent with goodness and smiles, and it is pleasing to see the little ones clustering around her to be caressed and share the envied kiss. Then there is the tall, strong woman, somewhat advanced in years. She has no especial call for the exercise of the softer motherly qualities. Her expression shows determination and executive capacity: and she should have these. The question of strong government is ever before her, for her charge is a family of thirty-four boys from fourteen to near sixteen years of age. They all sleep in one room, are naturally full of the exuberance and strength of dawning manhood, and how she manages to keep them from occasionally engaging in a pillow fight and frolic on retiring, after the manner of boys elsewhere, is a mystery.

To one such I carelessly remarked, "I suppose you have an easy time here in managing your charge." The moment I uttered this I wished I hadn't. I saw by the change of countenance, half comic and half anguished. I had made a mistake, for she at once ejaculated: "Humph! I should think so!—Boys are not angels; did you ever see any boys that were angels?"

The Soldier's Widow.—Then there is the short, small, delicate matron. She is a blonde about forty-five years old, and her face

ineffably sweet and gentle, and very sad; oh, so sad! There is a history of suffering in that face. Instinctively you are drawn toward her as to the face of the suffering Christ as portrayed by the genius of Raphael or Da Vinci. You inquire, and maybe learn she is a soldier's widow and now motherless. Her husband fell upon no battle-field in the heat and glory of patriotic conflict to find a grave of honor upon Southern soil. Worse than that. He was one of the thousands of victims to the horrors of Andersonville; was exchanged and came home to die, a mere skeleton, wasted by starvation, his mind gone, a hopeless driveling crying idiot. Then her two little ones were taken from her, and she is alone in the world. She is here and fills out her life in ministering to the little waifs of the departed heroes.

Religion offers to her its cup of anticipatory

bliss in the expectation of again meeting her children and the love of her youth as he was when he left her one bright spring morning early in the sixties—left her in his manly strength and beauty, and marched away under the beautiful flag. And she is happy, though suffering—happy in her ministering, happy in her faith. "God loves those whom he chastens," and to such, while the tears fall, the heart of the bereaved swells with the bliss of heavenly love.

"Her faith shows a new world, and the eyes Of saints look pity on her. Death will come: A few short moments over, and the prize Of peace eternal waits her, and the tomb Will become her fondest pillow: all its gloom Be scattered. What a meeting there will be To her and those she loved while here."

FOUR LITERARY MEN.

Four literary men of note and now living come under notice in connection with Xenia—William D. Gallagher, Coates Kinney, William D. Howells, and Whitelaw Reid. William Davis Gallagher was born in 1808, in Philadelphia, and when a lad of eight years came with his widowed mother to Mount Pleasant, Hamilton county, Ohio, and was for forty-seven years a resident of the State; his home is now Peewee Valley, near Louisville, Ky.

He learned the printing business in Cincinnati, and, in 1830, when but twenty-two years of age, came to Xenia, and started a campaign newspaper, which he entitled the *Backwoodsman*, giving it that name because it was peculiarly Western, a strong characteristic of his being an ardent affection for the West. Mr. Gallagher was an enthusiastic Whig, and the main object of his sheet was "to hurrah for Clay and to use up Jimmy Gardner, editor of the Jackson organ of Xenia."

After the lapse of a year he returned to Cincinnati and took the editorship of the Cincinnati Mirror, which had a life of several years, and his prose and poetic writings were of so much merit that he was soon regarded as the leading imaginative writer of the West. Later he edited two other literary journals, was for a time on the Ohio State Journal, of Columbus, and from 1839 to 1850 was associate editor on the Cincinnati Gazette, when he went to Washington with Thomas Corwin in a confidential capacity, Corwin having been appointed Secretary of the Treasury: again in the civil war he was employed in the United States Treasury Department at Louisville by Mr. Lincoln. In 1853 he was on the editorial staff of the Louisville Courier.

Mr. Gallagher's father, Barnard Gallagher, was an Irish Roman Catholic, a participant in the rebellion in 1803, that cost Robert Emmet his life; and his mother, Abigail Davis, daughter of a Welsh farmer, who lost his life in the American Revolution. Coming from a liberty-loving stock, Mr. Gallagher inherited the spirit of freedom and philanthropy and could not be otherwise than an opposer of slavery. His biographer, Prof.

Venable, in the Ohio Archeological and Historical Quarterly for 1888, says of him in his early days: "He sang the dignity of intrinsic manhood, the nobleness of honest labor and the glory of human freedom. Much he wrote was extremely radical. . . . Such lines as these, and as compose the poems 'Truth and Freedom,' 'Conservatism,' 'The Laborer,' 'The New Age,' 'All Things Free,' went to the brain and heart of many people, and it is not to be doubted but that they exercised a deep and lasting influence.

"Mr. Gallagher first became known as a writer in 1828 by the publication of 'A Journey through Kentucky and Mississippi' in the Cincinnati Chronicle. His first poetical contribution that attracted general attention was 'The Wreck of the Hornet;' this was reprinted in a collection of his poems entitled 'Errato' (3 vols., Cincinnati, 1835–7). He edited 'Selections from the Poetical Literature of the West' (Cincinnati, 1841). In 1849 he delivered the annual address before the Ohio Historical and Philosophical Society, of which he was President, on 'The Progress and Resources of the Northwest.' One of the most elaborate of his agricultural essays

is his 'Fruit Culture in the Ohio Valley.' His latest volume is 'Miami Woods: a Golden Wedding and Other Poems' (Cincinnati, 1881). Venable says: 'Gallagher's verse paints the forest and field with Nature's

own color, and glows with the warmth of human love and joy. 'Miami Woods' is a sort of Thomson's 'Seasons' adapted to the Ohio Valley.''

FIFTY YEARS AGO.

A Song of the Western Pioneer.

BY WM. D. GALLAGHER.

No man was ever more thoroughly imbued with a love of the West than Mr. Gallagher. The memories of his boyhood were rich with the glow of enthusiasm for its free and manly life, when everything was so rapidly expanding and prosperity seemed to be so assured to the humblest who would but exert his powers. Annexed is one of his songs that was widely published in the papers of the West forty years ago:

A song for the early times out West,
And our green old forest home,
Whose pleasant memories freshly yet
Across the bosom come:
A song for the free and gladsome life
In those early days we led,
With a teeming soil beneath our feet,
And a smiling heaven o'erhead!
O, the waves of life danced merrily
And had a joyous flow,
In the days when we were pioneers,
Fifty years ago!

The hunt, the shot, the glorious chase,
The captured elk or deer;
The camp, the big, bright fire, and then
The rich and wholesome cheer;
The sweet, sound sleep at dead of night
By our camp-fire blazing high—
Unbroken by the wolt's long howl
And the panther springing by.
O, merrily passed the time, despite
Our wily Indian foe,
In the days when we were pioneers,
Fifty years ago.

We shunn'd not labor; when 'twas due
We wrought with right good will,
And for the home we won for them
Our children bless us still.
We lived not hermit lives, but oft
In social converse met;
And fires of love were kindled then
That burn on warmly yet.
O, pleasantly the stream of life
Pursued its constant flow,
In the days when we were pioneers,
Fifty years ago!

We felt that we were fellow-men;
We felt we were a band,
Sustain'd here in the wilderness
By heaven's upholding hand.
And when the solemn Sabbath came,
We gather'd in the wood,
And lifted up our hearts in prayer
To God, the only good.
Our temples then were earth and sky;
None others did we know
In the days when we were pioneers,
Fifty years ago!

Our forest life was rough and rude,
And dangers closed us round,
But here, amid the green old trees,
Freedom we sought and found.
Oft through our dwellings wintry blasts
Would rush with shriek and moan;
We cared not; though they were but frail,
We felt they were our own!
O, free and manly lives we led,
'Mid verdure or 'mid snow,
In the days when we were pioneers,
Fifty years ago!

But now our course of life is short;
And as, from day to day,
We're walking on with halting step,
And fainting by the way,
Another land, more bright than this,
To our dim sight appears,
And on our way to it we'll soon
Again be pioneers!
Yet while we linger we may all
A backward glance still throw
To the days when we were pioneers,
Fifty years ago!

Many of his songs were set to music and sung in theatres, and in 1845 was published his famous ballad, "The Spotted Fawn," which became immensely popular, being sung everywhere. The Spotted Fawn was the beautiful daughter of an Indian chief, who dwelt in the valley of the Mahketewa, who, with her bridegroom, White Cloud, was slain on her bridal night by the cruel white man who in time of peace stole in upon them in their slumbering hours. The Mahketewa is the Indian name for a stream that empties into the Ohio at Cincinnati, commonly called Mill Creek and largely at that point inhabited by frogs. Some wicked wag

wrote a parody upon the ballad under the title of "The Spotted Frog," which paralleled the fate of the Indian maiden with that of a young frog stoned to death by boys. This ever after spoiled the ballad for popular use. A verse from each follows:

By Mahketewa's flowery marge
The Spotted Fawn had birth,
And grew as fair an Indian girl
As ever blessed the earth.
She was the Red Chief's only child,
And sought by many a brave;
But to gallant young White Cloud
Her plighted troth she gave.
Oh, the Spotted Fawn!
Oh, the Spotted Fawn!
The light and life of the forest shades
With the Red Chief's child is gone.

By stagnant Mill Creek's muddy marge
The Spotted Frog had birth,
And grew as fair and fat a frog
As ever hopped on earth.
She was the Frog Chief's only child,
And sought by many a frog;
But yet on one alone she smiled
From that old rotten log.
Oh, the Spotted Frog!
Oh, the Spotted Frog!
The light and life of Mill Creek's mud
Was the lovely Spotted Frog.

Mr. Gallagher is rather tall in person, with blue eyes and rather proudly bearing. He was a delegate to the National Convention which nominated Mr. Lincoln, whereupon, on his return home, a mob assembled at Beard's Station, near by, to warn him to leave the State, and his position was a dangerous one. Independent, outspoken and with the keenest sense of honor he had won the warm respect of his rebel neighbors, some of whom put arms into his hands for self-defence. A stalwart young mechanic took upon himself to champion the cause of free opinion. "I hate Gallagher's politics as much as any of you," said this chivalrous young Kentuckian to the crowd, "but he has as good a right to his opinions as we have to ours, and"—with a string of terrible oaths, added—"whoever tries to lay a hand on him or to give him an order to leave the State must first pass over my dead body." This put a quietus upon the mob, the excitement died away and the stars and stripes floated over Fern Cliff Cottage during the five gloomy years of the war.

On Tuesday, September 4, 1888, the opening day of the Ohio State Centennial

COL. COATES KINNEY.

Exposition at Columbus, a tall, finelyformed and erect gentleman, with flashing dark eyes, and with the most silvery head in that multitude of thousands, arose on the platform and delivered the "Ohio CENTENNIAL ODE." The Coliseum, in which it was given, rises about 100 feet in the air, springing from the ground in form a half globe, with seats for some 10,-Behind him were 1,500 children on the platform in tier above tier, arrayed in red, white and blue, whose patriotic songs had just filled the vast auditorium and the simultaneous fluttering of their hand-held flags had made for a few moments a bewildering, brilliant scene of gayety and beauty.

Most poets have fine, delicate voices, that nullify their public-spoken utter-

ances, from dwelling, we suppose, so greatly in the light, high regions of an attenuated etherealized idealism. Not so with the poet of Ohio's Centennial, Col. Coates Kinney, of Xenia, for his voice is clear, strong and sonorous, and the audience signified their appreciation of a masterly production with rounds of applause. It was a great topic, the sublime occasion of an hundred years, and here we gladden and render more patriotic our pages by its presentation:

OHIO CENTENNIAL ODE.

BY COL. COATES KINNEY.

Delivered in the Coliseum, Columbus, O., on the Opening Day, September 4, 1888, of the State Celebration of the Arrival of the Centennial Year.

In what historic thousand years of man Has there been builded such a State as this?

Yet, since the clamor of the axes ran
Along the great woods, with the groan and
hiss

And crash of trees, to hew thy groundsels here,

Ohio! but a century has gone,

And thy republic's building stands the peer Of any that the sun and stars shine on.

Not on a fallen empire's rubbish-heap, Not on old quicksands wet with blood of wrong.

Do the foundations of thy structure sleep,
But on a ground of nature, new and strong.
Men that had faced the Old World seven
years

In battle on the Old World turned their backs

And, quitting Old-World thoughts and hopes and fears,

With only rifle, powder-horn and axe For tools of civilization, won their way Into the wilderness, against wild man and

And laid the wood-glooms open to the day. And from the sway of savagery released The land to nobler uses of a higher race;

Where Labor, Knowledge, Freedom, Peace, and Law

Have wrought all miracles of dream in place And time—ay, more than ever dream fore-

A hundred years of Labor! Labor free! Our River ran between it and the curse,

And freemen proved how toil can glory be.
The heroes that Ohio took to nurse

(As the she-wolf the founders of old Rome)—

Their deeds of fame let history rehearse And oratory celebrate; but see

This paradise their hands have made our home!

Nod, plumes of wheat, wave, banderoles of corn,

Toss, orchard-oriflammes, swing, wreaths of vine, Shout, happy farms, with voice of sheep

Shout, happy farms, with voice of sheep and kine,

For the old victories conquered here on these

The fields of Labor when, ere we were born,

The Fathers fought the armies of the

trees,
And, chopping out the night, chopt in the morn!

A hundred years of Knowledge! We have $\underset{\text{mixt}}{\text{mixt}}$

More brains with Labor in the century Than man had done since the decree was fixt That Labor was his doom and dignity.

All honor to those far-foreworking men Who, as they stooped their sickles in to

fling,
Or took the wheat upon the cradles' swing,

Thought of the boy, the little citizen
There gathering sheaves, and planned the

school for him,
Which should wind up the clockwork of his

To cunning moves of wheels and blades that

skim Across the fields and reap, and rake, and bind!

They planned the schools—the woods were full of schools!

Our learning has not soared, but it has spread:

Ohio's intellects are sharpened tools

To deal with daily fact and daily bread.

The starry peaks of knowledge in thin air
Her culture has not climbed, but on the
plain,

In whatsoever is to do or dare

With mind or matter, there behold her reign.

The axemen who chopt out the clearing here Where stands the Capital, could they today

Arise and see our hundred years' display—Steam-wagons in their thundering career—Wires that a friend's voice waft across a State,

And wires that wink a thought across the sea,

And wires wherein imprisoned lightnings wait

To leap forth at the turning of a key—Could they these shows of mind in matter

Machines that almost conscious souls confess

Seeming to will and think—the printing press,

Not quite intelligent enough to vote— Could they arise these marvels to behold, What would to them the past Republic

The State historified in volumes old, Or prophesied in Grecian Plato's dream?

A hundred years of Freedom! Freedom such No other people on the earth had known Till our America the world had shown What Freedom meant. No slave might

touch nat Freedom meant. No slave mig

Our earth, no master's lash outrage our heaven:

The Declaration of the Great July,
Fired by our Ordinance of Eighty-seven,
Flamed from the River to the northern
sky;—

Ay, that flame rose against the Arctic stars,
And shone a new aurore across the land.
A Body scored with stripes of whip and
scars

Of branding-iron seemed to understand—Soulless though reckoned by our Union's

That It was Man, for whom that heavenly sign

Lit up the North; and while the bloodhounds tracked

Him footsore through Kentucky, stars benign

Befriended him and brought him to our shore, A stranger, frightened, hungry, travelworn;

And we laid hands on him and gave him o'er Again to bondage, as in fealty sworn.

So rich in Freedom, we had none to give!
While we might quaff, we could not pass
the cup:

No slave should touch foot to our soil and live
Upon it slave—he must be given up!

When that first man was wrested from our State,

Then slavery had crossed the Rubicon;
Then Freedom was the whole Republic's fate;
Then John Brown's soul began its marching-on;

Then the Ohio Idea had to go
Where'er the banner of the Union flew,
From northmost limits in Alaskan snow
To southmost in the Mexic waters blue.

A hundred years of Peace! Yes, less the four

(Our little Indian squabbles were not war), The four when we, in battle's shock and roar, Declared that Freedom was worth dying for. Ohio gave to that great fight for Man Her Grant, her Sherman, and her Sheri-

dan,
And her victorious hundred thousands more.
Victorious, yes, though legions of them sleep
In garments rolled in blood on foughten
fields—

Though still the mothers and the widows weep
For the slain heroes borne home on their
shields.

Their glorious victory this day behold:
They conquered Peace; and where their

manly frays
Across the land of bondage stormed and rolled,

Millions of grateful freedmen hymn their praise.

Ohio honors them with happy tears:

The battles that they braved for her, The banner that they waved for her, The Freedom that they saved for her,

Shall keep their laurels green a thousand years.

A hundred years of Law! The people's will,
The might of the majority,
The right of the minority

The right of the minority,
The light hand with authority,
We promised, with the purpose to fulfil;

But the contagion of the border-taint Blackened our statues with its shameful

stain,
And left the color of our conscience faint

Till freshened by the battle-storm's red rain.

Av. was has logislated; it has east

Ay, war has legislated; it has cast
The "White Man's Government" out into
night,

And Labor, Knowledge, Freedom, Peace, at last

Stand color-blind in Law's resplendent light.

Now hail, my State of States! thy justice wins—

Thy justice and thy valor now are one; Thou hast arisen, and thy little sins

Are spots of darkness lost upon the sun. Thy sun is up—O, may it never set!—

These hundred years were but thy morningred:

It shall be forenoon for thy glory yet
When all who this day look on thee are

dead.
O, splendor of the noon awaiting thee!
O, rights of man and heights of manhood

free!
Hail, beautiful Ohio that shalt be!

Hail, Ship of State! and take our parting cheers!

Ah, God! that we might gather here to see
Thy sails loom in, swoln with a thousand
years.

A hundred years of Freedom! Freedom such
No other people on the earth had known
Till our America the world had shown
What Freedom meant. No foot of slave might touch
Our earth, no master's lash outrage our heaven.

Col. Coates Kinney was born in Yates county, N. Y., in 1826; came to Obio in 1840; studied law with Judge Wm. Lawrence and J. W. and Donn Piatt; soon adopted journalism as a life profession; was paymaster in the army through the war and brevetted Lieut.-Colonel.

In 1881 he was the leading Republican speaker in the Ohio Senate. He was

the author of the amendment to the Constitution on the subject of temperance, which was submitted to the voters the following year, and of the bill for the abolition of "The Official Railroad Pass," on which he made a speech that was circulated and commended throughout the United States. He passed the bill through the Senate by his eloquent, masterly array of facts and deductions, but the railroad influence reconsidered it the next day, and converted enough votes from aye to no to defeat it, but the principles of the bill have since been enacted in the Inter-State Commerce Law. But Col. Kinney's record as editor, speaker and public official has been eclipsed by his achievements in literature, especially poetry. His reputation as a poet was established in 1849, when he wrote the famous lyric, "Rain on the Roof." Since then he has written several poems of such merit as to demonstrate that his early effort was not a literary accident, and his recent collection, entitled "Lyrics of the Ideal and the Real," has greatly extended his reputation.

In review of this work the poet's friend, Prof. W. H. Venable, says, he gives, "in glowing words and often splendid dictum, the deepest and most earnest thoughts of a well-trained and subtle intellect upon life, doubt, fear, faith, freedom, immortality, God and man; and then to all his own restless and penetrating questions finds an answer." This answer Mr. Venable then quotes in the thrilling stanza with which he concludes the great poem of the book entitled "Duty Here and Glory There."

Where? My soul looked up and questioned—
Up to where the stars were burning
In the grand and awful temple
Of the midnight—up to where

Of the midnight—up to where Vision stops against the curtain Of the infinite, but spirit

Parts aside the veil and enters;
It is there! Oh, it is there!
Thrilled the whisper through my being,
"Duty here for little lifetimes,
Glory there for endless ages—
Duty here and glory there!"

Another of the poet's friends, and he has many, Mr. Frank D. Mussey, in his review says: "After reading some of the strong poetical efforts of Col. Kinney in his recent book, how softly comes back into the thoughts from the days of one's boyhood, the old lines of 'Rain on the Roof,' a poem which there are few writers who could wish for anything better to leave to the world; that is in every schoolbook; sung to the music of a dozen composers, and is in every man's memory and life."

RAIN ON THE ROOF.

When the humid shadows hover
Over all the starry spheres,
And the melancholy darkness
Gently weeps in rainy tears,
What a bliss to press the pillow
Of a cottage-chamber bed,
And listen to the patter
Of the soft rain overhead.

Every tinkle on the shingles
Has an echo in my heart;
And a thousand dreamy fancies
Into busy being start.
And a thousand recollections
Weave their air threads into woof
As I listen to the patter
Of the rain upon the roof.

Now in memory comes my mother, As she used in years agone, To regard the darling dreamers Ere she left them till the dawn. O, I feel her fond look on me,
As I list to this refrain,
Which is played upon the shingles
By the patter of the rain.

Then my little seraph sister,
With the wings and waving hair,
And her star-eyed cherub brother—
A serene, angelic pair—
Glide around my wakeful pillow,
With their praise of mild reproof,
As I listen to the murmur
Of the soft rain on the roof.

And another comes to thrill me
With her eyes delicious blue;
And I mind not musing on her,
That her heart was all untrue;
I remember but to love her
With a passion kin to pain,
And my heart's quick pulses quiver
To the patter of the rain.

Art hath naught of tone or cadence That can work with such a spell In the soul's mysterious fountains, Whence the tears of rapture well, As that melody of nature, That subdued, subduing strain, Which is played upon the shingles By the patter of the rain.

When a lad of fourteen WILLIAM DEAN HOWELLS (see page 327) lived with his father's family in a log-cabin on the Little Miami river, where his father had a grist-mill, near the road to Dayton, some two or three miles from Xenia. His home was rude and ruinous; through the roof the stars shone in and the snows sifted down. Says Mr. Howells: "I should not like to step out of bed into a snow-wreath now, but then I was glad to do it; and, so far from thinking that or anything in our life a hardship, I counted it all joy."

There were barrels of books in the loft, and this was a treasure to him. Among them, he says, "I found also a copy of the poems of a certain Henry Wadsworth Longfellow, then wholly unknown to me; and, while the old grist-mill, whistling and wheezing to itself, made a vague music in my ear, my soul was filled with this strange new sweetness. I read 'The Spanish Student' then, and 'Copias de Manrique,' and the solemn and ever-beautiful 'Voices of the Night.' But neither those nor any other books I read made me discontented with the small boys' world around me. They made it a little more populous with visionary shapes, and there was room for

them all. It was not darkened with cares, and the duties in it were not many."

In the tenderly expressed poem of his "Lost Boyhood" he wistfully recalls the calm, peaceful hours of his early life on the banks of the Little Miami.

Were some bright seraph sent from bliss With songs of heaven to win my soul From simple memories such as this, What could he tell to tempt my ear From you? What high thing could there be, So tenderly and sweetly dear As my lost boyhood is to me."

It is a somewhat remarkable fact that Ohio, besides supplying the nation with so large a proportion of statesmen and generals of eminence, should be alike prolific of journalists. At this time three of the leading dailies of New York city, the metropolis of the nation, have as their editorial managers Ohio men, viz., Whitelaw Reid, the *Tribune*, Col. John A. Cockerill, the *World*, and Charles Julius Chambers, the Herald; also William Henry Smith, of the Associated Press, Bernard Peters, of the Brooklyn Times, and W. L. Brown, Daily News,

WHITELAW REID is a direct descendant of the Scotch Covenanters. His father, Robert Charleton Reid, had married Marian Whitelaw Ronalds, who came in a direct line from the small and ancient "clan Ronalds" of the Highlands. His paternal grandfather emigrated to this country from the south of Scotland, and settled in Kentucky, but crossed the Ohio in 1800, and bought several hundred acres of land on the present site of Cincinnati. He was a stern old Covenanter, and found his conscience uneasy owing to a condition in the deed which required him to run a ferry across the river every day of the week. Sooner than violate the Sabbath he sold out, and, removing to Greene county, became one of the founders of Xenia.

Whitelaw Reid was born near Xenia, October 27, 1837. He graduated at Miami University in 1856, and took an active interest in journalism and politics before attaining his majority; made speeches in the Fremont campaign on the Republican side, and soon became editor of the Xenia News. At the opening of the civil war he was sent into the field as correspondent of the Cincinnati Gazette, making his headquarters at Washington, where his letters on current politics, over the signature of "Agate," attracted much attention by their thought, information, and pungent style. From that point he made excursions to the army whenever there was a prospect of active operations.

He served as aide-de-camp to Gen. William S. Rosecrans in the Western Virginia campaign of 1861, and was present at the battles of Shiloh and Gettysburg. From 1863 to 1866 was librarian of the House of Representatives. He engaged in cotton-planting in the South after the war, and embodied the results of his observations in a book—"After the War." He then gave two years in writing "Ohio in the War" (Cincinnati, 1868). This work is by far the most important of all the State histories of the civil war. It contains elaborate biographies of most of the chief generals of the army, and a complete history of the State from 1861 till 1865. On the conclusion of this labor he came to New

SOLDIERS' AND SAILORS' ORPHANS' HOME, XENIA.

York at the invitation of Horace Greeley, and became an editorial writer on the *Tribune*. On the death of Mr. Greeley he succeeded him as editor and principal owner of the paper. In 1878 he was chosen by the Legislature to be a regent for life of the University of New York. With this exception he has declined all public employment. He was offered by President Hayes the post of Minister to Germany and a similar appointment by President Garfield. He is a director of

numerous financial and charitable corporations, and has been for many years president of the Lotus Club. Besides the works mentioned above, and his contributions to periodical literature, he has published "Schools of Journalism" (New York, 1871); "The Scholar in Politics" (1873); "Some Newspaper Tendencies" (1879); and "Town-Hall Suggestions" (1881).—Appleton's Cyclopedia of American Biography.

The Reid Homestead, in which Whitelaw was born, was erected by his father, Robert Charleton Reid, in 1823, on land which, before his marriage, he and his brother bought at the Virginia military sales, and stands to-day as it was then, identical in frame-work, flooring, plastering, and interior finish. It is situated between Massie's creek and Little Miami river, in what was then part of Xenia township, not far from the centre of the triangle formed by the three towns of Xenia, Yellow Springs, and Cedarville.

About the year 1850 this part of Xenia township was set off to Cedarville, of which it is now a part. The house, as left by Robert Charleton Reid, consisted of a two-story frame building with a one-story wing, in which were sitting-room, dining-room, and kitchen. Some extensions have been made to the wing and the whole exterior has been repaired and restored by Whitelaw Reid. The interior finish in the old part of the house was of oiled and polished black walnut, with handsome mantels, oak floors, excellent plastering, and windows with 8×10 panes of glass, which were then a costly elegance. Every room on the first floor had a large fireplace finished in Xenia limestone. The original framework has now been filled in with fireproof concrete blocks, and the roof and second story are covered entirely with red Akron tiles. There are numerous piazzas, a porte-cochere, etc., and the new rooms in the extensions of the wing are finished in handsome cabinet-work in cherry, sycamore, ash, walnut, etc. The house contains fourteen rooms, numerous bath-rooms, dressing-rooms, etc.

It is situated on one of the highest points in the county, the ground gently sloping away, and giving a view of many miles in every direction. The farm consists of about 200 acres, is carried on by a farmer for whom a separate house is provided, and is kept in a nice state of cultivation.

When Robert Charleton Reid was married he immediately took his bride to this house. There he died in the room in which his children were all born, and there his widow still lives. His eldest son also died there. The house was originally finished in oak, black walnut, and poplar; not because it was foreseen that these woods would be fashionable half a century afterwards, but because they stood on the actual site of the dwelling, and had to be got out of the way to make room for it. The house at first stood in almost unbroken forest, and for a number of years there were not more than ten acres of cleared land in sight. The lawn surrounding it has always remained unbroken by the plough since the Indians rambled over it.

Mr. Reid is in person very tall and sinewy, uniting delicacy with strength. He has in person and character the best qualities of his Scotch ancestry. His eyes are dark and forehead broad and full, and the intellectual perceptions that discern, and the untiring persistence that wins, have been his inheritance. His great work of "Ohio in the War" will grow with the years, for it has no equal as a record of those troublous times. Therein he wrote of that of which he was a part. He was at the head sources of knowledge and a personal witness of the events under which the Nation trembled. Its spirit of fairness, to those opinions with which he could have no personal sympathy, and its fulness in facts must impress every reader. In character-drawing it is most admirable—every man brought in review stands out in his peculiarities; and wherein there are words of condemnation which a love of truth and a sense of duty impelled him to utter, it seems as though the spirit of charity guided his pen and flowed with the ink.

Wilberforce University is the result of a most notable effort of the negro in America at self-development. It began Sept. 21, 1844, with the appointment of a committee "to select a tract of land for the purpose of erecting a seminary of learning, on the *Manual Labor* plan, for the instruction of the youth among us, in

the various branches of literature, science, agriculture and mechanic arts; and also

for those young men who may desire to prepare their minds for the work of the ministry." In 1847 Union Seminary, twelve miles from Columbus, began a humble yet relatively important career. In 1856 the M. E. Church laid the foundations of Wilberforce University. Students by the score came from the South into the free State of Ohio. Students by the score returned with education from surroundings, as well as from science, for Wilberforce began,

WILBERFORCE UNIVERSITY.

and has continued, a Southern school on Northern soil. In 1863 the University passed into the possession and under the control of colored men. Two years later it lay in ashes, on the very day of the assassination of Abraham Lincoln. Arrangements for rebuilding were begun at once; yet thirteen years of arduous effort were required for its completion.

"The work of the University has been, from its organization, continuous and progressive. It has maintained a faculty of from four to seven regular instructors, assisted by undergraduates. It has enrolled more than 3,000 students, or an annual average of about 130. These have come from all parts of the United States, from Canada, the West Indies, and India. It is located about three miles from Xenia, in Xenia township, and about one mile from the P. C. & St. L. R. R. The main building is a substantial brick 160 x 44, four stories high, containing seventy-eight rooms. Eight cottages in the campus are used for resident and dormitory purposes. There have been recently erected by the State Normal and Industrial Board a building for instruction in domestic arts, and one for instruction in carpentry.

for instruction in carpentry.

The property is variously estimated at from \$50,000 to \$60,000. The university has an endowment fund of \$14,033.62. During its existence of twenty-two and one-half years there have been collected and disbursed more than \$200,000. The university is under the

management of a Board of Trustees, composed of the entire Episcopal Bench—seventeen permanent trustees and 210 conference trustees: the latter are chosen at each conference and consist of three ministerial and two lay members. Under the jurisdiction of the Methodist Episcopal Church Dr. Frederick Merrick and Dr. R. S. Rust presided. Three Presidents have executed the will of the Board since 1863—Bishop D. A. Payne, D. D., presiding from July 3, 1863, to September 6, 1876; Rev. B. F. Lee, D. D., from September 6, 1876, to June 19, 1884, and Rev. S. T. Mitchell, A. M., was elected June 20, 1884. Under the provisions of an act of the Legislature of Ohio passed March 19, 1887, the Normal Department has been strengthened and an Industrial Department organized; \$5,000 per annum is pledged to its support.

support.
The Board for the management of the new department consists of Bishop D. A. Payne, Dr. B. W. Arnett, Hon. C. L. Maxwell, Senator John O'Neill, Dr. R. McMurdy and Hon. J. A. Howell.

Yellow Springs is about forty-five miles west of Columbus, on the Little Miami River, and on a branch of the P. C. & St. L. R. R. Newspaper: Review, Independent, A. E. Humphreys, publisher. Churches: 1 Christian, 1 Methodist Episcopal, 1 Presbyterian, 1 Episcopal, 1 Advent, 1 A. Methodist Episcopal and 1 Colored Methodist Episcopal. Industries: 1 saw-mill, grain elevator, etc. There are many small fruit growers at this place. Population in 1880, 1,377; school census in 1886, 410, S. Ogan, superintendent.

The village is a pleasant and interesting spot, the seat of Antioch College, and takes its name from the medicinal springs here. Formerly they were much visited, and there were ample hotel accommodations for invalids. Early in the century travellers often spoke of the place. The noted Duke of Saxe-Weimar, who was here in 1824, says in his travels:

who was here in 1824, says in his travels:

The spring originates in a limestone rock

The spring originates in a limestone rock. The water has a little taste of iron, and deposits a great quantity of ochre, from which it takes its name. The spring is said to give 110 gallons of water per minute, which is received in a

basin surrounded with cedar trees. The yellow stream which comes from the basin rups a short distance over a bed of limestone and is afterwards precipitated into the valley. These limestone rocks form very singular figures on the edge of this valley; the detached pieces resemble the Devil's Wall of the Hartz.

In the beautiful glen at Yellow Springs is Pompey's Pillar, of which Prof. Orton has written for us this brief description.

POMPEY'S PILLAR, YELLOW SPRINGS.

It consists of a mass of the native limestone rock, fifteen to twenty feet in height, which has been left as we find it, through the action of erosive agencies in the past. The large mass which makes the top of the column is a part of the caprock of the cliffs, and the column itself consists of a number of courses of the building stone of the same series. All of it is Niagara limestone. The formation of the column must date back for many hundred and probably for many thousand years. It is now slowly wasting through the action of the atmosphere, but is likely enough to remain about as it is for many centuries to come, unless disturbed by human agency.

Yellow Springs derives its principal importance at this time from being the seat of Antioch College. Connected with its teaching department have been quite a number of eminent men. In the college campus is a monument to the memory of Horace Mann of national fame, who spent the last seven years of his life, from 1852 to 1859, here as its President. He was born in Franklin, Mass., in 1796, was educated at Brown University; the theme of his graduating oration, "The Progressive Character of the

Human Race," foreshadowed his subsequent career. He was educated to the law, took great interest in the cause of education, and being elected Secretary to the Massachusetts Board of Education introduced thorough reforms into the school system of the State. He visited the schools of Europe, especially those of Germany, and on his return by his lectures and writings did more to awaken an interest throughout the country in education than any man in our history.

From 1848 to 1853 he served in Congress,

first succeeding to the vacancy, as a Whig, occasioned by the death of John Quincy Adams; then was re-elected by the antislavery party, and as an advocate in behalf of their principles was pre-eminent, at one time engaging in a controversy with Daniel Webster, in regard to the extension of slavery and a fugitive slave-law. Failing in his candidacy from the Free-soil party as Governor of the State, he accepted the Presidency of Antioch. He carried the institution through pecuniary and other difficulties, and satisfied himself of the practicability of

the co-education of the sexes, and his incessant labors hastened his death. This great friend to man gave to Ohio his last ripe years, and her soil is honored by being the resting place of his remains. He published several annual reports, also lectures on education, voluminous controversial writings, "A Few Thoughts for a Young Man," "Slavery: Letters and Speeches," "Powers and Duties of Women," etc. His work on education was republished in France, with a biographical sketch.

Bellbrook is about forty miles northeast of Cincinnati and half a mile from the Miami river. The Magnetic Springs, owned by Ohmer & Co., of Dayton, were discovered here in 1884. Newspaper: *Moon*, Independent, Morgan Fudge, editor and proprietor. Churches: 1 Methodist Episcopal, 1 P. M., 1 Presbyterian. Population in 1880, 425.

Jamestown is an important village eleven miles east of Xenia, on the D. & I. railroad, which had in 1880 a population of 877. It narrowly escaped destruction a few years since by what has been termed the "Jamestown Cyclone."

THE JAMESTOWN CYCLONE.

On Sunday, April 27, 1884, at about five o'clock, a destructive cyclone passed over the southern part of Montgomery and Greene counties. It was formed near Dayton by the meeting of two light storm clouds from the south and northwest respectively, which immediately assumed the shape of a water spout, rising and descending like waves of the sea, and moved on with great fury, destroying everything in its path. It caused much damage in Montgomery county, mowing down forests, destroying buildings, fences, live-stock, etc.

At Bellbrook, in Greene county, at least fifteen houses were more or less damaged; but the inmates seeing its approach took refuge in the cellars, and thus escaped serious injury. The greatest damage inflicted was at Jamestown, where the cloud approached along the pike leading to Xenia, having first passed over the fair grounds of the Union Agricultural Society, completely demolishing all the buildings excepting a few small stalls: even the fence posts were razed to the ground. In Jamestown only about one-half of the homes of the entire population escaped destruction: nearly one hundred families were rendered homeless, four persons killed outright, and some thirty-five or forty more or less seriously injured.

Along the track of the storm, which was about one hundred yards wide, not a single building was left intact, and nine out of every ten were razed to the ground. The most prominent buildings in the town were either unroofed or badly damaged. Every church was more or less damaged, and those of the Methodist, Presbyterian, Christian and Colored Methodist nearly demolished. The loss of property amounted to nearly \$200,000. The cyclone seemed to have about exhausted its fury on Jamestown, for it passed away to the east without creating much more damage.

CLIFTON is ten miles north of Xenia, on the Little Miami, and on the line of Clark county, and has about 300 inhabitants. The name originated from the cliffs which bound the river at this place. The stream commences running through a deep ravine at the eastern extremity of the village, and after circling around the town, leaves it on the southwest. For more than two miles it runs through a deep and narrow gorge, bounded by perpendicular and impending rocks,

overhung by evergreens, and presenting scenery of a wild and picturesque character. In this distance the stream has sufficient fall to supply a number of manufacturing establishments.

CEDARVILLE is forty-seven miles southwest of Columbus on the P. C. & St. L. R., and on Massies' creek, eight miles northeast from Xenia. Newspaper: *Herald*, Independent, Robt. H. Young, editor and publisher. Churches: 1 Cov-

enanter, 1 Reformed Presbyterian, 1 Methodist Episcopal, 1 United Presbyterian, 1 African Methodist Episcopal and 1 Colored Baptist.

Industries.—Manufacture of lime; extensive saw-mills are also located here. Population in 1880, 1,181. School census in 1886, 368; J. V. Stewart, superintendent.

FAIRFIELD is twelve miles northwest of Xenia; had in 1880, 380 population. Spring Valley, seven southwest of Xenia, 376; and Osborne, near the northwest corner and line of Clark county, 656 population.

GUERNSEY.

GUERNSEY COUNTY was organized in March, 1810. The upland is hilly and of various qualities, and the soil clay or clayey loam. There is much excellent land in the bottom of Wills creek and its branches, which cover about one-third of the county. Wool is a staple product of the county, together with beef cattle, horses and swine. Its area is 460 square miles. In 1885 the acres cultivated were 67,095; in pasture, 133,784; woodland, 48,407; lying waste, 1,134; produced in wheat, 68,313 bushels; oats, 206,490; corn, 671,694; tobacco, 231,191 pounds; wool, 685,262; sorghum, 32,069 gallons; sheep owned, 162,640; coal, 433,800 tons. School census, 1886, 9,690; teachers, 180.

It has seventy-eight miles of railroad.

Population in 1820 was 9,292; in 1830, 18,636; 1840, 27,729; 1860, 24,474; 1880, 27,197, of whom 23,554 were Ohio-born, 1,499 Pennsylvania, 608 Virginia, 47 New York, and 578 from Europe.

Previous to the first settlement of the county there was a party of whites attacked by Indians on Wills creek, near the site of Cambridge. The particulars which follow are from the pen of Col. John M'Donald, author of the "Biographical Sketches."

In the year 1791 or '92, the Indians having made frequent incursions into the settlements along the Ohio river, between Wheeling and the Mingo bottom, sometimes killing or capturing whole families, at other times stealing all the horses belonging to a station or fort, a company consisting of seven men rendezvoused at a place called the Beech bottom, on the Ohio river, a few miles below where Wellsburg has been erected. This company were John Whetzel, William M'Collough, John Hough, Thomas Biggs, Joseph Hedges, Kinzie Dickerson, and a Mr. Linn. Their avowed object was to go to the Indian towns to steal horses. This was then considered a legal, honorable business, as we were then at open war with the Indians. It would only be retaliating upon them in their own way. These seven men were all trained to Indian warfare and a life in the woods from their youth. Perhaps the western frontier at no time could furnish seven men whose souls were better fitted, and whose nerves and sinews were better strung to perform any enter-

prise which required resolution and firmness. They crossed the Ohio, and proceeded with cautious steps and vigilant glances on their way through the cheerless, dark and almost impervious forest, in the Indian country, till they came to an Indian town, near where the head waters of the Sandusky and Muskingum rivers interlock. Here they made a fine haul, and set off homeward with fifteen horses. They travelled rapidly, only making short halts to let their horses graze and breathe a short time to recruit their strength and activity. In the evening of the second day of their rapid retreat they arrived at Wills creek, not far from where the town of Cambridge has been since erected. Here Mr. Linn was taken violently sick, and they must stop their march or leave him alone to perish in the dark and lonely woods. Our frontier men, notwithstanding their rough and unpolished manners, had too much of my Un-cle Toby's "sympathy for suffering humanity" to forsake a comrade in distress. They halted, and placed sentinels on their back

trail, who remained there till late in the night, without seeing any signs of being pursued. The sentinels on the back trail returned to the camp, Mr. Linn still lying in excruciating pain. All the simple remedies in their power were administered to the sick man, without producing any effect. Being late in the night, they all lay down to rest, except one who was placed as guard. Their camp was on the bank of a small branch. Just before daybreak the guard took a small bucket and dipped some water out of the stream; on carrying it to the fire he discovered the water to be muddy. The muddy water waked his suspicion that the enemy might be approaching them, and were walking down in the stream, as their footsteps would be noiseless in the water. He waked his companions and communicated his suspicion. They arose, examined the branch a little distance, and listened attentively for some time; but neither saw nor heard anything, and then concluded it must have been raccoons, or some other animals, puddling in the stream. After this conclusion the company all lay down to rest, except the sentinel, who was stationed just outside of the light. Happily for them the fire was burned down, and only a few coals afforded a dim light to point out where they lay. The enemy had come silently down the creek, as the sentinel suspected, to within ten or twelve feet of the place where they lay, and fired several guns over the bank. Mr. Linn, the sick man, was lying with his side towards the bank, and received nearly all the balls which were at first fired. The Indians then, with tremendous yells, mounted the bank with loaded rifles, war-clubs and tomahawks, rushed upon our men, who fled barefooted and without arms. Mr. Linn, Thomas Biggs and Joseph Hedges were killed in and near the camp. William M'Collough had run but a short distance when he was fired at by the enemy. At the

instant the fire was given he jumped into a quagmire and fell; the Indians, supposing that they killed him, ran past in pursuit of others. He soon extricated himself out of the mire, and so made his escape. He fell in with John Hough, and came into Wheeling. John Whetzel and Kinzie Dickerson met in their retreat, and returned together. Those who made their escape were without arms, without clothing or provisions. Their sufferings were great; but this they bore with stoical indifference, as it was the fortune of war. Whether the Indians who defeated our heroes followed in pursuit from their towns, or were a party of warriors who accidentally happened to fall in with them, has never been ascertained. From the place they had stolen the horses they had travelled two nights and almost two entire days, without halting, except just a few minutes at a time, to let the horses graze. From the circumstance of their rapid retreat with the horses it was supposed that no pursuit could possibly have overtaken them, but that fate had decreed that this party of Indians should meet and defeat them. As soon as the stragglers arrived at Wheeling, Capt. John M'Collough collected a party of men, and went to Wills creek and buried the unfortunate men who fell in and near the camp. The Indians had mangled the dead bodies at a most barbarous rate. Thus was closed the horse-stealing tragedy.

Of the four who survived this tragedy none are now living to tell the story of their suffering. They continued to hunt and to fight as long as the war lasted. John Whetzel and Dickerson died in the country near Wheeling. John Hough died a few years since, near Columbia, Hamilton county, Ohio. The brave Capt. William M'Collough fell in 1812, in the battle of Brownstown, in the campaign with Gen. Hull.

Hon. William M. Farrar has given us the following interesting items concerning the early history of the county:

The streams of this county come somewhat curiously by their names, as Leatherwood, from a bush having a tough leathery bark used by the pioneers for many useful purposes; Yoker, from the yoker brush that grows along its banks; Wills creek, from Wills river, Maryland; Crooked creek, from its winding course; Little and Big Skull Forks, from the fact that in early times the Indians, having made one of their raids into the white settlements east of the Ohio river, were returning with their prisoners, among whom were a mother and infant child; being pursued they first killed the infant and left the body to be devoured by the wolves, who left no remains but the little skull; farther on the mother was killed and in like manner devoured by the wolves, leaving only the skull. These skulls were found by the pursuing whites on the banks of the streams which thus received their respective names.

Another stream is named Indian Camp from

one of their camping grounds.

The settlement of the county was curious in that settlers from so many different districts met here. The Virginians and Guernseymen met at Wills creek; the Yankees from Massachusetts and Western Pennsylvanians in the southwest; Quakers from North Carolina and Chester county, Pa., in the southeast; the Irish in northern and western townships. A settlement from New Jersey extends into two townships, while there are families, descendants of the Hessians, in the southern part of the county that came in through Virginia and Maryland settlements. The youngest daughter of Gen. Stark, of the Revolution, died in this county, aged ninety-nine years.

The man who wields the second oar in the painting of Perry's Victory, in the rotunda of the Ohio State House, was a Guernsey county man known as "Fighting Bill" Reed. He was of Virginia or Pennsylvania stock, who learned the blacksmith trade with William McCracken, of Cambridge.

Gen. Broadhead's trail on his Coshocton

campaign in 1781 against the Indians is distinctly marked through the county. There were no Indian villages in this region, it being the hunting ground of parties that hunted and fished along the principal streams.

In 1798 "Zane's Trace" was cut through the county. When Zane's party arrived at Wills Creek Crossing they found the government surveyors busy surveying the United States military lands. They had a camp on its banks. At this time the only dwelling between Wheeling and Lancaster was at Zanesville. The Zanes were from the South Branch of the Potomac, near Wills river, Maryland, and hence gave the name Wills creek to the stream. So far as known, Ebenezer Zane's party consisted of himself, his brother Jonathan Zane, John McIntire, Joseph Worley, Levi Williams, and an Indian guide named Tomepomehala.

Wills creek is a sluggish stream with clay bottom, and choked up as it was at that day with drift wood and rubbish, was a difficult crossing; and the Zanes, in compliance with the requirements of the act to establish and maintain ferries at the principal crossings, probably induced a man of the name of Graham to establish one there. It was the first stream west of Wheeling on the "Trace" over which they placed a ferry. Who this first ferryman was or where from is not He remained about two years, and was succeeded by George Beymer, from Somerset, Pennsylvania, a brother-in-law of John McIntire, of Zane's party. McIntire was a brother-in-law of Ebenezer Zane. Both of these persons kept a house of entertainment and a ferry for travellers on their way to Kentucky and other parts of the West. Mr. Beymer, in April, 1803, gave up his tavern to Mr. John Beatty, who moved in from Loudon county, Virginia. Beatty's family consisted of eleven persons. Among these was Wyatt Hutchinson, who later kept a tayern in the town. The Indians then hunted in this vicinity, and often encamped on the creek. In June, 1806, Cambridge was laid out; and on the day the lots were first offered for sale, several families from the British isle of Guernsey, near the coast of France, stopped here and purchased lands. were followed by other families, amounting in all to some fifteen or twenty, from the same island; all of whom, settling in the county, gave origin to its present name. Among the heads of these families were William Ogier, Thomas Naftel, Thomas Lanfisty, James Bishard, Charles and John Marquand, John Robbins, Daniel Ferbrache, Peter, Thomas and John Sarchet, and Daniel Hubert.

CAMBRIDGE IN 1846.—Cambridge, the county-seat, is on the National road, 77 miles east of Columbus and 24 east of Zanesville. It is a flourishing village, and contains 1 Presbyterian, 1 Seceder, 1 Methodist Episcopal and 1 Reformed Methodist church, an academy, 9 mercantile stores, 2 carding machines, 1 flouring and 2 fulling mills, 1 newspaper printing office and about 1,000 inhabitants. The view represents the town as it appears from a hill on the west, about 300 yards north of the National road. The bridge across Wills creek is shown on the right and the town on the hill in the distance.—Old Edition.

The bridge above spoken of is shown also in the new picture. Although built in 1828 it still does good service. It is on the plan of Ithiel Town, a noted architect who, at the same date, was building the Connecticut State-House after the model of the Greek temple, and is now standing on the New Haven Green, though no longer used as a State-House, while the bridge, started as a bridge, remains still on duty as a bridge.

Cambridge is 77 miles east of Columbus, at the intersection of the C. & M. and B. & O. railroads. It is the centre of a fine agricultural district and the county-seat of Guernsey county. County officers in 1888: Probate Judge, Lot P. Hosick; Clerks of Court, James R. Barr, Alfred Weedon; Sheriff, Hugh F. McDonald; Prosecuting Attorney, Justus H. Mackey; Auditor, Thomas Smith; Treasurer, Milton Turner; Recorder, John K. Casey; Surveyor, William J. Hes-

tor; Coroner, John H. Sarchet; Commissioners, John Shipman, James B. Hartley, George Watson. Newspapers: *Jeffersonian*, Democrat, John M. Amos, editor and proprietor; *Guernsey Times*, Republican, D. D. Taylor, editor and proprietor; *Herald*, Independent, Mehaffy & Ogier, editors and proprietors; *Peo*

CAMBRIDGE, FROM THE WEST.

A. J. Hutchinson, president, W. E. Boden, cashier; Guernsey National, J. D. Taylor, president, A. A. Taylor, cashier; Old National, S. J. McMahon, president, A. R. Murray, cashier.

Industries and Employees.—C. & M. R. R. shops, 50 hands; Cambridge Chair Factory, 75 hands; Cambridge Roofing Co., iron roofing, 27 hands; Hoyle &

Scott, doors and sash; Simons Bros., foundry; E. M. Collum, buggies, City Mills.—State Report for 1887. Natural gas is used here for manufacturing and domestic purposes. Population in 1880, 2,883. School census in 1886, 1,280; E. Burgess, superintendent.

Eight miles east of Cambridge, on the National road, is Washington, of which we said in 1846: "It is a very thriving village, and does an extensive business with the surrounding country, which is very fertile. It has 1 Lutheran, 1 Pres-

byterian, 1 Methodist, 1 Union and 1 Catholic church, the last of which is an elegant and costly Gothic edifice; 6 mercantile stores, 1 woollen factory, a population nearly equal to Cambridge. It was laid out about the year 1805 by Simon Beymer, proprietor of the soil, and a native of Cumberland county, Pennsylvania." Being away from railways, it has lost its relative importance. The census of 1880 gave it exactly 600 inhabitants.

In the northern part of this county, on the line of the C. & M. railroad track, a few hundred yards north of Guernsey station, stand the TWIN SYCAMORES, which are a considerable curiosity in the way of trees. These are the measurements, as obtained for us by Mr. William M. Farrar: Twelve inches above ground the largest is in girth 14 feet 6 inches, and the smaller, 10 feet and 4 inches. The arm or connection is 22 feet 2 inches from the ground, and its girth

THE TWIN SYCAMORES.

5 feet 5 inches. The girth of the larger tree above the arm is 10 feet 5 inches; of the smaller tree, 7 feet 9 inches. The growing of a limb of one tree into the body of another is occasionally seen in the forests. This, however, is an unusual specimen. Sometimes one limb grows into another; an example of this is on the New Haven Green, where a lower limb about five feet in length has grown into the one above and serves as a brace as completely as any brace put in by human hands.

THE LEATHERWOOD GOD.

At the village of Salesville there was built by the early settlers a hewed log-church called the Temple and for the use of all denominations. In August, 1828, about two and a half miles northwest of the Temple, was held a camp-meeting under the auspices of the United Brethren Church. It began on Wednesday and continued over Sunday.

On Sunday afternoon a large assemblage was addressed by the Rev. John Crum, P. E. He was about half way through a sermon of great eloquence, which had produced a profound impression, when he paused that the truths he had spoken might sink into the minds of his hearers. At this moment the solemn silence was broken by a tremendous voice, bursting forth like a clap of thunder upon the congregation, giving utterance to but one word, "Salvation," followed by a shout and snort, which filled the people with awe and dread; one of those present said: "They carried with them, right through you, a thrill like that felt when greatly scared in the dark and a dread similar to that experienced when we think of dying instantly."

Men jumped to their feet, women screamed aloud and every cheek blanched. All eyes were turned in the direction from whence the sounds came, and there, seated in the midst of the congregation, was a stranger with solemn countenance, totally unmoved, dressed in a suit of broadcloth, frock coat, white cravat and yellow beaver hat.

How or when he had come there no one knew, although dressed in a garb differ-

ing from any seen in this community at that time.

After several moments the clergyman proceeded with his sermon, but the people gave no heed to it, for every eye and mind was centred upon the mysterious and solemn stranger in their midst. His large black flashing eyes, pale face, low broad forehead, from which the long black locks were brushed back, reaching half way to his waist, and his melancholy, solemn aspect seemed to inspire the

people with awe.

After the meeting, he went about representing himself to be God Almighty, who had come down into the midst of the assembled people in his spiritual body and then assumed the corporeal one with the name of Joseph C. Dylks; that he could appear and disappear at will, perform miracles, and, finally, that he had come to establish the millennium, and that whosoever followed him should never die in their natural bodies. He found many believers and followers. At first he was very cautious in his statements, but, as converts became more numerous, he grew more bold, claimed that his body could not be touched without his permission and that with a shout and snort he could destroy the universe. His following increased and converts were made throughout parts of Belmont, Guernsey and Noble counties. Three men from the vicinity of Salesville, Michael Brill, Robert McCormick and John Brill, also a young minister named Davis, who had come to Salesville during his visitation, were appointed disciples. He preached in the Temple at Salesville and made many converts.

He addressed them as follows: "I am God and there is none else. I am God and the Christ united. In me Father, Son and Holy Ghost are met. There is now no salvation for men except by faith in me. All who put their trust in me shall never taste death, but shall be translated into the New Jerusalem, which I am about to bring down from heaven." Then the brothers yelled "We shall never die," the sisters screamed, Dylks snorted and the spectators muttered their indignation at the blasphemy. When Dylks descended from the pulpit McCormick exclaimed, "Behold our God," and the believers fell on their knees and worshipped him.

The indignation of those who had not been drawn into the delusion of the Dylksites finally resulted in organized opposition, and Dylks was called upon to prove his professions by the performance of a miracle. Thereupon he agreed to

make a seamless garment if the cloth were furnished him.

The cloth was forthcoming but the miracle was not accomplished. Dylks was arrested and brought before a magistrate, but there being no law provided for such offences he was discharged. His accusers were not satisfied with this, and Dylks was obliged to flee to the woods pursued by a mob. After this his conversions ceased, but those who had accepted him still believed in his divinity, and among these he found a refuge from the unbelievers who sought to drive him from the country. He remained several weeks in hiding, and then assembled his converts and announced that he must go to Philadelphia and set up his "New Jerusalem." This was in the latter part of October, and taking three of his disciples with him, they proceeded on foot to Philadelphia. When about to enter the city, Dylks and Davis separated from McCormick and Michael Brill, "to meet again," said Dylks. "where the light from heaven shall shine brightest within the city, for there will New Jerusalem begin to expand to fill the earth." They searched the city over and never found the "Light" nor Dylks and Davis, and after many days wanderings, footsore and moneyless, with sorrow and weeping, McCormick and Brill turned their steps homeward.

Notwithstanding that death removed the Dylksites one by one, the survivors still believed in the divinity of the Leatherwood God, and that he would some day return and set up his New Jerusalem. Seven years later the Rev. Davis reappeared and preached a sermon in which he declared he had seen Dylks ascend into heaven, and that he would return and set up his kingdom. Davis then left and neither he nor Dylks was ever heard of again.

The mystery surrounding the method by which Dylks reached the centre of that congregation was never divulged. When it is considered that his appearance was such a peculiar one, his attire differing from any ever seen in that community at that time, it is not surprising that many believed him to be a supernatural being, to have suddenly appeared in the midst of that large body of people without observation from any one.

A PENNYROYAL DISTILLERY.

The title, "The Leatherwood God," was given this impostor from the meeting where he first appeared having been held on the bank of Leatherwood creek. Leatherwood, which gives name to the creek, is a peculiarly soft and pliable wood with a tough bark that can be tied into knots. It was used by the pioneers for tying the meat of wild hogs, venison and bear upon pack saddles for conveyance to market at Wheeling. When green it is so soft and spongy that it can be dented by the pressure of the fingers.

Pennyroyaldom is the name of a district of uncertain boundaries of which Oxford township is the centre and to which it is principally applicable. This is the central of the three easternmost townships bordering on Belmont county. It is so called from the peculiar industry of pennyroyal raising and distilling within its limits. It is not a great industry, because the demand for the article is light, but it is a peculiar and rare industry, and as such is worthy of notice. The following is a description of the process of its distillation.

The pennyroyal, after being gathered, is allowed to wilt until it will pack well, is then tramped down carefully in the steam-chest until it is full. The oil is in the leaf, and at times can be seen with a magnifying glass in small globules on the under side of the leaf. Set free by the steam it passes into the condenser, into which a stream of cold water is conducted until condensed, and poured into an oil vat filled with water up nearly to the top. The oil, being lighter than the water, runs into the vessel and passes out into a receiver.

The still-houses are of rude construction, as shown in the engraving. Four forks are set in the ground with connecting poles, upon which the roof of rough

boards is placed, extending from a ridge-pole to the eaves. The business is not of enough importance to justify any large expenditure for complete works.

The origin of the industry is as follows:

The first settlers of Oxford township found after plowing up the ground that a spontaneous growth of pennyroyal sprang up. Benjamin Borton, who came from New Jersey in 1804 and settled on the line of the old Wheeling road, having learned the art in his native State, commenced its distillation, and the industry has since been continued by his sons, grandsons and great-grandsons and became identified with the history of this region.

It is said that in the early days when all other resources for raising ready money with which to pay taxes had been exhausted, the farmers would go out and gather pennyroyal, distil it and in this way raise the cash, which was a scarce article in

those times.

The medicinal qualities of the American pennyroyal are superior to that of for-

eign production, and the oil found a ready sale in the Eastern markets.

The industry has been productive of benefit as it has given rise, indirectly, to social reunions among the people, and as the outcome of these has been narratives of pioneer experience, it comes within our province to go into some little detail in regard to them.

At a banquet given in Cambridge on the retirement of Jonathan Rose as County Commissioner and the incoming of Peter Lochary it was proposed to hold annual reunions of those born or bred in Pennyroyaldom, and the proposition acted upon. The first was held, August. 1880, at Gardiner's Grove in Oxford township, and the records of that and succeeding meetings have been preserved by Mr. John Kirkpatrick in pamphlet form from which we quote.

Rev. John Ables, of Jackson township, and his brother Bethuel (since deceased), the oldest living people born in Oxford township, were present at the first reunion, and from the speech of Bethuel (the first white child born in Oxford township), we extract the

following:

"I was born in 1806, within a mile of this spot, amongst the wolves, Indians and snakes. My father died when I was six years old, and left me the oldest of the family upon my mother's hands. John, who has just spoken, was the next eldest. One night he and I, as the wolves were troublesome, penned the sheep right up against the cabin. In the night the wolves came and howled and pushed around the house. The sheep were killed and wounded. It made our little hearts quake at the danger. Once I went for my uncle, Reuben Borton, through a wheat patch for water. I was terribly afraid of snakes. I stepped in my bare feet on two copperheads while going, and also on an old hoop which flew up and struck me. I jumped so high each time that I brought no water back. My uncle found and killed the snakes.

"There were no near neighbors; for miles around there was nothing but paths. One day I was riding on an errand through the woods on 'Kate,' and suddenly a man's hand came from behind a tree on my thigh. I told of it and was informed that it was a robber looking for land buyers who had money. I escaped because I was a boy. In

a few days we heard of a murder on the Maginnis farm. The hand of Providence was around us or we could not have lived. We suffered. I was out after the cows one day, and in crossing a creek walked on a log out into the stream and jumped to get over. I lit in the mud and went down and down, and could not get out: the more I stepped the more I became fastened. Some chips floated near me and little by little I was enabled to reach a slim branch above

me.

"I learned the blacksmith business. I made the tools to clear this country. Is made the hoes, the axes and the mattocks for the settlers. I was here when there were not thirty people in the township. I know all of Pennyroyal, and how to make the oil, too. In the early days we boiled it in kettles, now a four-horse load is needed to fill a 'gum.' It was hard work to gather pennyroyal. It grows by 'grasshopper springs.' The springs near it are generally filled with grasshoppers, and the fields with weeds, etc.''

and the fields with weeds, etc.''

From the address of Geo. Plattenburg (since deceased) we give:

"In 1805 my father and family moved out. We did not have a load of furniture, and put some salt in the bottom of the wagon and sold it at Washington, Pa., for \$6 a sack or \$30 a barrel. It took one-and-a-half bushels of wheat to buy a pound of coffee then. Flour sold at New Orleans for \$1.50 a barrel. It was plenty and money scarce. I made a coat for a man that cost him twenty-seven barrels of flour, or one hundred and thirty-five bushels of wheat. Timber sold at \$12 a thousand feet, and whiskey at fifteen cents a gallon, but where were the fifteen cents?"

From William Morton's remarks we quote: "There were not more than fifteen persons in the township when we came to the goodly land of Ohio, in 1814 and 1815. The early settlers who followed were from New Jersey.

New York, Delaware, Maryland, Pennsylvania and Virginia. I was then ten years old. The boys had to hunt the cows from ridge to ridge through the wood sometimes for half a day, and then come home without them. They braved dangers, too. The hogs in the woods, wild as they were, were more dangerous than the bears. When cow-hunting the dogs would scare up the hogs, the hogs would charge, in battle array, upon the dogs, who would fall back upon the boys and they would have to stand the battle from great fallen trees or from the saplings. One day when my brothers and myself were out, we heard on a ridge above us howlings like those of a wolf. We howled similarly in return, and the dogs joined us in the howling. A boy on the ridge took to flight, thinking a pack of wolves was in reality near. This was the fun of those times."

Hon. Joseph Ferrell said that when Oxford township was organized there were not enough men in it to fill the offices. It was soon settled by soldiers from the war of 1812, two of whom, William Bernard and William Richards, were still living. The Second Regiment of Ohio in the war of 1812 was made up in this region; the Second Regiment in the war of 1846 was filled from here, and the Second Regiment in the last war had many from this

neighborhood.

From Hon. Newell Kennon's reminiscences of Fairview we extract:

About 1818, in the woods south of Fairview, was seen by all the passers-by a speaker's stand with benches in front sufficient to seat a large audience. This place was occupied for preaching by the Reformed Associate Presbyterian Church for five or six years by the Rev. Samuel Findley, their chosen pastor. In fair weather very large and appreciative audiences would assemble to hear the teachings of the learned doctor. The church increased rapidly, large numbers of families settling in the neighborhood who were members of that persuasion, besides others joining who had never been members of any church. They then built what was called a large and comfortable stone church. The chief architeet was a sort of stone mason-but not a Free Mason, or he would have used the plumb, square and level more than he did, thus preventing the intolerant law of gravitation from pushing it down in the process of time. It was strange that the architect, who had the entire control of the building, would have a jug of whiskey placed in the corner-stone as a memento. When the workmen took as a memento. When the workmen took down the building, the jug and the whiskey were found in a high state of preservation; they drank the whiskey and I don't know what became of the jug.

In the early settlement of the West the borders were infested by desperadoes flying from justice, suspected or convicted felons escaped from the grasp of law, who sought safety in the depths of the wilderness. The counterfeiter and robber found there a secure retreat and a new theatre for crime.

During the early settlement of the wild hill country of Southeastern Ohio the scattered, struggling, honest pioneers suffered much from the depredations of this class who found hiding-places among the caves and rocks and thick tangled undergrowth of the ravines. Much loss was inflicted by horse-thieves and counterfeiting of coin was carried on at times quite extensively. In some instances the early settlers executed summary justice upon the depredators and hung or shot them without ceremony. The outside public learned not of these events, as they took place before the advent of newspapers and communication with the older settled communities infrequent; we now learn of them mainly by tradition.

For several years prior to 1834 a large number of horses had been stolen from Guernsey and the surrounding counties, and so completely were all traces of the thieves covered up that the settlers were forced to the conclusion that an organized band of horse thieves must have been formed in their midst. From the scant evidence at hand, it appeared that these marauders had a line of communication from the Muskingum Valley to Lake Erie. So that horses stolen in Guernsey county would be passed along the line and disposed of at a point far distant from the place of theft. All efforts toward the discovery of the thieves were without avail, until finally suspicion fastened upon one Walter G. Perry, who resided some five miles east of Cumberland, in Guernsey county, near what is now called Blue Bell.

On the night of October 15, 1833, a horse had been stolen from Wm. Knappenburger, of Tuscarawas county, who offered a reward for the capture of the thief, and described him as "a short stout-made man, with black piercing eyes and of a rather quiet disposition." Perry answered to this description and measures were taken for his arrest, but he could not be found.

At this time a school-teacher in the McElroy district, named Adonijah Parrish, was boarding with Anthony Jones, and during the night, January 5, 1834, he

heard some one cautiously admitted to the Jones dwelling; his suspicions were aroused and still further excited when, toward morning, he heard the stealthy departure of the person admitted during the night. By questioning the young son of Jones, Parrish learned that the cautious guest of the night was "uncle Perry." Instead of attending to his school that day he hastened to an adjoining district, now called Harmony, and securing the assistance of Robert Marshall, Thomas Rannels, James C. Bay, E. Burt and Robert Kells, started in pursuit of Perry. Armed with rifles, they proceeded to the dwelling of Jones and from there

L M Rodecker, Photo , Cumberland.

PERRY'S DEN.

took up the trail, which was easily followed, owing to a light snow having fallen during the night. After following it for some distance, they perceived that an effort had been made to cover the tracks and baffle pursuit.

About a mile and a half from Jones's the trail led into a deep ravine, on either side of which were high projecting rocks and deep, dark recesses, causing the pursuers some trepidation through fear that Perry might have accomplices hid among the rocks and caverns of the ravine, and that they might fall victims to an ambushed enemy. They moved cautiously forward, speaking only in whispers, every faculty on the alert. Suddenly one of the party called out, "There he is, by the rocks." Seeing that he was discovered, Perry assumed a defiant attitude, and pistol in hand, cried out with an oath that he would shoot the first one who came near. His pursuers having satisfied themselves that he was alone, began closing in on him, when he started to run. Marshall and Rannels threw up their rifles, firing simultaneously, and Perry fell, wounded in the right leg. His captors carried him to the cabin of Clark Williams, where his wound was dressed, and on the evening of the same day he was taken to Cambridge.

Perry was tried and convicted at the April term of court in Tuscarawas county, and on the 19th of April was sentenced to five years' imprisonment in the penicentiary. His wound refused to heal and near the end of the first year's imprisonment he was pardoned by the governor and set at liberty. He returned to his family, who still resided in Guernsey county, but, after a short time, they all left and were heard of no more. Perry had preserved the rifle-ball which had shattered his leg, swearing he would be glad to "plant it in each of his captors."

After Perry's departure evidences came to light of his having been connected

After Perry's departure evidences came to light of his having been connected with a gang of counterfeiters. For several months preceding his arrest, numerous

spurious notes and coins were put in circulation, and Perry on one occasion had remarked to Martin Robbins that he had a lot of coins that would "go just as well as any." About two hundred yards east of his dwelling, in a ravine, was discovered a slot cut in a tree, and near it a long lever, which was used to make imprints of coins in short blocks of seasoned wood; from these primitive molds casts were made in the same manner that the early pioneers cast their rifle-balls.

These discoveries furnished an explanation of the stealthy visits of strangers to the cabin of Perry during all hours of the night. In 1883, in a field near this spot, Newton Hickle plowed up some 130 or more counterfeit coins, evidently made in this manner.

The place of his capture has ever since been called Perry's Den, and is a resort for picnic parties and lovers of the romantic in nature. It is in Spencer township, three miles east of Cumberland, in a deep glen in the highlands, dividing the waters of Wills and Duck creeks.

In its native wildness it afforded remarkable facilities for secreting stolen property. Its distance from roads and the difficulties of access, together with the dense underbrush and its peculiar openings in the rocks, made its discovery extremely unlikely.

Two waterfalls of from twenty to thirty feet descent and about one hundred yards apart add to the romantic beauty of the glen. Horse Shoe Falls, with its ledge of rock projecting out over the depths below, forms a cavern in which twenty horses could be stabled at one time, undiscoverable except by the closest inspection, and early settlers say that unmistakable evidences that it had been put to such uses were plainly discernible. The second waterfall is a gem of beauty; in summer it is bordered with ferns and flowers, intermingled with laurels and evergreens, and in winter, stately columns of glittering ice and fantastic shapes and forms of filagree and frosted work arrest and please the eye.

THE GUERNSEY COUNTY METEOR.

On the 1st of May, 1860, about half an hour after noon, an aerolite exploded over the western border of this county a little east of the village of New Concord. As it approached the earth its brilliance was almost equal to the sun. A great number of distinct detonations were heard like the firing of cannon, after which the sounds became blended together and were compared to the roar of a railway train. This meteor was one of the most remarkable on record from the large quantity of stones which fell to the earth. Prof. Elias Loomis, of Yale College, in Harper's Magazine for June, 1868, in an article entitled "Shooting Stars, Detonating Meteors and Aerolites," thus gives the main items connected with this very notable aerolite.

"Several stones were seen to fall to the ground and they penetrated the earth from two to three feet. The largest weighed 103 pounds, and is preserved in the cabinet of Marietta College. Another was found which weighed fifty-three pounds, a third fifty-one pounds, a fourth was estimated to weigh forty to fifty pounds and a fifth weighed thirty-six pounds. A small one, weighing fifteen pounds, is preserved in the cabinet of Yale College. . . About thirty stones were found, and the entire weight of all the fragments was estimated at 700 pounds.

All these stones have the same general appearance. They are irregular blocks, and are covered with a very thin black crust, which looks as if it had been fused. Their

specific gravity was 3.54, and their composition very similar to that of the Weston meteor. This meteor fell in the southwestern part of Connecticut on the morning of December 14, 1807, and was nearly one-half silex, about one-third oxide of iron, and one-eighth magnesia, with a little nickel and sulphur.

"Owing to the cloudy state of the atmosphere, the time was unfavorable for accurate observation of the meteor's position in the heavens. It has been computed, however, that the meteor moved toward the northwest, that its path was nearly horizontal, and elevated about forty miles above the earth's surface. . . The velocity of the Weston meteor relative to the earth was about fifteen miles per second. . . There are eighteen

well-authenticated cases in which aerolites have fallen in the United States during the last sixty years and their aggregate weight is

1,250 pounds.
"While aerolites contain no elements but such as are found in terrestrial minerals, their appearance is quite peculiar, and the grouping of the elements, that is, the compound formed by them, is so peculiar as to enable us by chemical analysis to distinguish an aerolite from any terrestrial substance.

"All aerolites without exception contain a substance called *Schreibersite*, though often in very small quantities. This substance is a compound of iron, nickel and phosphorus, and has never been found except in aero-

Another writer upon meteors says:
"Records of the fall of aerolites is as old as history. One is recorded by Pliny, 467 B. C., which was the size of a wagon. Kepler affirmed his belief that there were more

comets and smaller bodies flying through space

in number than fish in the ocean.
"In regard to the chemical composition of these stones it must be observed that in passing through our atmosphere they undergo some change, as they always take fire in the upper regions by friction against our atmosphere, and arrive at the ground hot, sometimes making a deep hole. Combustible substances in their composition, and perhaps an atmosphere of combustible gases surrounding them, combined with the immense velocity with which they enter our atmosphere, cause, on the sudden diminution of that motion, a most intense rise in tempera ture, ignition, and very often one or more violent explosions. It is not surprising that they all present the appearance of having been subject to great heat. Chemists have proved that aerolites are not of volcanic origin, and astronomers that their velocity is far too great to be accounted for by terrestrial attraction.

HAMILTON.

Hamilton was the second county established in the Northwestern Territory. It was formed January 2, 1790, by proclamation of Governor St. Clair, and named from Gen. Alexander Hamilton. Its original boundaries were thus defined: "Beginning on the Ohio river, at the confluence of the Little Miami, and down the said Ohio to the mouth of the Big Miami; and up said Miami to the standing stone forks or branch of said river, and thence with a line to be drawn due east to the Little Miami, and down said Little Miami river to the place of beginning." The surface is generally rolling; soil on the uplands clay, and in the valleys deep alluvion, with a substratum of sand. Its agriculture includes a great variety of fruits and vegetables for the Cincinnati market.

Area about 400 square miles. In 1887 the acres cultivated were 68,458; in pasture, 19,468; woodland, 10,774; lying waste, 5,619; produced in wheat, 163,251 bushels; rye, 34,390; buckwheat, 110; oats, 116,500; barley, 34,390; corn, 468,501; broom corn, 2,345 pounds brush; meadow hay, 16,573 tons; clover hay, 3,915; potatoes, 190,398 bushels; tobacco, 25,460 pounds; butter, 648,910; cheese, 9,950; sorghum, 15 gallons; maple syrup, 454; honey, 7,413 pounds; eggs, 327,650 dozen; grapes, 235,235 pounds; wine, 3,091 gallons; sweet potatoes, 11,314 bushels; apples, 1,910; peaches, 2,327; pears, 1,195; wool, 9,405 pounds; milch cows owned, 9,714; milk, 3,779,048 gallons. School census, 1888, 99,049; teachers, 1,031; miles of railroad track, 545.

Population of Hamilton, in 1820, was 31,764; 1830, 52,380; 1840, 80,165; 1860, 216,410; 1880, 313,374; of whom 191,509 were born in Ohio; 10,586, Kentucky; 6,468, Indiana; 4,362, New York; 4,185, Pennsylvania; 2,361, Virginia; 53,252, German Empire; 16,991, Ireland; 4,099, England and Wales; 1,787, France; 1,308, British America; 796, Scotland. Census, 1890, 374,573.

Before the war much attention was given to the cultivation of vineyards upon the hillsides of the Ohio for the manufacture of wine, and it promised to be a great business when the change in climate resulted disastrously.

ANTIQUITIES.

THE GREAT DAM AT CINCINNATI IN THE ICE AGE.

The country in the vicinity of Cincinnati owes its unsurpassed beauty to the operations of Nature during the glacial era. It was the ice movements that gave it those fine terraces along the valleys and graceful contours of formation on the summits of the hills that were so attractive to the pioneers. Here it was that the great ice movement from the north ended. As has been remarked, "those were the days of the beautiful lake rather than the beautiful river."

No single cause has done more to diversify the surface of the country, to add to the attractiveness of the scenery and to furnish the key by which the condition of the Ice Age can be reproduced to the mind's eye than glacial dams. To them we owe the present existence of nearly all the waterfalls in North America, as well as nearly all the lakes.

A glacial dam across the Ohio river is supposed to have existed at the site of Cincinnati during the Ice Age, and the evidence supporting the theory is so full and conclusive that its existence can almost be assumed as an absolute certainty.

The evidences of the former existence of this dam and the lake caused thereby were first discovered and the attention of the scientific world attracted thereto, in the summer of 1882, by Prof. G. Frederick Wright, of Oberlin, whose valuable researches on glacial phenomena have given him a world-wide reputation. The facts here given are extracted from Prof. Wright's recently published volume, "The Ice Age in North America," a work scientific, but plain to the commonest understanding, intensely interesting and an inestimably valuable contribution to the sum of human knowledge.

"The ice came down through the trough of the Ohio, and meeting with an obstruction, crossed it so as to completely choke the channel, and form a glacial dam high enough to raise the level of the water five hundred and fifty feet—this being the height of the water shed to the south. The consequences following are interesting to trace.

"The bottom of the Ohio river at Cincin-

nati is 447 feet above the sea-level. A dam of 553 feet would raise the water in its rear to a height of 1,000 feet above the tide. This would produce a long narrow lake, of the width of the eroded trough of the Ohio, submerge the site of Pittsburg to a depth of 300 feet, and make slack-water up the Monongahela nearly to Grafton, W. Va., and up the Allegheny as far as Oil City. All the tributaries of the Ohio would likewise be filled to this level with the back-water. The length of this slack-water lake in the main valley, to its termination up either the Allegheny or the Monongahela, was not far from one thousand miles. The conditions were also peculiar in this, that all the northern tributaries head within the southern margin of the ice-front, which lay at varying distances to the north. Down these northern tributaries there must have poured during the summer months immense torrents of water to strand bowlder-laden icebergs on the summits of such high hills as were lower than the level of the dam."

Prof. E. W. Claypole, in an article read before the Geological Society of Edinburgh, and published in their "Transactions," has given a very vivid description of the scenes connected with the final breaking away of

the ice-barrier at Cincinnati. He estimates that the body of water held in check by this dam occupied 20,000 square miles, and that during the summer months, when the ice was most rapidly melting away, it was supplied with water at a rate that would be equivalent to a rainfall of 160 feet in a year. This conclusion he arrives at by estimating that ten feet of ice would annually melt from the portion of the State which was glaciated, and which is about twice the extent of the un-glaciated portion. Ten feet over the glaciated portion is equal to twenty feet of water over the unglaciated. To this must be added an equal amount from the area farther back whose drainage was then into the upper Ohio. This makes forty feet per year of water so contributed to this lake-basin. Furthermore, this supply would all be furnished in the six months of warm weather, and to a large degree in the daytime, which gives the rate above mentioned.

The breaking away of the barrier to such a body of water is no simple affair. As this

writer remarks:

"The Ohio of to-day in flood is a terrible danger to the valley, but the Ohio then must have been a much more formidable river to the dwellers on its banks. The muddy waters rolled along, fed by innumerable rills of glacier-milk, and often charged with ice and stones. The first warm days of spring were the harbinger of the coming flood, which grew swifter and deeper as the summer came, and only subsided as the falling temperature of autumn locked up with frost the glacier fountains. The ancient Ohio river system was in its higher part a multitude of

From Wright's Ice Age in North America; by courtesy of D. Appleton & Co., Publishers.

glacial torrents rushing off the ice-sheet, carrying all before them, waxing strong beneath the rising sun, till in the afternoon the roar of the waters and their stony burden reached its maximum, as the sun slowly sank again diminished, and gradually died away during the night, reaching its minimum at sunrise.

at sunrise.
"But with the steady amelioration of the climate, more violent and sudden floods ensued. The increasing heat of summer compelled the retreat of the ice from the Kentucky shore, where Covington and Newport now lie, and so lowered its surface that it fell below the previous out-flow point. The waters then took their course over the dam, instead of passing, as formerly, up the Licking and down the Kentucky river valleys. The spectacle of a great ice-cascade, or of long ice-rapids, was then exhibited at Cincinnati. This cataract or these rapids must have been several hundred feet high. Down these cliffs or this slope the water dashed, melting its own channel, and breaking up the foundations of its own dam. With the depression of the dam the level of the lake also fell. Possibly the change was gradual, and the dam and the lake went gently down together. Possibly, but not probably, this was the case. Far more likely is it that the melting was rapid, and that it sapped the strength of the dam faster than it lowered the water. This will be more probable if we consider the immense area to be drained. The catastrophe was then inevitable—the dam broke, and all the accumulated water of Lake Ohio was poured through the gap. Days or even weeks must have passed before it was all gone; but at last its bed was dry.
The upper Ohio valle; was free from water,
and Lake Ohio had passed away.

"But the whole tale is not yet told. Not once only did these tremendous floods occur. In the ensuing winter the dam was repaired by the advancing ice, relieved from the melting effects of the sun and of the floods.

Year after year was this conflict repeated. How often we cannot tell. But there came at last a summer when the Cincinnati dam was broken for the last time; when the winter with its snow and ice failed to renew it, when the channel remained permanently clear, and Lake Ohio had disappeared forever from the geography of North America.

"How many years or ages this conflict between the lake and the dam continued it is quite impossible to say, but the quantity of wreckage found in the valley of the lower Ohio, and even in that of the Mississippi, below their point of junction, is sufficient to convince us that it was no short time. 'The Age of Great Floods' formed a striking episode in the story of the 'Retreat of the Ice.' Long afterwards must the valley have borne the marks of these disastrous torrents, far surpassing in intensity anything now known on earth. The great flood of 1885, when the ice-laden water slowly rose seventythree feet above low-water mark, will long be remembered by Cincinnati and her inhabitants. But that flood, terrible as it was, sinks into insignificance beside the furious torrents caused by the sudden, even though partial, breach of an ice-dam hundreds of feet in height, and the discharge of a body of water held behind it, and forming a lake of 20,000

square miles in extent.

"To the human dwellers in the Ohio valiey—for we have reason to believe that the valley was in that day tenanted by man—these floods must have proved disastrous in the extreme. It is scarcely likely that they were often forecast. The whole population of the bottom lands must have been repeatedly swept away; and it is far from being unlikely that in these and other similar catastrophes in different parts of the world, which characterized certain stages in the Glacial era, will be found the far-off basis on which rest those traditions of a flood that are found among almost all savage nations, especially in the north temperate zone."

Madisonville, eight miles northeast of Cincinnati (in a cross valley about five miles in length, connecting Mill creek with the Little Miami back of Avondale, Walnut Hills and the observatory), is an extremely interesting region, as connected with the glacial period. This valley, or depression, is generally level, from one to two miles wide, and about 200 feet above the low water-mark in the Ohio, and from 200 to 300 feet below the adjacent hills. It is occupied by a deposit of gravel, sand and loam, belonging to the glacial-terrace epoch. In the article, "Glacial Man in Ohio," by Prof. Wright, in Vol. I., page 93, is given a map of this region. The article also speaks of the discoveries of Dr. C. L. Metz of two palæolithic implements, which prove that man lived in Ohio before the close of the glacial period, say from 8,000 to 10,000 years ago, before which there were no Niagara Falls and no Lake Erie.

The first implement was found at Madisonville by him, in 1885, while digging a cistern. "In making the excavation for this he penetrated the loam eight feet before reaching the gravel, and then near the surface of the gravel this implement was found. There is no chance for it to have been covered by any slide, for the plain is extensive and level-topped, and there had evidently been no previous disturbance of the gravel." "It is not smoothed, but simply a rudely chipped,

pointed weapon about three inches long." The other palæolith was found by Dr. Metz, in the spring of 1887, in an excavation in a similar deposit near Loveland, some thirty feet below the surface, and near where some mastodon bones had previously been found. It was an oblong stone about six inches long, four and a half inches wide, which had here been chipped all around to an edge. Similar discoveries have since been made in Tuscarawas county.

Dr. Metz has favored us with the following article upon discoveries in the mounds and earthworks of the lost race which inhabited this region after the glacial era. They are all upon the surface, being built upon the summits of

the glacial-terraces or upon the present flood plains.

THE PREHISTORIC MONUMENTS OF HAMILTON COUNTY.

The territory comprising Hamilton county appears to have been one of the great centres of the aboriginal inhabitants. This is evi-denced by the great number of earthworks, mounds and extensive burial places found

throughout the county.

Mounds and Earthworks.—The mounds and the earthworks are found most numerous in the valleys of the Little and Great Miami, and in the region between the Little Miami and Ohio rivers. Of the mounds, 437 have been observed in the county, the largest of which is located on the Levi Martin estate, about one mile east of the village of Newtown. The dimensions of this mound from actual measurements are as follows: Circumference at base, 625 feet; width at base, 150 feet; length at base, 250 feet; perpendicular height, 40 feet.

Earth Enclosures.—Of the earthworks, or enclosures, fifteen in number have been located the principal ones being the "Forenclosures, fifteen in number have been located, the principal ones being the "Fortified Hill" near the mouth of the great Miami river, figured and described by Squire and Davis in their "Ancient Monuments of the Mississippi Valley" [see Plate IX., No. 2. Vol. I., Smithsonian Contributions to Knowledge], and the very interesting earthworks located on the lands of Mr. Michael Turren pear the invertion of the Fast Fork Turner, near the junction of the East Fork and Little Miami river in Anderson township, and the Maint Ever in Anderson cownsing, and which the writer takes the liberty to designate as the "Whittlesey and Turner group of works." This group of works was first described by T. C. Day, Esq., in a paper entitled "The Antiquities of the Miami Valley," Cincinnati Chronicle, November, 1839, and subsequently in 1850, were surroyed and ley," Cincinnati Chronicle, November, 1859, and subsequently, in 1850, were surveyed and described by Col. Charles Whittlesey in Vol. III., Article 7, Smithsonian Contributions to Knowledge. Of this work, Mr. Day says: "The site of this stupendous fortification, if we may so call it, is a few rods to the right of the road leading from Newtown to Milford, and about midway between them. It is situated on a ridge of land that juts out from the third bottom of the Little Miami, and reaches within 300 yards of its bed. From the top of the ridge to low water-mark is probably 100 feet. It terminates with quite a sharp point, and its sides are very abrupt, bearing evident marks of having once been swept by some stream of water, probably the Miami. It forms an extremity of an immense bend,

curving into what is now called the third bottom, but which is evidently of alluvial formation. Its probable height is forty feet, and its length about a quarter of a mile before it expands out and forms the third alluvial bottom. About 150 yards from the extreme point of this ridge, the ancient workmen having cut a ditch directly through it, it is thirty feet in depth, its length, a semi-circular curve, is 500 feet, and its width at the top is eighty feet, having a level base of forty feet. At the time of its formation it was probably cut to the base of the ridge, but the washing of the rains has filled it up to its present height. Forty feet from the western side of the ditch is placed the low circular wall of the fort, which describes in its circumference an area of about four acres. The wall is probably three feet in mean height, and is composed of clay occasionally mixed with small flat river stone. It keeps at an exact distance from the top of the ditch, but approaches nearer to the edge of the ridge. The form of the fort is a perfect circle, and is 200 yards in diameter. Its western side is defended with a ditch, cut through in the same manner as the one on the eastern side. Its width and depth is the same, but its length is greater by 200 feet, as the ridge is that much wider than where the other is cut through. The wall of this fort keeps exactly the same distance from the top of this ditch as of the other, viz.: forty feet. Its curve is exactly the opposite of that of the other, so as to form two segments of a circle. At the southeastern side of the fort there is an opening in the wall thirty-six yards wide, and opposite this opening is one of the most marked features of this wonderful monument. A causeway extends out from the ridge about 300 feet in length, 100 feet in width, with a gradual descent to the alluvial bottom at its base. The material of its construction is evidently a portion of the earth excavated from the ditches. . . . "To defend this entrance they raised a mound of earth seven feet high, forty wide and seventy-five long. It is placed about 100 feet from the mouth of the causeway, and is so situated that its garrison could sweep it to its base." The mound above re-ferred to was explored by the writer under the auspices of Prof. F. W. Putnam, curator of the Peabody Museum of American Archæology and Ethnology, Cambridge, Mass.,

and we quote from their Sixteenth Annual Report: "The large mound proved a most interesting structure, unlike anything heretofore discovered. It contained a small central tumulus, surrounded by a carefully built stone-wall and covered in by a platform of . stones, over which was a mass of clay. On this wall were two depressions in each of which a body had been laid, and outside the wall in the surrounding clay were found several skeletons, one of them lying upon a platform of stones. With these skeletons were found a copper celt, ornaments made of copper and shell, and two large sea-shells. With each of three of the skeletons was a pair of the spool-shaped ear ornaments of copper, and in every instance these ornaments were found one on either side near the skull.'

Large Earth Enclosure.—From the base of the graded way heretofore described extend two embankments forming the segments of an oblong oval, enclosing an area of about 16 acres. These embankments extend in an easterly direction, gradually approaching each other until an opening or gateway, 150 feet in width, remains. To protect this gateway a mound is erected just within the opening, having a diameter at base of 125 feet and a perpendicular height of seven feet. the above enclosure are fourteen mounds and one large circular embankment, having a diameter of 300 feet and a gateway to the south sixty feet wide. Near the northern side of this circular enclosure was a small mound covering a stone cist containing a human

Altar Mounds.—On the southern side of the oval was a group of eight mounds. Several of these mounds contained ' tars" or basings of burnt clay, on two of which there were thousands of objects of interest, which are described as follows by Prof. Putnam in his report: "Two of these altars, each about four feet square, were cut out and brought to the museum. Among the objects from the altars are numerous ornaments and carvings unlike any-

thing we have had before.

"One altar contained about two bushels of ornaments made of stone, copper, mica, shells, the canine teeth of bears and other animals, and thousands of pearls (50,000 have been counted and sorted from the mass). Nearly all of these objects are perforated in various ways for suspension. Several of the copper ornaments are covered with native silver, which had been hammered out into thin sheets and folded over the copper. Among these are a bracelet and a bead, and several of the spool-shaped ear ornaments.

'Gold in Mound.—One small copper pendant seems to have been covered with a thin sheet of gold, a portion of which still adheres to the copper, while other bits of it were found in the mass of material. This is the first time that native gold has been found in the mounds, although hundreds have been explored. The ornaments cut out of copper and mica are very interesting, and embrace many forms. Among them is a grotesque human profile cut out of a sheet of mica.

Several ornaments of this material resemble the heads of animals whose features are emphasized by a red color, while others are the form of circles and bands. Many of the copper ornaments are large and of peculiar shape; others are scrolls, scolloped circles. oval pendants and other forms. There are about thirty of the singular spool-shaped objects or ear-rings made of copper. Three large sheets of mica were on this altar, and several finely-chipped points of obsidian, chalcedony and chert were in the mass of materials.

"There were several pendants cut from a micaceous schist and of a unique style of work. There are also portions of a circular piece of bone, over the surface of which are incised figures, and flat pieces of shell similarly carved. Several masses of native copper

were on the altar.

Meteor ic Iron and Terra-Cotta Figurines.— But by far the most important things found on this altar were the several masses of meteoric iron and the ornaments made from this metal. One of these is half of a spoolshaped object like those made of copper, with which it was associated. Another earornament of copper is covered with a thin plating of the iron, in the same manner as others were covered with silver. "Three of the masses of iron have been more or less hámmered into bars, as if for the purpose of making some ornament or implement, another is apparently in the natural shape in which it was found." "On another altar in another mound of the group were several terra-cotta figurines of a character heretofore unknown from the mounds.

'Unfortunately these objects as well as others found on the altars have been more or less burnt, and many of them appear to have been purposely broken before they were

placed on the altars.

Many pieces of these images have been united, and it is my hope that we shall succeed in nearly restoring some of them.

"Enough has already been made out to show the peculiar method of wearing the hair; the singular head-dress and large buttonlike ear-ornaments shown by those human On the figures are of particular interest. same altar with the figurines were two remarkable dishes carved from stone in the form of animals; with these was a serpent cut out of mica. On the altar were several hundred quartz pebbles from the river, and nearly 300 astragali of deer and elk. As but two of these bones could be obtained from a single animal, and as there were but one or two fragments of other bones, there must have been some special and important reason for collecting so large a number of these particular bones.

"A fine-made bracelet made of copper and covered with silver and several other ornaments of copper, a few pearls and shells and other ornaments were also on this altar. Near the last group of earth-works are two parallel ways or embankments, 100 feet apart and extending one-half mile in length northwestwardly across the lands of Mr. Gano Martin.

Small Earth Enclosures.—Of the smaller earth enclosures, the one in the Stites Grove, near Plainville, is in the best state of preservation. It consists of a circular embankment, inner ditch, across which is a causeway leading to an opening in the embankment to the southeast. Numerous ancient burialplaces are found in the county, and the mortuary customs are varied; indicating that the territory has been occupied by various tribes at different periods. We find the stonecist burials, burials under flat stones, burials in stone circles, burials in the drift gravel beds, burials in pits in the horizontal and also in the sitting positions, original mound burials, intrusive mound burials and evidences of cremation.

Ancient Cemetery, Near Madisonville, O.— The most extensive and interesting of the ancient burial-places is the one known as the pre-historic cemetery, near Madisonville, Ohio, which has become noted for its singular ash-pits, as well as for the skeletons buried in or at the bottom of the leaf-mould covering the pits. One thousand and sixtyfive skeletons, 700 ash-pits, upwards of 300 earthen vases, numerous implements of bone, horn, shell, copper and stone have been found.

The Ash-pits are discovered after twelve to twenty-four inches of the leaf-mould has been removed and the hard pan or clay is reached, when the pit is discovered by a circular discoloration or black spot. These ash-pits, as they have been well named, are circular excavations in the hard pan of the plateau, from three to four feet in diameter and from four to seven feet deep. The contents themselves are of peculiar interest, and the purpose for which they were made is still a mystery. The average pit may be said to be filled with ashes in more or less defined layers. Some of the layers near the top seem to be mixed with the surrounding gravel to a greater or less extent; but generally, after removing the contents of the upper third of the pit, a mass of fine gray ashes is found, which is from a few inches to over two feet in thickness.

Sometimes this mass of ashes contains thin strata of charcoal, sand or gravel. Throughout the mass of ashes and sand, from the top of pit to the bottom, are bones of fishes, reptiles, birds and mammals. With the bones are the shells of several species of With the unionidæ. There are also found in these pits large pieces of pottery, also a large number of implements made of bones of deer, and elk antlers have been found. Those made of elk antlers are in most cases adapted for digging or agricultural purposes, and often so large and so well made as to prove that they are effective implements. Among other objects made of bone are beeds, small whistles, or bird-calls, made from hollow bone of birds, also flat and cylindrical pieces with 'tally" notches and marks cut upon them, short round pieces of antler carefully cut and polished together, with arrow points, drills, scrapers and other chipped instruments of stone. A few polished celts and several rough hammer stones have been found in the pits.

Corn-Pit.—A number of objects of copper, particularly beads, have been taken from these pits, as have also several pipes of various shapes cut out of stone. One pit discovered August 26, 1879, known as the "corn-pit," is of peculiar interest. The depth of this pit was six feet, its diameter three feet. The layers or strata from above downwards were:

1st, Leaf-mould 24 inches; 2d, Gravel and clay 15 inches; 3d, Ashes containing animal remains, pottery sherds, unio shells 10 inches; 4th, Bark, twigs and matting 4 inches; 5th, Carbonized shell corn 4 inches; 6th, Layer of twigs, matting and corn leaves 2 inches; 7th, Carbonized corn in ear 6 inches; 8th, Boulders covering the bottom of the pit 6 inches.

Immediately along-side of this pit was another the same depth, 3 feet 7 inches in diameter; containing leaf-mould, 24 inches; ashes with animal remains, fragments of pot-

tery, shells, etc., 4 feet.

The bottom layer of all the pits was invariably ashes, and in the ashes were found, in good state of preservation, bone implements, representing fish hooks, fish spears, bone and horn digging tools, bone beads, solid cylinders of bone two to three inches in length, one-fourth to one-half inch in diameter, bone awls, needles, fifes, grooved bones, cut pieces of antler of deer and elk, copper beads, perforated unios, together with numerous animal remains; of these many were identified as belonging to the deer, elk, bear, buffalo, raccoon, opossum, mink, woodchuck, beaver, various species of birds and water fowls, turkey, fish, together with various species of unio shell.

Pottery.—The skeletons were buried in the horizontal position, and are generally found at a depth of from eighteen inches to three feet; with the skeletons have been found a number of vessels of pottery; the most com-mon of these are small cooking-pots with pointed bottoms and four handles. Most of the vessels are simply cord-marked, but some are found ornamented within with incised lines, or with circular indentations. Several have been obtained on which were small and rudely made medallion figures representing

the human face.

Lizard Ornamentation.—On one pot a similarly formed head is on the edge so as to face the inside of the vessel. One vessel lent to the Smithsonian Institute has luted ornants representing the human face on either side between the handles. A half dozen small vessels have a very interesting form of decoration; these are known as lizard or salamander pots. On some of these vessels the salamander, which is fairly modeled, is on the surface of the broad, flat handles on opposite sides, on others these ornaments are placed between the handles, and on one they form the handles. In all, the head of the salamander is on the edge or lip of the vessel, and in one or two is carried a little to the inside. A few other forms of vessels are represented by single specimens. Such are an ordinary pot attached to a hollow stand a few inches high, two vessels joined together, one above the other, the upper without a bottom, the two having eight handles and a flat, long dish with two handles at each end.

The pre-historic cemetery, near Madisonville, occupies an area of about fifteen acres covered with vast forest trees. Many of the skeletons and pits are found beneath the roots of large oak, walnut or maple trees.

Mardelles or Dug-outs.—In the county but two of the circular excavations designated as "mardelles" have been found. The best preserved of this class of works is the one situated on the lands of the John Turner estate, two miles northeast of the village of

Newtown.

This pit has a diameter of sixty feet at the top, depth in the centre twelve feet; six feet from the edge of the pit is a well-marked embankment conforming to the circular edge of the pit. The embankment is two feet high, eight feet wide at the base, and is interrupted by a gate-way or opening fifteen feet wide at the east. There are many interesting objects in the county that warrant a detailed description; we can, however, but briefly call attention to the terraced hill at Red Bank and the old road-way in Section 11, Columbia Township.

The hill at Red Bank, just north from the railway station, has an elevation of about 300 feet, and is terraced on its eastern and southern slopes. The terraces are five in number, and are undoubtedly the work of human hands. This hill is surmounted by a small mound. The ancient road-way in Section 11, Columbia Township, near Madisonville, is cut along the face of a steep hill extending from the creek in a southwestwardly direction to the top of the hill ending near the Darling homestead. The road-way is upward of 1,600 feet in length, having an average width of twenty-five feet, and is overgrown with large forest trees.

Implements of Preglacial Men.—Evidences of preglacial men having existed in Ohio have been given by the finding of rudely chipped pointed implements at Madisonville and at Loveland in the glacial deposits as before stated. The discovery of the altar mounds in the Little Miami Valley similar to those discovered and explored by Squire and Davis in the Scioto Valley, near Chillicothe, would indicate that the territory that is now known as Ross and Hamilton counties was once the great centre of the pre-historic population of Southern Ohio.

THE FIRST SETTLEMENTS.

Hamilton county was the second settled in Ohio. Washington, the first, had its first settlement at Marietta, April 7, 1788. The country between the Great and Little Miamis had been the scene of so many fierce conflicts between the Kentuckians and Indians in their raids to and fro that it was termed the "Miami Slaughter House." In June, 1780, the period of the Revolutionary war, Captain Byrd, in command of 600 British and Indians with artillery from Detroit, came down the Big Miami and ascended the Licking opposite Cincinnati on his noted expedition into Kentucky, when he destroyed several stations and did great mischief. And in the August following Gen. Rogers Clark, with his Kentuckians, took up his line of march from the site of Cincinnati for the Shawnee towns on Little Miami and Mad rivers, which he destroyed. On this campaign he erected two blockhouses on the north side of the Ohio. These were the first structures known to have been built on the site of the city.

The beautiful country between the Miamis had been so infested by the Indians that it was avoided by the whites, and its settlement might have been procrastinated for years, but for the discovery and enterprise of Major Benjamin Stites, a trader from New Jersey. In the summer of 1786 Stites happened to be at Washington, just back of Limestone, now Maysville, where he headed a party of Kentuckians in pursuit of some Indians who had stolen some horses. They followed for some days; the latter escaped, but Stites gained by it a view of the rich valleys of the Great and Little Miami as far up as the site of Xenia. knowledge, and charmed by the beauty of the country, he hurried back to New Jersey, and revealed his discovery to Judge John Cleves Symmes, of Trenton, at that time a member of Congress and a man of great influence. The result was the formation of a company of twenty-four gentlemen of the State, similar to that of the Ohio Company, as proprietors of the proposed purchase. Among these were General Jonathan Dayton, Elias Boudinot and Dr. Witherspoon, as well as Symmes and Stites. Symmes, in August of next year, 1787, petitioned Congress for a grant of the land, but before the bargain was closed he made arrangements with Stites to sell him 10,000 acres of the best land.

SETTLEMENT OF COLUMBIA.

Under the contract with Symmes, Stites, with a party of eighteen or twenty, landed on the 18th of November, 1788, and laid out the village of Columbia below the mouth of the Little Miami; it is now within the limits of the city, five miles east of Fountain Square.

The settlers were superior men. Among •them were Col. Spencer, Major Gano, Judge Goforth, Francis Dunlavy, Major Kibbey, Rev. John Smith, Judge Foster, Col. Brown, Mr. Hubbell, Capt. Flinn, Jacob White and John Riley, and for several years the settlement was the most populous and successful.

Two or three blockhouses were first erected for the protection of the women and children, and then log-cabins for the families. The boats in which they had come from Maysville, then Limestone, were broken up and used for the doors, floors, etc., to these rude buildings. They had at that time no trouble from the Indians, which arose from the fact that they were then gathered at Fort Harmar to make a treaty with the whites. Wild game was plenty, but their breadstuffs and salt soon gave out, and as a substitute they occasionally used various roots, taken from native plants, the bear grass especially. When the spring of 1789 opened their prospects grew brighter. The fine bottoms on the Little Miami had long been cultivated by the savages, and were found mellow as ash

heaps. The men worked in divisions, onehalf keeping guard with their rifles while the others worked, changing their employments morning and afternoon.

Turkey Bottom, on the Little Miami, one and a half miles above Columbia, was a clearing in area of a square mile, and had been cultivated by the Indians for a long while, and supplied both Columbia and the garrison at Fort Washington at Cincinnati with corn for that season. From nine acres of Turkey Bottom, the tradition goes, the enormous crop of 963 bushels were gathered the very first season.

Before this the women and children from Columbia early visited Turkey Bottom to scratch up the bulbous roots of the bear grass. These they boiled, washed, dried on smooth boards, and finally pounded into a species of flour, which served as a tolerable substitute for making various baking operations. Many of the families subsisted for a time entirely on the roots of the bear grass; and there was great suffering for provisions until they could grow corn.

SETTLEMENT OF CINCINNATI.

The facts connected with the settlement of Cincinnati are these: In the winter of 1787–1788 Matthias Denman, of Springfield, New Jersey, purchased of John Cleves Symmes, a tract of land comprising 740 acres, now but a small part of the city, his object being to form a station, lay out a town on the Ohio side opposite the mouth of the Licking river, and establish a ferry, which last was especially important. The old Indian war-path from the British garrison at Detroit here crossed the Ohio, and here was the usual avenue by which savages from the north had invaded Kentucky. Denman paid five shillings per acre in Continental scrip, or about fifteen pence per acre in specie, or less than \$125 in specie for the entire plot.

Denman the next summer associated with him two gentlemen of Lexington, Ky., each having one-third interest, Col. Robert Patterson and John Filson. The first was a gallant soldier of the Indian wars, and John Filson a school-master and surveyor, and author of various works upon the West, of which he had been an explorer, one of them "The Discovery, Settlement and Present State of Kentucky," published in 1784; also a map of the same. Filson was to survey the site and lay it out into lots, thirty in-lots of half an acre and thirty out-lots of four acres to be given thirty settlers on their paying \$1.50 for deed and survey. He called the proposed town Losantiville, a name formed by him from the Latin "os," mouth, the Greek "anti," opposite, and the French "ville," city, from its position opposite the mouth of the Licking river. And this name it retained until the advent of Gov. St. Clair, January 2, 1790, who, being a member of the old Revolutionary army Society of Cincinnatus, expressed a desire the name should be changed to Cincinnati, when his wish was complied with.

Preliminary Exploration.—In September, 1788, a large party, embracing Symmes, Stites, Denman, Patterson, Filson, Ludlow, with others, in all about sixty men, left Limestone to visit the new Miami Purchase

of Symmes. They landed at the mouth of the Great Miami, and explored the country for some distance back from that and North Bend, at which point Symmes then decided to make a settlement. The party surveyed the distance between the two Miamis, following the meanders of the Ohio, and returned

to Limestone.

On this trip Filson became separated from his companions while in the rear of North Bend, and was never more heard of, having doubtless been killed by the Indians, a fate of which he always seemed to have a presentiment. Israel Ludlow, who had intended to act as surveyor for Symmes, now accepted Filson's interest, and assumed his duties in laying out Losantiville.

Landing at Cincinnati.—On the 24th of December, 1788, Denman and Patterson, with twenty-six others, left Limestone in a boat to found Losantiville. After much difficulty and danger from floating ice in the river, they arrived at the spot on or about the 28th, the exact date being in dispute. The precise spot of their landing was an inlet at the foot of Sycamore street, later known as Yeatman's Cove.

Ludlow laid out the town. On the 7th of January ensuing the settlers by lottery decided on their choice of donation lots, the same being given to each in fee simple on condition: 1. Raising two crops successively, and not less than an acre for each crop. 2. Building within two years a house equal to twenty-five feet square, one and a half stories high, with brick, stone or clay chimney, each house to stand in front of their lots. The following is a list of the settlers who so agreed, thirty in number: Sam-. uel Blackburn, Sylvester White, Joseph Thornton, John Vance, James Dumont, — Fulton, Elijah Martin, Isaac Van Me-ter, Thomas Gissel, David McClever, — Davidson, Matthew Campbell, James Mon-Son, James McConnell, Noah Badgely, James Carpenter, Samuel Mooney, James Campbell, Isaac Freeman, Scott Traverse, Benjamin Dumont, Jesse Stewart, Henry Bechtle, Richard Stewart, Luther Kitchell, Ephraim Kibbey, Henry Lindsey, John Porter, Daniel Shoemaker, Joel Williams.

The thirty in-lots in general terms comprised the space back from the landing between Main street and Broadway, and there

was the town began.

The North Bend settlement was the third within the Symmes Purchase, and was made under the immediate care of Judge Symmes. He called it North Bend because it is the most northerly bend on the Ohio west of the Kanawha. The Judge with his party of adventurers left Limestone January 29, 1789, only about a month after that of Denman at Cincinnati, and two months after that of Stites at Columbia. The history of this with other connecting historical items we extract from Burnet's Notes:

The party, on their passage down the river, were obstructed, delayed and exposed to imminent danger from floating ice, which covered the river. They, however, reached the Bend, the place of their destination, in safety, early in February. The first object of the Judge was to found a city at that place, which had received the name of North Bend, from the fact that it was the most northern bend in the Ohio river below the mouth of the Great Kanawha.

The water-craft used in descending the Ohio, in those primitive times, were flat-boats made of green oak plank, fastened by wooden pins to a frame of timber, and caulked with tow, or any other pliant substance that could be procured. Boats similarly constructed on the northern waters were then called arks, but on the western rivers they were denominated Kentucky boats. The materials of which they were composed were found to be of great utility in the construct on of temporary buildings for safety, and for protection from the inclemency of the weather, after they had arrived at their destination.

At the earnest solicitation of the Judge, General Harmar sent Captain Kearsey with forty-eight rank and file, to protect the improvements just commencing in the Miami country. This detachment reached Lime-stone in December, 1788, and in a few days after, Captain Kearsey sent a part of his command in advance, as a guard to protect the pioneers under Major Stites, at the Little Miami, where they arrived soon after. Mr.

Symmes and his party, accompanied by Captain Kearsey, landed at Columbia, on their passage down the river, and the detachment previously sent to that place joined their company. They then proceeded to the Bend, and landed about the first or second of February. When they left Limestone, it was the purpose of Captain Kearsey to occupy the fort built at the mouth of the Miami, by a detachment of United States troops, who afterwards descended the river to the falls.

That purpose was defeated by the flood in the river, which had spread over the low grounds and rendered it difficult to reach the fort. Captain Kearsey, however, was anxious to make the attempt, but the Judge would not consent to it; he was, of course, much disappointed, and greatly displeased. When he set out on the expedition, expecting to find a fort ready built to receive him, he did not provide the implements necessary to construct one. Thus disappointed and displeased, he resolved that he would not build a new work, but would leave the Bend and

join the garrison at Louisville.

In pursuance of that resolution, he embarked early in March, and descended the river with his command. The Judge immediately wrote to Major Willis, commandant of the garrison at the Falls, complaining of the conduct of Captain Kearsey, representing the exposed situation of the Miami settlement, stating the indications of hostility manifested by the Indians, and requesting a guard to be sent to the Bend. This request was promptly granted, and before the close of the month, Ensign Luce arrived with seventeen or eighteen soldiers, which, for the time, removed the apprehensions of the pioneers at that place. It was not long, however, before the Indians made an attack on them, in which they killed one soldier, and wounded four or five other persons, including Major J. R. Mills, an emigrant from Elizabethtown, New Jersey, who was a surveyor, and an intelligent and highly respected citizen. Although he recovered from his wounds, he felt their disabling effects to the day of his death.

Symmes City Laid Out.—The surface of the ground where the Judge and his party had landed was above the reach of the water, and sufficiently level to admit of a convenient settlement. He therefore deter-mined, for the immediate accommodation of his party, to lay out a village at that place, and to suspend, for the present, the execution of his purpose, as to the city, of which he had given notice, until satisfactory information could be obtained in regard to the comparative advantages of different places in the vicinity. The determination, however, of laying out such a city, was not abandoned, but was executed in the succeeding year on a magnificent scale. It included the village, and extended from the Ohio across the peninsula to the Miami river. This city, which was certainly a beautiful one, on paper, was called Symmes, and for a time was a subject of conversation and of criticism; but it soon ceased to be remembered—even its name was forgotten, and the settlement continued to be called North Bend. Since then, that village has been distinguished as the residence and the home of the soldier and statesman, William Henry Harrison, whose remains now repose in an humble vault on one of its beautiful hills.

In conformity with a stipulation made at Limestone, every individual belonging to the party received a donation lot, which he was required to improve, as the condition of obtaining a title. As the number of these adventurers increased in consequence of the protection afforded by the military, the Judge was induced to lay out another village, six or seven miles higher up the river, which he called South Bend, where he disposed of some donation lots; but that project failed, and in a few years the village was deserted and converted into a farm.

Indian Interviews.—During these transactions, the Judge was visited by a number of Indians from a camp in the neighborhood of Stites' settlement. One of them, a Shawnee chief, had many complaints to make of frauds practised on them by white traders, who fortunately had no connection with the pioneers. After several conversations, and some small presents, he professed to be satisfied with the explanation he had received, and gave assurances that the Indians would trade with the white men as friends.

In one of their interviews, the Judge told him he had been commissioned and sent out

to their country, by the thirteen fires, in the spirit of friendship and kindness; and that he was instructed to treat them as friends and brothers. In proof of this he showed them the flag of the Union, with its stars and stripes, and also his commission, having the great seal of the United States attached to it; exhibiting the American eagle, with the olive branch in one claw, emblematical of peace, and the instrument of war and death in the other. He explained the meaning of those symbols to their satisfaction, though at first the chief seemed to think they were not very striking emblems either of peace or friendship; but before he departed from the Bend, he gave assurances of the most friendly character. Yet, when they left their camp to return to their towns, they carried off a number of horses belonging to the Columbia settlement, to compensate for the injuries done them by wandering traders, who had no part or lot with the pioneers. These depredations having been repeated, a party was sent out in pursuit, who followed the trail of the Indians a considerable distance, when they discovered fresh signs, and sent Captain Flinn, one of their party, in advance, to reconnoitre. He had not proceeded far before he was surprised, taken prisoner, and carried to the Indian camp. Not liking the movements he saw going on, which seemed to indicate personal violence, in regard to himself, and having great confidence in his activity and strength, at a favorable moment he sprang from the camp, made his escape, and joined his party. The Indians, fearing an ambuscade, did not pursue. The party possessed themselves of some horses belonging to the Indians, and returned to Columbia. In a few days, the Indians brought in Captain Flinn's rifle, and begged Major Stites to restore their horses—alleging that they were innocent of the depredations laid to their charge. After some further explanations, the matter was amicably settled, and the horses were given up.

The three principal settlements of the Miami country, although they had one general object, and were threatened by one common danger, yet there existed a strong spirit of rivalry between them—each feeling a pride in the prosperity of the little colony to which he belonged. That spirit produced a strong influence on the feelings of the pioneers of the different villages, and produced an esprit du corps, scarcely to be expected under circumstances so critical and dangerous as those which threatened them. At first it was a matter of doubt which of the rivals, Columbia, Cincinnati or North Bend, would eventually become the chief seat of business.

That, however, lasted but a short time. The garrison having been established at Cincinnati, made it the headquarters and the depot of the army. In addition to this, as soon as the county courts of the territory were organized, it was made the seat of justice of Hamilton county. These advantages convinced everybody that it was destined to become the emporium of the Miami country

Privations of the Settlers.—A large number of the original adventurers to the Miami purchase had exhausted their means by paying for their land, and removing their families to the country. Others were wholly destitute of property, and came out as volunteers, under the expectation of obtaining, gratuitously, such small tracts of land as might be forfeited by the purchasers, under Judge Symmes, for not making the improvements required by the conditions stipulated in the terms of sale and settlement of Miami lands, published by the Judge, in 1787. The class of adventurers first named was comparatively numerous, and had come out under an expectation of taking immediate possession of their lands, and of commencing the cultivation of them for subsistence. Their situation, therefore, was dis-To go out into the wilderness to tressing. till the soil appeared to be certain death; to remain in the settlements threatened them with starvation. The best provided of the pioneers found it difficult to obtain subsistence; and, of course, the class now spoken of were not far from total destitution. They depended on game, fish, and such products of the earth as could be raised on small patches of ground in the immediate vicinity of the settlements.

Occasionally, small lots of provision were brought down the river by emigrants, and sometimes were transported on pack-horses, from Lexington, at a heavy expense, and not without danger. But supplies, thus procured, were beyond the reach of those destitute

persons now referred to.

Stations Established.—Having endured these privations as long as they could be borne, the more resolute of them determined to brave the consequences of moving on to their lands. To accomplish the object with the least exposure, those whose lands were in the same neighborhood united as one family; and on that principle, a number of associations were formed, amounting to a dozen or more who went out resolved to maintain their positions.

Each party erected a strong block-house, near to which their cabins were put up, and the whole was enclosed by strong log pickets. This being done, they commenced clearing their lands, and preparing for planting their crops. During the day, while they were at work, one person was placed as a sentinel, to warn them of approaching danger. At sunset they retired to the block-house and their cabins, taking everything of value within the pickets. In this manner they proceeded from day to day, and week to week, till their improvements were sufficiently: extensive to support their families. During this time, they depended for subsistence on wild game, obtained at some hazard, more than on the scanty supplies they were able to procure from the settlements on the river.

In a short time these stations gave protection and food to a large number of destitute families. After they were established, the Indians became less annoying to the settlements on the Ohio, as part of their time was

employed in watching the stations. The former, however, did not escape, but endured their share of the fruits of savage hostility. In fact, no place or situation was exempt from danger. The safety of the pioneer depended on his means of defence, and on perpetual vigilance.

The Indians viewed those stations with great jealousy, as they had the appearance of permanent military establishments, intended to retain possession of their country. In that view they were correct; and it was fortunate for the settlers that the Indians wanted either the skill or the means of demolishing

 $_{
m them.}$

The truth of the matter is, their great error consisted in permitting those works to be constructed at all. They might have prevented it with great ease, but they appeared not to be aware of the serious consequences which were to result, until it was too late to act with effect. Several attacks were. however, made at different times, with an apparent determination to destroy them; but they failed in every instance. The assault made on the station erected by Captain Jacob White, a pioneer of much energy and enterprise, at the third crossing of Mill creek from Cincinnati, on the old Hamilton road, was resolute and daring; but it was gallantly met and successfully repelled. During the attack, which was in the night, Captain White shot and killed a warrior, who fell so near the block-house, that his companions could not remove his body. The next morning it was brought in, and judging from his stature, as reported by the inmates, he might have claimed descent from a race of giants. On examining the ground in the vicinity of the block-house, the appearances of blood indicated that the assailants had suffered severely.

Dunlap's Station Attacked.—In the winter of 1790–1, an attack was made, with a strong party, amounting, probably, to four or five hundred, on Dunlap's station, at Colerain. The block-house at that place was occupied by a small number of United States troops, commanded by Col. Kingsbury, then a subaltern in the army. The fort was furnished with a piece of artillery, which was an object of terror to the Indians; yet that did not deter them from an attempt to effect their purpose. The attack was violent, and for some time the station was in imminent danger.

The savages were led by the notorious Simon Girty, and outnumbered the garrison, at least, ten to one. The works were entirely of wood, and the only obstacle between the assailants and the assailed was a picket of logs, that might have been demolished, with a loss not exceeding, probably, twenty or thirty lives. The garrison displayed unusual gallantry—they frequently exposed their persons above the pickets, to insult and provoke the assailants; and judging from the facts reported, they conducted with as much folly as bravery.

Col. John Wallace, of Cincinnati, one of the earliest and bravest of the pioneers, and as amiable as he was brave, was in the fort when the attack was made. Although the works were completely surrounded by the enemy, the colonel volunteered his services to go to Cincinnati for a reinforcement. The fort stood on the east bank of the Big Miami. Late in the night he was conveyed across the river in a cance, and landed on the opposite shore. Having passed down some miles below the fort, he swam the river, and directed his course for Cincinnati. On his way down, the next day, he met a body of men from that place and from Columbia, proceeding to Colerain. They had been informed of the attack, by persons hunting in the neighborhood, who were sufficiently near the fort to hear the firing when it began.

He joined the party, and led them to the station by the same route he had travelled from it; but before they arrived, the Indians had taken their departure. It was afterwards

ascertained that Mr. Abner Hunt, a respectable citizen of New Jersey, who was on a surveying tour in the neighborhood of Colerain, at the time of the attack, was killed before he could reach the fort. His body was afterwards found, shockingly mangled.

was afterwards found, shockingly mangled. The Indians tied Hunt to a sapling, within sight of the garrison, who distinctly heard his screams, and built a large fire so near as to scorch him, inflicting the most acute pain; then, as his flesh, from the action of the fire and the frequent application of live coals, became less sensible, making deep incisions in his limbs, as if to renew his sensibility of pain; answering his cries for water, to allay the extreme thirst caused by burning, by fresh tortures; and, finally, when, exhausted and fainting, death seemed approaching to release the wretched prisoner, terminating his sufferings by applying flaming brands to his naked bowels."

EARLY BEGINNINGS OF CINCINNATI.

Soon as the settlers of Cincinnati landed (December, 1788) they commenced erecting three or four cabins, the first of which was built on Front, east of and near Main street. The lower table of land was then covered with sycamore and maple trees, and the upper with beech and oak. Through this dense forest the streets were laid out, their corners being marked upon the trees. This survey extended from Eastern row, now Broadway, to Western row, now Central Avenue, and from the river as far north as to Northern row, now Seventh street.

Fort Washington was built in the fall of 1789 by Major Doughty, the commander of a body of troops sent by Gen. Harmar from Fort Harmar with discretionary power to locate a fort in the Miami country. The site selected was a little east of Broadway just outside of the village limits, and where Third street now crosses it. The fort was a solid, substantial fortress of hewn timber about 180 feet square with block-houses at the four angles and two stories high. Fifteen acres were reserved there by government. It was the most important and extensive military work then in the Territories, and figured largely in the Indian wars of the period. Gen. Harmar arrived and took command late in December, its garrison then comprising seventy men.

In January, 1790, Gen. Arthur St. Clair, then governor of the Northwest

In January, 1790, Gen. Arthur St. Clair, then governor of the Northwest Territory, arrived at Cincinnati to organize the county of Hamilton. In the succeeding fall Gen. Harmar marched from Fort Washington on his expedition against the Indians of the Northwest. In the following year (1791) the unfortunate army of St. Clair marched from the same place. On his return, St. Clair gave Major Zeigler the command of Fort Washington and repaired to Philadelphia. Soon after the latter was succeeded by Col. Wilkinson. This year Cincinnati had little increase in its population. About one-half of the inhabitants were attached to the army of St. Clair, and many killed in the defeat.

In 1792 about fifty persons were added by immigration to the population of Cincinnati, and a house of worship erected. In the spring following the troops which had been recruited for Wayne's army landed at Cincinnati and encamped on the bank of the river, between the village of Cincinnati and Mill creek. To that encampment Wayne gave the name of "Hobson's Choice," it being the only suitable place for that object. This was just west of Central avenue. Here he remained several months, constantly drilling his troops, and then moved on to a spot now in Darke county, where he erected Fort Greenville. In the fall, after the army had left, the small-pox broke out in the garrison at Fort Washington, and spread with so much malignity that nearly one-third of the soldiers and citizens fell victims. In July, 1794, the army left Fort Greenville, and on the

20th of August defeated the enemy at the battle of "the Fallen Timbers," in what is now Lucas county, a few miles above Toledo. Judge Burnet thus de-

scribes Cincinnati, at about this period.

Prior to the treaty of Greenville, which established a permanent peace between the United States and the Indians, but few improvements had been made of any description, and scarcely one of a permanent character. In Cincinnati, Fort Washington was the most remarkable object. That rude but highly interesting structure stood between Third and Fourth streets produced, east of Eastern Row, now Broadway, which was then a two-pole alley, and was the eastern boundary of the town, as originally laid out. It was composed of a number of strongly built, hewed-log-cabins, a story and a half high, calculated for soldiers' barracks. Some of them, more conveniently arranged and better finished, were intended for officers' quarters. They were so placed as to form a hollow square of about an acre of ground with a strong block-house at each angle. It was built of large logs, cut from the ground on which it stood, which was a tract of fifteen acres, reserved by Congress in the law of 1792 for the accommodation of the garrison.

The artificers' yard was an appendage to the fort, and stood on the bank of the river immediately in front. It contained about two acres of ground, enclosed by small contiguous buildings, occupied as work-shops and quarters for laborers. Within the enclosure there was a large two-story frame-house, familiarly called the "yellow-house," built for the accommodation of the quartermaster-general, which was the most commodious and best finished edifice in Cincinnati.

On the north side of Fourth street, immediately behind the fort, Colonel Sargent, secretary of the territory, had a convenient frame-house and a spacious garden, cultivated with care and taste. On the east side of the fort, Dr. Allison, the surgeon-general of the army, had a plain frame dwelling in the centre of a large lot, cultivated as a garden and fruitery, which was called Peach Grove.

The Presbyterian church, an interesting edifice, stood on Main street in front of the spacious brick building now occupied by the first Presbyterian congregation. It was a substantial frame building about forty feet by thirty, enclosed with clapboards, but neither lathed, plastered nor ceiled. The floor was of boat plank, resting on wooden blocks. In that humble edifice the pioneers and their families assembled statedly for public worship; and, during the continuance of the war, they always attended with loaded rifles by their sides. That building was afterwards neatly finished, and some years subsequently [1814] was sold and removed to Vine street, where it now [1847] remains the property of Judge Burke.

On the north side of Fourth street, opposite where St. Paul's Church now stands, there stood a frame school-house, enclosed, but unfinished, in which the children of the village were instructed. On the north side of the public square there was a strong log-building erected and occupied as a jail. A room in the tavern of George Avery, near the frog-pond, at the corner of Main and Fifth streets, had been rented for the accommodation of the courts; and as the penitentiary system had not been adopted, and Cincinnati was a seat of justice, it was ornamented with a pillory, stocks and whipping-post, and occasionally with a These were all the structures of a public character then in the place. Add to these the cabins and other temporary buildings for the shelter of the inhabitants, and it will complete the schedule of the improvements of Cincinnati at the time of the treaty of Greenville. The only vestige of them now remaining is the church of the pioneers. With that exception, and probably two or three frame buildings which have been repaired, improved and preserved, every edifice in the city has been erected since the ratification of that treaty. The stations of defence scattered through the Miami Valley were all temporary, and have long since gone to decay or been demolished.

It may assist the reader in forming something like a correct idea of the appear-

ance of Cincinnati, and of what it actually was at that time, to know that at the intersection of Main and Fifth streets, now the centre of business and tasteful improvement, there was a pond of water, full of alder bushes, from which the frogs serenaded the neighborhood during the summer and fall, and which rendered it necessary to construct a causeway of logs to pass it. That morass remained in its natural state, with its alders and its frogs, several years after Mr. B. became a resident of the place, the population of which, including the garrison and followers of the army, was about six hundred. The fort was then commanded by William H. Harrison, a captain in the army, but afterwards President of the United States. In 1797, General Wilkinson, the commander-in-chief of the army, made it his head-quarters for a few months, but did not apparently interfere with the command of Captain Harrison, which continued till his resignation in 1798.

During the period now spoken of, the settlements of the territory, including

Drawn by Henry Howe in Winter of 1846-1847.
THE FIRST CHURCH IN CINCINNATI.

[The engraving represents the first Presbyterian Church as it appeared in February, 1847. In the following spring it was taken down and the materials used for the construction of several dwellings in the western part of Cincinnati then called Texas. The greater proportion of the timber was found to be perfectly sound. The site was on Vine street just above where now is the Arcade. In 1791 a number of the inhabitants formed themselves into a company to escort the Rev. James Kemper from beyond the Kentucky river to Cincinnati; and, after his arrival, a subscription was set on foot to build this church, which was erected in 1792. This subscription paper is still in existence, and bears date January 16, 1792. Among its signers were General Wilkinson, Captains Ford, Peters and Shaylor, of the regular service, Dr. Allison, surgeon to St. Clair and Wayne, Winthrop Sargeant, Captain Robert Elliot and others, principally citizens, to the number of 106.]

Cincinnati, contained but few individuals, and still fewer families, who had been accustomed to mingle in the circles of polished society. That fact put it in the power of the military to give character to the manners and customs of the people. Such a school, it must be admitted, was by no means calculated to make the most favorable impression on the morals and sobriety of any community, as was abundantly proved by the result.

Idleness, drinking and gambling prevailed in the army to a greater extent than it has done at any subsequent period. This may be attributed to the fact that they had been several years in the wilderness, cut off from all society but their own, with but few comforts or conveniences at hand, and no amusements but such as their own ingenuity could invent. Libraries were not to be found—men of literary minds or polished manners were rarely met with; and they had long been deprived of the advantage of modest, accomplished female society, which always produces a salutary influence on the feelings and moral habits of men.

Thus situated, the officers were urged, by an irresistible impulse, to tax their wits for expedients to fill up the chasms of leisure which were left on their hands after a full discharge of their military duties; and, as is too frequently the case, in such circumstances, the bottle, the dice-box and the card-table were among the expedients resorted to, because they were the nearest at hand and the most easily procured.

It is a distressing fact that a very large proportion of the officers under General Wayne, and subsequently under General Wilkinson, were hard drinkers. Harrison, Clark, Shomberg, Ford, Strong and a few others were the only exceptions. Such were the habits of the army when they began to associate with the inhabitants of Cincinnati, and of the western settlements generally, and to give tone to

public sentiment.

As a natural consequence the citizens indulged in the same practices and formed the same habits. As a proof of this it may be stated that when Mr. Burnet came to the bar there were nine resident lawyers engaged in the practice, of whom he is and has been for many years the only survivor. They all became confirmed sots, and descended to premature graves, excepting his brother, who was a young man of high promise, but whose life was terminated by a rapid consumption in the summer of 1801. He expired under the shade of a tree, by the side of the road, on the banks of Paint creek, a few miles from Chillicothe.

On the 9th of November, 1793, William Maxwell established at Cincinnati The Centinel of the Northwestern Territory, with the motto, "open to all parties influenced by none." It was on a half-sheet, royal quarto size, and was the first newspaper printed north of the Ohio river. In 1796 Edward Freeman became the owner of the paper, which he changed to Freeman's Journal, which he continued until the beginning of 1800, when he removed to Chillicothe. On the 28th of May, 1799, Joseph Carpenter issued the first number of a weekly paper entitled the Western Spy and Hamilton Gazette. On the 11th of January, 1794, two keel-boats sailed from Cincinnati to Pittsburg, each making a trip once in four weeks. Each boat was so covered as to be protected against rifle- and musket-balls, and had port-holes to fire out at, and was provided with six pieces carrying pound balls, a number of muskets and ammunition, as a protection against the Indians on the banks of the Ohio. In 1801 the first sea-vessel equipped for sea—of 100 tons, built at Marietta—passed down the Ohio, carrying produce, and the banks of the river at Cincinnati were crowded with spectators to witness this novel event. December 19, 1801, the Territorial Legislature passed a bill removing the seat of government from Chillicothe to Cincinnati.

January 2, 1802, the Territorial Legislature incorporated the town of Cincinnati, and the following officers were appointed: David Ziegler, President; Jacob Burnet, Recorder; Wm. Ramsay, David E. Wade, Chas. Avery, John Reily, Wm. Stanley, Samuel Dick, and Wm. Ruffner, Trustees; Jo. Prince, Assessor; Abram Cary, Collector; and James Smith, Town Marshal. In 1795 the town contained 94 cabins, 10 frame houses, and about 500 inhabitants. In 1800 the population was estimated at 750, and, in 1810, it was 2,540.

We give on an adjoining page a view of Cincinnati, taken by J. Cutler, as it appeared about the year 1810. It is from an engraving in "the Topographical Description of Ohio, Indiana Territory, and Louisiana, by a late officer of the

army," and published at Boston, in 1812.

That work states that Cincinnati contains about 400 dwellings, an elegant court-house, jail, 3 market-houses, a land-office for the sale of Congress lands, 2 printing-offices, issuing weekly gazettes, 30 mercantile stores, and the various branches of mechanism are carried on with spirit. Industry of every kind being duly encouraged by the citizens, it is likely to become a considerable manufacturing place. It has a bank, issuing notes under the authority of the State, called the Miami Exporting Company. A considerable trade is carried on between Cincinnati and New Orleans in keel-boats, which return laden with foreign goods. The passage of a boat, of forty tons, down to New Orleans, is computed at about twenty-five, and its return at about sixty-five days.

In 1819 a charter was obtained from the State Legislature, by which Cincannati was incorporated as a city. This, since repeatedly amended and altered, forms the basis of its present municipal authority.

DESCRIPTION OF CINCINNATI IN 1847.

[From the Original Edition.]

Cincinnati is 116 miles southwest Columbus; 120 southeast Indianapolis, Indiana; 90 north-northwest Lexington, Kentucky; 270 north-northeast Nashville, Tennessee; 455 below Pittsburg, Pennsylvania, by the course of the river; 132 above Louisville, Kentucky; 494 above the mouth of the Ohio river, and 1,447 miles above New Orleans by the Mississippi and Ohio rivers; 518 by postroute west of Baltimore; 617 miles west by south of Philadelphia; 950 from New York by Lake Erie, Erie canal, and Hudson river, and 492 from Washington City. It is in 39 deg. 6 minutes 30 seconds N. lat., and 7 deg. 24 minutes 25 seconds W. long. It is the largest city of the West north of New Orleans, and the fifth in population in the United States. It is situated on the north bank of the Ohio river, opposite the mouth of Licking river, which enters the Ohio between Newport and Covington, Kentucky. The Ohio here has a gradual bend towards the south.

This city is near the eastern extremity of a valley about twelve miles in circumference, surrounded by beautiful hills, which rise to the height of 300 feet by gentle and varying slopes, and mostly covered with native forest trees. The summit of these hills presents a beautiful and picturesque view of the city and valley. The city is built on two table-lands, the one elevated from forty to sixty feet above the other. Low-water mark in the river, which is 108 below the upper part of the city, is 432 feet above tide-water at Albany, and 133 feet below the level of Lake Erie. The population in 1800 was 750; in 1810, 2,540; in 1820, 9,602; in 1830, 24,831; in 1840, 46,338; and, in 1847, over 90,000. Employed in commerce in 1840, 2,226; in manufactures and trades, 10,866; navigating rivers and canals, 1,748; in the learned professions, 377. Covington and Newport, opposite in Kentucky, and Fulton and the adjacent parts of Mill Creek township on the north are, in fact, suburbs of Cincinnati, and if added to the above population would extend it to 105,000. The shore of the Ohio at the landing is substantially paved to low-water mark, and is supplied with floating wharves, adapted to the great rise and fall of river, which renders the landing and shipping of goods at all times convenient.

Cincinnati seems to have been originally laid out on the model of Philadelphia —with great regularity. North of Main street, between the north side of Front street and the bank of the river, is the landing, an open area of 10 acres, with about 1,000 feet front. This area is of great importance to the business of the city, and generally presents a scene of much activity. The corporate limits include about four square miles. The central part is compactly and finely built, with spacious warehouses, large stores, and handsome dwellings; but in its outer parts it is but partially built up and the houses irregularly scattered. Many of them are of stone or brick, but an equal or greater number are of wood, and are generally from two to four stories high. The city contains over 11,000 edifices, public and private; and of those recently erected, the number of brick exceeds those of wood, and the style of architecture is constantly improving. Many of the streets are well paved, extensively shaded with trees, and the houses ornamented with shrubbery. The climate is more variable than on the Atlantic coast in the same latitude. Snow rarely falls sufficiently deep or lies long enough to furnish sleighing. Few places are more healthy, the average annual mortality being 1 in 40. The inhabitants are from every State in the Union, and from various countries in Europe. Besides natives of Ohio, Pennsylvania and New Jersey have furnished the greatest number; but many are from New York, Virginia,

Maryland, and New England. Nearly one-fifth of the adult population are Germans. But England, Ireland, Scotland, France, and Wales have furnished considerable numbers.

The Ohio river at Cincinnati is 1,800 feet, or about one-third of a mile wide, and its mean annual range from low to high water is about 50 feet; the extreme range may be about 10 feet more. The greatest depressions are generally in August, September, and October, and the greatest rise in December, March, May, and June. The upward navigation is generally suspended by floating ice for eight or ten weeks in the winter. Its current at its mean height is about three miles an hour; when higher and rising, it is more; and, when very low, it does not exceed two miles. The quantity of rain and snow which falls annually at Cincinnati is near 3 feet 9 inches. The wettest month is May, and the driest January. The average number of clear and fair days in a year is 146; of variable, 114; of cloudy, 105. There have been, since 1840, from thirty-eight steamboats

annually built, with an average aggregate tonnage of 6,500 tons.

Among the public buildings of Cincinnati is the court-house, on Main street; it is a spacious building. The edifice of the Franklin and Lafayette bank, of Cincinnati, on Third street, has a splendid portico of Grecian Doric columns, 4 feet 6 inches in diameter, extending through the entire front, was built after the model of the Parthenon, and is truly classical and beautiful. The First and Second Presbyterian churches are beautiful edifices, and the Unitarian church is singularly neat. There are several churches, built within the last three years, which possess great beauty, either internally or externally. But the most impres sive building is the Catholic Cathedral, which, at far less cost, surpasses in beauty and picturesque effect the metropolitan edifice at Baltimore. There are many fine blocks of stores on Front, Walnut, Pearl, Main, and Fourth streets, and the eye is arrested by many beautiful private habitations. The most showy quarters are Main street, Broadway, Pearl, and Fourth street west of its intersection with Main.

There are 76 churches in Cincinnati, viz.: 7 Presbyterian (4 Old and 3 New School); 2 Congregational; 12 Episcopal Methodist; 2 Methodist Protestant; 2 Wesleyan Methodist; 1 Methodist Episcopal South; 1 Bethel; 1 Associate Reformed; 1 Reformed Presbyterian; 6 Baptist; 5 Disciples; 1 Universalist; 1 Restorationist; 1 Christian; 8 German Lutheran and Reformed; English Lutheran and Reformed, 1 each; 1 United Brethren; 1 Welsh Calvinistic; 1 Welsh Congregational; 1 Unitarian; 2 Friends; 1 New Jerusalem; 8 Catholic, 6 of which are for Germans; 2 Jewish synagogues; 5 Episcopal, and 1 Second Advent.

There are 5 market-houses and 3 theatres, of which 1 is German.

Cincinnati contains many literary and charitable institutions. The Cincinnati College was founded in 1819. The building is in the centre of the city, and is the most beautiful edifice of the kind in the State. It is of the Grecian Doric order, with pilaster fronts and façade of Dayton marble, and cost about \$35,000. It has 7 professors or other instructors, about 160 pupils, one-quarter of whom are in the collegiate department. Woodward College, named from its founder, who gave a valuable block of ground in the north part of the city, has a president and 5 professors or other instructors, and, including its preparatory department, near 200 students. The Catholics have a college called St. Xavier's, which has about 100 students and near 5,000 volumes in its libraries. Lane Seminary, a theological institution, is at Walnut Hills, two miles from the centre of the city. It went into operation in 1833, has near 100 students, and over 10,000 volumes in its libraries. There is no charge for tuition. Rooms are provided and furnished at \$5 per annum, and the students boarded at 90 and $62\frac{1}{2}$ cents per week. The Medical College was chartered and placed under trustees in 1825. It has a large and commodious building, a library of over 2,000 volumes, 7 professors, and about 150 students. The Cincinnati Law School is connected with Cincinnati College, has 3 professors and about 30 students. The Mechanics' Institute,

chartered in 1828, has a valuable philosophical and chemical apparatus, a library and a reading-room. The common free schools of the city are of a high order, with fine buildings, teachers, and apparatus. In the high schools there are not less than 1,500 pupils; in the common and private, 5,000; and, including the

Drawn by Henry Howe, in 1846. St. Xavier's College.

students in the collegiate institutions, there are 7,000 persons in the various departments of education. In 1831 a college of teachers was established, having for its object the elevation of the profession, and the advancement of the interest of schools in the Mississippi Valley, which holds an annual meeting in Cincinnati in October. The Young Men's Mercantile Library Association has a fine library and reading-rooms. The library contains over 3,800 volumes, and

LANE SEMINARY.

the institution promises to be an honor and a blessing to the commercial community. The Apprentices' Library, founded in 1821, contains 2,200 volumes.

The charitable institutions of the city are highly respectable. The Cincinnati orphan asylum is in a building which cost \$18,000. Attached is a library and well-organized school, with a provision even for infants; and it is surrounded by

ample grounds. It has trained up over 300 children for usefulness. The Catholics have one male and female orphan asylum. The commercial hospital and lunatic asylum of Ohio was incorporated in 1821. The edifice, in the northwest part of the city, will accommodate 250 persons; 1,100 have been admitted within a year. A part of the building is used for a poor-house; and there are separate apartments for the insane.

The city is supplied by water raised from the Ohio river, by a steam-engine, of forty horse-power, and forced into two reservoirs, on a hill, 700 feet distant; from whence it is carried in pipes to the intersection of Broadway and Third streets, and thence distributed through the principal streets in pipes. These works are now

owned by the city.

Cincinnati is an extensive manufacturing place. Its natural destitution of water-power is extensively compensated at present by steam-engines, and by the surplus water of the Miami canal, which affords 3000 cubic feet per minute. But the Cincinnati and White Water canal, which extends twenty-five miles and connects with the White Water canal of Indiana, half a mile south of Harrison, on the State line, will furnish a great increase of water-power, equal to ninety runs of millstones. The manufactures of the city, already large, may be expected to greatly increase. By a late enumeration, it appears that the manufactures of Cincinnati of all kinds employ 10,647 persons, a capital of \$14,541,842, and produce articles of over seventeen millions of dollars value.

The trade of Cincinnati embraces the country from the Ohio to the lakes, north and south; and from the Scioto to the Wabash, east and west. The Ohio river line, in Kentucky, for fifty miles down, and as far up as the Virginia line, make their purchases here. Its manufactures are sent into the upper and lower Missis-

sippi country.

There are six incorporated banks, with aggregate capital of \$5,800,000, beside two unincorporated banks. Cincinnati is the greatest pork market in the world. Not far from three millions of dollars worth of pork are annually exported.

Cincinnati enjoys great facilities for communication with the surrounding country. The total length of canals, railroads and turnpikes which centre here, completed and constructing, is 1,125 miles. Those who have made it a matter of investigation predict, that Cincinnati will eventually be a city of a very great population. A writer, J. W. Scott, editor of the Toledo Blade, in Cist's "Cincinnati in 1841," in a long article on this subject, commences with the startling announcement: "Not having before my eyes the fear of men, 'who—in the language of Governor Morris—with too much pride to study and too much wit to think, undervalue what they do not understand, and condemn what they do not comprehend,' I venture the prediction, that within one hundred years from this time, Cincinnati will be the greatest city in America; and by the year of our Lord 2000 the greatest city in the world." We have not space here to recapitulate the arguments on which this prediction is based. The prediction itself we place on record for future reference.—Old Edition.

EARLY INCIDENTS.

The few following pages are devoted to incidents which transpired within the city and county up to the time of issue of the edition of 1847. They were derived mainly from newspapers and other publications.

Adventure of Jacob Wetzel, the Indian Hunter.—The road along the Ohio river, leading to Storrs and Delhi, some four hundred yards below the junction of Front and Fifth streets, crosses what, in early days, was the outlet of a water-course, and notwithstanding the changes made by the lapse of

years, and the building improvements adjacent, the spot still possesses many features of its original surface, although now divested of its forest character. At the period of this adventure—October 7, 1790—besides the dense forest of maple and beech, its heavy undergrowth of spice-wood and grape-vine

made it an admirable lurking-place for the savage beasts, and more savage still, the red

men of the woods.

Wetzel had been out on his accustomed pursuit—hunting—and was returning to town, at that time a few cabins and huts collected in the space fronting the river, and extending from Main street to Broadway. He had been very successful, and was returning to procure a horse to bear a load too heavy for his own shoulders, and, at the spot alluded to, had sat down on a decaying tree-trunk to rest himself, and wipe the sweat from his brow, which his forcing his way through the brush had started, cool as was the weather, when he heard the rustling of leaves and branches, which betokened that an animal or an enemy was approaching. Silencing the growl of his dog, who sat at his feet, and appeared equally conscious of danger, he sprang behind a tree and discovered the dark form of an Indian, half hidden by the body of a large oak, who had his rifle in his hands, ready for any emergency that might require the use of it—as he, too, appeared to be on his guard, having heard the low growling of the dog. At this instant, the dog also spied the Indian and barked aloud, which told the Indian of the proximity of his enemy. raise his rifle was but the work of a moment, and the distinct cracks of two weapons were heard almost at the same time. The Indian's fell from his hands, as the ball of the hunter's had penetrated and broken the elbow of his left arm, while the hunter escaped unhurt. Before the Indian could possibly reload his rifle in his wounded condition, Wetzel had rushed swiftly upon him with his knife, but not before the Indian had drawn his. The not before the Indian had drawn his. first thrust was parried off by the Indian with the greatest skill, and the shock was so great in the effort that the hunter's weapon was thrown some thirty feet from him. Nothing daunted, he threw himself upon the Indian with all his force and seized him around the body; at the same time encircling the right arm, in which the Indian still grasped his The Indian, however, was a very muscular fellow, and the conflict now seemed doubtful indeed. The savage was striving with all his might to release his arm, in order to use his knife. In their struggle, their feet became interlocked, and they both fell to the ground, the Indian uppermost, which extricated the Indian's arm from the iron grasp of the hunter. He was making his greatest endeavors to use his knife, but could not, from the position in which they were lying, as Wetzel soon forced him over on his right side, and, consequently, he could have no use of his arm.

Just at this point of the deadly conflict, the Indian gave an appalling yell, and, with renewed strength, placed his enemy underneath him again, and with a most exulting cry of victory, as he sat upon his body, raised his arm for that fatal plunge. Wetzel saw death before his eyes, and gave himself up for lost, when, just at this most critical juncture, his faithful dog, who had not been an

uninterested observer of the scene, sprang forward and seized the Indian with such force by the throat, as caused the weapon to fall harmless from his hand. Wetzel, seeing such a sudden change in his fate, made one last and desperate effort for his life, and threw the Indian from him. Before the prostrate savage had time to recover himself, the hunter had seized his knife, and with redoubled energy rushed upon him, and with his foot firmly planted on the Indian's breast, plunged the weapon up to the hilt in his heart. The savage gave one convulsive shudder, and was no more.

As soon as Wetzel had possessed himself of his rifle, together with the Indian's weapons, he started immediately on his way. He had gone but a short distance when his ears were assailed by the startling whoop of a number of Indians. He ran eagerly for the river, and, fortunately, finding a canoe on the beach near the water, was soon out of reach, and made his way, without further danger, to the cove at the foot of Sycamore

street.

The Indians came up to the place of the recent rencounter, and discovered the body of a fallen comrade. They gave a most hideous yell when, upon examination, they recognized in the dead Indian the features of one of

their bravest chiefs.

O. M. Spencer Taken Captive.—In July, 1792, two men, together with Mrs. Coleman and Oliver M. Spencer, then a lad, were returning in a canoe from Cincinnati to Columbia; they were fired upon by two Indians, in ambush on the river bank; one of the men was killed, and the other, a Mr. Light, wounded. Mrs. Coleman jumped from the canoe into the river, and without making any exertions to swim, floated down nearly two miles. It is supposed she was borne up by her dress, which, according to the fashion of that time, consisted of a stuffed quilt and other buoyant robes. Spencer was taken and carried captive to the Maumee, where he remained about eight months and was ransomed. A narrative of his captivity, written by himself, has been published by the Methodists. [For some further details see Defiance County.]

see Defiance County.]

Scalping of Col. Robert Elliott.—In 1794
Col. Robert Elliott, contractor for supplying the United States army, while travelling with his servant from Fort Washington to Fort Hamilton, was waylaid and killed by the Indians, at the big hill, south of where Thomas Fleming lived, and near the line of Hamilton and Butler counties. When shot, he fell from his horse. The servant made his escape by putting his horse at full speed, followed by that of Elliott's, into Fort Hamilton. The savage who shot the colonel, in haste to take his scalp, drew his knife, and seized him by the wig which he wore. To his astonishment, the scalp came off at the first touch, when he exclaimed, "dam lie!" In a few minutes, the surprise of the party was over, and they made themselves merry at the expense of their comrade. The next

day, a party from the fort, under the guidance of the servant, visited the spot, placed the body in a coffin and proceeded on their way to Fort Washington. About a mile south of Springdale they were fired upon by Indians, and the servant, who was on the horse of his late master, was shot at the first fire. The party retreated, leaving the body of Elliott with the savages, who had broken open the coffin, when the former rallied, retook the body and carried it, with that of the servant, to Cincinnati, and buried them side by side in the Presbyterian cemetery, on Twelfth street. Several years after, a neat monument was erected, with the following inscription:

In memory of ROBERT ELLIOTT,

SLAIN BY A PARTY OF INDIANS,
Near this point,
While in the service of his country.
Placed by his son,
Com. J. D. ELLIOTT, U. S. Navy.
1835.

DAMON AND FIDELITY.

A Witch Story.—About the year 1814, one of our most wealthy and respectable farmers of Mill creek, who had taken great pains and expended much money in procuring and propagating a fine breed of horses, was unfortunate in losing a number of them, by a dis-temper which appeared to be of a novel character. As the disease baffled all his skill, he soon became satisfied that it was the result of witchcraft. Under that impression, he consulted such persons as were reputed to have a knowledge of sorcery, or who pre-tended to be fortune-tellers. These persons instructed him how to proceed to discover and destroy the witch. One of the experiments he was directed to make was to boil certain ingredients, herbs, et cetera, over a hot fire, with pins and needles in the cauldron, which, he was told, would produce great mental and bodily distress in the witch or wizzard. He tried that experiment, and while the pot was boiling furiously, placed himself in his door, which overlooked the principal part of his farm, including the field in which his horses were kept. It so happened, that, while standing in the door, he saw his daughter-in-law, who lived in a cabin about eighty rods from his own house, hastening to the spring for a bucket of water. His imagination connected that hurried movement with his incantation so strongly, that he immediately ordered his son to move his family from the farm.

From some cause, he had formed an opinion that a Mrs. Garrison, an aged woman, in feeble health, fast sinking to the grave, living some eight or ten miles from his farm,

was the principal agent in the destruction of his horses. He had frequently expressed that opinion in the neighborhood. Garrison had heard of it, and, as might be expected, her feelings were injured and her spirits much depressed by the slanderous report. One of the charms he had been directed to try was to shoot a silver bullet at a horse while the witch was evidently in him. This he was told would kill the witch and cure the animal. He accordingly prepared a silver ball, and shot it at a very fine brood-mare which was affected by the distemper. The mare, of course, was killed; and as it so happened, that, in a very short time after, poor Mrs. Garrison died, the experiment was declared to be successful, and the experimenter believes to this day that his silver bullet killed the poor old woman. However that may be, his slanderous report had a

great effect on her health, and no doubt hastened her death.—Burnet's Notes.

Explosion of the Moselle.—The new and elegant steamboat, Moselle, Captain Perkin, left the wharf in Cincinnati, April 26, 1838 (full of passengers), for Louisville and St. Louis; and, with the view of taking a family on board at Fulton, about a mile and a half above the quay, proceeded up the river and made fast to a lumber raft for that purpose. Here the family was taken on board; and, during the whole time of their detention, the captain had madly held on to all the steam that he could create, with the intention, not only of showing off to the best advantage the great speed of his boat, as it passed down the river the entire length of the city, but that he might overtake and pass another boat which had left the wharf for Louisville, but a short time previous. As the Moselle was a new brag boat, and had recently made several exceedingly quick trips to and from Cincinnati, it would not do to risk her popularity for speed, by giving to another boat (even though that boat had the advantage of time and distance) the most remote chance of being the first to arrive at the destined port. This insane policy—this poor ambition of proprietors and captains—has almost inevitably tended to the same melancholy results. The Moselle had but just parted from the lumber raft to which she had been fast—her wheels had scarcely made their first revolution—when her boilers burst with an awful and astounding noise, equal to the most violent clap of thunder. The explosion was destructive and heart-rending in the extreme; heads, limbs and bodies were seen flying through the air in every direction, attended with the most horrible shrieks and groans from the wounded and dying. boat, at the time of the accident, was about thirty feet from the shore, and was rendered a perfect wreck. It seemed to be entirely shattered as far back as the gentlemen's cabin; and her hurricane deck, the whole length, was entirely swept away. The boat immediately began to sink, and float with a strong current down the river, at the same time receding farther from the shore—while

the passengers, who yet remained unhurt in the gentlemen's and ladies' cabins, became panic-struck, and most of them, with a fatuity which seems unaccountable, jumped into the Being above the ordinary business parts of the city, there were no boats at hand, except a few large and unmanageable woodfloats, which were carried to the relief of the sufferers, as soon as possible, by the few persons on the shore. Many were drowned, however, before they could be rescued, and many sunk, who were never seen afterwards. There was one little boy on the shore who was seen wringing his hands in agony, imploring those present to save his father, mother and three sisters—all of whom were struggling in the water to gain the shorebut whom the little fellow had the awful misfortune to see perish, one by one, almost within his reach; an infant child, belonging to the family, was picked up alive, floating down the river on one of the fragments of the hurricane deck.

The boat sunk about fifteen minutes after the explosion, leaving nothing to be seen but her chimneys and a small portion of her

upper works.
The "Moselle" was crowded with passengers from stem to stern, principally Germans, bound to St. Louis. Nearly all on board (with the exception of those in the ladies' cabin) were killed or wounded. Most of the sufferers were among the hands of the boat and the steerage passengers. The captain was thrown by the explosion into the street and was picked up dead and dreadfully mangled. Another man was forced through the roof of one of the neighboring houses; the pilot was thrown about a hundred feet into the air, whence he fell and found his grave in the river; and many were the limbs and other fragments of human bodies which were found scattered about upon the river and far along the shore. The number de-stroyed by the explosion was estimated at over 200 persons

The Asiatic Cholera.—This dreaded pestilence first visited the United States in 1832 and broke out in October of that year. The total number of deaths by it in Cincinnati was, as reported, 351. [The most fatal year of its visitation was in 1849, when out of a population of 116,000 the total deaths were 8,500. The deaths among the Germans and Irish were one in sixteen persons and among the Americans one in fifty-six. The causes of these results were doubtless owing to the different modes of living. The greatest mortality was in the hot month of July, yet great fires were made in some streets, but the disease went on with its fearful fatality and

the long funerals blackened all the way.'']
The Great Freshet of February, 1832.— The Ohio river commenced rising at this place about the 9th inst. On the 12th it began to swell over the banks, and on the 14th many merchants and others near the river were compelled to remove their goods to the second story of their houses. It continued to rise rapidly till Saturday morning, February 18th, when it came to a stand, having risen sixty-three feet above low water mark. ferences of opinion exist as to its comparative height with the rises of 1792 and 1815. It is supposed to have been about five feet higher than in 1792 or 1815. About noon, on the 18th, it commenced falling very slowly, and yet continues to fall. In the course of two or three days it probably will be confined within its banks.

The rise was of the most distressing char-It carried desolation into all the lower parts of the city. Hundreds of families were turned houseless upon the community. During the early part of the rise many in the lower part of the city were awakened at night by the water pouring in upon them and were obliged to fly; others betook themselves to the upper stories and were brought away in boats the next morning. Many families continue to reside in the upper part of their dwellings, making use of boats in going from and returning to their stores and houses.

We have heard of the death of but two individuals, Mr. John Harding and Mr. William Aulsbrook; the former a man of family, the latter a single man. They were in the employ of Mr. William Tift, of this city, and lost their lives in endeavoring to keep the water out of his cellar. While at work the back wall of the building gave way; the cellar filled in an instant and they were unable to get out. They both were very worthy

The water extended over about thirty-five squares of the thickly settled part of the city, from John street on the west to Deer creek on the east, and north to Lower Market and Pearl streets. The distance of about a mile west of John street was likewise sub-merged. This part of the city, however, is

but thinly settled.

The amount of damage sustained by merchants, owners of improved real estate and others cannot be correctly ascertained. Many houses have floated away, a great number have moved from their foundations and turned over; many walls have settled so as to injure the houses materially, and a great quantity of lumber and other property has floated off. The large bridge over the mouth of Mill creek floated away, and that over Deer creek is much injured. Thousands and tens of thousands of dollars worth of dry goods, groceries, etc., have been destroyed or materially injured. Business of almost every description was stopped; money became scarce, and wood and flour enormously high.

Active measures were taken by the citizens for the relief of the sufferers. A town meeting was held at the council chamber on the 15th inst. G. W. Jones was appointed chairman and Samuel H. Goodin secretary. On motion a committee of fifteen (three from a ward) was appointed to take up collections for the relief of the sufferers, consisting of the following persons: E. Hulse, N. G. Pendleton, E. C. Smith, J. W. Gazlay, Jno. Wood, G. W. Jones, W. G. Orr, W.

Holmes, A. Owen, P. Britt, J. Resor, O. Lovell and G. C. Miller.

A committee or vignance pointed, whose duty it was to remove perpointed, whose duty it was to remove perpointed with water. The A committee of vigilance was also apsons and goods surrounded with water. following persons composed that committee: J. Pierce, Wm. Phillips, Saml. Fosdick, Wm. Stephenson, Chas. Fox, Henry Tatem, I. A. Butterfield, Jas. McIntyre, N. M. Whittemore, M. Coffin, Jas. McLean, J. Aumuck, J. D. Garard, A. G. Dodd and Fullom

T. D. Carneal, J. M. Mason, J. C. Avery, Chas. Fox and R. Buchanan were appointed a committee to procure shelter for those whose houses were rendered untenable. On motion it was resolved that persons who may need assistance be requested to make application to the council chamber, where members of the committee of vigilance shall rendezvous and where one or more shall at all times remain for the purpose of affording relief. At a subsequent meeting twenty were added

to the committee of vigilance.

It gives us pleasure to state that the members of the foregoing committees most faithfully discharged their respective duties. A provision house was opened by the committee of vigilance, on Fourth street, where meats, bread, wood, clothes, etc., were liberally given to all who applied. The ladies supported their well-known character for benevolence by contributing clothing and food to the sufferers. The committee appointed to collect funds found the citizens liberal in their donations. All who had vacant houses and rooms cheerfully appropriated them to the use of those made homeless. buildings, school-houses and basement stories of churches were appropriated to this purpose. Mr. Brown, of the amphitheatre, Mr. Franks, proprietor of the gallery of paintings, Mr. R. Letton, proprietor of the Museum, appropriated the entire proceeds of their houses, the first on the night of the 17th; the second on the 18th, and the third on that of the 20th, for the relief of the sufferers. The Beethoven society of sacred music also gave a concert for the same purpose, in the Second Presbyterian church, on Fourth street, on the night of the 24th.

Destruction of the Philanthropist newspaper printing office by a mob, July 30, 1836.

The paper had then been published in Cincinnati about three months, and was edited by James G. Birney. As early as the 14th of July, the press-room was broken open and the press and materials defaced and destroyed. July 23d a meeting of citizens was convened at the lower market-house "to decide whether they will permit the publication or distribution of abolition papers in this city." This meeting appointed a committee, which opened a correspondence with the conductors of that print—the executive committee of the Ohio Anti-slavery Society—requesting them to discontinue its publication. This effort being unsuccessful, the committee of citizens published the correspondence, to which they appended a resolution, in one clause of which

they stated, "That in discharging their duties they have used all the measures of persuasion and conciliation in their power. That their exertions have not been successful the above correspondence will show. only remains, then, in pursuance of their instructions, to publish their proceedings and adjourn without day. But ere they do this, they owe it to themselves, and those whom they represent, to express their utmost abhorrence of everything like violence, and earnestly to implore their fellow-citizens to abstain therefrom." The sequel is thus given

by a city print.

On Saturday night, July 30th, very soon after dark, a concourse of citizens assembled at the corner of Main and Seventh streets, in this city, and upon a short consultation, broke open the printing office of the Philanthropist, the abolition paper, scattered the type into the streets, tore down the presses and completely dismantled the office. It was owned by A. Pugh, a peaceable and orderly printer, who printed the *Philanthropist* for the Antislavery Society of Ohio. From the printing office the crowd went to the house of A. Pugh, where they supposed there were other printing materials, but found none, nor offered any violence. Then to the Messrs. Donaldson's, where only ladies were at home. The residence of Mr. Birney, the editor, was then visited; no person was at home but a youth, upon whose explanations the house was left undisturbed.

A shout was raised for Dr. Colby's, and the concourse returned to Main street, proposed to pile up the contents of the office in the street and make a bonfire of them. A gentleman mounted the pile and advised against burning it, lest the houses near might take fire. A portion of the press was then dragged down Main street, broken up and thrown into the river. The Exchange was then visited and refreshments taken. After which the concourse again went up Main street to about opposite the Gazette office. Some suggestions were hinted that it should be demolished, but the hint was overruled. An attack was then made upon the residences of some blacks in Church alley; two guns were fired upon the assailants and they recoiled. It was supposed that one man was wounded, but that was not the case. It was some time before a rally could again be made, several voices declaring they did not wish to endanger themselves. A second attack was made, the houses found empty and their interior contents destroyed. . . On the afternoon of August 2d, pursuant to a call, a very large and respectable meeting of citizens met at the court-house and passed a series of resolutions, the first of which was "that this meeting deeply regret the cause of the recent occurrences, and entirely disapprove of mobs or other unlawful assemblages.' The concluding resolution was approbatory of the course of the colonization society, and expressed an opinion that it was "the only method of getting clear of slavery."

Negro Riot of September, 1841.—This city

has been in a most alarming condition for several days, and from 8 o'clock on Friday evening until 3 o'clock yesterday [Sunday] morning almost entirely at the mercy of a lawless mob, ranging in number from 200 to 1500

On Tuesday evening last, as we are informed, a quarrel took place on the corner of Sixth street and Broadway, between a party of Irishmen and some negroes; some two or three of each party were wounded. On Wednesday night the quarrel was renewed in some way, and some time after midnight a party of excited men, armed with clubs, etc., attacked a house occupied as a negro boarding-house on Macalister street, demanding the surrender of a negro whom they said was secreted in the house, and uttering the most violent threats against the house and the negroes in general. Several of the adjoining houses were occupied by negro families. The violence increased and was resisted by those in or about the houses—an engagement took place, in which several were wounded on each side. On Thursday night another rencounter cook place in the neighborhood of the Lower Market between some young men and boys and some negroes, in which one or two boys were badly wounded, as was supposed, with Knives.

On Friday evening before 8 o'clock a mob, the principal organization of which, we understand, took place in Kentucky, openly assembled in Fifth street market, unmolested by the police or citizens. They marched from their rendezvous towards Broadway and Sixth street, armed with clubs, stones, etc. Reaching the scene of operation with shouts and blasphemous imprecations they attacked a negro confectionery in Broadway, next to the synagogue, and demolished the doors and windows. This attracted an immense crowd.

About this time, before 9 o'clock, they were addressed by J. W. Piatt, who exhorted them to peace and obedience to the law; but his voice was drowned by shouts and throwing of stones. The mayor also attempted to address them. The savage yell was instantly raised: "Down with him! run him off!" were shouted and intermixed with horrid imprecations and exhortations to the mob to move onward. A large portion of the leading disturbers appeared to be strangers—some connected with river navigation and backed by boat hands of the lowest order. They advanced to the attack with stones, etc., and were repeatedly fired upon by the negroes. The mob scattered, but immediately rallied again, and again were in like manner repulsed. Men were wounded on both sides and carried off—and many reported dead. The negroes rallied several times, advanced upon the crowd, and most unjustifiably fired down the street into it, causing a great rush down the street. These things were repeated until past 1 o'clock, when a party procured an iron six pounder from near the river, loaded with boiler punchings, etc., and hauled it to the ground, against the exhortations of the mayor and others. It was posted on Broadway and pointed down Sixth street. The yells continued, but there was a partial cessation of Many of the negroes had fled to the The attack upon the houses was rehills. commenced with the firing of guns upon both sides, which continued during most of the night; and exaggerated rumors of the killed and wounded filled the streets. The cannon was discharged several times. About 2 o'clock a portion of the military, upon the call of the mayor, proceeded to the scene of disorder and succeeded in keeping the mob at bay. In the morning and throughout the day several blocks, including the battle-ground, were surrounded with sentinels and kept under martial law-keeping within the negroes there, and adding to them such as were brought in during the day for protection.

A meeting of citizens was held at the courthouse on Saturday morning, which was addressed by the mayor and others, and a series of resolutions passed discountenancing mobs -invoking the aid of the civil authorities to stay the violence, repudiating the doctrines of the abolitionists, etc. The city council also held a special session to concert measures to vindicate the majesty of the law and restore peace to the city. Intense excitement continued during the day, the mob and their leaders boldly occupying the streets without arrest. The negroes held a meeting in a church and respectfully assured the mayor and citizens that they would use every effort to conduct as orderly citizens, to suppress imprudent conduct among their own people, etc. They expressed their readiness to conform to the law of 1807, and give bond, or to leave within a specified time—and tendered their thanks to the mayor, watch, officers and gentlemen of the city, for the efforts made to save their property, their lives, their wives and children.

At 3 P. M., the mayor, sheriff, marshal and a portion of the police, proceeded to the battle-ground, and there, under the protection of the military, though in the presence of the mob, and so far controlled by them as to prevent the taking away of any negroes upon their complying with the law, several of the negroes gave bond and obtained permission to go away with their sureties, who were some of our most respectable citizens, but were headed even within the military sentinels, and compelled to return within the ground. It was resolved then to embody the male negroes and march them to jail for security under the protection of the civil and military authority. From 250 to 300 were accordingly escorted to that place with difficulty, surrounded by the military and officers, and a dense mass of men, women and boys, confounding all distinction between the orderly and disorderly, accompanied with deafen ing yells. They were safely lodged, and still remain in prison, separated from their families. The crowd was in that way dispersed.

The succeeding night the military were ordered out, the firemen were out, clothed with authority as a police band. About eighty citizens enrolled themselves as assist-

ants of the marshal. A troop of horse and several companies of volunteer infantry continued on duty until near midnight. Some were then permitted to sleep upon their arms, others remained on duty until morning guard-

ing the jail, etc.

As was anticipated, the mob, efficiently organized, early commenced operations, dividing their force and making their attacks at different points, thus distracting the attention of the police. The first successful onset was made upon the printing office of the Philanthropist. They succeeded in entering the establishment, breaking up the press, and running with it amid savage yells, down through Main street to the river, into which it was thrown. The military appeared in the alley near the office, interrupting the mob for a short time. They escaped through the byeways, and when the military retired, returned to their work of destruction in the office, which they completed. Several houses were broken open in different parts of the city, occupied by negroes, and the windows, doors and furniture completely destroyed. Among these was the negro church on Sixth street. One of the last efforts was to fire or otherwise destroy the book establishment of Messrs. Truman & Smith, on Main street. From this they were driven by the police, and soon after, before daylight, dispersed from mere exhaustion.

It is impossible to learn either the number of killed and wounded on either side; probably several were killed and twenty or thirty variously wounded, though but few dangerously. Several of the citizen-police were hurt with stones, etc.; the authorities succeeded in arresting about forty of the mob, who are now in prison. The mob was in many cases encouraged and led on by persons from Kentucky. About 11 o'clock on Saturday night a bonfire was lighted on that side of the river, and loud shouts sent up as if a great triumph had been achieved. In some cases the motions of the mob were directed and managed by mere boys, who suggested the points of attack, put the vote, declared the result and led the way! After all the negro men had been disarmed and committed to prison for safe-keeping, under a solemn pledge that their wives and children should be protected, a band of white men were permitted to renew their brutal attacks upon these females and children. The excitement continued yesterday. The governor, who had arrived in town, issued his proclamation. The citizens rallied with spirit to aid the city authorities. Strong patrols of military and citizens last night prevented any further outbreak.

Bank Mob, Jan. 11, 1842.—Monday evening, the Miami Exporting Company Bank assigned its effects, and on Tuesday morning (January 11) the Bank of Cincinnati closed doors. Early in the morning, the crowd, in consequence of their failure, began to collect around the doors of these institutions, and by 11 o'clock had broken into them, destroying all the movable property and whatever of

books or papers could be laid hold of. About this time ten of the city guards, headed by their brave captain, Mitchell, appeared, drove the rioters away, and, for a time, gallantly maintained their position; but they were called off. On retiring, they were assailed—they fired, and wounded some one or two persons. The mob had, with this exception, undisputed possession of the city, and commenced, first an attack upon Babes' Exchange Bank, and after that, upon Lougee's exchange office, both of which they destroyed, making havoe of everything which was at all destructible.

Distressing Fire, Feb. 28, 1843.—On Saturday morning, about 5 o'clock, a fire broke out in the smoke-house of Messrs. Pugh & Alvord, at the corner of Walnut street and the canal, which, in its consequences, has been one of the most distressing that ever occurred in this city. The smoke-house was in the rear, and somewhat detached from the main building, being connected with it only by a wooden door and narrow passage-way, through which the meat was usually wheeled. It was thought the fire could be confined to the former, and for that purpose the porkhouse was closed as tight as possible, by shutting all the doors and windows, to exclude a rush of air to feed the flames.

In the course of half an hour, the main building was filled with smoke, rarefied air and inflammable gas from the smoke-house; and when the flames burst through the wooden door connecting the two buildings, an instantaneous roar of flame was perceived, and in the twinkling of an eye, the whole of this spacious, substantial building was a mass of ruins. The whole roof was lifted in the air and thrown into the streets in large fragments—the second story walls, on the north and south sides, were thrown down, and the whole eastern end of both stories fronting on Walnut street blown into the streets from its foundation up. The appearance of the explosion was awfully terrific, and its consequences fatal to several of our most estimable citizens. We annex the names of the killed and severely wounded, as far as we can now ascertain them. Killed—Joseph Bonsall, Caleb W. Taylor, H. S. Edmands, J. S. Chamberlain, H. O. Merrill, John Ohe, a German laborer, with two or three other German laborers. Wounded severely— George Shillito, H. Thorpe, T. S. Shaeffer, Mr. Alvord (of the firm of Pugh & Alvord), Samuel Schooley, Warren G. Finch, John Blakemore, Lewis Wisby, John M. Vansickle, Joseph Trefts, A. Oppenhermer, Jas. Tryatt, Robt. Rice, William H. Goodloe.

A few minutes before the explosion, the smoke settled to the ground around the corner of the building, on the causal and Walnut street fronts, which caused the removal of the masses of people which filled those spaces, unconscious of danger. But for this, the force of the explosion being in that direction, the destruction of life would

have been frightfully extensive.

On Sunday morning, a special meeting of

the city council was called, and in obedience to one of the resolutions passed, the mayor issued a proclamation, requesting the citizens to suspend their business on Monday, the 27th inst., and attend the funerals of the deceased. On Monday, the court of common

pleas adjourned for this purpose, shops were closed, and the business of the day was set aside. The bells were tolled, and little was done save to aid in performing the last sad rites of the dead.

REMINISCENCES OF CINCINNATI IN THE WAR TIME.

Cincinnati up to the outbreak of the rebellion largely sympathized with the slave-holders so far as to deprecate any restrictions upon what was termed "their rights under the laws." Many of the leading families by blood and kindred were connected with the South: indeed largely came from there. Through trade with the South its citizens had been greatly sustained. "The establishment of an anti-slavery newspaper had resulted in its destruction by a mob, in which were some of the most prominent citizens, and the driving of its editor, Mr. Birney, to a distant city. The quarters of the negro population at times were subject to attacks from the scum of the city, aided by the rabble from the Kentucky side of the Ohio. Free speech, if it took the form of public protests against the continuance of slavery, was dangerous. Wendell Phillips was driven from the stage at Pike's Opera House, and waited for in the streets to be hung up by a howling proslavery mob, the mayor refusing to allow the police to suppress it. At the same era Mr. Yancey, of Alabama, was allowed therein to utter the most bitter disloyal tirade, with threats against the North, without a whisper of dissent from an audience of three thousand.

With the firing upon Sumter, April 12, 1861, a spirit of vengeance for the insult to the flag seemed at once to take possession of the entire population. All thoughts of trade and money-getting were swept completely from the minds of the people as in any Northern city. These incidents illustrate the conciliatory temper of the public just prior to this event. On April 5th three cannon from Baltimore were allowed to pass through the city en route for Jackson, Mississippi, marked for the "Southern Confederacy" and on the very day before a slave was remanded into the custody of his master by a United States Commissioner in Cincinnati.

The first authentic despatch of the bombardment reached Cincinnati Friday evening, the 12th, and was posted on the bulletin boards. The fact was a surprise to multitudes. Up to that very moment they had believed the South was not in earnest. It was all bluster; there would be no war. What is noteworthy, the large German population of the city believed differently; among them were many old soldiers who had been engaged in the German revolution of 1848, and they felt war "in the air." And it was the same with the officers of our army. We remember meeting on the street a valued acquaintance, in a Captain of the Topographical Corps of Engineers, on the reception of the news of the fall of Sumter. He greeted us with sadness and in tones of anguish exclaimed: "It is terrible—it is terrible; there is great suffering in store for us all; it is to be a long and bloody struggle. God only knows how it will end." With that he drew in his breath between his closed teeth in his agony of emotion and walked away. This officer was a member of the Cincinnati Literary Club. In a paper read before the club in the preceding fall on the subject of "Fortifications," he criticised the policy of President Buchanan in unsparing terms; for this he was arrested to be tried by court-martial. His strong Union sentiments and his boldness of denunciation early made for him implacable enemies. He did excellent service in the war and is known in history as General John Pope. He was a rather short man, then in his prime, very handsome too, with full chest, sparkling black eyes, pearly teeth, dainty hands and feet, his figure just beginning to round into that fulness which at a certain time of life often overtakes both sexes, and when reached by some specimens of the gentler sex is sometimes happily expressed by the agreeable sentence, "fair, fat, and forty."

At the Gazette office a man had a sentence in favor of the South squelched by an egg striking him fairly in the open mouth, when amid the jeers of the crowd this egg receiver disappeared. Before night the city was gay with the Stars and Stripes. Never had the flag seemed so beautiful in the eyes of the American people. Until that moment they had no conception of the strength of their patriotism. Everywhere throughout the land it fluttered in its glory and was such an insignia of love for the Union, that even the lukewarm as a defence against the stigma of their more loyal neighbors felt compelled to display it. A comical incident occurred on the outskirts of an Ohio city, where a family of lukewarm proclivities were alarmed by a cry in the street, when the mother called out to her son, "John, they are calling out to us 'Secesh, secesh;' run quick and put out our flag or we shall be mobbed." John thereupon obeyed. It was subsequently ascertained the cry had proceeded from a pedlar, who going by in a wagon was proclaiming his wares, "fresh fish."

The week that opened with Monday, the 15th, with the news of the fall of Sumter, and the call of Mr. Lincoln for 75,000 troops, was one of intense activity all over the State. The legislature appropriated \$1,000,000 to arm and equip the 10,000 men. These Gov. Dennison telegraphed the President were subject to his orders; Cincinnati also voted by its Council \$200,000 to aid in equipping the troops. These sums were then thought to be sufficient in view of the prediction

of Mr. Seward that the "war would be over in ninety days."

Large and enthusiastic meetings were held in the city, participated in largely by leading Democrats, and every voice rang clear in support of the Government. The attitude of Kentucky at this time was alarming, and the citizens at one of these meetings amid a whirlwind of applause adopted resolutions signifying that it was too late to draw nice distinctions between armed neutrality and open rebellion—that both were alike rebellion—that those who did not sustain the Government in the present crisis were traitors. As Whitelaw Reid expresses it, "From the first day that the war was open, the people of Cincinnati were as vehement in their determination that it should relentlessly be prosecuted to victory as the city of Boston." The attitude of Kentucky was indeed at this time peculiarly alarming. Her Governor, Beriah Magoffin, in response to the call for troops had declared—"I say emphatically Kentucky will furnish no troops for the wicked purpose of subduing her sister Southern States." Whereupon Governor Dennison telegraphed to Washington, "If Kentucky will not fill her quota, Ohio will fill it for her." He more than kept his promise. Some of the first Kentucky regiments, so called, were almost entirely composed of Ohio men and commanders. Sixteen days after the President's call, Ohio had volunteers offered enough to fill the full quota for the nation, 75,000 men.

What made the position of Cincinnati at this trying era especially interesting was that no large Northern city was so exposed, so inviting to attacks from its location and great wealth. If Kentucky should secede the city would have to be defended from her own hills instead of from those on the south side of the river. By wise management Kentucky was saved, but multitudes of her young men from her rich slave-holding centres enlisted under the banner of Secession.

General Henry M. Cist, in his article in the "Magazine of American History"

entitled "Cincinnati with the War Fever," says:

"During the first week after the fall of Sumter, active work was done in recruiting and drilling companies and in perfecting regimental organizations. On Thursday, April 18th, the heartstrings of mothers, relatives, and dear friends received the first strain of war. When the three companies of Rover Zouaves and Lafayette Guards left the city under order to report at Columbus to take their place in a regiment en route to the defence of Washington, these companies were escorted to the depot by the Guthrie Grays and the Continentals, and there amid the tears and farewells of friends the soldier boys started, all aglow with martial ardor, for the fields of glory. During the week four regiments were

started in the city, and recruiting was so active that it became a question who was not to go. The Germans turned out with a magnificent soldierly body of men, over 1,000 strong, the regiment known as the famous 9th Ohio."

This was called the Turner Regiment. It paraded the streets as we remember in the white garb of the Turner Society, of which its members were mostly composed. It became one of the most effective of regiments and had the distinguished honor of making at Mill Springs the first bayonet charge of the war. It proved an unhappy punching to the enemy, who, not relishing that kind of tickling, broke and ran. They were, however, composed of "poor whites" and armed

mainly with shot-guns.

This regiment was commanded by Col. Robert L. McCook. He was a large-hearted man with a frank, open, laughing manner; a lawyer and a partner with the eminent German lawyer, J. B. Stallo. He so hated pretense and show of any kind that he most unwillingly submitted to the requirement of wearing a military dress. On the occasion of this parade he was mounted on horseback, clad in citizen's dress with stove-pipe hat, his only military insignia a sword buckled to his side. We lately met a lady who, when a child, was a school-mate with McCook and she tells us that he at one time got into a quarrel with another boy and on being separated and reprimanded by the "school-marm," he answered, "It is all right—you are a woman—you don't know anything about war."

McCook, who was idolized by his men, was murdered in the summer of 1862 while riding, sick and recumbent, in a spring-wagon, attended by a small escort of cavalrymen, who all but one cowardly galloped off as the guerillas

appeared.

The Irish element in Cincinnati was not far behind the German in their alacrity to spring to the cause of the Union, and, says Cist, "The well-known regiment, the Tenth Ohio, that did splendid work under Col. William H. Lytle, the 'Soldier Poet,' was ready for camp. The Fifth Ohio, with Col. J. H. Patrick, with many of the most promising young men of the city as members, formed during the week; and the ranks of the Guthrie Grays—the Sixth Ohio—were well filled, over one thousand strong, with the most prominent young men in all branches of society and business in the city, under W. K. Bosley. The latter part of the week orders were received by General Lytle to establish a camp of instruction, which was done at the Cincinnati Trotting Park, some six miles north of the city, and named Camp Harrison. To this camp these regiments marched with the music of bands and the waving of flags and amid the applauding cheers of vast crowds lining the streets and bidding them God-speed." A little later Camp Dennison was established sixteen miles out on the Little Miami Railroad and became the great rendezvous for Ohio in the war.

None of those early city regiments at this time were in Federal uniforms. The German regiment was in the white clothing of the Turner Society with short white roundabout jackets of linen; the Sixth Ohio in the uniform of the Guthrie Grays; and the Fifth Ohio in red flannel shirts, making a gorgeous display as they marched down Sycamore street one thousand strong in platoons stretching

from curb to curb.

In a very few days more, just at the edge of evening, the First and Second Indiana regiments disembarked at the Fifth street depot and marched through the city, the whole length of Fourth street, en route for Western Virginia. Oliver P. Morton, the Governor of Indiana, a man of extraordinary executive as well as oratorical ability, had regiments mustered into service in a surprisingly short space of time. A stigma of cowardice cast upon the conduct of Indiana troops at Buena Vista by Mr. Jefferson Davis during the Mexican war had rankled in the hearts of the Indiana people and they were eager for vengeance. These regiments, on departing from Indianapolis for the seat of war, had kneeled before the State Capitol and with bared heads had taken an oath to "Remember Buena Vista." Later they doubtless sang with unwonted gusto, in the war-song of the time,

CINCINNATI IN 1802.

CINCINNATI IN 1810.

CINCINNATI IN 1846.

FOURTH STREET, CINCINNATI, FEB. 2, 1858.

The above view was drawn by J. W. Barber for "Historical Collections, U. S.," by J. W. Barber and Henry Howe. The building with Grecian front was occupied as Post-office and Custom House now the site of the Chamber of Commerce. Mitchell & Rammelsburg's furniture and Shillito's drygoods establishments and the tower of the Unitarian Church appear beyond.

"We'll hang Jeff Davis on a sour apple-tree, Glory Hallelujah."

These Indiana regiments were the first regiments the Cincinnati people had seen beside their own, and they greeted them with great enthusiasm. They were two thousand strong, a fine body of bright young men, and splendidly equipped, with knapsacks slung and like all the early Indiana regiments attired in gray. Regiment after regiment of Morton's gray-attired men soon followed them. One of these, the Seventh Indiana, was reviewed a few weeks later by Major Anderson of Fort Sumter fame, from the residence of his brother, Larz Anderson, on Pike street. The major was a sedate-appearing gentleman and looked care-worn and dejected, the result it was said of the excessive mental strain put upon him by his experiences at Charleston.

The sudden change from the avocations of peace to those of war made the city seem as another place and the people another people. Under the excitement of a great overpowering emotion of patriotism all classes mingled with a surprising degree of friendliness and good feeling; even strangers greeted each other and neighbors that had been estranged for years forgot their petty jealousies. fathers and sons touched elbows as they marched away under the old flag amid their tears and prayers. The spirit of self-sacrifice and generosity largely displayed tended to increase one's love of his kind: and it came, too, often from those who had been reputed to be hard and selfish. The angel in their natures came out smiling but blew no trumpet. One whom we knew, still know, and never can get rid of, neither in this world nor in any other, said to his landlord, "These are strange times; my business is dead and now I have this great house of yours on my hands and no income to meet the rent: I shall have to move out and find some humble shelter for my family." "That," replied he, "will do me no good. Stay where you are and take care of my property; no matter about rent. These are the times spoken of in Scripture when the hand of the father is against the son and brother against brother. We must help each other. If I get out of bread and you have it, I will call upon you; and if you get out and I have it, come to me and I will divide the last crust." The dough for that last crust was never kneaded.

War was a matter about which the people were as ignorant as babes. The spirit of humanity, and not of ferocity and blood-shedding, was their natural characteristic. But for years blood-shedding was the great business of the city; its industries were shaped to that end and supported its population. In those beginning days the public meetings were intensely exciting. Two or three of these we distinctly remember. One, about the very first, was in Pike's Opera House. It was packed from pit to dome, tier above tier. The venerable Nathaniel Wright attempted to read some spirit-spiriting resolutions and failing for want of voice they were passed over to Mr. Rufus King, when every syllable went forth in clear ringing tones to the ears and hearts of that packed, enthusiastic mass. Mr. King to this day we are glad to say has that magnificent voice in sound working condition; a voice that always goes out only for what is good.

It was in that very hall later on, on an October evening, 1864, that James E. Murdock read for the first time "Sheridan's Ride," that fine descriptive poem of Buchanan Read, a Cincinnati production, conceived and born on that very day wherein genius in song illustrated genius in war and the hearts of the nation beat in unison with the music.

A meeting of gentlemen and ladies was held at Smith and Nixon's Hall to learn from O. M. Mitchell what he knew about war. He was an object of pride with the Cincinnatians. Through his exertions they had the honor of having established the first observatory, built by the contributions of a people, on the globe. He was a small and ordinarily silent man, dark complexion, erect in figure, his face strong, keen with its expression of thought. The little man

seemed the concentration of nervous energy. He had often addressed them on the subject of astronomy. His religious and poetical instincts were strong, he was all alive with feeling; he possessed great fluency and command of language and electrified his audiences with this sublime elevating topic as probably no man When the war broke out he said he was ready to fight in had ever done before. the ranks or out of the ranks; and he only asked permission from his country to have something to do. This sentence was the key-note of his character—patriotism and intense activity. On this occasion he spake with flery energy—the war "We read in the newspapers about steel netting for was to be no child's play. our soldiers to protect the breasts against bullets. What nonsense! And they tell us of a famous cannon just invented that will carry seven miles—seven miles! What? Expect to put down this rebellion and drive the rebels into the last ditch, they talk so much about, and get no nearer than seven miles!" At this sally the audience roared.

Judge Bellamy Storer was another of Cincinnati's flery, enthusiastic orators, and like Mitchell was overflowing with patriotism united to the religious instinct. The more sublime flights of oratory can never be reached without an infusion of the latter.

At a meeting in Greenwood Hall Judge Storer gave one of his fervid appeals, calling upon the young men to volunteer. As he closed, he drew his tall, imposing form to its utmost height and spreading out his arms exclaimed, "I'm an old man, rising of sixty years," then with a look as though about ready to spring into a fight, added, "and I now volunteer."

A few days later our eyes were greeted with the sight of a company of old substantial citizens called the "Storer Rifles," clad in handsome uniforms, marching through the streets to the sound of drum and fife-old, mostly wealthy, grayheaded men, some of them very obese, with aldermanic protuberances; they were splendidly equipped, each at his own expense, and were named the "Storer Rifles." Among them was the Judge himself, bearing his shooting-piece and evidently as proud of his trainer clothes as any school-boy.

This company was organized to act as Home Guards for the protection of the

city and to stimulate "the boys" to enlist for the war.

After a little it seemed as though the entire force of able-bodied men were drilling, and, where not for the army, to act as Home Guards. Within a week from the fall of Sumter at least ten thousand men were drilling in the city. vacant halls were used as drill-rooms and the measured tramp of the recruits and the cries of the drill-sergeants, "left, left," arose from all over the city. The town wag of the time was Platt Evans, a tailor who had his shop on Main street, Numberless were the stories told of his witticisms. He was just below Fourth. a rather short, red-faced man, advanced in life, with a coarse complexion but of artistic tastes. Withal he stammered in speech, and this defect often gave a peculiar pungency to his wit. On being solicited to act as a captain of a company of Home Guards he blurted out, "you —— foo-fools; if-if I was m-m-marching you down B-B-Broad-B-Broadway, you all would be in the r-r-river b-b-b-before I could ca-call ha-ha-halt!"

The famed Literary Club, converting their rooms into a drilling hall, formed into a military company. They were largely young lawyers, their business for the time crushed and they had no resource for occupation but to turn from law to war, from courts to camps. Some sixty went into the service, almost all became officers and some distinguished generals, as R. B. Hayes, M. F. Force, Ed. O. Noves, etc. Mr. R. W. Burnet volunteered to drill the club. He was a dignified, quiet gentleman of about fifty years of age, a son of Judge Burnet, and had been educated at West Point. On taking charge he made a short address, in which he said his first military experience on graduating was as a young lieutenant in the nullification times of 1832, when he was sent with his company by Jackson to Charleston to throttle its rebellious citizens if they attempted to execute their treasonable threats. "And now," said he, "I can but reflect that it is these same pestilential people that have so wickedly plunged the country into a cruel, unnec-

essary war, and I am again in service against them."

Finding himself, after the lapse of thirty years, somewhat rusty in his tactics, Mr. Burnet resigned and his place was supplied by a drill sergeant from the Newport Barracks. He was a coarse, rough, ignorant foreigner, and occasionally forgetting himself at some exhibition of awkwardness, would let slip an oath, "D—n you there, on the left, hold up your heads!" Then, remembering where he was, he would bow himself and in tones of great humility say, "I ask your pardon, gentlemen." Then, a minute later, again flying into a passion, he would let slip another oath, to be in like manner followed with another "I ask your pardon, gentlemen." And thus it was the Literary Club was initiated into the school of the soldier by oaths alternated with expressions of humility.

Cincinnati was especially prominent for the large number of eminent characters she supplied for the cabinet and the field—Hon. Salmon P. Chase, the great war secretary, and two of Ohio's war governors, Dennison and Brough, and many of the distinguished Union generals, as Major-Generals Rosecrans, McClennan, Mitchell and Godfrey Weitzell; Brevet Major-Generals R. B. Hayes, August Willich, Henry B. Banning, Manning F. Force, August V. Kautz and Kenner Garrard; Brigadier-Generals Robert L. McCook, William H. Lytle, A. Sanders Piatt, E. P. Scammon, Nathaniel McLean, M. S. Wade and John P. Slough; and Brevet Brigadier-Generals Andrew Hickenlooper, Benjamin C. Ludlow, Israel Garrard, William H. Baldwin, Henry V. N. Boynton, Charles E. Brown, Henry L. Bennet, Henry M. Cist, Stephen J. McGroarty, Granville Moody, August Moore, Reuben D. Mussey, George W. Neff, Edward F. Noyes, Augustus C. Parry, Durbin Ward and Thomas L. Young; also Joshua L. Bates of the Ohio militia. A host of other Cincinnatians served in various civil and military capacities. Especially useful were its medical men; more than half the entire number of "United States volunteer surgeons" were from this city; they entered the service independent of special commands. Among the medical men were William H. Mussey, George Mendenhall, John Murphy, William Clendenin, Robert Fletcher, George H. Shumard, etc. After the bloody battles of Fort Donaldson and Shiloh the Cincinnati surgeons went down to the fields in streams, attended to the wounded and their transportation to hospitals in the city, a number of buildings being improvised for the purpose. A very efficient citizen of that era was Miles Greenwood, an iron founder, who cast cannon, rifled muskets and plated steamboats with iron for war purposes.

The Cincinnati branch of the United States Sanitary Commission was particularly efficient; an outline of their work is given on page 190. Alike efficient was the local branch of the United States Christian Commission. It was under the management of A. E. Chamberlain, H. Thane Miller, with Rev. J. F. Marlay Secretary, and B. W. Chidlaw general agent. It distributed stores and money to the amount of about \$300,000, the contributions of Soldiers' Aid Societies and Ladies' Christian Commission, mainly from the patriotic men and women of

The most marked events in the war history of the city were what has been termed the "Siege of Cincinnati" in 1862 and the raid of John Morgan in the following year.

THE SIEGE OF CINCINNATI.

After the unfortunate battle of Richmond, on the 29th of August, Kirby Smith, with his 15,000 rebel veterans, advancing into the heart of Kentucky, took possession of Lexington, Frankfort, and Maysville. Bragg with his large army was then crossing the Kentucky line; while Morgan, with his guerilla cavalry, was already joined to Smith. Pondrous-proportioned Humphrey Marshall was also busy swelling the rebel ranks with recruits from the fiery young Kentuckians.

Affairs looked threateningly on the border.

General Lewis Wallace was at once placed in command at Cincinnati, by order of Major-General Wright. Soon as he arrived in the city, on Thursday, the 4th of September, he put Cincinnati and the two cities on the Kentucky side of the Ohio, Newport and Covington, under martial law, and, within an hour of his arrival, he issued a proclamation suspending all business, stopping the ferry-boats from plying the river, and summoning all citizens to enrol themselves for defence. It was most effective. It totally closed business, and sent every citizen, without distinction, to the ranks or into the trenches. Nor was it needless, for the enemy, within a few days thereafter, advanced to within five miles of the city, on the Kentucky side, and skirmished with our outposts. Buchanan Read, the poet, painter of the time, draws this picture of the events. Read was a volunteer aid to General Wallace.

The ten days ensuing will be forever memorable in the annals of the city of Cincinnati. The cheerful alacrity with which the people rose en masse to swell the ranks and crowd into the trenches was a sight worth seeing. Of course, there were a few timid creatures who feared to obey the summons. Sudden illness overtook some. Others were hunted up by armed men with fixed bayonets; ferreted from back kitchens, garrets and cellars, closets and even under beds where they were hiding. One peacefully excited individual was found in his wife's clothes, scrubbing at the wash-tub. He was put in one of the German working parties, who received him with shouts of laughter.

The citizens thus collected were the representatives of all classes and many nativities. The man of money, the man of law, the merchant, the artist, and the artisan swelled the lines, hastening to the scene of action, armed

either with musket, pick, or spade.

But the pleasantest and most picturesque sight of those remarkable days was the almost endless stream of sturdy men who rushed to the rescue from the rural districts of Ohio and Indiana. These were known as the squirrel-hunters. They came in files, numbering thousands upon thousands, in all kinds of costumes, and armed with all kinds of firearms, but chiefly the deadly rifle, which they knew so well how to use.

Old men, middle-aged men, and often mere boys, like the "minute men" of the old Revolution, they dropped all their peculiar avocations, and with their leathern pouches full of bullets, and their ox-horns full of powder, by every railroad and by-way, in such numbers that it seemed as if the whole State of Ohio were peopled only with hunters, and that the spirit of Daniel Boone stood

upon the hills opposite the town beckoning them into Kentucky.

The pontoon bridge over the Ohio, which had been begun and completed between sundown and sundown, groaned day and night with the perpetual stream of life, all setting southward. In three days there were ten miles of intrenchments lining the Kentucky hills, making a semicircle from the river above the city to the banks of the river below; and these were thickly manned, from end to end, and made terrible to the astonished

enemy by black and frowning cannon.
General Heath, with his 12,000 veterans, flushed with their late success at Richmond, drew up before these formidable preparations and deemed it prudent to take the matter into serious consideration, before making the

attack.

Our men were eagerly awaiting their approach, thousands in rifle pits, and tens of thousands along the whole line of fortifications, while our scouts and pickets were skirmishing with their outposts in the plains in front. Should the foe make a sudden dash and carry any point of our lines, it was thought by some that nothing would prevent them from entering Cincinnati.

But for this provision was also made. city above and below was well protected by a flotilla of gunboats, improvised from the swarm of steamers which lay at the wharves. The shrewd leaders of the rebel army were probably kept well posted by traitors within our own lines, in regard to the reception prepared for them, and taking advantage of the darkness of night and the violence of a thunder storm made a hasty and ruinous retreat. Wallace was anxious to follow, and was confident of success, but was overruled by those higher in authority.

To the above general view of the siege we contribute our individual experience. Such an experience of the entire war in a diary, by a citizen of the genius of Defoe, would outlive a hundred common histories; centuries hence be preserved among the choice collections of American historic literature. It would illustrate as nothing else could, the inner life of our people in this momentous period, their varying emotions and sentiments; their surprise and indignation at the treason to the beautiful country of their love; their never-equalled patriotism and generosity; their unquenchable hope; the almost despair that at times settled upon them, when all seemed but lost, through the timidity and irresolution of weak generals in the field; the intrigues and intended treachery of demagogues at home. Then the groping forward, like children in the dark, of millions of loyal hearts for some mighty arm to guide; some mighty intellect to reveal and thus relieve the awful suspense as to the future; as though any mere man had an attribute that alone is of God. Finally, through the agony of sore adversities, came the looking upward to the only power that could help. Thus the religious instincts became deepened. Visions of the higher life dwarfed the large things of this: and through faith came greater blessings than the wisest among the good had hoped.

On the morning the city was put under martial law, I found the streets full of armed police in army blue, and all, without respect to age, compelled to report at the head-quarters of their respective districts for enrolment. An unwilling citizen, seeing the bayonet levelled at him, could but yield to the inexorable logic of military despotism. It was perilous to walk the streets without a pass. At every corner stood a sentinel.

The colored men were roughly handled by the Irish police. From hotels and barber shops, in the midst of their labors, these helpless people were pounced upon and often bareheaded and in shirtsleeves, just as seized, driven in squads, at the point of the bayonet, and gathered in vacant yards and guarded. What rendered this act more than ordinarily atrocious was, that they, through their head men, had, at the first alarm, been the earliest to volunteer their services to our mayor, for the defence of our common homes. It was a sad sight to see human beings treated like reptiles.

Enrolled in companies we were daily drilled. One of these in our ward was composed of old men, termed "Silver Grays." Among its members were the venerable Judge Leavitt, of the United States Supreme Court, and other eminent citizens. Grandfathers were seen practicing the manual, and lifting alternate feet to the cadence of mark-

At this stage of affairs the idea that our colored citizens possessed war-like qualities was a subject for scoffing; the scoffers forgetting that the race in ancestral Africa, including even the women, had been in war since the days of Ham; strangely oblivious also to the fact that our foreign-born city police could only by furious onslaughts, made with Hibernian love of the thing, quell the frequent pugnacious outbreaks of the crispy-haired denisons of our own Bucktown. From this view, or more probably a delicate sentiment of tenderness, instead of being armed and sent forth to the dangers of battle, they were consolidated into a peaceful brigade of workers in the trenches back of Newport, under the philanthropic guidance of the Hon. William M. Dickson.

The daily morning march of the corps down Broadway to labor was a species of the mottled picturesque. At their head was the stalwart, manly form of the landlord of the Dumas house, Colonel Harlan. Starting

back on the honest, substantial, coal-black foundation, all shades of color were exhibited, degenerating out through successive gradations to an ashy white; the index of Anglo-Saxon fatherhood of the chivalrous American type. Arrayed for dirt-work in their oldest clothes; apparently the fags of every conceivable kind of cast-off, kicked-about, and faded-out garments; crownless and lop-eared hats, diverse boots; with shouldered pick, shovel, and hoe; this merry, chattering, piebald, grotesque body, shuffled along amid grins and jeers, reminding us of the ancient nursery distich:

"Hark! hark! hear the dogs bark,
The beggars are coming to town,
Some in rags, some in tags,
And some in velvet gowns."

Tuesday night, September 9, 1862, was starlight; the air soft and balmy. With others I was on guard at an improvised armory, the old American Express buildings, on Third street near Broadway. Three hours past midnight from a signal tower three blocks east of us a rocket suddenly shot high in the air; then the fire-bell pealed an alarm. All was again quiet. Half an hour passed. Hurrying footsteps neared us. They were those of the indefatigable, public-spirited John D. Caldwell. "Kirby Smith," said he quickly, "is advancing on the city. The military are to muster on the landing and cross the river at sunrise."

Six o'clock struck as I entered my own door to make preparations for my departure. The good woman was up. The four little innocents—two of a kind—were asleep in the bliss of ignorance, happy in quiet slumber. A few moments of hurried preparation and I was ready for the campaign. The provisions were these: a heavy blanket-shawl, a few good cigars, a haversack loaded with eatables, and a black bottle of medicinal liquid—cherry bounce—very choice.

bounce—very choice.

As I stepped out on the pavement my neighbor did the same. He, too, was off for the war. At each of our adjoining chamberwindows stood a solitary female. Neither could see the other though not ten feet apart, a house dividing wall intervening. Sadness and merriment were personified. Tears bedewed and apprehension elongated the face of the one. Laughter dimpled and shortened the face of the other. The one thought of

her protector as going forth to encounter the terrors of battle; visions of wounds and death were before her. The other thought of hers with only a prospect of a little season of rural refreshment on the Kentucky hills, to return in safety with an appetite ravenous as a wolf's for freshly dug pink-eyes and

Beresford's choice cuts.

We joined our regiment at the landing. This expanse of acres was crowded with armed citizens in companies and regiments. Two or three of our frail, egg-shell river steamers, converted into gun-boats, were re-ceiving from drays bales of hay for bulwarks. The pontoon was a moving panorama of newly made warriors, and wagons of munitions hastening southward. Back of the plain of Covington and Newport rose the softly rounded hills; beyond these were our bloodthirsty foe. Our officers tried to manœuvre our regiment. They were too ignorant to manœuvre themselves; it was like handling a rope of sand. But in my absence they had somehow managed to get that long line of men arranged into platoons. Then as I took my place the drums beat, fifes squeaked, and we crossed the pontoon. people of Covington filled their doorways and windows to gaze at the passing pageant. To my fancy they looked scowlingly. No cheers, no smiles greeted us. It was a staring silence. The rebel army had been largely recruited from the town.

March! march! march! We struck the The way up seemed interminable. hills. The boiling September sun poured upon us like a furnace. The road was as an ash like a furnace. The road was as an ash heap. Clouds of limestone dust whitened us like millers, filling our nostrils and throats with impalpable powder. The cry went up, Water! water! Little or none was to be had. The unusual excitement and exertion told upon me. Years before, I had, bearing my knapsack, performed pedestrian tours of thousands of miles. Had twice walked across New York, once from the Hudson to the lake; in the hottest of summer had footed it from Richmond to Lynchburg. No forty or fifty miles a day had ever wilted me like this march of only four. But my muscles had been relaxed by years of continuous office labor. I had been on my feet

on guard-duty all night.

Near the top of the hills, some 500 feet above the Ohio level, our regiment halted, when our officers galloped ahead. We broke ranks and lay down under the wayside fence. Five minutes elapsed. Back cantered the cortege. "Fall into line! fall into line! Quick, men!" was the cry. They rode among us. Our colonel exclaimed, "You are now going into battle! The enemy are advancing! You will receive sixty rounds of cartridges! Do your duty, men! do your I fancied it a ruse to test our courage, and so experienced a sense of shame.

I looked upon the men around me. a word was spoken; not one smiled. No visible emotion of any kind appeared, only weary faces, dirty, sweaty, and blowsy with the burning heat.

I dropped my cartridges into my haversack along with my food. Our captain, in his musical, pleasant voice, gave us instructions, though he had never studied war. "Gentlemen! these cartridges are peculiar; you put the ball in first and the powder on top!" Some one whispered in 1 top!" Some one whispered in his ear. "Gentlemen," he again exclaimed, with a significant scowl and shake of his head, "I was mistaken; you must put the powder in first and the ball on top!" We did so. We had elected Billy captain, for he was genial and of a good family.

We again shuffled upward. Suddenly as the drawing of a curtain, a fine, open, rolling country with undulating ravines burst upon Two or three farm mansions with half concealing foliage and corn-fields appeared in the distance; beyond, a mile away, the fringed line of a forest; above, a cloudless sky and a noon-day sun. The road we were on penetrated these woods. In these were concealed the unknown thousands of our war-

experienced foe.

On the summit of the hills we had so laboriously gained, defending the approach by the road, ran our line of earth-works. On our right was Fort Mitchell; to our left, for hundreds of yards, rifle-pits. The fort and pits were filled with armed citizens, and a regiment or two of green soldiers in their new suits. Vociferous cheers greeted our appearing. "How are you, H.?" struck my attention. It was the cheerful voice of a tall, slender gentleman in glasses, who did my legal business, John W. Herron.

Turning off to the left into the fields in

front of these, and away beyond, we halted an hour or so in line of battle, the nearest regiment to the enemy. We waited in expectation of an attack, too exhausted to fight, or, perhaps, even to run. Thence we moved back into an orchard, behind a rail-fence, on rather low ground; our left, and the extreme left of all our forces, resting on a farm-house. Our pioneers went to work strengthening our permanent position, cutting down brush and small trees, and piling them against the fence. Here, we were in plain view, a mile in front, of the ominous forest. When night came on, in caution, our camp-fires were extinguished. We slept on hay in the open air, with our loaded muskets by our sides, and our guards and pickets doubled.

At 4 o'clock reveille sounded and we were up in line. I then enjoyed what I had not before seen in years-the first coming on of morning in the country. Most of the day we were in line of battle behind the fence. Regiments to the right of us, and more in the rifle-pits farther on, and beyond, it seemed a mile to the right, the artillerists in Fort Mitchell—all those on hills above us also stood waiting for the enemy. Constant picket firing was going on in front. The rebels were feeling our lines. Pop! pop! pop! one-two-three, then half a dozen in quick succession, followed by a lull with intervals of three or four minutes, broken perhaps by a solitary pop. Again continuous pops, like a feu-de-joie, with another lull, and so on through the long hours. Some of our men were wounded, and others, it was reported, killed. With the naked eye we caught occasional glimpses of the skirmishers in a corn-field near the woods. With a glass a man by my side said he saw the butternut-colored garments of the foe.

Toward evening a furious thunder-storm drove us to our tents of blankets and brushwood bowers. It wet us through and destroyed the cartridges in our cotton haversacks. Just as the storm was closing, a tremendous fusilade on our right, and the cries of our officers, "The enemy are upon us; turn out! turn out!" brought us to the fence again. The rebels, we thought, had surprised us and would be dashing down in a moment with their cavalry through the orchard in our rear. Several of our companies fired off their muskets in that direction, and to the manifest danger of a line of our own sentinels. It was a false alarm, and arose in the 110th Ohio, camped on the hill

to our right.

You may ask what my sensations were as I thus stood, back to the fence, with uplifted musket in expectant attitude? To be honest, my teeth chattered uncontrollably. I never boasted of courage. Drenched to the marrow by the cold rain, I was shivering before the alarm, and so I reasoned in this way-" Our men are all raw, our officers in the same doughy condition. We are armed with the old, condemned Belgian rifle. Not one in ten can be discharged. All my reading in history has ground the fact into me, that militia, situated like us, are worthless when attacked by veterans. An hundred experienced cavalrymen dashing down with drawn sabres, revolvers and secesh yells will scatter us in a twinkling. When the others run, and I know they will, I won't. I'll drop beside this fence, simulate death, and open an eye to the culminating circumstances.' not aching for a fight. Ambitious youths going in on their muscles, alas! are apt to come out on their backs.

Unlike Norvel, I could not say:

"I had heard of battles and longed To follow to the field some warlike *chap*."

When at school I never fought excepting when my pugnacity was aroused on seeing large boys tyrannize over small ones. I never slew anything larger than a cat, which had scratched me, and at this, as soon as done, I child-like, as child I was, repenting, sat down and cried. I am soft-hearted as my uncle Toby with the fly—''Go, poor devil! the world is large enough for both you and me.'' To pit my valuable life against one of these low Southern whites—half animals, fierce as hyenas, degraded as serfs—appeared a manifest incongruity. It never seemed so plain before. It was tackling the beast in the only point where he was strong.

Some things were revealed to me by this soldier life. The alarming rumors current. The restraints upon one's liberty, imprisoned within the lines of the regiment. The sensation of being ordered around by small men in high places, and not admirable in any. The waste of war, piles of bread, watersoaked by rain into worthless pulp. The vacuity of mind from the want of business for continuous thought. The picturesque attitudes of scores of men sleeping on heaps of straw; seen by the uncertain light of night. The importance of an officer's horse beyond that of a common soldier, shown by the refusal of hay on which to sleep on the night of our arrival, because the colonel's beast wanted it. Didn't our good mother earth furnish a bed?

earth furnish a bed :

In our company were three of us—William J. Flagg, Samuel Davis and myself, not relatives in any way—who, in a New England city, distant nearly a thousand miles, had, over thirty years before, been school-mates. It illustrated a peculiar phase of American habits. We had some odd characters. Our fifer, a short, spare-built, wan-faced man, had been in the British army-had seen service in Afghanistan, the other side of the globe. Another, a German lieutenant, had experience of war in our country-was at Shiloh. He was imaginative. I talked with him in the night. To my query of the probability of a night attack, he replied, "Yes, the secesh always attack in that way." Past midnight as he was going the rounds of the pickets as officer of the guard, he said he saw crouching in the shadow of a ravine a large body of rebels. He ran to headquarters and aroused our colonel and staff; but when they arrived at the seeing point, lo! the foe had vanished. A fat, gray-headed captain with protuberant abdomen came to me soon after our arrival and with an impressive countenance discoursed of the perils of our position. In this I quite agreed with him. Then putting his hand to his stomach and giving his head a turn to one side, after the usual manner of invalids in detailing their woes, he uttered in lugubrious tones—"I am very sick; the march over has been too much for me; I feel a severe attack of my old complaint, cholera morbus, coming on." After this I missed him. He had got a permit from the surgeon and returned home to be nursed. Our medical man, Dr. Dandridge, was old Virginia born; and I had, notwithstanding his generous qualities, suspected him of secesh sympathies. I wish to be charitable, but I must say this confirmed my suspicion; it was evident he wished to get the fighting men out of the way!

Saturday afternoon, the 13th, we began our return march. The militia were no longer needed, for the rebels had fallen back, and thousands of regular soldiers had been pouring into the city and spreading over the hills. Our return was an ovation. The landing was black with men, women and children. We recrossed the pontoon amid cheers and the boom of cannon. Here, on the safe side

of the river, the sick captain, now recovered, joined his regiment. With freshly shaven face, spotless collar and bright uniform, he appeared like a bandbox soldier among dust-covered warriors. Escaping our perils, he shared our glories, as, with drawn sword, he strutted through street after street amid cheers of the multitude, smiles of admiring women, and waving of 'kerchiefs. Weary

and dirt-begrimed, we were, in a tedious, circuitous march, duly shown off by our officers to all their lady acquaintances, until night came to our relief, kindly covered us with her mantle, and stopped the tomfoolery. The lambs led forth to slaughter thus returned safely to their folds, because the butcher hadn't come.

It is now known that Kirby Smith was never ordered to attack Cincinnati, but only to demonstrate; and about this very time the advance of Buell seemed to Bragg so menacing that he made haste to order Smith back to his support. The force that approached so near the city at no time comprised 12,000 men and were under the immediate command of General Heath. In speaking of this event after the war, Kirby Smith said that at one time he could "have very easily entered Cincinnati with his troops, but all h—ll could not have got them out again."

MORGAN'S RAID.

Morgan's raid in July of the next year was the next event to arouse an excitement in the city. He came within a few miles and slipped around it in the night. The details of the raid are given elsewhere. After the battle of Buffington Island the prisoners, amounting to about 700 men, were brought to the city in steamers. The privates were sent from here to Indianapolis. The officers, about 70 in number, were landed at the foot of Main street from the steamer Starlight, and marched up the street under a strong guard to the city prison on Ninth street. The people had regarded them in the light of horse-thieves, and greatly rejoicing at their capture, as they passed along, in places expressed their contempt by howls and cat-cries. No other bodies of prisoners brought to the city during the war were otherwise than respectfully received. Indeed the only word of disrespect we heard towards any of them came from a little boy and of our own family. It was early morning when in our residence on East Fifth street, near Pike, we were attracted by sounds in the street. Rushing to the door our eyes were greeted by the sight of a body of say 200 unarmed men dressed in gray, with about a third of their number in blue on each side with muskets in hand, and the whole mass were on a run in the middle of the street hurrying to the depot of the Little Miami Railroad en route for Camp Chase. At this sight the little one at my side called out, "Rebel traitors—rebel traitors!" Curious to know the effect of so much war time education he was receiving had upon the same young mind we about then inquired: "Would you like to be a soldier?". "No, sir; not one of the kind that go to war." "Why not?" "Because, I should expect to get killed."

Morgan and a number of his officers were confined in the State Prison at Columbus, from whence the great raider made his escape on the night of the 27th of November. The following particulars of the flight were detailed in a Richmond paper:

"It had been previously determined that, on reaching the outer walls, the parties should separate, Morgan and Hines together, and the others to shape their course for themselves. Thus they parted. Hines and the General proceeded at once to the depot to purchase their tickets for Cincinnati. But, lo! where was the money? The inventive Hines had only to touch the magical wand of his ingenuity to be supplied. While in prison he had taken the precaution, after

planning his escape, to write to a lady friend in a peculiar cypher, which when handed to the authorities, to read through openly, contained nothing contraband, but which, on the young lady receiving, she, according to instructions, sent him some books, in the back of one of which she concealed some "greenbacks," and across the inside wrote her name to indicate the place where the money was deposited. The books came safe to hand, and Hines was flush. Going boldly up to

the ticket office, while Morgan modestly stood back and adjusted a pair of green goggles over his eyes, which one of the men, having weak eyes, had worn in prison. They took their seats in the cars without

They took their seats in the cars without suspicion. How their hearts beat until the locomotive whistled to start! Slowly the wheels turn, and they are off. The cars were due in Cincinnati at 7 o'clock A. M. At Xenia they were detained one hour. What keen anguish of suspense did they not suffer! They knew at 5 o'clock A. M. the convicts would be called, and that their escape would then be discovered, when it would be telegraphed in every direction; consequently the guards would be ready to greet them on their arrival. They were rapidly nearing the city of abolition hogdom. It was a cool, rainy morning. Just as the train entered

the suburbs, about half a mile from the depot, the escaped prisoners went out on the platform and put on the brakes, checking the cars sufficiently to let them jump off. Hines jumped off first, and fell, considerably stunned. Morgan followed, unhurt. They immediately made for the river. Here they found a boy with a skiff, who had just ferried across some ladies from the Kentucky side. They dared not turn their heads for fear of seeing the guards coming. "Hines," whispered the General, "look and see if anybody is coming." The boy was told they wanted to cross, but he desired to wait for more passengers. The General told him he was in a hurry, and promised to pay double fare. The skiff shot out into the stream—they soon reached the Kentucky shore, and breathed—free"

THE CINCINNATI NEWSPAPERS IN THE WAR TIMES.

The press of the city sprang into an importance never before experienced. Extras were being continually issued, and the newsboys persistent everywhere filled the air with their cries, "all about the battle." Not only in the city, but the carriers penetrated to the armies in front to sell their wares. Colonel Crafts Wright, in writing a description for the Gazette of the battle of Fort Donaldson, said: "Sunday morning we were ordered to advance on the trenches of the enemy. While standing there a new cry was heard—a carrier came along crying, 'Cincinnati Commercial, Gazette and Times,' and as I sat upon my horse, bought them and read the news from home, and this too within an hour after the fort had surrendered."

The colonel had been a room-mate and class-mate with Jefferson Davis, and through life remained a personal friend, though not agreeing in politics; this was not to be expected from one of the proprietors of the Cincinnati Gazette.

The press had correspondents everywhere, and these were untiring in gathering the news from the "front." In the early stages of the war every skirmish was published and magnified, and little minor matters detailed that later on were not noticed, as anecdotes of individual heroism, descriptions of the appearance of the dead and wounded, illustrating the savagery of war.

The city being so close upon the border found its business in diverting its industries to prosecution of the war. After a short period of stagnation there were but few idle people, and when it was seen that the war had come to stay, there was no scarcity of money and the entire community were prospering. Among the peculiar industries of the time was the putting up of stationery in large envelopes called "paper packages." The amount of letter-writing between the soldiers and their friends at home was enormous. These packages were peddled everywhere, alike in town, country and camps, at a cost of about a dime each, and consisted of envelopes, paper, pencil, pens, holder and ink; most of the stationery was miserable. Soldiers' letters went postage free.

The city was often alive with troops through the war period. Regiments came from every State. At first they were looked upon with interest and pride. Familiarity changed this. Then came sad scenes. One was the bringing in of the wounded from the battle-fields. After Donaldson and Shiloh the physicians and nurses, notably the Sisters of Charity, went down from the city and large numbers were brought here by boat and taken to the hospitals in ambulances. Just at the edge of a winter's evening we saw a line of ambulances filled with the sufferers. They had stopped before an improvised hospital, that had been a business building on Fourth street, near Main, and were being carried in on stretchers or in the arms of others. Among them were some wounded prisoners, who received equally good

treatment with the others. On the bloody field of Moskwa, Napoleon, as he stooped over the Russian wounded and ordered relief, said, "After battle we are

no longer enemies."

We asked one of the medical men, a personal friend, Dr. George Mendenhall, President of the Sanitary Commission, who had come up the river with them from Donaldson, if he had, while ministering to their wounds, talked with them. "No," said that good man, "I felt so indignant when I reflected what a miserable business they had been engaged in that I had no stomach for social intercourse." Personally, we think it instructive to get at the bottom thought of all sorts of people in religion, business, politics and war—and even in wedlock, which, alas, often results in the same. It often teaches charity for what is wrongdoing. In a deserted rebel camp, Laurel Hill, Western Virginia, was found "a love letter,"in which was expressed the bottom thought of at least one poor secessionist: "I sa agen, dear Melindy, weer fitin for our libertis to do gest as we pleas, and we will fit for them so long as Goddlemity gives us breth."

The hospitals were sacred places to the ladies of the city who were alive in ministering to the wants of the soldier boys; and to the latter they seemed angelic. One very great occupation was writing letters at the dictation of the suffering and often dying soldiers to their loved ones at home. A melanchol yduty, but purifying and ennobling, as they often found among the most humble of these men the choicest of spirits, the most noble of natures, and could but feel as they saw them sinking away into their last sleep, it would be to awake again in

ethereal brightness to be appreciated in the higher immortality.

A Soldier's Funeral awakens different emotions from that of any other. If he be an officer high in rank no pageant can be so affecting as the funeral procession. Cincinnati had several such. One was that of General Wm. H. Lytle, the poet soldier killed at Chickamauga, and was most imposing. The entire city seemed anxious to pay their last tribute to the illustrious dead. The houses were draped in mourning, the bells tolled, and the flags hung at half-mast. The procession passed through Fourth street, a long line of military with reversed arms moved slowly and solemnly along, the band playing a dirge. The horse of the General, according to military custom, was led by a military servant, with a pair of cavalry boots hanging from the empty saddle. On each side of the sarcophagus marched a guard of honor; officers high in rank and attired in their full parade uniforms; tall, showy, splendid-looking men. It was evening ere they reached Spring Grove, the moon silvering that repository of the dead as they entered its imposing gateway.

Regiments Returning from service in the field often looked war-worn and in ragged condition. After the Union defeat at Rich mond we saw two Indiana regiments which had surrendered and the men then paroled, marching through Third street, en route for Indianapolis. They had left that city only a few weeks before, newly formed troops, and had passed through ours for Kentucky, in high spirits and excellent condition. On their return they were in a deplorable state, ragged, dirty with the dust of the roads, and many of them bare-footed. The enemy must have largely robbed them of their clothing and shoes. The city at the time was destitute

of troops; but few persons were on the street to look upon this sad, forlorn, woe-begone-looking body of young men. Kirby Smith had taken out their starch. We felt they ought to have been received with open arms, but no one was around to help brighten their spirits. The few who saw them gazed in staring silence. Another dilapidated-looking body we saw, and in 1864, was the Fifth Ohio. After three years of bloody and heroic service they had been reduced to little more than a company and were drawn up in line on Third street before the Quarter-master's department to draw new clothing. It was quite a contrast to that same regiment as we saw it just after the fall of Sumter marching down Sycamore street 1,000 strong, attired in red-flannel shirts and aglow with patriotic ardor. Their brave Colonel, J. H. Patrick, had been killed only a few weeks before down in Dalton, Georgia, while gallantly leading a charge. The heroic band were home on furlough.

The Sixth, or Guthrie Gray Regiment, marched away in gray and came back in the army blue after an absence of three years, when they were mustered out of service, about 500 strong. They were received in a sort of ovation by the citizens as they marched through the city. Their Colonel, N. L. Anderson, brought back "the boys," largely from the elite of the city, in splendid physical condition. They had an entirely different appearance from the ordinary returning regiments, being very neat and cleanly in their appearance. Some thoughtful friends had supplied them, as they neared the city, with a due quantity of fresh paper collars—as we were told—which were quite striking in contrast with their bronzed war-

hardened countenances. It was a proud moment for the young men to be welcomed after their long absence by their lady friends from the streets, doors, and windows, with smiles and the waving of handkerchiefs. Eleven of their number subsequently received

commissions in the regular army.

To have lived anywhere in our country during the long four years of the rebellion was to have had a variety of experience and emotion; especially was this true of Cincinnati. They were grand and awful times. What was to be the outcome no one could divine. Our first men could not tell us anything. They seemed insignificant in view of the stupendous, appalling events. At the beginning all dissenting voices were hushed in one general outburst of indignation. Later on, what were termed the "copper-heads" raised their hissing heads. One mode of striking their fangs into the Union cause was by trying to weaken respect for those at the head of affairs. Mr. Lincoln seemed an especial object for their abuse. The most obscene anecdotes were coined and circulated as coming from him, to arouse disgust and destroy all respect and confidence in him. One of their public prints described him "as an ape, a hyena, a grinning satyr, and the White House at Washington but a den where the baboon of Illinois and his satellites held their disgusting orgies. Going through our lower market one morning during the war, our ears were greeted with an expression that was new to us. We turned to see the speaker and there stood before us an immense, fat, blowsy-faced market woman, evidently from the Kentucky side of the Ohio half a mile distant. It was she that had just belched forth in bitter, contemptuous tones the epithet, "Old ter, contemptuous tones the epithet, Link.

During the gloomy period when news of defeat was received, the faces of some of those around us would light up with exultation; then they would say: "O, I told you so: they are better fighters than our soldiers, more warlike, and in earnest. We can never conquer them. The old Union is dead. We shall probably have three confederacies. The New England States and the East; the West; and the South, its geographical situation in connection with the Mississippi making it a necessity." Such was the talk to which those who loved the Union were compelled to listen in those times. It added to their distresses, while it excited their indignation and loathing. Not to record it would be a rank injustice to those who sacrificed for their country and a falsification of the truth of history by its concealment.

In such a time as we had in Cincinnati there are very many isolated scenes and incidents that each in itself is perhaps of no especial consequence, but if itemized and given in bulk are instructive, illustrating life there in the time of the rebellion. We give some within our personal experience.

The First Funeral.—When our volunteers

left for Western Virginia it was generally

thought the trouble would soon be over. Never was there a greater hallucination. In a few weeks came tidings of skirmishes and deaths among those who had but just left us. At this juncture one day I was brought to a realizing sense of what war was. By chance I saw on Broadway, just above Fifth street, a group of servant-girls and children, with others, standing before a small brick house, evidently the home of humble people. A hearse and a few carriages were in front. The group looked on with sad, curious eyes. On inquiry I learned it was the funeral of a young man who had been killed in a skirmish in Western Virginia. In a little while an old man with his wife leaning on his arm, parents of the deceased, came out, bowed and heart-broken, followed by sorrowing brothers and sisters; they got into the carriages, which then slowly moved away. And this was what war meant. Tears and heart-breaks and lives of sorrow and suffering to the innocent and helpless.

The Gawky Officer.—There was, ordinarily, very little pride of military show among those engaged in so serious a business as war. The officers, when not on duty, generally appeared in undress. Our streets at times were thick with such. It was near the beginning when there passed, walking on Fourth street, by Pike's Opera House, a very tall, gawky officer, over six feet in stature. He was in full parade dress, with spreading epaulettes, and his stride was that which showed he had passed his days in plowed fields straddling from furrow to furrow. He evidently felt he was creating a sensation in the big city—and he was. Every one turned and looked at this specimen of pomp, fuss and feathers, with

comical emotion.

Falling in Battle.—We asked a young man, a captain who had come home on furlough, by the name of Emerson, whom we well knew, if he had ever seen any one fall in battle. He laughed as though the thought was new and replied, "No, I don't know that I ever did," and then turning to a companion said, "Tom, did you?" The latter replied the same. Being always in front they had their eyes only to watch the enemy before them. Both had seen plenty after they were down, but never one in the act of falling. A few months passed. Emerson had gone to the front. He had command of a small fort down in Tennessee, built to protect a railroad bridge. The enemy made an attack and were repelled. One man only had they killed. It was its commander, Emerson, his head carried away by a cannon ball. He was a handsome fellow, black eyes and rosy cheeks. His character was of the best. His pastor, Rev. Dr. Henry M. Storrs, said in speaking of his sacrifice: "So pure and noble was he that his very presence on our streets was a continued fragrance." That laughing, pleasant face is now before me, just as though it was yesterday that he said, "Tom, did you?"

Contraband Soldiers.—Ordinarily, men in

uniform are so transformed that it was rarely that we could tell, on seeing a regiment marching through the streets, whether it was Irish, German or American. In regard to one class of Union soldiers there could be no mistake—the negro. On Fifth street, close to Main, on the large space in front of the present Government Building, was reared a huge, shed-like structure, one story high, for barracks. Late in the war it was occupied briefly by a regiment or more of plantation blacks, clad in the Union uniform. They were a very different-looking people from our Northern blacks, many of whom possess bright, interesting faces. These were stolid-appearing, their faces with but little more expression than those of animals. When I saw them they had finished their suppers and were engaged in whiling away their time singing plantation melodies in the gathering shadows of the evening. The voices of this immense multitude went up in a grand orchestra of sound. The tunes were plaintive, weirdlike, and the whole exhibition one that could not but affect the thoughtful mind. It was singularly appealing to one's best instincts to look upon these poor, simple children of nature, who were acting their humble part in the midst of events so momentous.

At times our city was alive with troops, and then it was that the theatres and places of amusement—and places of wickedness—as in Paris during the Reign of Terror, were extraordinarily prosperous. At other times only a few people were seen on the streets, so many of the men having gone to the war. After the fall of Richmond it was felt that the great bulk of the fighting was over; but it was largely feared that the South would for years continue a scene of guerilla warfare and keep society in a state of chaos. The assassination of Mr. Lincoln came—a terrible blow in the midst of rejoicings at peace. Strong men could only speak of it with swelling throats and choked utterance. The nation writhed in agony. Then came the return of the regiments to their varied homes; but everywhere, amid the general rejoicings, were the stricken families to be reminded only the more vividly of the terrible loss of fathers, sons and brothers, who had died that the nation might live.

CINCINNATI IN 1877.

In 1877, after a residence in Cincinnati of thirty years, we returned to our native city, New Haven, when we gave, in a publication there, the annexed description of Cincinnati as it then was. The article is now historical, and hence proper here for permanent record; beside, we wish to preserve it as a heartfelt tribute to a city where, and a people among whom, our children were born, and where we had so much enjoyment of life. The caption of the article was "Cincinnati on the Hills."

Recently an Eastern gentleman, a divine of national reputation, at one time like the writer a resident of Cincinnati—a gentleman of broad experience of travel and association in this and other lands—remarked to us: "Cincinnati is the exceptional city of the world, for the social character of its people and the wise generosity and the public spirit of its wealthy men and citizens generally." We had long felt this, and were pleased to see it so emphasized by one with such opportunities for a correct opinion.

In April, 1832, Catherine Beecher first arrived at Walnut Hills, then largely in the primeval forest, and before her sister Harriet had come to eventually marry Calvin Stowe, and fill up for the writing of "Uncle Tom." To her Catherine wrote: "I never saw a place so capable of being rendered a paradise by the improvements of taste as the environs of this city." Thirty years later the improvements were well started when out came Theodore Woolsey, president of Yale College, to Walnut Hills for a visit, and, alike enthused, said: "No other city on the globe has such beautiful suburbs."

Prevalence of Public Spirit—While other of our great cities may each point to one or two living citizens who have contributed in single gifts tens of thousands to objects promotive of the public welfare, Cincinnati can

point to five gentlemen of this class now walking her streets, pleasant to meet, as seeing them recalls their beneficence. They are Reuben Springer, who gave \$175,000 toward a music hall, and later regretted that he had not given its full cost, \$300,000; Joseph Longworth, \$50,000 for a Free Art School; Henry Probasco, \$105,000 for a public fountain; David Sinton, \$33,000 for a Christian association building, and also \$100,000 for the Bethel Sunday-School, where every Sabbath from 2,500 to 3,000 children of the poor are gathered under one roof; and William S. Groesbeck, \$50,000 for music in the parks. Beside these are scores of others equally liberal, according to their means, often dispensing hundreds and sometimes thousands in their gifts.

Cincinnati's Blessings.—The people are so social, come together so much for social objects, that everybody worth knowing is generally known. Pride in themselves, in their city and in their public spirit, is a manifest and righteous characteristic. They stand on tiptoe when their city is named, and feel a foot taller.

The city is near the centre of population, in the very heart of the Union. It is said to be more familiarly known on the continent of Europe, more noticed in the public prints, especially in Germany, from its peculiar

RETURNING FROM THE WAR.

The War is ended, and now we are marching home, Our noble girls rejoicing to see us soldiers come.

They love the drum-beat, the shrill notes of the fife; They love our dear old flag—are UNION, too, for life.

-American Revolution Song Modernized.

SQUIRREL HUNTERS CROSSING THE OHIO AT CINCINNATI.

The Squirrel Hunters of Ohio and Indiana, many thousands strong, having poured into Cincinnati to defend it from invasion, are crossing the Ohio on pontoons, Wednesday morning, September 10, 1862, to meet the enemy, only five miles distant.

MT. AUBURN INCLINED PLANE.

ZOOLOGICAL GARDEN.

THE HIGHLAND HOUSE.

bright points, than any other of our large cities. Among these is its zoölogical garden, established by an association of gentlemen simply as a matter of public beneficence. It occupies a half-mile square of undulating, picturesque ground on the summit of the hills, and is the only one in the country with a single exception. Within the inclosure are numerous buildings containing a great variety of animals, beside those in the park outside the buildings, where is a town of prairie dogs and dens with white and grizzly bears.

Within the city is a public fountain, a free gift, the finest in the Union; a free public library of over 80,000 volumes, in a magnificent library building, where nearly a score of assistants stand ready to loan out the choicest books to the humblest citizens without money and without price; a free art school, where one can learn, without cost, to draw and paint, carve and mould, and listen to attractive lectures from Benn Pitman on art; and a music hall and organ, both the largest on the continent, and costing unitedly nearly a third of a million, also a free gift. The steam fire engine is a Cincinnati invention, and the city the first to adopt it, which it did through a severe conflict, largely through the indomitable pluck and will-power of Miles Greenwood, one of the city's strongest citizens, literally an iron man

Musical Festivals.—A distinguishing feature of the city has been her musical festivals, to be still greater, for she is to be the centre of music in this country, especially so now that she has secured as her guiding spirit the graceful, manly maestro, Theodore Thomas, whom simply to see while wielding the baton is alone worth the price of admission. opening of these festivals is always a gala The streets are gay with flags, the hotels and public buildings resplendent with artistic adornments, illustrative of music and musical celebrities, and at night illuminated. Multitudes come, some from hundreds of miles away, to attend these festivals; from Missouri, Illinois, Michigan, and other Western States; and it is said that once there was a man who came all the way from Boston! But we never believed it. At the seasons of these festivals the streets are crowded with a body of ladies and gentlemen, elegantly attired, with refined and thoughtful expressions, perhaps beyond anything seen there on any other public occasions, thus attesting to the elevating influence of music upon her votaries, and the elevated class which the art divine brings within the circle of her magic wand.

Industrial Expositions.—In the past years Cincinnati has taken the lead in her industrial expositions. Her experience was so great that when Philadelphia gave her Centennial she wisely went there for her Director General. This she found in Alfred C. Goshorn, the Cincinnati manager, a gentleman of but few words, who, by silent energy and brain power, could bring order from chaos and master inharmonious and distracting elements to unite and move together as in

the harmony and beauty of a grand sym-

Inclined Planes.—The city proper is on two planes, one called the "Bottom," 60 feet and the other 112 feet above low-watermark This, with the exception of in the river. New York and Boston, is the most densely populated area in the Union. Owing to the contracted dimensions of the plains, population is rapidly extending on to the river hills. These are nearly 400 feet above the city, and take one on to the general level of the country. Besides roads leading to their summits. there are in all four inclined railway planes on the north, east and west—where, by stationary engines at the top, people are taken up, sometimes nearly a hundred in a car, and in ninety seconds. They are hauled up by a wire rope large as one's wrist, which winds around a drum with a monotonous humming sound, quick resounding, as though in a hurry to get you up. An extra rope is attached to each car as a precaution in case

the one in use should break.

Bird's-eye Views.—The views from the hills are unique. Seemingly within, a stone's throw one looks down from a height of between 300 and 400 feet into a huge basin-like area filled by a dense, compact city. Beyond this wilderness of walls, roofs and steeples, is seen the Ohio, with its magnificent bridges, the Kentucky towns of Covington and Newport opposite. Encircling hills everywhere bound the view, through which the Ohio pierces, turning its broad silvery surface to that sun which shines equally for us all.

Beer Gardens and Music.—At the summit of these planes are immense beer gardens with mammoth buildings, where on stifling summer nights the city hive swarms out thousands upon thousands of all classes and nationalities, who thus come together and alike yield to the potent influences of music and lager. One, the Highland House, travelers say, is not only the largest in the world but is unequalled in splendor and appointments. It is on Mount Adams, east of the city plain, where nearly 40 years ago John Quincy Adams, "the old man eloquent," delivered his oration on the occasion of lay-ing the corner stone of the Cincinnati Observatory, the first astronomical building erected in human history by the joint con-tributions of private citizens. Thus carly had this people initiated those habits of public beneficence which bring down blessings from the stars. In the summer of 1877 Theodore Thomas with his orchestra gave there three continuous weeks of music, with audiences on some nights of from 6,000 to 8,000 people, many of them around tables and taking in music with their beer.

Viewed from the city the long lines of hundred lights, in places rising tier above tier, marking the spot, made the place appear as an illuminated palace in the skies; while the lighted car in incessant motion up and down the inclined plane looked like a huge fire ball in transit.

The city itself, hundreds of feet below,

with its miles of street lamps vanishing in the distance, and the broad Ohio with its moving steamers lighted up, gave to those on the hill top an equally picturesque view as they sat there listening to the music, their brows whilom fanned by the cool breezes from the west. This was comfort, solid comfort up there as one might say at an alighting place between the basin-placed city and

its overhanging stars.

The Germans.—The prevalence of music and lager in the city is largely owing to the Of the 300,000 inhabitants at this centre nearly one-third are Germans or of German stock. In these respects the Americans have become largely Teutonized.

The Germans are notably frugal and thrifty. The ambition of each family is to own its dwelling—their great ambition a three-story brick. They associate with and cultivate the acquaintance of their own families more thoroughly than our people do theirs. resort on Sunday afternoons, with their wives and children, to the beer gardens on the hill tops, where there is music, green arbors, kindly skies and soft airs. The utmost decorum prevails. All classes of Germans with their families to the toddling infant thus mingle in calm, peaceful recreation. They learn to know and sympathize with each other, a matter seemingly impossible with a certain class of our snobbish countrymen who ever seem dreadfully apprehensive of soiling their gentility.

Love of Flowers.—A pleasing characteristic of the Germans is their passion for flowers. While an American woman of humble rank will spend her money for an article of personal adornment that perchance may destroy all grace of movement and crucify all beauty, a German woman will purchase a pot of flow-On passing even tenement houses occupied by Germans, one will often see every window, may be thirty or forty in all, story upon story, filled with pots of flowers. These please the thoughtful passer-by as he thinks of a people who thus endeavor to make fra-

grant their hard work-day lives.

German Peculiarities.—The original Germans are largely of the working class. old-country folk, generally, they are clannish and let their affections go back to the fatherland, while their children take especial pride in being thought Americans; indeed some manifest shame at being overheard by Americans talking in the German tongue.

A very common sight in the German quarters is to see old men, grandfathers, on their last legs, acting as nurses for babies, pushing them around in carriages or dangling them on their knees, they meanwhile regaling themselves with their everlasting pipes.

The common class of Germans in the city know next to nothing of the inner life of Americans. Some of them stigmatize us as "Irish." Their gross ignorance after a residence on our soil of often half a life-time impressed us with the sheer folly of people travelling in Europe, fancying they receive anything more than a surface knowledge of

Europeans. Of the earnest spiritual life of our orthodox Christian people they have not the faintest conception. Nothing like it exrists among them. As to Sunday, even the Protestant Germans attach to it no especial sanctity, while with the Catholics everywhere every day is equally "the Lord's."

The Crusaders Among the Germans.— When the temperance crusade opened the Germans were dumbfounded. Beer is with them as water is with us, and is used from infancy to old age. They received the crusading bands with stolid silence, looking at the ladies from out of their round blue eyes with an expression that showed that their sensations must have been queer, indescribable. Not a saloon in the city was closed. The ladies might as well have prayed and sang before the Rock of Gibraltar.

One day the crusade among the Germans came to a sudden end. An entire band of ladies, wives and mothers of the very best citizens, were arrested by the city police-respectfully arrested and escorted to the police station, and charged with violating the city laws in obstructing the sidewalks. As is usual with criminals, they were compelled to register their names, residence and ages! As they were not put in "the lock-up," their pockets

were saved the usual emptying

During these exciting times the temperance meetings were crowded, and men and women alike addressed the multitudes, the exercises being varied with prayer and song. It was noted that while the men always more or less hesitated, the women never. Their words always flowed as from an everlasting fountain. Pathos, poetry and matter of fact were the concomitants in varied measures of their speech.

At some of these meetings the narratives were so touching that hundreds were melted in tears. We remember one we attended when we were so affected by an involuntary twitching of the facial muscles, that to conceal anything that might happen we bowed our head and looked into the bottom of our hat to study and see if we could not improve the lettering of the hatter's advertisement. And we believe we succeeded!

And the speaker who so aroused our emotions by the plaintive melody of her voice and the heart-melting scenes of her narrative, was a woman, and she with crispy hair and black as the ace of spades! The earthly tabernacle is as nothing, but it is the divine spirit, wherever it enters, that gives dignity to its pos-

sessor, lifts and unites with the Infinite.

In the interior of the State, among an American orthodox population, the Crusaders were for a time wonderfully successful. Peter the Hermit had come again-this time in the form of Dio Lewis. In some villages every saloon was closed. It seemed for a time as though another age of miracles had dawned upon mankind.

Some ladies spent weeks in the open air, often exposed in cold, inclement weather. Two whom we knew of caught colds and died; another, from being lean, dyspeptic and com-

plaining, grew fat and cheerful and has looked smiling from that day to this. She had been

to Palestine and got back.

This speaking of the Holy Land carries us back by association to childhood years, to our father's house, to a pretty picture acted there, wherein the maid of the broom, moving from room to room, rosy, blithe and happy, doing the useful things, as making the beds and spatting the pillows, was wont, from the abundance of her heart, to burst out, birdlike, in song, her mind being upon love and the gay cavaliers in the days of chivalry, as she caroled forth:

"It was Dunois, the young and brave, Was bound for Palestine."

The word "Crusade," which the good ladies used to designate their forays upon the saloons, we verily believe, by the association of ideas—the romantic word with the prosaic fact—helped to lighten their disagreeable labors. To them every saloon was as a Jerusalem to be taken, but without the holy places.

The Original German Immigrants to Cincinnati are mainly of the humble classes. But very few people of elegance are among them. They are a highly valued body of citizens, commanding respect for their industry and general sobriety of deportment.

An excellent and very wealthy part of the German element is the Hebrew. They, however, are German but little more than in language. Everywhere they are the same pecu-

liar people.

The routine of their domestic daily lives, the preparation of their food, etc. is regulated by certain rules and ceremonies which form an essential part of their religion, so that they never can socially assimilate with other people. There is but little visiting between the families of Jews and Gentiles.

Cincinnati is a sort of paradise for the Hebrews. They number about 10,000 souls. Among them are some very learned men, as the Rabbis Wise and Lilienthal. Finer specimens of mercantile honor and integrity do not exist than are exemplified in some of their

leading merchants.

These people—we speak from knowledge and neighborhood—carry out among themselves more closely perhaps than is common even with Christians, the Christly injunction, "Love one another.' This is not surprising, as previous to the year A. D. 1, they had all the Christianity there was anywhere. They allow none among them to sink into pauperism, but help each other with no stinted hand. And when one returns from a journey his friends run to embrace and kiss him. Music, dancing, theatricals, gayety, bright colors and a good time in this life are the cardinal objects with them. Originally an Oriental people, they naturally take to bright, sensuous things. As many of them nowadays have serious doubts of immortality, these act on the principle of "eat, drink and be merry, for tomorrow we die." This is pitiful when we reflect that the highest joy and the loftiest

virtue only can come to the soul when it feels its inestimable value through its conviction

of immortality.

The Cause of Cincinnati's Pre-eminence.— It may be asked, why has Cincinnati obtained its pre-eminence in art, literature and public spirit over other Western cities, for instance Chicago? We answer, Cincinnati is older than this century. More than forty years ago, when Chicago was a mere fort and Indian trading post, Cincinnati was a city of 25,000 people with a cultured society noted even then for its fostership of literature and art. In those days Cincinnati had such men as Chief-Justice McLean, Salmon P. Chase, Jacob Burnett, Dr. Daniel Drake, James C. Hall, Nicholas Longworth, Nathaniel Wright, Nat. G. Pendleton, Charles Hammond, Henry Starr, Bellamy Storer, Larz Anderson, Bishop McIlvain, Lyman Beecher, D. K. Este, John P. Foote, Nathan Guilford, General William Lytle, General William H. Harrison, Colonel Jared Mansfield, etc. The last named had been Surveyor General of the N. W. Territory and Professor of Mathematics at West Point.

Brilliant Women.—Colonel Mansfield, with Mrs. Mansfield, were natives of this city, and she it was who introduced into Cincinnati society the custom of New Year calls. Probably there is scarcely a single individual, aside from the writer, in this, the city of her birth and childhood, who remembers this lady, now long since deceased, but New Haven never produced, nor Cincinnati never held, a more queenly woman. Her son, the Hon. E. D. Mansfield, the statistician of Ohio and wellknown writer of Cincinnati, who graduated at the head of his class at Princeton, and then second at West Point, is New Haven born. Although about as old as the century, his spirits are as buoyant, as youthful as those of any school-boy who now carries a happy morning face through the streets of his native city. Among other ladies who have figured in the old society of the city were Mrs. Trollope, Fanny Wright Darusemont and Harriet Beecher Stowe.

Cincinnati's and Chicago's Characteristics.—Cincinnati has ever been a great manufacturing and creating centre, instead of a great trading, distributing, land speculating point like Chicago. The latter in consequence has drawn to itself from its first uprising out of the bogs, hosts of wild speculators and adventurers of all sorts, who came under the influence of the elixir of an exhilarating climate, with their imaginations excited to money making by the sight of vast prairies of wonderful fertility stretching away in easy gradations from its site, forming a greater body of rich land than lies around any other city in all Christendom.

The growth of Cincinnati having been comparatively slow, its best elements have had time to take root, unite and strengthen with the rolling years. Her population has been stable and not changing. Hence there is in this generation an aristocracy of "town born," of culture united to wealth, as the

Longworths, Groesbecks, Dexters, Pendletons, Andersons, Goshorns, etc., who take immense pride in their native city, forming a nucleus around which gather those forces which are impelling it on its upward career

a nucleus around which gather those forces which are impelling it on its upward career. Cincinnati a Literary Centre.—Cincinnati, more than any other Western city, has been a literary centre—a great book-publishing, book-selling mart. The bookstore of Robert Clarke & Co. is the literary focus of the city and adjoining States. There one meets with the most eminent characters of society. Said a prominent bookseller of Chicago to a member of this firm: "I don't understand how you in Cincinnati can sell such quantities of the higher class of scientific works—the books of the great thinkers and specialists; we have very little call for them here." A partial solution of this may be found in the capacity of the Cincinnati bookseller! The capacity of the Cincinnati bookseller! The value of a bookseller, genial. book-loving and book-knowing to any community that has his services, are they not, Oh! appreciative reader, beyond your arithmetic?

The Hills and Clifton.—Eventually the city plain will be devoted entirely to business and the homes of the people be "Cincinnation the Hills." Now the finest of the palatial residences are there with the outlying districts of Mount Auburn, Walnut Hills,

Price Hill and Clifton.

Clifton is a collection of magnificent chateaux, four miles from the city, amid groves and grassy lawns, which in architectural display, combined with landscape adornment and picturesque outlooks, has not, says a German author, its equal but in one spot in Europe. Clifton has been the astonishment of foreigners who have accepted the hospitalities of its prince-like dwellers, among whom may be mentioned the Prince of Wales. Charles Dickens, Thackeray, and those Queens of Song, Jenny Lind and Christine Nilsson. There in a palace resides Henry Probasco, once a penniless youth, who gave the Tyler-Davidson fountain to Cincinnatal. He alike proposes the same with his magnificent picture gallery valued at \$200,000 soon as the citizens erect a suitable building, which they are certain to do some day. Another resident is William S. Groesbeck, who gave \$50,000 for music in the parks. He it was who told his brother Democrats at the close of the rebellion, that they must accept the issue of the question of State Rights as ended. Said he, "war legislates, the trial of arms is the final Court of Appeals." George Pendleton, the famous Democratic Gentleman George," from the suave manners and good fellowship generally. He is what is termed "a handsome man," compact, full rounded, with dark sparkling eyes. Richard Smith, proprietor of the Cincinnati Gazette, also dwells in Clifton. He is a plain, unostentatious citizen, who will receive in his office with more attention a poor crone of a woman who comes to crave charity than any swelling individual who calls under circumstances of pomp and state.

Beauty of the Country.—The country on the hills is surpassingly beautiful. The formation is the blue limestone, and geologists say peculiar. Trilobites—petrified marine shells—are found in abundance. The surface is disposed in soft, exquisitely graceful swells with no abrupt transitions. In places the beech woods stretch away over hill and through dale in billowy swells, the ground one continuous green lawn with no underbrush to mar the prospect under the lights and shadows of the leafy canopies. For height combined with massiveness and luxuriance of foliage, no tree within our knowledge is equal to the beech of the Ohio valley, at there is none in picturesque beauty and graceful sweep of branches equal to the New England elm. Where the beech grows the soil is fat and luxuriant for the corn, the wheat and the good things, that plump out the ribs, rejoice and make laugh the inner

On these hill sides, amid the lesser vales, within easy rides from the city are many charming suburban homes of the well-to-do citizens, sweet surprises to the stranger as they suddenly burst upon him from out a wilderness of green things. These are often reached by some sequestered by-road, winding through some lesser vale, where one might easily fancy they were a hundred miles away from any city. There are many such places all unknown to the masses who delve and sweat out their lives in the great hot, sooty town. At one of these, on a lofty eminence opposite Clifton, called "Makatewah" from the Indian name of the deep, broad valley which they each overlook—the first from the east and the last from the west and near two miles apart—we had passed so many happy days, escapes from the heat, dust and brain worrying life of the hot city, that although unused to versification, we could not refrain from a tribute.

MAKATEWAH.

O. Makatewah! peaceful spot, Where Nature's sweetest charms are spread. My weary spirit finds repose, To calmest thought is led.

Bright, sparkling morn, mild, tranquil eve.
Hope, retrospection there by turn inspire,
Imagination, charming fancies weave,
As softly sighs the leafy lyre.

The mansion strong and massive stands
Where love and virtue cheer the guest;
Where life's best gifts with blessings fill
And earthly scenes bring heavenly rest.

There swelling slopes rise decked in green.

Mid summer suns lie cooling shades,
Flowers quaff the morning dews

And zephyrs stir the tender blades.

Ripe luscious fruits in red and gold, Mid emerald settings blush and glow; While generous vines the nectar yields That lifts sad hearts in genial flow.

Mid fragrance, insects happy hum, The wood bird beats his rataplan, The peacock* struts with speckled mates And stately swings a glittering fan.

When evening's shadows solemn steal O'er Clifton's leaf-crowned height, There sweet to watch the fading day Die in the arms of night.

The valley sounds rise on the air, The tinkling bells, the rolling ears, While o'er the deep'ning gloom below Look down the sad, mysterious stars.

O, Makatewah! peaceful spot, Where Nature's sweetest charms are spread; My weary spirit finds repose, To calmest thought is led.

This region, like that of Athens of old, has the prime requisite for a perfect climate, being just in that latitude where one can remain out of doors in comfort the greatest number of days in the year. The time is not distant when this centre will number a million of people. Then "Cincinnati on the Hills" will be one of the choice spots of this earth. This from the extraordinary resources and beauty of the country, combined with the extraordinary public spirit of her citizens:—the latter moving with an accelerated increase from the habits already established, all combining to render this a great art centre and focus of all which broadens life and renders it sweet and beneficent.

CINCINNATI (STATISTICAL) IN 1888.

CINCINNATI, county-seat of Hamilton, largest city in the State, is in a direct line about 100 miles from Columbus. It is on the north bank of the Ohio, opposite the mouth of the Licking river, about midway between Pittsburg at the source, and Cairo, at the mouth of the Ohio river. It is within a few miles of the centre of the population of the United States. Railroads entering the city are the O. & N. W.; C. H. & D.; C. I., St. L. & C.; C. L. & N.; C. G. & P.; C. C. C. & I.; C. S., B. & O.; C. W. & B.; N. Y. P. & O.; O. & M.; C. & M. V.; P. C. & St. L.; C. & W.; C. H.; K. C.; N. N. & M.; C. J. & M.; L. & N.; C. & O., and C. N. O. & T. P.

County Officers in 1888.—Auditor, Frederick Raine; Clerk, Daniel J. Dalton, John B. Peaslee; Commissioners, William Anthony, Luke A. Staley, Herman H. Goesling; Coroner, John H. Rendigs; Infirmary Directors, Charles S. Dunn, John H. Penny, Tilden R. French; Probate Judge, Herman P. Goebel; Prosecuting Attorney, John C. Schwartz; Recorder, George Hobson; Sheriff, Leo Schott; Surveyor, Albert A. Brasher; Treasurer, John Zumstein.

City Officers in 1888.—Amor Smith, Jr., Mayor; Edwin Henderson, Clerk; E. O. Eshelby, Comptroller; Albert F. Bohrer, Treasurer; Theo. Horstman, Solicitor; John A. Caldwell, Judge of Police Court; Emil Rense, Clerk of Police Court; John G. Schwartz, Prosecuting Attorney; Philip Deitsch, Supertendent of Police.

Newspapers.—The number of periodicals of all kinds is 133, of which there are 14 dailies and 46 weeklies. The principal dailies are, Enquirer, Democratic, John R. M'Lean, Editor and Publisher; Commercial Gazette, Republican, Murat Halstead, Editor; Times Star, Independent; Evening Post; Evening Telegram; Sun, Democratic. German: Abend Presse, Independent; Freie Presse, Democratic; Volksblatt, Democratic, Henry Haacke, Editor and Publisher; Volksblatt, Republican. Religious Weeklies: American Christian Review, Disciples; American Israelite; Catholic Telegraph; Christiche Apologete; Christian Standard, Christian; Herald and Presbyter, Presbyterian; Journal and Messenger, Baptist;

*The peacock on the place in 1874 lost its mate. A respectable period of mourning having been passed he suddenly disappeared.

After over two years of absence he as unexpectedly returned, leading in stately procession on to the grounds two new-found wives. As there were none of his kind in that vicinity, the distance and direction of that matrimonial journey remain a mystery. That he should bring back two to replace the one he had lost, in view of his long abstinence from the companionship of any, was probably justifiable to the peacock indgment and the peacock morals.

Sabbath Visitor, Jewish; Wahrheits Freund, Catholic; Western Christian Advo-

cate, Methodist.

Churches.—Cincinnati has over 200 churches, among which are Roman Catholic, 51; Methodists, 37; Presbyterian, 24: Congregational, 5; Protestant Episcopal, 19; Baptist, 18; German Evangelical, 15; Jewish Synagogue, 7; Disciples of Christ, 6; United Brethren, 3; Friends, 2; also 1 each Hollandische Reformed; Church of the New Jerusalem, Universalist and Unitarian.

Charities.—There are five hospitals, viz.: the Cincinnati, two Catholic, one Jewish and one Homeopathic; and other charitable institutions are numerous, as Children's Home, Christian Association's Home of the Friendless, Orphan Asylums, the Widows' and Old Men's Home on Walnut Hills, the Relief Union, Board of Associations, and the Bethel on the River, where destitute and homeless people are temporarily fed and sheltered. With it is a church and Sunday-school for the children of the poor, which for many years has had an attendance of 3,000

and attracts many visitors.

Banks.—Cincinnati National Bank, Joseph F. Larkin, president, Edgar Stark, cashier; Citizen's National Bank, B. S. Cunningham, president, George W. Forbes, cashier; Commercial Bank, Charles B. Foote, president, W. H. Campbell, cashier; Fidelity Safe Deposit and Trust Company, Briggs Swift, president, J. G. Brotherton, superintendent; First National Bank, L. B. Harrison, president, T. Stanwood, cashier; Fourth National Bank, M. M. White, president, H. P. Cooke, cashier; Franklin Bank, John Kilgour, president, H. B. Olmstead, cashier; German National Bank, John Hauck, president, Geo. H. Bohrer, cashier; Merchants' National Bank, D. J. Fallis, president, W. W. Brown, cashier; National Lafayette Bank, W. A. Goodman, president, J. V. Guthrie, cashier; Ohio Valley National Bank, James Espy, president, Theo. Baur, cashier; Queen City National Bank, John Cochnower, president, Samuel W. Ramp, cashier; Second National Bank, Charles Davis, president, Wm. S. Rowe, cashier; Third National Bank, J. D. Hearne, president, Wm. A. Lemmon, cashier; Union National Bank, Edward Weil, president, L. Kleybolte, cashier; S. Kuhn & Sons; Seasongood, Sons & Co.; A. Seinecke, Jr.; Simon & Huseman; A. C. Conklin & Co., brokers; Geo. Eustis & Co., brokers; H. B. Morehead & Co., brokers; Albert Netter, broker; Cincinnati Clearing House Association, James Espy, president, W. D. Duble, manager.

Industries.—For the year 1887, the report of Colonel Sidney D. Maxwell, superintendent of the Chamber of Commerce, gives the number of industrial establishments in Cincinnati as amounting to 6,774, employing 103,325 hands, and producing in value \$203,459,396, viz.: Iron, \$26,966,999, hands, 14,741; other Metals, \$7,674,160, hands, 5,056; Wood, \$20,440,182, hands, 12,589; Leather, \$10,484,425, hands, 6,404; Food, \$23,526,858, hands, 5,821; Soap, Candles and Oils, \$11,165,200, hands, 1,845; Clothing, \$23,202,769, hands, 21,951; Liquors, \$29,012,711, hands, 2,242; Cotton, Wool, Hemp, etc., \$2,258,983, hands, 1,968; Drugs, Chemicals, etc., \$4,913,150, hands, 874; Stone and Earth, \$4,972,730, hands, 3,384; Carriages, Cars, etc., \$11,109,950, hands, 6,601; Paper, \$6,670,986, hands, 2,976; Book Binding and Blank Books, \$598,724, hands, 860; Printing and Publishing, \$4,456,876, hands, 4,138; Tobacco, \$3,784,868, hands, 3,305; Fine Arts, \$1,046,250, hands, 756; Miscel-

laneous, \$11,174,375, hands, 7,814.

In 1860 the annual value was \$46,995,062; in 1880, \$163,351,497; since which last date as above shown there has been an increase of about one-quarter in value. The First Ohio Revenue district, in which is Cincinnati, in 1881 paid a larger revenue than any other in the Union, amounting to over \$12,000,000, having been mainly from distilled liquors, tobacco and beer.

Population in 1840, 46,338; 1850, 115,438; 1870, 216,239; 1880, 255,139;

1890, 296,908.

LITERARY SYMPOSIUM ON CINCINNATI.

In the New England Magazine for September, 1888, under the head of "Illustrated Literary Symposium on Cincinnati," was a series of ten articles by nine authors of the city. They were "Prehistoric Cincinnati," by M. F. Force; "Cincinnati, Historical and Descriptive," by W. H. Venable; "Education," by the same; "Newspapers and Literature," by George Mortimer Roe; and "The Art Museum and the Art Academy," by A. T. Goshorn; "Decorative Art," by Benn Pitman; "History of Cincinnati Expositions," by W. H. Chamberlain; "Clubs and Club Life," by Chas. Theodore Greve, and "Political Reminiscences of Cincinnati," by Job E. Stevenson. The object of these articles was to present to the public in the centennial year of Ohio's settlement a picture of the progress of the great city from its beginning, with a view of its present characteristics. Nothing can be so well adapted for our purpose to accomplish the same end as their review, with extracts, abridgments, itemized facts. We begin with

PREHISTORIC CINCINNATI.

Before the advent of the white man the "Mound Builders" had possession here. When the whites first came the plateau extending from near the present line of Third street to the hills was literally covered with low lines of embankments, and an almost endless variety and numbers of figures. Among them were several mounds, one large mound on the bluff at the intersection of Third and Main streets; the great mound at the intersection of Fifth and Mound streets, which, if mounds were really used for watch-towers and beacons, communicated by means of a system of such, not only with the little valley of Duck creek, lying behind the Walnut Hills, but also with the valleys of both the Miami rivers.

Among the various articles found in these works were some very interesting, especially that from the great mound at the intersection of Fifth and Mound streets. That was the incised stone known to all archæologists as "the Cincinnati tablet."

There were, in the year 1794, stumps of oak trees at the corner of Third and Main streets, showing that mound was over 400 years old. The site of Cincinnati was temporarily occupied by bands of the Miami Confederacy.

CINCINNATI, HISTORICAL AND DESCRIPTIVE.

Dr. Daniel Drake, in his "Picture of Cincinnati," published in 1815, called it the "metropolis of the Miami country." In 1824 its importance as a trade-centre became such that merchants distinguished it as the "Tyre of the West." The unclassic name of "Porkopolis" clung to the place for many years until Chicago surpassed it in the pork industry. The poetical appellation, "Queen City," was proudly worn by this Ohio valley metropolis, and recognized gracefully in Long-fellow's praiseful song—

"To the Queen of the West In her garlands dressed, On the banks of the beautiful river."

The latest designation, the "Paris of America," the city earned from its reputation as a pleasure resort and a seat of the polite arts.

A majority of the early settlers came from New Jersey, Pennsylvania and Maryland. Their religion was as austere as that of the Puritans, but not so aggressive. The New England and Virginia forces came only a little later with their powerful influences. The history of society presents no chapter more interesting than that which describes the interaction of ideas in Cincinnati from the close of the war of 1812–1815 to the end of the civil war. The three elements of population, and we might say of civilization, northern, central and southern,

met together on the shores of the Ohio, and Cincinnati became a cauldron of boiling opinions, a crucible of ignited ideas. There was a time when Southern alkali seemed to prevail over the Northern oxide, and the aristocratic young city was dominated by cavalier sentiment; but the irrepressible Yankee was ever present with his propensity to speak out in town-meeting. One of the significant factors of culture was the class that organized the "New England Society," to which belonged Bellamy Storr, Lyman Beecher, Calvin Stowe, Salmon P. Chase and others.

All sorts of questions, theological, political, social, came up for radical discussion in early Cincinnati. The foundations were taken up and examined. Every sentiment and every ism had its chance to be heard. Several new sects were differentiated. Scepticism, by the powerful voice of Robert Owen, challenged faith as held by Alexander Campbell; Protestantism encountered Romanism in hot debate. Religious controversies became involved with political (for if we dig deep we shall find the roots of all thought entangled together), and theoretical differences became practical issues at the polls.

When the tide of emigration was swollen by a foreign flood then arose the "Know Nothing" movement, directed by powerful newspapers in Cincinnati and Louisville. The discussion of the status of foreigners was radical, and dealt with the primary rights of man, and with the most essential functions of government, education and society. The relations of Church and State were considered.

The German population form a most important element, enough to make a large city—more than a hundred thousand. It is liberty-loving, and distinguished for thrift and intelligence. The Germans are devoted patrons of education and the arts, and especially music. German is taught in the public schools. The Irish

element is also large and powerful.

Cincinnati, by the accident of her geographical position, became the focus of Abolitionism, and also of the opposite sentiment. In this city Birney was mobbed; Phillips was egged; colored men persecuted. In this city "Uncle Tom's Cabin" was planned, and here the Republican party was born. When the war came on Cincinnati did not waver. All sects and all parties, foreign and native, followed the Union flag. As soon as the war was over the citizens resumed their discus-The Queen City is the arena of wrestling thoughts. Therefore it has become a city of practical toleration. Extreme radicalism lives side by side with extreme conservatism. Jew and Gentile are at peace. Orthodoxy fights heterodoxy, but each concedes to the other the right to exist. The people like to read Ingersoll and Gladstone. The Prohibitionists have a strong party here, and the drinkers of beer have a hundred gardens on the hills. In politics, Republicans and Democrats are pretty equally divided, and there is a lively class of "scratchers" in each party. All things considered, there seems to be good ground for the opinion often expressed by enthusiastic Cincinnatians that their city is the freest city on the globe. This is a bold claim, but it would be difficult to name a city in which the rights of the private individual are less interfered with than they are in the Queen City. This status of its people is the best for an ultimate true result. It is only by agitation and experience that the race anywhere can advance; and nothing is a final settlement until it is settled right.

The tract known as the Miami Purchase, on the north shore of the Ohio, was first settled at Cincinnati and Columbia (this last now in the city limits) in 1788. Surrounded by a region of unsurpassed fertility, and located on a stream which floated the principal commerce of the West, Cincinnati in a few decades naturally took the leading rank. The farm products of Ohio, Indiana and Kentucky, whether in the form of grain or live-stock, poured into her markets. The steamboat interest was vast and far-reaching, and until after the middle of the century Cincinnati profited greatly not only by river commerce but by boat-building. The river landing was then a scene of bustle and business, with the loading and unloading of goods and the movement of steamers; its varying stages and phases

THE TYLER DAVIDSON FOUNTAIN.

MUSIC HALL AND EXPOSITION BUILDING.

were in everybody's thoughts and talks. "How's the river to-day? Good stage

of water, eh?"

In the period of its early life it was largely visited by foreign travellers, for it was regarded as the brightest, most interesting place in the West—as Volney, Ashe, Basil Hall, the Duke of Saxe-Weimar, Capt. Marryat, Harriet Martineau, Chas. Dickens and Mrs. Trollope. The latter, with her four children, resided here two years, from 1828 to 1830, and lost thousands in what she named "The Bazaar," which came to be known as "Trollope's Folly." It stood on Third street, just east of Broadway. Among its attractions was a splendid ball-room, long the pride of the city.

The civil war wrought miracles in the development of Cincinnati. Its manufacturing enterprises have developed prodigiously, property values multiplied and large individual fortunes accumulated. A population of fully half a million dwells within a radius of ten miles, and the city proper has a third of a million. A wide and rich field of traffic and investment has of late years opened in the South by means of the Cincinnati Southern Railroad, and also by that through the

Virginias by the Chesapeake and Ohio.

The Cincinnati Southern Railway was built at a total cost of \$20,000,000, and runs to Chattanooga, a distance of 336 miles, into the heart of the South. It was leased in 1880 until the close of the century to the Erlanger Syndicate. It was built by the city by an issue of its bonds nearly to the entire amount, which being regarded as an abuse of its corporate rights, the construction being even outside of the State, met with strong opposition in the courts. The act was sustained, its prospective immense importance to the well-being of the city overcoming all adverse arguments of illegality.

Freight by it consists largely of live-stock, coal, iron, stone, lumber, bark, flour, whisky, turpentine, grain, cotton, hemp, fruit, tobacco, salt provisions and beer. In 1883 it carried six hundred thousand passengers and earned nearly two and a

half millions in freight.

The river trade is still very great, especially in coal; its weekly consumption in the city is about a million of bushels. Freight is largely conveyed up and down the river by powerful steamboats with fleets of barges. About one-quarter of

the imports and exports of Cincinnati are moved by water.

Cincinnati is a composite city, an aggregation of towns once separate, which, however, retain their old names, as Walnut Hills, Columbia, Pendleton, etc., and just outside lie some charming villages which practically enjoy the benefits of the city, yet control their own local affairs by a mayor and aldermen, as Clifton and Avondale. Then, on the Kentucky side of the Ohio, are Covington and Newport, with the Licking dividing them, and Bellevue, Dayton and Ludlow. Several bridges connect Cincinnati with the Ohio, among them the beautiful suspension bridge to Covington, completed in 1866 by the engineer, Roebling, at a cost of \$1,800,000. It is 103 feet above low water, and is the largest single span of its class in the world. The towers over which the gigantic cables pass are 1,057 feet apart, are 230 feet in height, and thus are higher, and each contain more stone, than the Bunker Hill Monument. The others are pier bridges, and built to accommodate railroads, viz.: the Cincinnati Southern Railroad, the Louisville Short Line Railroad, and the Chesapeake and Ohio. This last cost nearly \$5,000,000, and was opened January 1, 1889.

Cincinnati now extends along the Ohio ten or twelve miles, with an average width of about three miles. Forty years ago its corporate limits were only about four square miles, and with scarce an exception was the most densely populated area of its size in the Union. Above the flood plain it is built on a terrace, and then rise the hills about 400 feet higher. The canal roughly bounds a quarter long known as "Over the Rhine," because of its great German population. In the Exposition of 1888 the canal was utilized to represent a Venetian street, and

was supplied with gondolas. The great Music Hall, Arbeiter Hall and Turner Hall are in that quarter.

Access to the hill-tops is by steeply graded roads, cable-car and horse-car roads, and by four inclined planes up which cars are drawn by powerful engines. The principal lines converge at Fountain Square.

The pavements are excellent, consisting of granite, asphalt and Ohio river boulders. The sewerage and underdrainage is perfect, and few cities are so healthy. Within the city limits is EDEN PARK, which is on the hills above the city plain, a pleasure-ground of 240 acres, on which is the reservoir which supplies the city with water. Burnet Woods, a tract of beautiful forest of 170 acres, is also on the hills not far from the Zoölogical Gardens, which last front on the Carthage pike. They are the largest and finest in America, and the buildings are as costly and substantial as those of the Zoölogical Gardens in Europe. The grounds, sixty acres in extent, are beautifully improved. There are about 1,000 specimens of animals and birds from all parts of the world. Frequently there are balls, picnics and special attractions, and on Thursday evening there is a fete. The gardens were opened in 1875, and since then over \$300,000 has been expended.

Each of the four inclined planes leads to a famous resort. On the east is the Highland House, on the north Lookout and Bellevue, and on the west Price Hill. Thousands flock to these, especially summer evenings and on Sundays.

Spring Grove Cemetery is six miles from the river, in the valley of Mill Creek, on Spring Grove avenue. It comprises 600 acres, and has had therein about 35,000 interments. Its numerous springs and groves suggested the name. It is probably the most picturesque, as it is the largest cemetery in the world. It is on the plan of a park, to relieve the ground of the heavy, incumbered air of a churchyard, and to present the appearance of a natural park. It is exquisitely laid out, with far-stretching lawns, miniature lakes and shrubbery, and ornamented with stately monuments, chapels, vaults and statues. There are about 7,000 lot-holders. The more prominent objects are the Mortuary Chapel, the Dexter Mausoleum and the Soldiers' Monument. Many eminent historical characters are interred here. The spot is so enchanting that it seems as an earthly Paradise rather than a home of the dead.

The great beauty of the cemetery is largely due to the late Prof. Adolph Strauch, landscape gardener and arborculturist, who died in 1882, and who was for many years its superintendent. "To him belongs the credit of giving to Cincinnati her renown for beautiful suburbs, with landscapes lovely as a dream." He estimated, exclusive of funerals, that in a single year (1880) it had a quarter of a million of visitors.

The Tyler Davidson Fountain is the grandest fountain on the continent. It stands on the Esplanade in the centre of Fountain square, which is a raised stone structure twenty-eight inches in height. This square is near the centre of the city and from which distances are calculated and the car lines mostly start. The fountain is a work in bronze consisting of fifteen large figures, of which the most prominent represents a woman from whose outstretched prone hands water is falling in fine spray. She is the Spirit of Rain. The head of this figure rises forty-five feet above the street level. The fountain was designed and cast in Munich, at a cost of \$200,000. The work was presented to Cincinnati in 1871 by one of her public-spirited citizens, Henry Probasco, a patron of arts and literature, whose magnificent residence is one of the palaces of the suburbs.

The GOVERNMENT BUILDING is on the same street near it, and is a magnificent and convenient structure. Herein are the custom house, court rooms and post-office. It is built of gray stone, and cost \$5,000,000, the most expensive building in the city. Close by it also is the EMORY ARCADE, one of the largest in the world; extends between two streets, a passage way of 400 feet protected by a glass roof. It is lined with varied shops, and is decidedly Parisian

ART BUILDINGS, EDEN PARK.

THE SUSPENSION BRIDGE.

in character. A few squares from the fountain, near the Lincoln Club House, is

the colossal statue of Garfield, by Niedhaus, a Cincinnati artist.

The Broadway of the city is Fourth street, the aristocratic East end—where faces the once famous Longworth mansion and garden—to the railroad environed West end. Several blocks on Fourth street are solid, lofty structures. Among these is Pike's Opera House and the new Chamber of Commerce, dedicated January 30, 1889, ex-Gov. Edward F. Noyes being the orator of the occasion. It is a most striking work of art in Roman Provençal style, one of the best designs of the celebrated Richardson—its cost was over \$700,000. Two other remarkably fine structures, both designed by Hannaford, are now in the course of construction—the New City Hall and a City Armory.

Two admirable buildings of stone stand high upon a hill in Eden Park. They are the ART MUSEUM and the ART ACADEMY, designed by McLaughlin. The first of these cost nearly \$400,000, and the other is correspondingly costly. These buildings were bestowed upon the city by the munificence of several liberal individuals. Charles W. West gave \$150,000, David Sinton \$75,000, Joseph Longworth \$37,100. Reuben Springer and Julius Dexter then subscribed largely. Over a million of dollars have been given to the museum since 1880, and the

art school is the best endowed in the United States.

The Art Academy building, completed in October, 1887, was entirely the gift of David Sinton. The Art Academy is an outgrowth of the old "School of Design," a branch of the McMicken University. In 1887 it had 400 students and twelve instructors, teaching and lecturing. Excepting an initiation fee of \$10, the institution is free.

The greatest pride of the city and its greatest ornament is the Music Hall and Exposition Building. It occupies most of a block and faces Washington Park. Its architect was McLaughlin. The building is brick and in the modernized Gothic style. The whole front on Elm street is 402 feet; 95 feet being given to each of the exposition buildings, and 178½ feet to the music hall. The widest part of the building is 316 feet. The buildings are so arranged that they can be used separately or together, and the upper stories so they can be connected by bridges. In these buildings is the grand music hall. It will hold 8,728 persons—seat 4,228, give standing room for 3,000, while the stage will accommodate 1,500. The GREAT ORGAN is one of the largest in the world. It was but in Boston, but the artistic screen of wild cherry was designed and carved by residents of Cincinnati. It has 96 registers, 6,237 pipes, 32 bells, 42 pedal movements, and 4 keyboards of 61 notes each. Its cash cost was \$32,000.

The College buildings, adjoining the magnificent Music Hall, contain forty class and study rooms, libraries, waiting-rooms, offices and a large and beautiful concert hall, "The Odeon," seating 1,200 persons, with a stage thoroughly equipped for operatic and dramatic performances. The Cincinnati College of Music is open throughout the year, Peter Rudolph Neff, president; Professor Schradieck, musical director

The amount of taxable property in Cincinnati is over one hundred and seventy-two millions. Next to Chicago this is the chief pork-packing place in the world. The brewing of lager beer is an industry that ranks next to the pork business. Over twenty million gallons of beer are produced annually in its breweries; distilling; heavy capital is engaged in the manufacture of iron, stone and wood; other important lines of manufacture are clothing, and in food products it is the largest mart in the world. For over half a century Cincinnati has held a leading rank as a printing, publishing and lithographing centre. It has the largest school-book house in the world—that of Van Antwerp, Bragg & Co., publishers of the eclectic series of text-books.

EDUCATION IN CINCINNATI.

The public-school system embraces schools of every grade, from kindergarten to university; the number of pupils enrolled in 1887 was 53,402. The schools are celebrated for their general excellence and for several special features of reform. They made a famous exhibit in the Exposition of 1876 in Philadelphia. They set the example now so widely followed of celebrating Arbor Day and Author Day

The Public Library is under the management of the Board of Education, and free to the people. It is in a spacious and elegant building, has 164,000 volumes and an annual circulation of about 400,000 volumes; it is under the charge of A. W. Whepley. Beside this is the Mercantile and other public libraries, and some fine private libraries. The most noteworthy of the latter is that of A. T. Goshorn, in consequence of its peculiarly honorable history. He had been directorgeneral of the National Exposition of 1876 at Philadelphia, and refusing pecuniary compensation for his services, the citizens presented him with \$10,000 in value in books of his choice, and sent on a committee to fit up a room in his residence for their reception; this was done in exquisite taste. The library of Enoch I. Carson, burned some years since, was extraordinary as the most complete Masonic collection in the world, beside a fine Shakespearian collection.

The University of Cincinnati is a municipal institution, forming part of the system of public instruction. It was founded on a bequest of Charles McMicken; its endowment is over \$750,000; its faculty numbers fifteen professors, Hon. J. D. Cox, ex-governor of Ohio, being president. Both sexes are admitted and college degrees conferred. The Cincinnati Observatory, on Mount Lookout, four miles in a direct line from the city, founded by Gen. O. M. Mitchell, belongs to the university; there is also an organic connection between the university and the medical colleges—the Miami and the Ohio—and also with the College of Dental

Surgery and that of Pharmacy.

The Medical College of Ohio was established in 1819, and has ten professors; the Miami Medical College has twelve professors. The homeopathists have an excellent institution, the Pulte College; and there is an Eclectic College, a Physico-Medical Institute and other schools. The city hospitals are large and admirably conducted; the Cincinnati Law School, founded in 1833, J. D. Cox, dean, is a flourishing institution, with many pupils; the Ohio Mechanics' Institute, the Cincinnati Technical School, the Society of Natural History with its museums and lectures, the system of kindergartens and the kitchen garden are all of a high order of efficiency.

As a centre of musical education the Queen City claims to be without a rival on the continent. The College of Music, with splendid quarters in Music Hall and the Odeon, draws students in all departments of the art, from all parts of the United States. The famous opera festivals and May musical festivals of the city are visited annually by thousands and thousands of people. Miss Clara Bauer's conservatory is also widely known; there are other music schools, especially piano schools. Beside the Art Academy, the arts of drawing and design are well taught in the public schools, in the Technical School and in many private schools, and by special teachers of art in their studios.

Lane Theological Seminary, on Walnut Hills, went into operation in 1832, under the Presidency of Lyman Beecher, D. D., and has since graduated about 700 students. It is well endowed, and has a fine library. St. Xavier College, on Sycamore street, is the great Roman Catholic institution of the Ohio valley. The Catholics possess a powerful system of public schools in connection with their many churches, and have a monastery near the city for the training of priests.

The Jews are numerous and influential in Cincinnati, possessing several synagogues of striking architectural beauty. The American Israelite, the organ of liberal Judaism, is conducted by Dr. I. M. Wise, who is also President of the

Hebrew Union College, a flourishing institution for the education of rabbis. The Wesleyan Female College was founded in 1842, and is controlled by the Methodist Episcopal Church. Many Cincinnati ladies, prominent in charitable and educational works, are alumni of this college, among them the wife of President Hayes.

Business education is a prominent feature: commercial colleges are numerous, and there are schools of type-writing, telegraphy and all the graphic arts; among them the Cincinnati School of Phonography, which enjoys the hearty recommendation of Mr. Benn Pitman, so favorably known for his discriminating lectures on Art in the Art Academy. Cincinnati has been a centre for short-hand since 1849. Benn Pitman came from England to America in 1853, and settled here to advance his brother's system of short-hand, invented in 1837.

Fry's Carving School is one of the unique institutions of the city. It is conducted by Henry L. and Wm. H. Fry, father and son, and granddaughter, Laura H. Fry. Some of the most exquisite wood carving ever executed in the country is by them. The Frys did a large part of the elaborate carving in Henry Probasco's residence, in Clifton, and of the casement of the great organ in Music Hall. Art furniture of all kinds is made to order, and many specimens of their

handiwork are to be found in various parts of the Union.

Clays for the manufacture of tiles and the finer grades of pottery are plentiful in the vicinity of Cincinnati. The artistic ceramic wares made here have a high reputation. The Rookwood Pottery, founded by Mrs. Maria Longworth Storer, daughter of Joseph Longworth, was designed to advance artistic culture in the line of ceramics. The establishment is an admirable one, managed wholly by ladies, and its products are chiefly sold at the East and in Europe. Its decorators were mostly educated at the Cincinnati Art Academy. The wares are unique, resembling Limoges. They display unusual richness and harmony of coloring. In style of decoration they are peculiarly American, the native plants, flowers and other objects having been much used in the designs. Carving in clay is a feature in the ornamentation. A specialty of this establishment is that the color of the body is utilized as a part of the decoration.

EXPOSITIONS.

The Industrial Expositions of the city had their origin in the annual fairs of the Ohio Mechanics' Institute, the first of which was held in Trollope's Bazaar building, in 1838. These fairs ceased owing to the civil war. In 1869 the Wool Growers' Association of the Northwest gave a Textile Fabric Association which lasted four days, and was such a great success as to lead, through the exertions of Mr. A. T. Goshorn and his associates, to uniting the three great organizations—the Board of Trade, the Chamber of Commerce and the Ohio Mechanics' Institute, in a plan to give "the Cincinnati Industrial Exposition of Manufactures, Products and Arts in the year 1870."

Each of these bodies was represented by a committee of five members chosen for their zeal and peculiar capacity. They received no salary although their services involved much labor and time. To be an exposition commissioner was thought to be a distinguished honor. An exposition organized in this way could only be a public trust. There were to be no profits, no dividends to anybody. As a financial basis a guarantee fund was subscribed of \$24,000. The form of subscription was a note by the guarantor for the amount of his individual guaranty, payable to the Exposition Commissioners only in case the receipts of the Exposition failed to pay expenses, and then only in proportion to the amount of deficit. The city banks advanced money on these notes.

The Exposition was held in a massive building erected for the National Saengerfest of the same year. With additions the exhibiting space covered seven acres. This entire space was filled with interesting exhibits, and the exposition was open from September 21 till October 22. Admission 25 cents. When it

closed it was found that over 300,000 visitors had passed through its gates; that the receipts had been about \$54,000, leaving a small surplus over all expenses.

Not only was the city delighted with the great success but a wide interest was aroused throughout the country, whence visitors were drawn by the thousands to the great exposition. For the four following years expositions were held, and so far successful that no assessments were made on the guarantors.

"No exposition was held in the year 1876, on account of the great Centennial Exhibition in Philadelphia; but it was a high compliment to the Cincinnati plan and management that, as early as the year 1872, the Philadelphia Commissioners visited the great Cincinnati Exposition of that year, studied its details carefully, and afterwards chose for the important office of director-general of their exhibition A. T. Goshorn, then the President of the Cincinnati Board of Exposition Commissioners."

Meantime Music Hall had been built as one of the outgrowths caused by the exposition, all the people uniting to this end, even the school-children giving concerts with their massive child choruses in aid of the enterprise.

In 1888 was inaugurated "The Centennial Exposition of the Ohio Valley and Central States," for the support of which a guarantee fund of \$1,050,000 was subscribed by the people of Cincinnati. Honorary Commissioners were appointed from thirteen States, including their respective governors, thus giving national significance to the event, which was intended also to celebrate the settlement of the Northwest Territory. Buildings occupying a large part of Washington Park and spanning the canal were erected, which in connection with the permanent Exposition Buildings furnished a floor area of about thirty-two acres.

In this was gathered a magnificent collection of manufactured articles, products of the soil and works of art, illustrating the mighty progress of a century. Congress appropriated \$250,000 towards a national exhibit of some of their rarest and most valuable archives, which were placed in charge of government officials.

The Exposition was opened July 4, 1888, by a great daylight procession, much of it illustrative of the early history of the country and its wonderful progress. The streets were throughd with hundreds of thousands of people, all bearing testimony to the manner in which the popular heart was responding to the demands of the celebration.

The Exposition continued over 100 days, and the entire enterprise was a grand industrial and artistic success, reflecting great credit and honor upon the citizens of Cincinnati, Exposition Commissioners and exhibitors.

CLUBS AND CLUB LIFE.

Cincinnati abounds in clubs, social, literary and scientific. It being largely a collection of suburban towns, difficult of access one directly with the other, gathered around a central town readily accessible from each, has tended to the establishment of clubs. The Historical and Philosophical Society is located on Garfield It has a Museum of Natural Curiosities, a Historical Library of 7,000 volumes and over 40,000 pamphlets, many of them rare and containing a mine of information on the early history of this region. A club of a similar character is the Natural History Society, located on Broadway. This society has quite an extensive museum, and it stimulates an interest in the natural characteristics of the surrounding country. Connected with the club is a section devoted to photographic work which makes excursions to the various points of beauty and interest about the neighborhood. These have resulted in a collection of beautiful views, which, supplemented by plates obtained by exchange with similar societies, furnish the material for an annual exhibit of remarkable variety and excellent workman-Lectures are given of a popular character on scientific subjects which are free to the public at large. The society has regular meetings at which papers are read and discussed. The Unity Club supplies a regular course of Sunday afternoon lectures, open to the public at a nominal fee. These are usually given in the Grand Opera House, where are heard during the winter some of the best lecturers in the country. Through the efforts of Librarian A. W. Whelpley, they are largely attended, and have become a permanent feature in the life of the city. The Unity Club comprises both sexes and has varied objects. Its membership is very large and far reaching. Throughout the winter on Wednesday evenings a regular course of exercises is carried out. One night it is a lecture by some member on some literary subject, the next night a debate, the following an amateur dramatic performance, or an opera, and so on throughout the year. These lectures are so arranged that they form a connected whole on some subject, each member being assigned a particular branch of the topic under study for treatment.

The Cuvier Club was organized in 1874, for the protection of game and fish and for social purposes. It has a very fine collection of 3,000 specimens of birds and fish. The building of the Club, on Longworth street, is excellently designed, with a large room for a museum above, where are trophies of the chase and social rooms with a small library and periodicals. The club claims to make the best laws, to catch the best fish and game in season, and to have in its membership the best whist-players of this section. The club has been of great service in keeping before the public and various legislatures the great harm that arose from the indiscriminate pursuit of game and fish; and it has been indefatigable in its efforts to procure the enactment and enforcement of suitable laws.

Then there are the Ladies' Musical Club, a Press Club composed of journalists and four large purely social clubs. Two of these, the Allemania and the Phœnix, are limited entirely to those of Jewish extraction. The Queen City Club has the handsomest building, and here are gathered the men of wealth of the city. It has attached a ladies' apartment, which is enjoyed by the wives and daughters Billiard rooms and card rooms are plenty, and its table excelof its members. lent. Within the club is another club, the Thirteen Club, with thirteen members, which seats itself and dines on the Thirteenth hour of the Thirteenth day of each month. The Ananias Club, devotes itself entirely to dining. The object of this club is good fellowship and the promotion of truth. It numbers among its members newspaper men, lawyers, doctors, artists and musicians. It has no Constitution and only one officer, whose business it is to attend only to his own. At its dinners, which are only occasional, there rests in the centre of the table the original hatchet used by G. Washington in his famous cherry tree difficulty, surmounted by the skull of Ananias, which is alike original—the identical skull which he used when living. The annual meeting is always held on Washington's birthday; of course, his first and only one.

The Country Club has a very comfortable place near Carthage, with a convenient club-house and large grounds, where can be had tennis, shooting, or any sports that suit the fancy. It is sufficiently far from the city for a pleasant drive for the members and their friends. The University Club is composed entirely of college graduates, and about all the principal colleges in the country are represented. As with the Queen City Club a large number of its members lunch here regularly.

Two other characteristic clubs are the U. C. D. and the Literary Club. The U. C. D. is a club organized of ladies and gentlemen in 1866 on Mount Auburn, for the reading of essays, music and theatricals.

The Literary Club is the oldest of the kind in the country. At the first meeting were Judge Stanley Matthews and A. R. Spofford, Librarian of Congress. The club was devoted to the discussion of various topics, social, literary, theological and political, the reading of essays and a monthly newspaper; also recitations. Rutherford B. Hayes was elected a member in 1859, and on March 9th of that year, acting as chairman, he decided in the negative on the merits of the question: "Has the agitation in the North on the slavery question been an advantage?" On the merits of the question the club also voted in the negative.

The same year the club discussed and decided in the negative, "Are there any causes at present existing from which we have reason to fear a dissolution of the Union?" Among its members have been many prominent men beside those here mentioned. Buchanan Read, Salmon P. Chase, Fred. Hassaurek, O. P. Morton, James Beard, Generals McClellan and Pope, John W. Herron, John M. Newton, W. F. Poole, Ainsworth Spofford, Moncure D. Conway, Henry Howe, Chas. Reemelin, J. B. Stallo, Donn Piatt, E. F. Noyes, Alphonso Taft, etc. At the outbreak of the war the club organized itself into the Burnet Rifles, about 60 in number; a larger part of the members became officers in the Union army. The club is very flourishing, with an increased membership.

HISTORIC MISCELLANIES.

THE OHIO STATE FORESTRY ASSOCIATION.

When in 1881 the Von Steubens came to America to unite in the centennial celebration of the Surrender at Yorktown, in which their ancestor, General Von Steuben, had taken such an illustrious part, they visited Cincinnati. Among them was Baron Richard Von Steuben, the Royal Chief Forester of the German

Empire.

In conversation with him some of the gentlemen of the city became so deeply interested on the subject of forestry, that they met in conference in January, 1882, to take measures to interest the people in the subject. They were Col. W. L. De Beck, Rev. Dr. Max Lilienthal, the Hebrew rabbi; John B. Peaslee, School Superintendent; Hon. John Simpkinson, the first President of the Association; Col. A. E. Jones and Hon. Emil Rothe. Through a committee then organized, for the next three months the press of the country laid before the people the subject of forestry in its various important aspects. The continuous history of the subject we take from a pamphlet, "Trees and Tree Planting," with exercises and directions for the celebration of Arbor Day, by John B. Peaslee, Supt. Public Schools, issued by the Ohio State Forestry Association, Cincinnati, 1884.

The work of the committee culminated in a three days' meeting at Music Hall, April 25th, 26th and 27th, at which most of the distinguished foresters of this country and Canada were present and read papers before the scientific department. The excellent programme for this meeting was principally made by Dr. John A. Warder and Prof. Adolph Leué. Governor Foster made the address of welcome.

The public schools were dismissed on the 26th and 27th, to enable the pupils and teachers to take part in the celebration of tree planting in the public parks. The 27th had been appointed as Arbor Day by proclamation of the Governor. Extensive preparations had been made for its appropriate celebration in Eden Park.

The city was in holiday attire. The soldiery and organized companies of citizens formed an immense procession under command of Col. S. A. Whitfield, and marched to the park, where the command was turned over to Col. A. E. Jones, the officer in charge. The school-children were under the charge of Superintendent Peaslee. Fifty thousand citizens covered the grassy slopes and crowning ridges, those assigned to the work of transplanting trees taking their respective places.

At the firing of the signal gun "Presidents' Grove," "Pioneers' Grove," "Battle Grove," "Citizens' Memorial Grove" and "Authors' Grove" were

planted and dedicated with loving hands and appropriate ceremonies.

Addresses were made by ex-Gov. Noyes, Dr. Loring, Cassius M. Clay and Durbin Ward, and others. No sight more beautiful, no ceremonies more touching had ever been witnessed in Cincinnati. An important lesson in forestry had indeed been brought home to the hearts of the people, and a crown of success was awarded the American Forestry Congress. This was the first Arbor

Day celebration in Ohio. And thus closed the first session of the American Forestry Congress, which embraces in its scope the United States and Canada.

In 1883 the Ohio State Forestry Association, the outgrowth of the American Forestry Congress, was organized. The organizers were Dr. John A. Warder, Prof. Adolph Leué, Col. A. E. Jones, Hon. John Simpkinson, Supt. John B. Peaslee, Gen. Durbin Ward, Hon. Emil Rothe, Hon. Leopold Burckhardt, D. D. Thompson, Prof. R. B. Warder, Prof. Adolph Strauch, Dr. A. D. Birchard, Hon. Charles Reemelin, Prof. W. H. Venable, Dr. W. W. Dawson, John H. Mc-Makin, Esq., and perhaps a few others. A convention was held in April.

By authority of a joint resolution adopted by both branches of our State Legislature, Governor Foster issued his proclamation, appointing the fourth Friday in April as Arbor Day, which was the last day of the convention. Accordingly, the association had made extensive preparations for its celebration in Eden Park

by the citizens and by the public schools.

This second celebration of Arbor Day in Cincinnati was thus described at the time.

"The east ridge of the park was thronged with the associations planting tablets to the memories of the Presidents of the United States, the heroes of Valley Forge, and the pioneers of Cincinnati in their respective groves, while the northern projecting slope of the ridge was occupied by fully seventeen thousand schoolchildren in honoring 'Authors' Grove.' Viewed from the summit of the ridge immediately west, the sight was one of the most animating ever brought before the eyes of Cincinnatians. The entire ridge, nearly a third of a mile in length, was occupied by those persons taking part in the first-named ceremonies, while the slope designated was occupied by a dense mass of gayly dressed children in active motion over a surface of about five acres, and whose voices, wafted across the deep hollow to the western ridge, sounded like the chattering from a grove full of happy birds. The eastern slope of the west ridge was occupied by three thousand or four thousand spectators, who, reclining on the green spring sod of the grassy slopes, quietly surveyed the scene from a distance. In all there were over twenty thousand persons present. Over in the centre of the east ridge was the speakers' stand, with a tall staff bearing the national colors rising from the centre, while smaller flags marked the trees dedicated to each author. The grove to the honor of Cincinnati pioneers had been planted by the association, and yesterday the tablet was laid to their memory. All the tablets were of uniform size and construction, each being of sandstone, twenty-four by thirty-six inches surface, and eleven inches depth. That for the Cincinnati pioneers contained at the upper centre a figure of the primitive log-cabin, and the following inscription, 'Planted and Dedicated to the Memory of the Pioneers of Cincinnati by the Forestry Society.' Below were cut the names of the pioneers.

"'Presidents' Grove' bore a tablet with the following inscription: 'Presidents' Grove, Planted and Dedicated to the Memory of the Presidents of the United States, by the Forestry Society, 1882, Cincinnati, April 27th.' Then followed

the names of all the twenty-one Presidents, down to President Arthur.

"'Centennial Grove' was planted in 1876 by Colonel A. E. Jones, from trees brought from Valley Forge. The tablet he had laid yesterday was dedicated to the heroes who served with Washington at Valley Forge. Following is the inscription: Eagle bearing the scroll 'Centennial Grove. Dedicated to the memory of 1776, and the patriots who suffered with Washington at Valley Forge, brought from that historic ground and planted by A. E. Jones, April 27, 1876.' Then followed the names Washington, Knox, Lafayette, Greene, Hamilton, Gates, Wayne, Putnam, H. Lee, Steuben, Weldin, Muhlenburg, Sullivan, Stark, Warren, McIntosh, Potter, Maxwell, Woodward, Patterson, Allen, De Kalb, Kosciusko, Marion, C. Lee, Glover, Poor, Larned, Scott, Pulaski, Sumter, Lincoln, Morgan, Smallwood, Eberhardt.

"At eleven o'clock the school exercises commenced at 'Authors' Grove.' The

trees having previously been planted, small granite tablets, about eight inches square, bearing the name of the author honored and the date of the ceremony, were sunk, in most cases uniformly with the surface of the sod, in the immediate vicinity of the tree. Thus the exercises were dedicatory only."

These were the first memorial groves ever planted in America; the first public planting of trees in honor of the memory of authors, statesmen, soldiers, pioneers,

and other distinguished citizens.

The credit for the inauguration of Arbor Day anywhere is given to Hon. J. Sterling Morton, who suggested the propriety of the day and was instrumental in effecting the first observance, while he was governor of Nebraska, in 1872. Since that date it is stated that in Nebraska have been planted six hundred millions of

The two following articles upon floods and riots were written for this work, by Mr. Harry M. Millar, of the editorial corps of the Commercial Gazette.

OHIO RIVER FLOOD.

BY HARRY M. MILLAR.

The Ohio river, one of the greatest national waterways. 950 miles in length, is formed at Pittsburg by the confluence of the Alleghenv and Monogahela rivers, coming from opposite directions. The Allegheny sources are numerous creeks in the mountains of New York, and is fed by hundreds of other tributaries that traverse Western Pennsylvania and parts of Ohio, draining an area of 13,000 square miles. The sources of the Mononga-hela are not large streams but they are numerous, especially in Maryland and West Virginia.

The Cheat river, its largest tributary, drains much mountainous country, and its sudden fluctuations are a wonder to not only visitors but the inhabitants along its banks. It is a frequent thing in the early spring or during the rainy season for this stream to rise over thirty feet within twenty-four hours. Youghiogheny is also an important feeder of the Monongahela. The estimated drainage of the Youghingheny and its tributaries is 2,100 square miles, the Monongahela and its tributaries 4,900 square miles, making the total watershed of the Monongahela 7,000 square miles, which, added to that of the Allegheny, gives a grand total area of 20,000 square miles drained by the sources of the Ohio river. From the forking of these rivers in Pennsylvania to its mouth at Cairo there are tributaries innumerable, many of which are navigable and at a good boating stage the greater part of the year.

These geographical and topographical situations are important causes which lead to the frequency of floods in the Ohio river. The month of February in the Ohio valley along the course of the river in later years has been looked for with dread. The highest stages of the river, the greatest floods and the most suffering, and great property losses within the past decade have occurred at that time of the year. The melting of snows in the mountains, sudden thawing spells, added to which are the early spring rainfalls alternated with sleet, all combine to bring on these freshets. The encroachments upon the

bed or channel of the river have in a great measure caused a narrowing of the width of its bed. So many large cities, towns and villages are strung out along its shores that the debris from sawmills, einders and other material by being "dumped" over its banks have confined the rush of the waters to a fastly filling-up canal bed. In fact such has the Ohio river become within the past few years. Great stone pier bridges have been erected in the river bed, dams have been built, and these things combined have had a tendency to yearly increase the danger to the lowlands along the valley.

The greatest floods in the Ohio river were on February 18, 1832; December 17, 1847; February 15, 1883; February 14, 1884, and March 26, 1890. In 1832 the highest stage reached was 64 feet 3 inches; 1847, 63 feet 7 inches; 1883, 66 feet 4 inches; 1884, 71 feet and $\frac{3}{4}$ inch, and in 1890, 59 feet 2 These heights are measured from low-water mark, which is 2 feet and 6 inches above the bed of the channel.

The flood of 1884 exceeded all the others, and at the present writing stands on record as having attained the highest stage. Beginning on the 14th day of December, 1883, it continued rising until noon of February 14th, a space of two months, during which time there was much suffering among the people, loss of life and property. The meteorological causes began at the date mentioned, when the winter's first snow fell throughout the Ohio valley—a fall of a fraction less than an inch, with the stage of water in the Ohio at 10 feet 7 inches at Cincinnati, a minimum to which it did not again decline for a period of over six months.

During the month of December the total fall of snow, sleet and rain, reduced to rainfall, was 5.61 inches, while the highest stage of the river during the month was 49½ feet on the 28th, after which it began to decline.

The first two weeks in January were cold, with frequent light snows, with a heavy two days' fall on the 14th and 15th. Cold weather then set in and the river alternately rose and fell, varying from 15 feet 9 inches on the 29th to 31 feet 3 inches on the 31st, when the

great flood of 1884 properly began.

At Cincinnati, at this time, the solidified snow previously fallen was from 18 inches to 4 feet deep, which was packed upon the hills. mountains and valleys of the Ohio river and its tributaries and the smaller streams tributary to the latter. A depth of 10 inches of snow fell in January, and the rainfall of the month was 1.23 inches. From the 30th of January to the 13th of February a general thaw progressed with rain day after day, all

combining to affect the river accordingly.

The Ohio river continued rising steadily and rapidly, and at Cincinnati on February 2d had reached a stage of 49 feet 11½ inches, having entered the buildings at the foot of Broadway, Main and Walnut streets. same afternoon there was a heavy fall of rain that carried much of the solidified snow into the river and local tributaries, and a rise again set in that did not cease until noon of the 14th, when it culminated in the highest stage of water at the mouth of the Licking river that had ever been seen at that point by an enlightened people. The total amount of the rainfall on the 4th was 1.35 inches; a dense fog came over the city and in the bottoms became so dense that artificial light was necessary in all buildings south of Third

The thermometer had crept up to 62°; there was a miasmatic feeling in the atmosphere that was stifling, and the general darkness prevailing cast great gloom among the populace. At all river points above there was a heavy rainfall, while the Monongahela and Licking rivers had started on a second freshet and were rising several inches per

Daylight the next day found all the buildings fronting on the river between the Suspension Bridge and Main street, and Ludlow and Broadway, invaded by the water. The Mill creek bottoms of Cincinnati, as well as the lowlands in Pendleton and Columbia, were submerged, and later in the day the alarming news came that Lawrenceburg and Aurora were partly submerged, the river steadily rising, and grave apprehensions were felt for the security of the levees in front of those cities.

All day on the 5th a steady downpour of rain fell, measuring 1.56 inches, and more rain had fallen in eight hours on the days of the 4th and 5th than fell in four days pre-reding the same stage of water on February 8, 1883. The river was 20 feet and ½ inch higher than at the same time of the previous year, and there had been but nine years in which the stage of the water exceeded that at midnight of the 5th.

The Kentucky river, when it pours into the Ohio, prevents the water of the latter from passing off freely, and is thus a factor in producing high water at Cincinnati. At 1 o'clock of the morning of February 6th the levee at Lawrenceburg gave way and her citizens called upon the people of Cincinnati to come to their relief. The Chamber of Commerce immediately called a meeting, and committees were appointed to adopt meas-

ures of relief.

At Cincinnati the water extended above Second street on Sycamore and Broadway, and was two feet deep at Third and Wood streets, while communication with the Suspension Bridge was cut off except by boats. On the 8th the Cincinnati Gas Works became submerged at noon, when the stage of the river had reached 62 feet 6½ inches. The next day, at 9 o'clock A. M., the stage of water was 63 feet 7 inches, the high-water mark of December 17, 1847, and by midnight covered the high-water mark of February 18, 1832, 64 feet 3 inches.

Heavy rains again set in at headwaters on the 10th, and all the streams again began rising. Point Pleasant, Va., was entirely in-undated, there being four feet of water in parts of the town that had escaped the flood of 1883, while the back-water from the Ohio extended up the Kanawha fifty miles, inundating farm houses and villages of the valley and entirely wrecking the track of the Ohio The width of the Kan-Central Railroad. awha varied from three to five miles. Be-tween Ripley and Cincinnati, all houses on both banks of the river, that remained in their places, were invaded or entirely covered by water, and some towns were nearly washed out of existence. The Ohio back-water extended up the Little Miami to Milford, with the Little Miami also rising.

On the night of the 12th a wind-storm from the south rocked from their foundations many houses that had withstood the force and buoyancy of the current. Dayton and Bellevue, Ky., were invaded and the greater part of the northwest portion of Covington was covered. There were 13,000 applicants for relief at Newport—half of the city being

under water.

On the 13th a decided cold wave set in throughout the Ohio valley, and this gave assurance that its climax was near. temperature grew colder and colder at Cincinnati, lowering to 20°, and the great flood of 1884 reached its maximum at noon on the 14th of February, when the stage of water was 71 feet and $\frac{3}{4}$ of an inch. The situation at Cincinnati at this time was that not a street in Pendleton was free from water, and the line extended up Deer creek valley to the foot of the Highland House Inclined Plane. Up the Mill creek valley it had spread eastwardly until Lincoln Park was entirely covered, and reached Baymiller street or Clark.

The water first licked the streets north of Pearl on Race, Vine, Walnut, Main and Sycamore streets, and the first floors of buildings at the north side of Lower Market were covered with water to Broadway. The water from the Ohio river on the south, and from the Mill creek bottoms on the west, met and commingled at the southwest corner of Fourth and Mill streets. It extended above Longworth street on Hoadley, and from the west on Sixth covered the railroad tracks that lead out of the Cincinnati, Hamilton and Dayton Railroad passenger depot. On Eighth street the water extended eastwardly to Harriet. South of Third street and west of Rose, extending northwestwardly past Clark and Baymiller streets, all avenues were navigated by skiffs and small boats. Mill creek bottom was one bay of water so deep that the largest steamboat that navigates the Ohio river could have passed over.

The Licking and Ohio rivers met in Newport at the corner of Columbia and Madison streets; half of the city of Newport was under water, and part of the Newport and Covington Suspension Bridge that spans the Licking river was covered by water several

feet deep.

The Ohio and Mississippi Railroad established boat communications, carrying their traffic to places between Cincinnati and Aurora. There was not a railroad track entering Cincinnati which was not submerged, except that of the Cincinnati Northern or Toledo, Cincinnati and St. Louis Railroad. Merchants in the bottoms had at great labor and expense removed their wares to places of safety, the various stock-yards ceased doing business, the river business for steamboats was entirely suspended, and the boatmen royally and heroically gave their time and labor to the saving of property and the rescue of people and live-stock. Boats were chartered by the Cincinnati Chamber of Commerce Relief Committee, and carried clothing

and provisions to the destitute and suffering at points above and below Cincinnati.

Cincinnati contributed \$96,680.12 for the relief of flood sufferers, this amount being realized from private subscription. The sum of \$97,751.22 was contributed by persons not citizens of Cincinnati; all this money was applied, with the exception of \$5,260.74, which was turned over to the Sinking Fund

Commission of Cincinnati.

The fall of 1889 and the first three months of 1890 were remarkable for the steady and heavy rainfall. This, of course, produced much water, and during February, 1890, it was feared that Cincinnati would experience another flood. There had fallen but little snow in the mountains, and that was favorable; yet there were two good-sized freshets, and of such proportions as to cause much alarm and apprehension throughout the Ohio valley. The greatest damage, however, this section of the country escaped; but the Missouri and Upper Mississippi rivers, rising to an unprecedented stage at the same time the Ohio and its tributaries were bank-full, caused the Lower Mississippi to reach the highest stage recorded in history, causing great suffering, privation, loss of life and damage to homes all along the Mississippi valley from Cairo to New Orleans. The highest stage reached by the Ohio river during the spring freshet in 1890 was on March 26th, when the marks at the city water works at Cincinnati indicated 59 feet 2 inches

The Court-House Riot of 1884.

With the possible exception of the first bank riot that occurred in 1820 upon the suspension of the Miami Exporting Company, and on the occasion of the second suspension on the 10th of January, 1842, of the same organization, Cincinnati has never witnessed such violations of law, defiance of authorities, and so much bloodshed as attended the great Hamilton County Court-House riot on the night of March 28, 1884, and continued several days, there being open conflict between the militia and police on one side, and an excitable, yet determined, law-less mob upon the other.

The circumstances that led to this most unfortunate affair was the trial for murder of Wm. Berner, who killed his employer, Wm.

Kirk.

It was one of the most outrageous assaults upon society, and a dastardly, cold-blooded crime that unsteadied the nerves of the populace, causing excitement to run high, and incensed all law-abiding citizens when the case came to trial by the methods pursued by criminal lawyers, who sought to perjure witnesses, bribe juries, and resorted to openhanded means to have their client acquitted against all principle of law or justice.

The newspapers published the proceedings of the trial in detail. The court-house was, during the examination, crowded to its capacity. The methods resorted to by the

lawyers was the subject of general conversation, and culminated in there being called at the great Music Hall, on the evening of March 28, 1884, of a mass-meeting of citizens. At this meeting speeches were made by Dr. Andrew C. Kemper, Judge A. G. W. Carter (since deceased), and General Andrew Hickenlooper, who each denounced in strong terms the methods pursued in acquiring a verdict. It was here asserted that the verdict was acquired by the cunning and adroitness of lawyers known for their legal talent. Five hundred and four people had been called to form a jury of twelve. It was a self-confessed murder, a murder committed deliberately for the sake of robbing a man of \$285. the proceeds from the sale of a horse; and had been planned weeks beforehand and then coolly consummated. The criminal lawyers were denounced as equally culpable of violation of law and order as the murderer. jury had only returned a verdict of manslaughter after hearing Berner's self-confession, and it was openly alleged in the speeches at the mass-meeting that the criminal lawyers were instrumental in securing, by bribery and other nefarious methods, such a verdict.

Resolutions were adopted condemning the verdict. Excitement ran high; but while the speeches were being made by three of the most honored and respected citizens, there

was a death stillness. Every word uttered was weighed. Every sentiment expressed seemed to find endorsement from every person in that crowd of at least six thousand souls.

Immediately after the meeting, as the masses were surging out upon Elm street, some one in the crowd shouted, "Fall in! Let's to the jail!" and a great mob from the meeting proceeded directly to the county jail in the court-house on the Sycamore street

side, above Court street.

On the way the mob was increased by hundreds of others. Upon reaching the jail it was surrounded by a howling, angry crowd. A piece of joist was procured, and with it the basement doors, at the foot of the stone steps, were battered down. Bricks and stones were hurled by men in the street above at the windows. Clubs, huge pieces of timber, crow-bars, and other weapons were quickly procured and passed down to the men who were at work upon the heavy outside entrance doors of the jail, and it at last yielded, the work being done speedily. The crowd then poured into the jail office, and there found other obstructions in the matter of stone walls and heavy iron grated doors.

Morton L. Hawkins, the county sheriff, and his few deputies faced the mob upon their entrance between the outer and inside doors. They were powerless to stem the fierce human tide, and besides the sheriff had given orders to his officers not to use their weapons on the mob, believing that such proceeding would only make bad worse. The mob completely filled the interior of the jail, yelling and searching for the murderer they had come to hang. They filled the corridors, and a force of men succeeded in so forcing the iron grated door that it at last gave way, and the mob ran up the winding stone stairway to the cell rooms, peering into each cell and demanding of other prisoners the whereabouts of the murderer whom they sought.

While this was going on within a squad of fifteen policemen arrived on the scene and began clearing the jail, meeting with but little success, as they were set upon by the mob and hurled to one side as though they were not there. At 9.55_P.M. the fire-bells sounded the riot alarm. This brought people to the scene from all sections of the city, and they turned in with the mob, the greater majority being in sympathy. It called the police from their posts of duty and the various stations; and through good manage-ment they were formed above and below the jail in two sections, and, headed by the patrol wagons, advanced upon the crowds assembled on Sycamore street, in proximity to the jail. The crowd outside was estimated to be between nine and ten thousand. The patrol and police advancing in two solid columns caused a stampede, the rioters escaping through side streets. Ringleaders and some of those who had been active inside the jail were taken in the patrol wagons to the station houses. The patrols were permitted to leave amid much jeering and denunciatory

language, and after their passage the gap was closed up and another onslaught made upon the jail; the rioters in the meantime having armed themselves with axes, stones and bricks.

Two or three attacks were made upon the jail, and about midnight a hand-to-hand conflict between the police and the rioting mob occurred inside. The police had succeeded in gaining an entrance to the jail through the court-house, going in on Main street. By the same means the militia had been admitted. and were stationed on the platform at the head of the cell-room stairs. Inside the mob had reached the gates separating the prisoners' cells from the office. These were broken down with sledge-hammers, and the mob had entered. They were in hand-to-hand conflict with the police, and overpowered them, making a grand rush up the stone stairway. Just then the militia stationed on the platform fired into the crowd. Two of the militia and four officers were shot. None of the mob were injured, but the latter retreated, giving the alarm to those on the outside. were then started in the jail-yard and around the court-house. A barrel of petroleum was rolled into a cellarway where burning fire-brands had been cast. The mob again assaulted the jail, gaining admittance in reinforced numbers, and armed with every conceivable kind of weapon except firearms.

The militia again fired upon them, using blank cartridges, although this was not known to the mob, and, aided by a largely reinforced police force, again drove the mob to the street. From the Court Street armory the militia were reinforced, gaining admittance to the jail through the court-house, the mob not up to this time making any attempt to effect an entrance to the jail by way of the

court-house.

Upon their being repulsed, however, a great crowd rushed over toward Main street and down town. Simultaneous attacks were made upon the entrances of several gun stores, and the places completely gutted of firearms, powder, cartridges and other ammunition. In the meantime others of the mob had fired the jail and the court-house, in a score of places, coal oil and powder being liberally used, and neighboring stores and groceries being sacked for the purpose. Affairs were assuming a serious and critical aspect. The light of the fires illuminated the whole city, causing hundreds of other citizens, upon the hilltops and in the suburbs, to hasten to the scene.

Immediately after the sentence had been pronounced that afternoon the murderer Berner had been hurried to Columbus, going in a buggy to Linwood, where the train was taken. He was in custody of Dominick Devots, a watchman or deputy sheriff, and through the latter's negligence the prisoner managed to escape from him while the train was at Loveland. All these things the rioters of course were ignorant of. They had been told by Sheriff Hawkins that the prisoner was not in jail upon the first attack, but this was looked

upon as a subterfuge to cause them to cease their violence. The fires around the jail and court-house had been put out, and towards early morning the mob, almost worn out with their labors, thinned out, but hundreds remained about the scene throughout the night, and as the hours approached the working hour their numbers were increased.

All day long Saturday the militia and police were on duty, and the court-house and jail were surrounded by tired-out but determined men, and thousands of others drawn there by the excitement of the occasion.

There were no attempts at attack made during the day, but Saturday night for several blocks above and below to the east and the west of the jail and court-house the streets were choked by rioters who had greatly increased their strength, and another attack on the jail was made.

This proved to be the most serious attack of all, and the most disastrous. Admission was gained to the court-house. The militia in the streets were held in a hollow square formed under the masterful leadership of some of their number. Once inside the court-house, the work of demolition began. The whole magnificent stone building seemed to become ignited at once. The whole place was gutted and the valuable records of three-quarters of a century's accumulation were destroyed.

The building burned to the ground. The governor of the State had called out the militia of the State, and they were arriving by every train. Their appearance upon the scene seemed to more aggravate and incense the mob, and being fired upon a bloody riot began in the streets, men being mowed down like grass under the keen sweep of a seythe.

Captain John J. Desmond, of the militia, was shot and killed inside the burning court-house, while leading an attack on the mob. Many prominent citizens received wounds from stray shots of the militia. Windows, doors and even walls of houses in the vicinity of the riot to this day bear evidence of that time of terror and bloodshed.

United States Secretary of War Lincoln ordered to the scene the United States troops, and their appearance seemed to have the desired effect, as the rioters gradually dispersed. The result was, however, that 45 persons

were killed and 125 wounded.

Berner, the cause of all this terrible loss and destruction to life and property, was recaptured late on Saturday afternoon in an out-of-the-way house in the woods on a hillside near Loveland. When captured by Cincinnati detectives, aided by the marshal of Loveland, he was coolly enjoying a game of cards, and was unaware of the riot and the attack upon the jail. He was taken to Columbus and lodged in the State penitentiary under the sentence that had been passed upon him on the 26th day of March of confinement for twenty years.

The Jail Riot of 1848.—The most disastrous jail riot preceding that above related by Mr. Millar, in the history of the city, occurred in the summer of 1848, the details of which are given in the Reminiscences of Judge Carter, who is alluded to in the preceding article. Two returned volunteers (Germans) from the Mexican war, who were ceding article. boarding in a German family consisting of a man and wife and daughter of eleven years of age, were arrested by the parents on the charge of having committed a horrible outrage upon their child. At the examination at the old court-house, the bed-clothes and under-garments of the little girl were shown covered with blood, which, with her testimony and that of the parents, so frenzied the spectators that it was with difficulty that the sheriff, Thomas J. Weaver, could lodge them in the jail, and then had to call in the service of the Cincinnati Grays and Citizens' Guards

to protect it from the mob.

That night the mob made an attack upon the jail. The sheriff first tried expostulation but this was useless. Then he ordered the military to fire with blank cartridges, which only the more enraged them. Finally he repeated the order to fire, with ball, when eleven persons fell dead, some of them innocent bystanders and the mob dispersed.

nocent bystanders, and the mob dispersed. "But," writes the judge, "the sequel. was the prosecuting attorney at the time, and know of what I speak. At the next term of court a bill of indictment against these poor volunteer soldiers was unanimously ignored on the plain and simple ground of their entire innocence. They had served their adopted country, and were hard-working, industrious, honest men. They had been the victims of these Germans, who, because they could not induce them to give up their land warrants entitling them each for honorable service to 160 acres of land, had conspired with their little daughter to get up and maintain this awful charge. After their discharge there was a hunt after their guilty prosecutors to lynch them, when it was found that father. mother and daughter had disappeared and were never heard of after.

THE PIONEER CELEBRATION AT COLUMBIA.

Columbia, included in the city limits, and in its first ward, since 1873, was, on the 4th of July, 1889, the scene of an eventful celebration. This was the celebration of the centennial of the 4th of July since the first boatload of pioneers landed there in November, 1789. On this occasion a monument was dedicated to their memory; and the first monument that has been erected over the graves of pioneers in the Northwest.

It stands on the beautiful knoll whereon stood the old Baptist church, the first Protestant church organized in the Northwest.

This knoll contains two acres of ground, deeded in 1804, by Benj. Stites, to the Baptists of Columbia township. The gravestone slabs of the pioneers whiten the spot, and noble old elms bending over give

it a pensive charm.

The monument is just five miles from Fountain Square, with a grand outlook up and down the Ohio valley, and up that of the Little Miami; just at that point where the railroad trains, whisking around a curve, bid farewell to the former and go up the varied windings of a stream, whose ever changing vistas bring forth admiring exclamations from hosts of travellers, who, though they should keep on to the uttermost parts of the earth, would never find a valley more sweet.

The monument was erected by the Columbia Monumental Association, George E. Stevens, President; consisting of fifteen delegates from five Baptist churches now in the original bounds of Columbia township. The present title of this body is the Mount Lookout Duck Creek Baptist church.

in 1830, when it was in ruins.

OLD BAPTIST CHURCH AT COLUMBIA. This church was taken down in 1835. The Society which worshipped in it was constituted in 1790, by Dr.

Stephen Gano. The engraving shows it as it appeared

On one side of the freestone pedestal is engraved, "To the Pioneers Landing near this spot November 18, 1788."
On the obverse side—"To the first boat-load of

On the obverse side—"To the first boat-load of pioneers landing near this spot—Major Benj. Stites, Mrs. Benj. Stites, Ben. Stites, Jr., Rachel Stites, Ann W. Stites, Greenbright Bailey, Mrs. Greenbright Bailey, Jas. F. Bailey, Reasom Bailey, Abel Cook, Jacob Mills, Jonathan Stites, Ephraim Kibby, John S. Gano, Mrs. Mary S. Gano, Thos. C. Wade, Hezekiah Stites, Edinand Buxton, Daniel Shoemaker,——Hempstead, Evan Shelby, Allen Woodruff. Hampton Woodruff. Joseph Cox. Woodruff, Hampton Woodruff, Joseph Cox, Benjamin Cox."

On the third side is—"The Baptists of Columbia Township in 1889 erected this pillar to lumbia Township in 1889 erected this pillar to commemorate the heroism and piety of the first Baptist pioneers of 1788–90. The first church in the Northwest Territory was the Columbia Baptist Church, organized January 20, 1790. Constituent members, Benj. Davis, Mary Davis, John Ferris, Elizabeth Ferris, Isaac Ferris (deacon), Joseph Reynolds, Amy Reynolds, John S. Gano, Thos. C. Wade."

On the fourth side—"The Columbia Baptist Church erected its first house of worship on this spot in 1792. The lot contains two acres of ground purchased of Benj. Stites, was deeded to the Baptists of Columbia Township."

The celebration consisted of a procession headed by the Newport Band, prayer, reading the Declaration of Independence, sing-

ing "America," firing of cannon, and speaking under a huge tent, Rev. G. W. Lasher, presiding. Rev. Dr. Galusha Anderson. President of Dennison University, opened with a history and eulogy of the Baptist Church, wherein he proclaimed the Baptists had ever been peculiar friends of religious liberty. But he did not allude to their early persecutions; did not speak of Roger Williams in Puritan New England, nor to their treatment in Episcopal Virginia, where, 140 years ago, over thirty Baptist ministers were thrown into dungeons, and outrageous mobs broke up their meetings; in one case tossing a snake and a hornets' nest into their midst.

Gen. Sam'l F. Cary occupied an hour and a half with a rousing good speech, consisting of pioneer reminiscences, with humorous allusions and anecdotes.

After him, Judge Joseph Cox spoke instructively upon the Mound Builders and

their works.

Henry Howe, who was supposed to know something about Ohio, having been present by invitation, was called upon to make a few remarks. He did not speak of Ohio at all, but alluded to a historical tour he made over New Jersey 47 years before, and of the excellent qualities of Jerseymen, which especially fitted them to make the best kind of pioneers: and it was well that Columbia got such, and as was proved a superior quality of

Jerseymen.

The thought of one of the speakers of the occasion is a sad memory to all who knew him. That is Surgeon-General A. F. Jones, of Walnut Hills, who a few months later was murdered by his negro servant. It was that old historian of this region and patriotic man who inaugurated the planting of trees in Eden Park to the memory of the pioneers, now known as "Pioneer Grove." And to him does this very monument owe its origin,

for years before he had suggested its build-

ing and made efforts in that direction.

The subject of "Progress" ended the exercises in the form of a carefully written paper upon that topic read by Dr. M. C. Lockwood.

The monument is a Corinthian pillar of Ohio freestone, with pedestal and base of granite; it is 43 feet in height and eventually is to be surmounted by the statue of a pioneer.

Oliver M. Spencer, then a boy, was at Columbia as early as 1790. He was in 1792 taken prisoner by the Indians. In his "Reminiscences" he has left this description of the life of the first settlers:

It is, perhaps, unknown to many, that the broad and extensive plain stretching along the Ohio from the Crawfish to the mouth, and for three miles up the Little Miami, and now divided into farms, highly cultivated, was the ancient site of Columbia, a town laid out by Major Benjamin Stites, its original proprietor; and by him and others once expected to become a large city, the great capital of the West. From Crawfish, the small creek forming its northwestern boundary, more than one mile up the Ohio, and extending back about three-fourths of a mile, and half way up the high hill which formed a part of its eastern and northern limits, the ground was laid off into blocks, containing each eight lots of half an acre, bounded by streets intersected at right angles. The residue of the plain was divided into lots of four and five acres, for the accommodation of the town. Over this plain, on our arrival, we found scattered about fifty cabins, flanked by a small stockade nearly half a mile below the mouth of the Miami, together with a few blockhouses for the protection of the inhabitants, at suitable distances along the bank of the Ohio.

Fresh in my remembrance is the rude loghouse, the first humble sanctuary of the first settlers of Columbia, standing amidst the tall forest trees, on the beautiful knoll, where now (1834) is a grave-yard, and the ruins of a Baptist meeting-house of later years. There, on the holy Sabbath, we were wont to assemble to hear the word of life; but our fathers met with their muskets and rifles, prepared for action, and ready to repel any attack of the enemy. And while the watchman on the walls of Zion was uttering his faithful and pathetic warning, the sentinels without, at a few rods distance, with measured step, were now pacing their walks, and now standing and with strained eyes endeavoring to pierce through the distance, carefully scanning every object that seemed to have life or motion.

The first clergyman I there heard preach was Mr. Gano, father of the late Gen. Gano, of this city, then a captain, and one of the earliest settlers of Columbia. Never shall I forget that holy and venerable man, with locks white with years, as with a voice tremulous with age, he ably expounded the word

I well recollect, that in 1791, so scarce and dear was flour, that the little that could be afforded in families was laid by to be used only in sickness, or for the entertainment of friends, and although corn was then abundant, there was but one mill (Wickerham's). a floating mill, on the Little Miami, near where Turpin's now (1834) stands; it was built in a small flat boat tied to the bank, its wheel turning slowly with the natural current running between the flat and a small pirogue anchored in the stream, and on which one end of its shaft rested; and having only one pair of small stones, it was at best barely sufficient to supply meal for the inhabitants of Columbia and the neighboring families; and sometimes, from low water and other unfavorable circumstances, it was of little use, so that we were obliged to supply the deficiency from hand-mills, a most laborious mode of grinding.

Pleasant Rural Scenes.—The winter of 1791-2 was followed by an early and delightful spring; indeed, I have often thought that our first western winters were much milder, our springs earlier, and our autumns longer than they now are. On the last of February some of the trees were putting forth their foliage; in March the red bud, the hawthorn and the dog-wood, in full bloom, checkered the hills, displaying their beautiful colors of rose and lily; and in April the ground was covered with May apple, bloodroot, ginseng, violets, and a great variety of herbs and flowers. Flocks of parroquets were seen, decked in their rich plumage of green and gold. Birds of various species, and of every hue, were flitting from tree to tree, and the beautiful redbird, and the untaught songster of the west, made the woods vocal with their melody. Now might be heard the plaintive wail of the dove, and the rumbling drum of the partridge, or the loud gobble of the turkey. Here might be seen the clumsy bear, doggedly moving off, or urged by pursuit into a laboring gallop, retreating to his citadel in the top of some lofty tree; or, approached suddenly, raising himself erect in the attitude of defence, facing his enemy and waiting his approach: there the timid deer.

BENJAMIN HARRISON,

Twenty-third President of the United States.

watchfully resting, or cautiously feeding, or, aroused from his thicket, gracefully bounding off, then stopping, erecting his stately head and for a moment gazing around, or sniffing the air to ascertain his enemy, instantly springing off, clearing logs and bushes at a bound, and soon distancing his pursuers. It seemed an earthly paradise; and but for apprehension of the wily copperhead, who lay silently coiled among the leaves, or beneath the plants, waiting to strike his victim; the horrid rattle-snake, who more chivalrous, however, with head erect amidst its ample folds, prepared to dart upon his foe, generously with the loud noise of his rattle, apprised him of danger; and the still more fearful and insidious savage, who, crawling upon the ground, or noiselessly approaching behind trees and thickets, sped the deadly shaft or fatal bullet, you might have fancied you were in the confines of Eden or the borders of Elysium.

Turkey Bottom.—At this delightful season, the inhabitants of our village went forth to their labor, inclosing the fields, which the spring flood had opened, tilling their ground, and planting their corn for their next year's sustenance. I said, went forth, for their principal corn-field was distant from Columbia

about one and a half miles east, and adjoining the extensive plain on which the town stood. That large tract of alluvial ground, still known by the name of Turkey Bottom, and which, lying about fifteen feet below the adjoining plain, and annually overflowed, is yet very fertile, was laid off into lots of five acres each, and owned by the inhabitants of Columbia; some possessing one, and others two or more lots; and to save labor, was enclosed with one fence. Here the men generally worked in companies exchanging labor, or in adjoining fields, with their fire-arms near them, that in case of an attack they might be ready to unite for their common defence. Here, their usual annual crop of corn from ground very ordinarily cultivated was eighty bushels per acre; and some lots, well tilled, produced a hundred, and in very favorable seasons, a hundred and ten bushels to the acre. An inhabitant of New England, New Jersey, or some portions of Maryland, would scarcely think it credible, that in hills four feet apart, were four or five stalks, one and a half inches in diameter, and fifteen feet in height, bearing each two or three ears of corn, of which some were so far from the ground, that to pull them an ordinary man was obliged to stand on tiptoe.

BIOGRAPHY.

GOVERNORS OF OHIO FROM CINCINNATI.

Thirteen of the Governors of the State have been at some time citizens of Cincinnati, one of whom only, William Dennison, was born in the city. They were Othniel Looker, 1814; Ethan Allen Brown, 1818–1822; Salmon P. Chase, 1856–1860; William Dennison, 1860–1862; John Brough, 1864, 1865; Charles Anderson, 1865, 1866; Jacob D. Cox, 1866–1868; Rutherford B. Hayes, 1868–1872; also 1876, 1877; Edward F. Noyes, 1872–1874; Thomas L. Young, 1887, 1888; Richard M. Bishop, 1878–1880; George M. Hoadley, 1884–1886; Joseph B. Foraker, 1888–1890.

We annex slight sketches of those not elsewhere noted:

OTHNIEL LOOKER was born in New York, in 1757; was a private in the war of the revolution and a man of humble origin and calling, and of whose history but little is known, but, being Speaker in the Ohio Senate, by virtue of that office became acting Governor for eight months when General Meigs resigned to go into Mr. Madison's cabinet. He was later defeated as a candidate for Governor against Thomas Worthington.

ETHAN ALLEN BROWN was born in Darien, Conn., July 4, 1766; studied law with Alexander Hamilton; settled in Cincinnati in 1804; from 1810 to 1818 was a Supreme Judge, when he was elected Governor and began agitating the subject of constructing canals. In 1820 was re-elected over Jeremiah Morrow and General Wm. Henry Harrison; in 1822 was elected to the United States Senate; from 1830 to 1834 U. S. Minister to Brazil; later Commissioner of Public Lands; then retired to private life and died in 1852 in Indianapolis after a long and useful career.

THOMAS L. YOUNG was born on the estate of Lord Dufferin, in North Ireland, Dec. 14, 1832; came to this country at fifteen years of age; served ten years as a private in the regular army, entering on the last year of the Mexican war; in 1859 came to Cincinnati; graduated at its law school. When the rebellion broke out was assistant superintendent of the House of Refuge, Reform School, and on the 18th of March wrote a letter to Gen. Winfield Scott, whom he personally

knew, offering his services for the coming war, thus becoming the first volunteer from Hamilton county. He eventually entered the army, was commissioned colonel and for extraordinary gallantry at Resaca was brevetted general. In 1866 he was elected to the legislature; in 1872 served as a Senator, and in 1876 elected Lieut.-Governor and succeeded R. B. Hayes when he became President. As Governor of Ohio during the railroad riots he showed extraordinary pluck. Being asked to call upon the general government for aid from the regular troops he replied tersely: "No, not until the last man in Ohio is whipped." died July 19, 1888, singularly admired for his thorough manliness.

RICHARD M. BISHOP was born in Fleming county, Kentucky, in 1812, and at the age of thirty-six came to Cincinnati, where for many years he was at the head of a wholesale grocery house; in 1859 was elected Mayor of the city and in 1877 Governor of the State. He has ever been a public-spirited and highly respected citizen and now, in advanced life, is erect as in youth and possesses a fine patriarchal presence, wearing a long flowing beard, as grand we dare say as that Moses had when on Pisgah. From early life he has been one of the most prominent men of the Disciples or Campbellite Baptist Church, the same as that with which President Garfield was identified.

JOHN CLEVES SYMMES-Father.

ANNA HARRISON-Daughter.

WILLIAM HENRY HARRISON was born at Berkley, on James river, twenty-five miles from Richmond, Virginia, in 1773. He was the youngest of three sons of Benjamin Harrison, who represented Virginia in Congress in

1774-1776 and was chairman of the committee of the whole house, when the declaration of independence was agreed to, and was one of its signers. He was elected Governor of Virginia, and was one of the most

popular officers that ever filled the executive chair. He died in 1791.

Wm. Henry Harrison entered Hampden Sydney College, which he left at seventeen years of age. He then began the study of medicine, but the death of his father checked his professional aspirations; and the "note of preparation"

which was sounding through the country, for a campaign against the Indians of the West, decided his destiny, and he resolved to enter into the service of his government.

His guardian, the celebrated Robert Morris, opposed his wishes; but it was in vain that he placed the enterprise before the enthusiastic youth in all its hardships and priva-tions. General Washington yielded to the importunities of the youth; presented him with an ensign's commission. With characteristic ardor he departed for Fort Washington, now Cincinnati; where, however, he arrived too late to participate in the unfortunate campaign of St. Clair. The fatal 4th of November had passed, and he was only in time to learn the earliest intelligence of the death of Butler, and of Oldham, and of the unparalleled massacre of the army of St.

The return of the broken troops had no effect in damping the real of young Harrison. He devoted himself ardently to the study of the theory of the higher tactics; and when, in the succeeding year, Wayne assumed the command, Ensign Harrison was selected by him for one of his aids, and distinguished

himself in Wayne's victory.

After the treaty of Greenville, 1795, he was given command of Fort Washington; and shortly after married the daughter of Judge Symmes, the proprietor of the Miami pur-

chase.

The idleness and dissipation of a garrison life comported neither with the taste nor active temper of Captain Harrison. He resigned his commission, and commenced his civil career, at the age of twenty-four years, as secretary of the Northwestern Territory. He was elected, in 1799, the first delegate in Congress. The first and general object of his attention as a representative was an alteration of the land system of the Territory. He was appointed chairman of the committee on lands, and though meeting with much opposition from speculators, secured the passage of a law for the subdivision of public lands into smaller tracts. To this measure is to be imputed the rapid settlement of the country northwest of the Ohio.

The reputation acquired by the young delegate from his legislative success created a party in his favor, who intimated a desire that he should supersede the venerable governor of the Territory. But Mr. Harrison checked the development of this feeling as soon as it was made known to him. He cherished too high a veneration for the pure and patriotic St. Clair to oppose him. Shortly after, when Indiana was erected into a separate Territory, he was appointed by Mr. Adams the first governor. Previously, however, to quitting Congress, he was present at the discussion of the bill for the settlement of Judge Symmes' purchase; and although this gentleman was his father-in-law, he took an active part in favor of those individuals who had purchased from him before he had obtained his patent. This was the impulse of stern duty; for at the moment he felt he was jeoparding a large pecuniary interest of his father-in-law.

In 1801 Governor Harrison entered upon the duties of his new office, at the old military post of Vincennes. The powers with which he was vested by law have never, since the organization of our government, been conferred upon any other officer, civil or military; and the arduous character of the duties he had to perform can only be appreciated by those who were acquainted with the savage and cunning temper of the northwestern Indians, with the genius of the early pioneers, and the nature of a frontier settlement. Among his duties was that of commissioner to treat with the Indians. In this capacity he concluded fifteen treaties, and purchased their title to upwards of seventy million of acres of land.

The whole Territory consisted of three settlements, so widely separated that it was impossible for them to contribute to their mutual defence. The first was Clarke's grant at the falls of Ohio; the second, the old French establishment at Vincennes; and the third extended from Kaskaskia to Kahokia, on the Mississippi; the whole comprising a population of about five thousand souls. The Territory, thus defenceless, presented a frontier, assailable almost at every point, on the northeast, north, and northwest bounda-Numerous tribes of warlike Indians ries. were thickly scattered throughout the northern portion of the Territory, whose hostile feelings were constantly inflamed by the intrigues of British agents and traders, if not by the immediate influence of the English government itself, and not unfrequently by the uncontrollable outrages of the American Governor Harrison hunters themselves. applied himself with characteristic energy and skill to his duties. Justice tempered by mildness; conciliation and firmness, accompanied by a never slumbering watchfulness; were the means he used. These enabled him to surmount difficulties, under which an ordinary capacity must have been prostrated.

During the year 1811, however, the intrigues of British agents operating on the passions of the Indians, brought affairs to a crisis which rendered hostilities unavoidable. Harrison called upon Colonel Boyd, of the 4th United States regiment, then at Pittsburg (who immediately joined him), and embodied a militia force as strong as the emergency would permit. To these were added a small but gallant band of chivalrous volunteers from Kentucky, consisting of about sixty-five individuals. With these he commenced his march towards the prophet's town at Tippecanoe. On the 6th of November he arrived in sight of the Indian village, and made several fruitless attempts to negotiate with the savages. Finding it impossible to bring

them to any discussion, he resolved to encamp for the night, under a promise from the chiefs to hold a conference next day. The men reposed upon the spot which each, individually, should occupy, in case of attack. The event justified the anticipations of the chief. On the morning of the 7th, before daylight, the onset was made with the usual yells and impetuosity. But the army was ready; Harrison had risen some time before, and had roused the officers near him. The Indians fought with their usual desperation, and maintained their ground for some time with extraordinary courage. Victory declared in favor of discipline, at the expense, however, of some of the most gallant spirits of the age. Among the slain were Colonels Daveis and Owen, of Kentucky, and Captain Spencer, of Indiana. Governor Harrison received a bullet through his stock, without touching his neck. The legislature of Kentucky, at its next session, while in mourning for her gallant dead, passed the following

resolution, viz.:

"Resolved, That Governor William H.
Harrison has behaved like a hero, a patriot
and general; and that for his cool, deliberate,
skilful and gallant conduct, in the battle of
Tippecanoe, he well deserves the thanks of

 ${
m the\ nation.''}$

From this period, until after the declara-tion of war against England, Governor Harrison was unremittingly engaged in negotiating with the Indians, and preparing to resist a more extended attack from them. In August, 1812, he received the brevet of majorgeneral in the Kentucky militia, to enable him to command the forces marching to relieve Detroit. The surrender of Hull changed the face of affairs; he was appointed a major-general in the army of the United States, and his duties embraced a larger sphere. Everything was in confusion, and everything was to be done; money, arms and men were to be raised. It is under circumstances like these that the talents of a great general are developed more powerfully than in conducting a battle. To do justice to this part of the biography of Harrison requires a volume of itself. Becoming stronger from reverses, collecting munitions of war, and defending Fort Meigs, were the prominent features of his operations, until we find him in pursuit of Proctor, on the Canadian shore. On the 5th of October, 1813, he brought the British army and their Indian allies, under Proctor and Tecumseh, to action, near the river Thames. The victory achieved by militia over the disciplined troops of England, on this brilliant day, was decisive; and like the battle of the Cowpens, in the war of the revolution, spread joy and animation over the whole Union. For this important action, Congress presented General Harrison with a gold medal. The success of the day is mainly attributable to the novel expedient of charging through the British lines with mounted infantry. The glory of originating this manœuvre belongs exclusively to General Harrison.

The northwestern frontier being thus re-

lieved, Gen. Harrison left his troops at Sacket's Harbor, under the command of Col. Smith, and departed for Washington by the way of New York, Philadelphia and Baltimore, and on the whole route he was received with enthusiasm.

Owing to a misunderstanding between Mr. Secretary Armstrong and himself, Gen. Harrison resigned his commission in the spring of 1814. Mr. Madison sincerely deplored this step, and assured Governor Shelby, in a letter written immediately after the resignation, "that it would not have been accepted had he been in Washington." It was received and accepted by Secretary Armstrong, while the President was absent at the springs.

Gen. Harrison retired to his farm at North Bend, in Ohio, from which he was successively called by the people, to represent them in the Congress of the United States, and in the legislature of the State. In 1824–5 he was elected to the Senate of the United States; and in 1828 he was appointed minister to Colombia, which station he held until he was recalled by President Jackson, not for any alleged fault, but in consequence of some difference of views on the Panama question. Gen. Harrison again returned to the pursuits of agriculture at North Bend. In 1834, on the almost unanimous petition of the citizens of the county, he was appointed prothonotary of the Court of Hamilton county.

In 1840 Gen. Harrison was called by the people of the United States to preside over the country as its chief magistrate. His election was a triumphant one; of 294 votes for President he received 234. From the time when he was first nominated for the office until his death, he had been rising in public esteem and confidence; he entered upon the duties of his office with an uncommon degree of popularity, and a high expectation was cherished that his administration would be honorable to himself and advantageous to the country. His death, which took place April 4th, 1841, just a month after his inauguration, caused a deep sensation throughout the country. He was the first President of the United States that had died in office.

President Harrison was distinguished by a generosity and liberality of feeling which was exercised beyond what strict justice to himself and family should have permitted. With ample opportunity for amassing immense wealth, he ever disdained to profit by his public situation for private emolument. His theory was too rigidly honest to permit him to engage in speculation, and his chivalry was too sensitive to permit him to use the time belonging to his country for private benefit. After nearly fifty years devotion to his duties in the highest stations, he left at his death but little more to his family than the inheritance of an unsullied reputation.

BENJAMIN HARRISON, son of Senator John Scott Harrison and grandson of Gen. Wm. Henry Harrison, was born in North Bend, Ohio, August 20, 1833; graduated at Miami University, Oxford, Ohio, in 1852. While at college he formed an attachment for Caroline L. Scott, daughter of John W. Scott, president of Oxford Female Seminary, and they were married October 20, 1853.

He studied law in the office of Storer & Gwynne, in Cincinnati, and in 1854 removed to Indianapolis, Ind. He was elected re-porter of the State Supreme Court in 1860, and in 1862 entered the army as second lieutenant of the 70th Indiana Volunteers—a regiment which he assisted in raising, and of which, when completed, Governor Morton appointed him colonel.

He was a valuable and efficient officer, greatly beloved by his men, to whom his many acts of kindness and consideration greatly endeared him, and he was by them called "Little Ben." His actions at the battle of Peach Tree Creek greatly pleased Gen. Hooker, who said of him: "My attention was first attracted to this young officer by the superior excellence of his brigade in discipline and instruction—the result of his labor, skill and devotion. With more foresight than I have witnessed in any officer of his experience, he seemed to act upon a principle, that success depended upon the thorough preparation in discipline and esprit of his command for conflict more than on any influence that could be exerted upon the field itself; and when collision came, his command vindicated his wisdom as much as his valor. In all of the achievements of the 20th Corps in that campaign (from Chattanooga to Atlanta), Col. Harrison bore a conspicuous part. At Resaca and Peach Tree Creek the conduct of himself and command was especially distinguished."

"Let us go in; these ladies have some conspiracy together." Such was a remark playfully made to us in a garden, near sunset, on an August evening in the summer of 1845. Two old gentlemen and their wives, two old ladies, were present, beside the writer; the ladies were a little one side, looking at the flowers glinting in the declining rays, and, true to their sex, busy talking. The speaker was Henry Clay, and this was his home, Ashland, near Lexington, Ky. He had invited us to tea, and directed through the house but a few moments before, we had found him in his garden. The other was JACOB BURNET, to whom he had introduced us. No man then living had made such an impress as he upon the history of Ohio and the Northwest. He looked every inch the peer of Mr. Clay, as indeed he was. They were strong friends; but in person and man-

He served to the close of the war, and was mustered out in the grand review in Washington, in June, 1865, with the rank of brevet brigadier-general.

Gen. Harrison had been re-elected, in 1864, while still in the army, to the office of State Supreme Court reporter, and assumed the duties of the office on his return to Indian-In 1879 he was appointed by President Hayes a member of the Mississippi River Commission. At the National Repub-lican Convention of 1880, held in Chicago, he was chairman of the Indiana delegation, and his name was placed in nomination, but he withdrew it. In 1880 he was chosen U. S. Senator, and held that seat until March 3, 1887. In 1884 he was a delegate at large from Indiana to the National Republican Convention; and his name was again men-

tioned in connection with the presidency.
In the National Republican Convention, held in Chicago in June, 1888, he was nominated for the presidency on the eighth ballot, receiving 544 votes. The Democratic party renominated Grover Cleveland, and the tariff issue became the main question of the campaign. All through the campaign Gen. Harrison made almost daily speeches to visiting delegations, giving free expression to his views and opinions on almost every question of the day; and his remarkably sound judgment and comprehension of all vital questions was signally illustrated in language of unusual simplicity and clearness. He received 233 votes in the Electoral college against 168 for Grover Cleveland.

JACOB BURNET.

ners antipodal. Mr. Clay was all geniality, his voice deeply sonorous and musical. Judge Burnet was a trifle less in stature than Mr. Clay, but broader. He was then seventy-six years of age; Mr. Clay several years younger. The Judge was a thorough gentleman of the old school, of Scotch descent, his complexion very dark, swarthy; eyes black, and general expression forbidding, and manner reserved and dignified. He walked with a cane, his hair in a queue, and we think he wore a ruffled shirt. His residence at this time was in a large old-style mansion, square in shape, with a broad hall running through the centre, on Seventh street, corner Elm, Cincinnati, of which city he was its first citizen.

This eminent man was the son of Dr. William Burnet, surgeon-general of the Revolutionary army, and a member of the Continental Congress; was born at Newark, N. J., in 1770; was educated at Princeton, and in 1796, when twenty-six years of age, came to Cincinnati to practise law, then a village of a few log-cabins and 150 inhabitants. The entire territory, now comprising five States and ten millions of people, was mostly a wilderness, containing scarcely the semblance of a road, bridge, or ferry. This territory was divided into four counties—Washington, Hamilton, St. Clair, and Knox. The seats of justice were respectively at Marietta, Cincinnati, Kaskaskia, and Vincennes, in each of which Courts of Common Pleas and General Quarter Sessions of the Peace were established. From 1796 to 1803 the Bar of Hamilton county occasionally attended the General Court at Marietta and Detroit, and during the whole of that time Mr. St. Clair (son of the General), Judge Symmes, and Judge Burnet never missed a term in either of those counties. These journeys were made with five or six in company and with pack-horses. They were sometimes eight or ten days in the wilderness, "and at all seasons of the year were compelled to swim every water-course in their way which was too deep to be forded." They had some hair-breadth escapes. One night their horses refused to go any farther, and they were obliged to camp; the next morning they found they had halted on the verge of a precipice.

In 1799 Judge Burnet was selected by the President of the United States as a member of the Legislative Council of the Territorial Government, of which he was the leading

mind.

"Thus," said the late Judge Este, "in less than four years he was at the head of the bar of the West, the popular, intelligent and official leader of the Legislature. Almost an entirely new system of laws was undertaken, and the labor devolved on him. He cheerfully engaged in it and was so clearly convinced of the necessity of giving himself up to the business of legislating for the Territory that he would not listen to the friends who urged him to be a delegate to Congress. Thus early and permanently did his mind make its impress upon the legislative history of the country."

Judge Burnet was the author of the first constitution of Ohio. From 1812 to 1816 was a member of the State Legislature. In 1821 he was appointed Judge of the Supreme Court of Ohio, serving until 1828, when he resigned to accept the position of United States Senator, to fill the vacancy created by the resignation of General Harrison. As a senator he was the intimate personal and political friend of Webster. From the notes taken by Senator Burnet in the celebrated discussion between Hayne and Webster the latter in part framed the reply which stamped Webster as the matchless orator of our

He was the life-long friend of General Harrison, and as a delegate to the Harrisburg Convention secured his nomination for President. He influenced Congress to relieve the settlers of the West and Southwest from much of the indebtedness for their lands, which otherwise would have involved the great mass in irretrievable ruin. Mr. Burnet possessed great public spirit and was eminent for solid integrity and acuteness of intellect. Mansfield says such was the construction of his mind that "it was impossible for Burnet not to have been a partisan." His likes and dislikes were held with great tenacity. When Aaron Burr was in Cincinnati he was peremptorily refused an interview by Judge Burnet, who sent him word that he would never shake hands with the murderer of his own and his father's friend.

Originally a Federalist, he became a strong Whig, and in the United States Senate came up to the level of its great leaders, Webster and Clay. He died in 1853, a firm believer in the inspiration of the Bible, a Presbyterian in faith, but was far removed from sectarian bigotry

NICHOLAS LONGWORTH was born in Newark, N. J., in 1782, was for a time a clerk in his brother's store in South Carolina, came to Cincinnati in 1803 and died in 1863, leaving an estate of many millions from early investments in Cincinnati land. He studied law and practised for a while, and in 1828 began the cultivation of the Catawba grape, and from it manufactured wine of a high marketable value. He had 200 acres of vineyards, a large wine-house, and was favorably known by his experiments on the strawberry. The Catawba grape was cultivated with great success for a number of years, producing about 500 gallons of wine per annum; then it gradually failed. It is thought that the cleaning of the forest has changed the climate of Southern Ohio, which is now afflicted with what is regarded as destructive to the grape culture, that is—heavy fogs, wet atmosphere, changes from warm to cold without wind—a condition from which the islands and shore of Lake Erie are free, and where the grape culture is so successful.

Mr. Longworth lived in a huge stone cot-

tage mansion, in the centre of a three or fouracre lot, at the east end of Fourth street,
originally built by Martin Baum, now the residence of David Sinton. Forty years ago the
spot was known as Longworth's Garden, and
was one of the chief attractions of the city
from its display of flowers and fruits, notably
grapes. "He was very shrewd, quick witted;
with great common sense and acquisitiveness.
He had little dignity or learning, but had a
quiet good humor and a readiness at repartee
which made him very popular." He was a
friend to artists and kindly to the poor, and
very eccentric. He was short in person and
careless in his dress. As was often his wont,
he had shown a stranger through his grounds,
when the latter, mistaking this man of millions for a serving man, on leaving him at
the gate dropped a dime in his hand, which

will help the devil's poor, the miserable drunken dog that nobody else will do anything for but despise and kick." And he did. He used to talk of himself in the second person, as once we heard him say, "There's Longworth; it takes \$30,000 to pay his taxes, and it keeps him poor to raise the money." This was true; he owned much earth, but had little cash. His son Joseph and grandson Nicholas were noted as patrons of art, as is his granddaughter, Mrs. Maria Longworth Storer. The entire family is unusually popular from its beneficence and public spirit, especially in the fostering the things of beauty that give to life its efflorescence and fragrance.

The first banker west of the Alleghenies, a successful merchant and most enterprising citizen, was JOHN H. PIATT. He did so much

Mr. Longworth accepted with thanks and put in his pocket. Every Monday for a term of years he had at his house a free gift distribution to the poor. At the appointed hour strings of old ladies, German and Irish, would be seen, flocking there with baskets to receive at their option a loaf of bread or a peck of corn meal or a dime. When he started out in the morning to make calls upon his numerous tenants or otherwise, he would have the business of each call written on a separate slip of paper and pinned on his coatsleeve. These would be pinned on in the order of his calls and torn off in rotation.

He had continuous appeals for charity, and he was wont to say in certain cases, "Ha! a poor widow, is she? Got a struggling family of little ones? I won't give her a cent. She is the Lord's poor—plenty to help such. I

JOHN H. PIATT.

for Cincinnati in developing its resources that President William H. Harrison, in his last speech at home before going to his inauguration, gave most of it to an eulogy of Mr. Piatt, saying among other things that a statue should be erected on the river landing to the memory of the man who had done so much for the city. That he has no monument and now scarcely a memory, that the one street named for him had its name changed, does not speak well for Cincinnati.

From Mr. Henry B. Teetor's "Past and Present of Mill Creek Valley," we quote: "Mr. Piatt entered with great energy and intrepidity indeed upon business enterprises. He was among the foremost in starting institutions, foundries, banks, launching steamboats, building houses and imparting a spirit of progress to the young city. He founded in

1817 the first bank west of the mountains. One of the bills of this bank is in the hands of Mr. George H. Schoenberger, and greatly prized by him. His prosperity and success were unequaled—evidenced by the possession of a large estate and a commanding position as a banker and a merchant. His name had gone out over the Northwest Territory. He knew its leading men and was familiar with its resources when the war of 1812 came on.

its resources when the war of 1812 came on.

"In an evil hour for Mr. Piatt he contracted with the government to furnish provisions to the Northwest army, then under Harrison. Congress adjourned without making appropriations for a continuance of the war. The consequences to the country at large were disastrous, to John H. Piatt fatal. Rations that he agreed to furnish at twenty cents rose through a depreciated currency to forty-five cents. After six months he had drawn on the government for \$210,000, the drafts for which had gone to protest for non-

payment.

"During this time about \$46,000 had come into Mr. Piatt's hands as a commissariat fund, resulting from the seles as commissary of the army. He applied this sum to the payment of debts incurred for supplies. This was treated by the department as a violation of law. This was the state of his offending. This condition obtained on the 26th of December, 1814, when Gen. McArthur made a requisition on him for 800,000 rations to be delivered in thirty days which at existing rates would have cost \$360,000 more.

"Unable to meet this requisition and un-

"Unable to meet this requisition and unwilling that the public should suffer Piatt immediately repaired to Washington to lay the matter before the Department, accompanied by the Hon. Justice McLean, then his representative in Congress. They found the war minister of the United States sitting in the ashes of the burned capital, in an agony of despair over a bleeding country and an empty treasury.

The Secretary appealed to Mr. Piatt's patriotism for help, and gave him verbal assurances, that if he could furnish the supplies called for he should be remunerated and allowed the market price for the rations regardless of the original contract.

"Upon these assurances John H. Piatt reurned home, and put his entire fortune and redit in the service of his country.

"When the final settlement came the government refused to allow him the difference between the first contract price of rations and the market value of supplies purchased under the assurances of Secretary Monroe.

"We have not the space to follow in detail the heart-breaking struggle of this great patriot for justice at the hands of a government he had so nobly served. For years he haunted in vain the ante-chamber of a department that had once only been too glad to welcome him. Once thrown into prison by the department for his technical violation of law, he was released only to have his creditors imprison him again.

"At last, heart-broken and bankrupt, he

died a prisoner, without enough money to give him a decent burial.

"Sixty years after the Supreme Court of the United States adjudicated the claim and allowed the principal. But to this day the government has not paid the interest."

The Piatts are all descended from John Piatt, a French Huguenot, who settled in New Jersey about 1740. Four of his five sons were soldiers of the American revolution. One, Captain William Piatt, was killed at St. Clair's defeat; two others emigrated with Judge Symmes to North Bend. The family were numerous and of high intellectual reputation.

JACOB WYKOFF PIATT.—This noted citizen of Cincinnati was born in Kentucky in 1801. Brought to Cincinnati when quite young, he grew to man's estate in the home

JACOB WYKOFF PIATT.

of his father, Benjamin M. Piatt, elder brother of the more famous John H. Piatt. Jacob Wykoff became a successful lawyer, and accumulated quite a fortune in his practice, and successful operations in real estate.

The one event in his life was his success in establishing a paid fire department, that is now known in every city of the civilized world. The old volunteer fire system, once the pride of the citizens, had fallen into disrepute.

The better class had either neglected the companies to which they belonged, or had been shouldered out by the worse elements of a prosperous town. This evil was not confined to Cincinnati. Every city in the Union suffered from the same cause. The Mose of New York, the brazen-cheeked, red-shirted ruffian was duplicated in every

municipality that possessed a fire department. Mr. Piatt returned to the city council at a time when the most reputable citizens considered it an honor to be a councilman, opened war on the volunteers, by introducing an ordinance providing for the selection of, and paying the firemen for their services.

There was scarcely a member of council that did not privately admit the necessity for such a reform, and yet when the vote was taken, in a chamber crowded by roughs, whose noisy demonstrations left no doubt as to their opposition, but one man was found brave enough to vote with Mr. Piatt in favor of this measure. This gentleman was Judge Timothy Walker, the well-known author and

Nothing daunted Mr. Piatt continued his efforts. At every assembly of a new council, his ordinance was offered to be again voted down. But the minority grew slowly in spite of the brutal opposition. Mr. Piatt was wont to defy the crowd in the debate that preceded defeat, and the feeling got so intense, that it was dangerous for the bold reformer to go to and from the chamber. As it was a volunteer guard of Irish constituents accompanied their representative. One night after a heated debate a mob assembled in front of Mr. Piatt's residence and amid groans, hisses, howls and yells, he was burned in effigy.

This contest continued for years. A happy event, however, came to end it. This was the invention and building of the Latta fireengine. After being tested by a commission of experts, the engine was accepted. What to do with it was the question. turn it over to the volunteers was to insure its immediate destruction. It was resolved, at length, to organize a paid company to use and protect the machine. A committee was appointed having on it Messrs. Piatt, Walker, Kessler and Loder to organize a company. To the amusement of his associates Mr. Piatt nominated Miles Greenwood as the captain of the new company. Judge Walker remonstrated. It was, he said, putting the new engine in the hands of the enemy, for Miles Greenwood was the pet of the volunteers, and had been loud in his denunciation of what he called the degradation of the paid system. Mr. Piatt persisted and asserted that Greenwood was the only man in the city who would make the new machine a success. "Well, try him," was the response, "he

wont accept.

Greenwood was sent for. He was startled at the offer but immediately accepted, provided that he could select the men.

"The machine will be attacked at the first fire, and I want to know whom I am to rely on.

The first alarm of fire that brought out the new engine proved the correctness of Green-wood's prophecy. The fire was a serious one on Sycamore street above Fourth. The general alarm brought all the engines to the fire and among the rest the new steam machine. Drawn by huge horses at a gallop, driven by Miles himself, a noble figure in his brass helmet, red shirt and speaking trumpet swung to his side, the impression made on the swiftly gathering crowds was impressive. Miles had about him the newly made firemen in their splendid uniforms. He had in addition all the men of his great foundry and workshops; and hurrying to the front of his first and only fight came Jacob Wykoff Piatt, followed by two hundred and fifty bold Irishmen from the old Thirteenth.

The volunteers were prompt to a redemption of their word. They attacked the new fire company. The fight was fierce, bloody and brief. Miles Greenwood led the van. His tall figure, bright helmet and trumpettoned voice, made him a leader to follow and a man to fear. The engagement lasted about thirty minutes. A few bloody heads, and damaged countenances, and the tumult ended in the volunteer companies striving to put the steam "squirt," as they called the new engine, out of public favor, through their own superior management and work.

It was all in vain. The new device won, and in less than a month all the fire companies were clamoring for the new invention,

organization and pay.

We write with unusual gratification the name of Miles Greenwood, who died in 1885. He was one of the strongest, most useful, public-spirited men in the annals of Ohio. He was of a large, strong physique, a great worker, labored incessantly in his own business and in many public enterprises. He was of Massachusetts stock, but was born in Jersey City, March 19, 1807; mingling in his veins were English, Huguenot French and German blood. In 1831 with ten hands he started iron founding in this city and eventually had an immense establishment.

In 1861 he turned it into a United States Arsenal for the manufacture of implements of war. Upward of 700 hands were employed, and among the goods turned out were over 200 bronze cannon, the first ever made in the West, hundreds of caissons and gun carriages, also a sea-going monitor; and forty thousand Springfield muskets were turned into rifles and supplied with percussion locks—a very effective weapon with tremendous "kicking qualities," so the soldiers who used it laughqualities," so the soldiers who used it laughingly said.

To Mr. Greenwood the Cincinnati Fire Department was greatly indebted for its efficient

organization.

Having been a leading spirit in the old volunteer fire department, he was induced by Jacob Wykoff Piatt to assume the leadership of the paid steam fire department. Once enlisted in behalf of the paid system, he quickly perceived the possibilities of vastly increased efficiency, and with iron will and never shrinking bravery determinedly fought and overcame all opposition. At one time the City Council failed to appropriate money to pay the men, and during this time Mr. Greenwood advanced for this purpose \$15,-000, to keep the men together by paying them regularily.

Night and day he was constantly engaged in fighting the opposition to the organization.

He had no time to attend to his own business, but paid a man \$1,500 to attend to it for him. Of this sum the city subsequently reimbursed him \$1,000, which he at once paid into the funds of the Mechanics' Institute. Eventually every difficulty was overcome, and to-day such a thing as a volunteer fire department is unknown in any city of the first class in Europe or America.

The first steam fire-engine ever built that

MILES GREENWOOD.

was used at a fire was constructed at Greenwood's establishment by Messrs. Shawk & Latta, and was first used on a Sunday morning in May, 1852. It was named the Uncle Joe Ross. It initiated a moral reform, as under the old system the engine houses had been the nurseries where the youth of the city were trained in vice, vulgarity and de-

bauchery

DR. DANIEL DRAKE was born in Plainfield, N. J., in 1785, and died in Cincinnati in 1852. He was a man of genius and did more to advance the intellectual life of Cincinnati than any one who had lived there. His family first emigrated to Mayslick, Ky., where they dwelt in a log-cabin. When a lad of 16 he came to Cincinnati to study medicine, and then finished his course at the University of Pennsylvania. He was at one time a medical Professor in the Transylvania University of Kentucky, and at another in that of the University of Louisville. In 1835 he organized the medical department of the Cincinnati College. In this city was past most of his life. An eloquent summary of the qualities of this distinguished man was given by Dr. Comegys before a medical convention in Cincinnati, wherein he said in conclusion:

"Nothing seemed to escape him for the adornment of the city and the comfort of the people. The line of elm trees on the south side of Washington Park were planted under his own direction over sixty years are

his own direction over sixty years ago.

"He was a roluminous writer on professional and general topics, but the work with which he crowned his life's labor was his 'Systematic Treatise on the Diseases of the Interior Valley of North America,' to which he devoted more than twenty years of travel throughout the vast Mississippi Valley. It was, so to speak, 'dug out of the very elements of the continent and society of America.' It is a great work of absolutely original research in medical topography, and will always remain a monument to his fame that has no parallel in the science and literature of medicine.

DR. DANIEL DRAKE.

"Though Drake has long been dead, yet all of his great undertakings remain and are flourishing. The Cincinnati College is the large Law School of the Ohio Valley; the Medical College of Ohio, now a Medical Department of the University of Cincinnati, was never so prosperous; the Clinical and Pathological School of the Hospital is attended by four hundred students. It has a large and growing library and museum, and is now undertaking to establish a pathological laboratory for original research. The beautiful elm trees are now as verdant as ever.

"The wonderful activity of Drake's mind,

"The wonderful activity of Drake's mind, which led him to undertake the most severe professional labors and throw himself besides into every struggle for the advancement of the interest of society, is readily explained when we consider the philosophic spirit which

animated his mind; for he was possessed of that gift of genius which sees beyond all the apparent disparity of phenomena; severe unity, after which all true philosophy

is continually aspiring.
"To him the universe was not a summation of material phenomena conveying sensuous impressions merely, but a revelation. His was a reverent and devout soul. He felt like Von Barden, who declares that 'he who seeks in nature nature only and not reason; he who seeks in reason reason only and not God; he who seeks God out of and apart from reason, or reason out of and apart from God, will find neither nature nor reason nor God, but will assuredly lose them all.'

'All the institutions he planted exhibit his

great powers of mind and will always pre-serve his memory fresh and venerated in the great Western Valley. In the medical firmament bending over the world, reaching from the past and stretching indefinitely away, amidst all the glittering galaxy and burning orbs that represent the immortal dead, the orb of Drake will shine as a star of light forevermore.

Benjamin Drake, a brother of the above, who died in 1841, was the author of several works of value on Cincinnati, Lives of Tecumseh, Gen. Harrison, etc. Another brother, CHARLES, born in Cincinnati in 1811, represented Missouri in 1867 in the U.S. Senate, and later became Chief Justice of the Court

of Claims in Washington."

EARLY INTELLECTUAL LIFE IN CINCINNATI.

As mentioned, no one so stimulated the intellectual life of Cincinnati as Dr. A great factor was his SOCIAL and LITERARY REUNIONS. a galaxy of characters he brought together under his roof! Mr. Mansfield, in his "Personal Memories," has described them, and also "THE COLLEGE OF TEACHERS," from which we quote in an abridged form:

In 1833 my friend and relative, Dr. Daniel Drake, instituted a social and literary reunion at his house, which possessed all the charms of information, wit, and kindness. They were really formed for his daughters, then just growing into womanhood. They were small enough to meet in his parlor and conversational, thus avoiding the rigidity of a mere literary party. We met at half-past seven, when the Doctor called attention by ringing a little bell, which brought them to the topic of the evening, which might be one appointed beforehand and sometimes then selected. Some evenings essays were read; on others nothing. Occasionally a piece of poetry or a story came in to relieve the conversation. These, however, were interludes rather than parts of the general plan, whose main object was the discussion of interesting questions belonging to society, literature, and religion.

The subjects discussed were always of a suggestive and problematical kind; so that the ideas were fresh, the debates animated, and the utterance of opinion frank and spontaneous. There, in that little circle of ladies, I have heard many of the questions which have since occupied the public mind, talked over with an ability and fulness of information which is seldom possessed by larger and more authoritative bodies. These were per-sons of such minds whose influence spreads over a whole country. They were of such character and talent as seldom meet in one place, and who, going out into the world, have signalized their names in the annals of letters, science, and benevolence.

Dr. Daniel Drake was himself the head of the circle and a man of great genius, whose suggestive mind furnished topics for others, and was ever ready to revive a flagging conversation. He studied medicine with

Dr. Goforth, the pioneer physician of Cincinnati, and for thirty years a leader in medical science and education.

Gen. EDWARD KING, another member, was, in spirit, manners, and education, a su-perior man. He was a son of the eminent statesman and senator from Massachusetts, Rufus King, and father of Rufus King, today eminent lawyer of Cincinnati, and author of "Ohio," in the American Commonwealth series of State Histories. Gen. King mar-ried Sarah, a daughter of Gov. Worthington, at Chillicothe, practised law, became speaker of the Ohio legislature and, in 1831, removed to Cincinnati. He was both witty and entertaining. He died in 1836. His wife, later known as Mrs. SARAH PETER (having eight years later married Mr. Peter, the British Consul at Philadelphia), was a most instructive member of the circle. Mr. Peter died, in 1853, and then again, until her decease, Cincinnati was her home.

Her life has recently been published by Robert Clarke & Co., and illustrates the truth of the statement made by Mr. Mansfield, viz., that "The activity, energy, and benevolence of her mind accomplished in the next forty years probably more of real work for the benefit of society than any one person, and that work has made her widely known at home and abroad." Not any Ohio-born woman has probably done so much.

She was one of the founders of the Cincinnati Orphan Asylum, which has cared for thousands of orphan children the last fifty years. She was also active in church and Sunday-school work, in improving church music, and relieving the poor. In Philadelphia she was prominent in founding "The Rosina Home for Magdalens," which still continues its noble work. She devoted a room in her house to a school of design for

women, and engaged a teacner to conduct it. From this germ sprang the Philadelphia School of Design, which now has over 200 pupils, and an institution of great utility. She also founded an institution there for the

protection of poor sewing women.

Her accounts of her several journeys to
Europe and the Holy Land are among the
best books of travel. When in Europe, Mrs. Peter urged the art-loving people of Cincinnati to secure good copies of painting and sculpture. In this and other regards she made a broad mark upon its art-history.

"It was in 1852, while visiting Jerusalem,

that Mrs. Peter found herself tending toward

MRS. SARAH PETER

the Roman Catholic Church, and she was soon in full communion with it. She was one of the most active and powerful members it has ever had in America. Her devotion to the sisterhoods and the hospitals was untiring and most generous. She was one of the good angels of the sick and wounded soldiers during the civil war. Her passion for charity was so great that she lived herself a simple convent life. She went to the battle-field of Shiloh with a relief-boat, and her ministrations continued until the war ended.

"This good woman, of so many noble achievements and of such commanding influence, passed to her rest February 6, 1877.

Another member of our circle was JUDGE James Hall, then editor of the Western Monthly Magazine, whose name is known both in Europe and America. He also, in the long time that elapsed before his death, accomplished much and good work as a writer, citizen and man of business. The Western Monthly Magazine, which he then

edited, was an excellent periodical, to which many of the literary young men of Cincinnati contributed. Judge Hall left the magazine to become cashier and president of the Commercial Bank, a much more profitable business. In the meanwhile he published several stories, novels, and essays on the West, which made him widely known, and deserves the success they receive, by their very pleasant style and pictures of Western life.

Professor Calvin E. Stowe, then a comparatively young man, was also present, and contributed his share to the conversation. He is the best Biblical scholar I ever knew. His first wife, a New England lady, quite hand-some and interesting, also attended the reunions. His present wife, then Miss Harriet Beecher, was just beginning to be known for her literary abilities. Two or three years after this time, I published in the *Cincinnati* Chronicle what I believe was her first printed story. I had heard her read at Miss Pierce's school, in Litchfield, Conn., her first public composition. It surprised every one so much that it was attributed to her father, but in fact was only the first exhibition of her remarkable talents. In the reunion I speak of she was not distinguished for conversation, but when she did speak, showed something of the peculiar strength and humor of her

Her first little story, published in the Chronicle, immediately attracted attention, and her writings have always been popular. Notwithstanding the world-wide renown of "Uncle Tom's Cabin" her real genius and characteristics were as much exhibited in her short stories as in her larger books. Her sister, Miss Catharine Beecher, was a far more easy and fluent conversationalist. Indeed, few people had more talent to entertain a company, or keep the ball of conversation going than Miss Beecher, and she was as willing as able for the task.

Conspicuous in our circle, both in person and manners, was Mrs. Caroline Lee Hentz, whom none saw without admiring. She was what the world called charming; and though since better known as an authoress was personally quite remarkable.

I have thus mentioned, out of a small circle gathered in a parlor, names which have been renowned both in Europe and America, and whose public reputation has contributed to the fame of our country. I have dwelt more particularly on these meetingst to illustrate what I think I've seen in other cases, and to which people in general seldom give due weight. I mean the influence of social sympathy in forming and developing individual

minds. About the year 1833 was founded what was called "The College of Teachers," which continued ten years, and was an institution of great utility and wide influence. Its object was both professional and popular; to unite and improve teachers, and, at the same time, to commend the cause of education to the public mind.

At that time public education was just beginning, and almost all in the Ohio educational system was created and developed after that period. To do this was the object in view, and, accordingly, a large array of distinguished persons took part in these proceedings. I doubt whether in any one association to promote the cause of education there was ever in an equal space of time concentrated in this country a larger measure of talent, information, and zeal.

Among those who either spoke or wrote for it were Albert Pickett, the president, and for half a century an able teacher; Dr. Daniel Drake, the Hon. Thos. Smith Grimke, the Rev. Joshua L. Wilson, Alexander Kinmont, and James H. Perkins, Professor Stowe, Dr. Beecher, Dr. Alexander Campbell, Bishop Purcell, President McGuffey, Dr. Aydelotte, E. D. Mansfield, Mrs. Lydia Sigourney, and Mrs. Caroline Lee Hentz.

LYMAN BEECHER.

HARRIET BEECHER STOWE.

The Beechers lived in Cincinnati (Walnut Hills), from 1832 to 1852, twenty years, and were so closely connected with the anti-slavery and educational history of this region as to require a further notice than that given by Mr. Mansfield. Dr. Lyman Beecher, the head of this remarkable family, was born in New Haven, Conn., in 1775, the son of a blacksmith and the direct descendant of the Widow Beecher, who followed the profession of midwife to the first settlers there about 1638. Lyman was educated at Yale, but as we heard in our youth could not "speak his piece" on graduating day from the inability of his father to supply him with a suit of new clothes in which to appear. He studied theology under the famous Timothy Dwight, and was settled as an Orthodox Congregational minister successively over churches at East Hampton, Long Island; Litchfield, Conn.; and Hanover Street Church, Boston. To fight evil in whatever form he saw it and help on the good was the love of his life. Old men who remember him in his prime pronounce him the most eloquent, powerful preacher they ever heard, surpassing in his greatest flights of oratory his highly gifted son Henry Ward.

In 1814, in New England, the vice of intemperance had become so demoralizing, even the clergy at their meetings often indulging in gross excesses, that Dr. Beecher arose in his might and wrote his wonderfully eloquent six sermons against it, which were translated into

many languages and had a large sale even after the lapse of fifty years. The rapid and extensive defection of the Congregational Churches under the lead of Dr. Channing was the occasion of his being called to Boston to uphold the doctrines of Puritanism; which he did with such great power as to soon be regarded as "unequalled among living divines for dialectic keenness, eloquence of appeal, sparkling wit, vigor of thought and concentrated power of expression. His personal magnetism was intense and his will unconquerable."

Mansfield in his Personal Memories writes that "Dr. Beecher's spells of eloquence seem to come on by fits." One hot day in summer and in the afternoon, says he, I was in church and he was going on in a sensible but rather prosy half sermon way, when all at once he began to recollect that we had just heard of the death of Lord Byron. He was an admirer of Byron's poetry, as all who admire genius must be. He raised his spectacles and began with an account of Byron, his genius, wonderful gifts, and then went on to his want of virtue and want of true religion and finally described a lost soul and the spirit of Byron going off and wandering in the blackness of darkness forever! It struck me as with an electric shock.

The Lane Theological Seminary having been established at Walnut Hills and the growing importance of the great West having filled the thought of the religious public at the East, a large sum of money was pledged to its support, on the condition of Dr. Beecher accepting the presidency, which he did in 1832. Then to eke out his salary for ten years he officiated as pastor of the Second Presbyterian Church, in Cincinnati. One of his first acts here was to startle the Eastern orthodoxy by a tract upon the danger of Roman Catholic supremacy at the West.

Soon after, in consequence of a tract issued by the abolition convention, at Philadelphia, the evils of slavery were discussed by the students. "Many of them were from the South; an effort was made to stop the discussions and the meetings. Slave-holders went over from Kentucky and incited mob violence in Cincinnati, and at one time it seemed as though the rabble might destroy the seminary, and the houses of the professors. In the absence of Dr. Beecher, a little after, the board of trustees were frightened into obeying the demands of the mob by forbidding all discussion of slavery; whereupon the students withdrew en masse. A few returned, while the seceders laid the foundations of Oberlin College."

Dr. Beecher in person was short and substantially built, his complexion was florid and he had such a genial, fatherly expression and withal was so very odd one could not but smile on meeting him. He was proverbially absent-minded, cared nothing for the little conventionalities of life; as likely as anything else when out taking tea with a parishioner to thrust his tea-spoon into the general preserve dish and eat direct therefrom: evidently

unconscious of his breach of manners. Like many not so great, he never could remem-ber where he put his hat. Topics of vital welfare to humanity seemed to fill his mind to the exclusion of thoughts of himself, or to what people thought of him, or where he had last put his hat. In 1846 we made his acquaintance and walking with him on Fourth street one day he described the situation at the time of the mobbing of the *Philanthropist*. The seminary was some three miles distant and over a road most of the way up-hill, ankle-deep in clayey, sticky mud, through which the mob to get there must of necessity flounder, even without being filled as they would undoubtedly have been with Old Bourbon. The mud was really what probably saved the theologian. "I told the boys," said he, "that they had the right of self-defence, that they could arm themselves and if the mob came they could shoot," and then look-ing in my face and whispering with an air that was irresistibly comical, he added, "but I told them not to kill 'em, aim low, hit 'em in the legs! hit 'em in the legs!

Those who knew the road to Walnut Hills in those days will remember it was largely a mere shelf cut out of the mud of the side hills whereupon omnibuses and single vehicles were often upset. The old divine coming down one night after dark was crowded off by some careless teamsters, and went rolling down the precipice perhaps some thirty feet, and so badly hurt he could not preach for three weeks. The stupid teamsters, attracted by his cries for help, came to the verge and peering down in the darkness hollowed, "How can we get there?" "Easy enough," he answered, "come down as I did!"

On one occasion a young minister was lamenting the dreadful increasing wickedness of mankind. "I don't know anything about that, young man," replied he in his whispering tones. "I've not had anything to do with running the world the last twenty-five years. God Almighty now has it in charge."

This good man was wont, after preaching a powerful sermon, to relax his mind from his highly wrought state of nervous excitement, sometimes by going down into his cellar and shovelling sand from one spot to another; sometimes by taking his 'fiddle,' playing 'Auld Lang Syne,' and dancing a double shuffle in his parlor. His very eccentricities only the more endeared him to the public. He was great every way. On a platform of a hundred divines, his was the intellect that all felt was their master. No American, except Benjamin Franklin, has given utterance to so many pungent, wise sentences as Lyman Beecher. In the power of concentrated expression he has been rarely equalled, and in his more sublime solemn outbursts he was like a thunderbolt.

Lyman Beecher was married thrice and had thirteen children; his seven grown sons all became Congregational clergymen, and his four daughters mostly gained literary and philanthropic distinction. Henry Ward, his most distinguished son, was educated at Lane

Seminary; and it was on Walnut Hills that his daughter, Harriet Beecher Stowe, met the originals of the persons that figure in her novel of "Uncle Tom's Cabin," and got filled up for that famous work, which was pub-

lished on her return East.

Her maiden sister Catharine's entire life was marred by a tragic event. She was betrothed to Prof. Fisher, of Yale College, who lost his life in 1822, by the wreck of the packet ship Albion off the coast of Ireland, at the age of twenty-seven years. He was a young man of extraordinary genius, thought to be akin to that of Sir Isaac Newton, and his loss was regarded as national. In the Yale Library to-day is an exquisite bust of him in marble. The face is very beautiful and refined. Evidence of his masterly power was shown by the opening article (an abstruse paper on the science of music) in the first volume of Silliman's Journal of Science, issued in 1818.

In conversation Miss Beecher was humorous, incisive and self-opinionated, but kindly. While at the head of a female seminary she became a convert to the Graham system of diet, and practised it upon herself and pupils, whereupon some of them invited her to partake of a good generous dinner at a restaur-

ant. It operated to a charm, converting her, and she came to the conclusion that a rich, juicy, tender, well-cooked beefsteak, with its accompaniments, was no object for contempt with a hungry soul.

An anecdote of her we heard in our youth was that, on being introduced at a social gathering in Hartford to the poet Percival, she went at him in an exciting adulatory strain upon his poetry, which had then just appeared and was eliciting general admiration. Percival, who was then a very young man, and the most shrinking of mortals, was completely overwhelmed; he could not answer a word, but as soon as possible escaped from her, and then, in his low, whispering tones, inquired of a bystander, "Is not that the young lady who was engaged to Prof. Fisher?" "Yes." "Ah!" rejoined he, "it is well he died."

No American family has so much influenced American thought as the Beechers, and none, through its genius and eccentricities, has been so interesting; and it did Ohio good that she had possession of them for twenty years. It used to be a common expression forty years ago that the United States possessed two great things, viz., the

American flag and the Beechers.

LEVI COFFIN.

CATHARINE COFFIN.

The reputed President of the Underground Railroad, Levi Coffin, philanthropist, was born October 28, 1798, near New Garden, North Carolina, and of Quaker parentage. His ancestors were from Nantucket, and he was a farmer and teacher. His sympathies were enlisted in favor of the slaves, and when a a lad of but fifteen he began to aid in their escape. In 1826 he settled in Wayne county, Indiana, kept a country store, cured pork and manufactured linseed oil.

Meanwhile his interest in the slaves continued, and he was active in the Underground Railroad, by which thousands of escaping slaves were aided by him on their way to Canada, including Eliza Harris, the heroine of "Uncle Tom's Cabin." In 1847 he removed to Cincinnati and opened and continued for years a store where only were sold goods produced by free labor, at the same time continuing his efforts for the escape of slaves. In the war period he aided in the establishment of the Freedmen's Bureau, visited England and held meetings in the various cities and collected funds for the Freedmen's Commission. On the adoption of the Fifteenth Amendment he formally resigned his office of Presisident of the Underground Railroad, which he had held for more than thirty years. He died in 1877. His "Reminiscences," published by Robert Clarke & Co., is a highly interesting volume, from which the following narratives are derived in an abridged form.

ELIZA HARRIS'S ESCAPE.

Eliza Harris, of "Uncle Tom's Cabin," the slave woman who crossed the Ohio river on the drifting ice, with her child in her arms, was sheltered for several days and aided to escape by Levi Coffin, he then residing at Newport, Ind.

Harriet Beecher Stowe's graphic description of this woman's experiences is almost identical with the real facts in the case.

The originals of Simeon and Rachael Halliday, the Quaker couple alluded to in her remarkable work, were Levi and Catharine Coffin.

Eliza Harris's master lived a few miles back from the Ohio river, below Ripley, Ohio. Her treatment from master and mistress was kind; but they having met with financial reverses, it was decided to sell Eliza, and she, learning of this and the probable separation of herself and child, determined to escape. That night, with her child in her arms, she started on foot for the Ohio river. She reached the river near daybreak, and instead of finding it frozen over, it was filled with large blocks of floating ice. Thinking it impossible to cross, she ventured to seek shelter in a house near by, where she was kindly received.

She hoped to find some way of crossing the next night, but during the day the ice became more broken and dangerous, making the river seemingly impassable. Evening came on when her pursuers were seen approaching the house. Made desperate through fear, she seized her infant in her arms, darted out the back door and ran toward the river, followed by her pursuers.

Fearing death less than separation from her babe, she clasped it to her bosom and sprang on the first cake of ice, and from that to another, and then to another, and so on. Sometimes the ice would sink beneath her; then she would slide her child on to the next cake, and pull herself on with her hands. Wet to the waist, her hands benumbed with cold, she approached the Ohio shore nearly exhausted. A man, who had been standing on the bank watching her in amazement, assisted her to the shore. After recovering her strength, she was directed to a house on

a hill in the outskirts of Ripley, which is that shown on page 336 of the "Ohio Historical Collection," this edition. Here she was cared for, and after being provided with food and dry clothing, was forwarded from station to station on the Underground Railroad until she reached the home of Levi Coffin. Here she remained several days until she and her child, with other fugitives, were forwarded via the Greenville branch of the Underground Railroad to Sandusky, and from thence to Chatham, Canada West, where she finally settled, and where years after Mr. Coffin met her.

THE MARGARET GARNER CASE.

One of the most remarkable of the cases that occurred under the Fugitive Slave law, and one which aroused deep sympathy and widespread interest during the latter part of January, 1856, was that of Margaret Garner, the slave mother who killed her child rather than see it taken back to slavery.

She was one of a party of seventeen who, though closely pursued, had escaped to Cincinnati. The party had separated at this point for greater safety, and Margaret with her four children and husband Robert, together with Robert's parents, Simon and Mary, had sought shelter at a house below Mill creek, the home of a free colored man named Kite, who had formerly been a slave in their neighborhood.

Kite did not consider his house a safe place for the fugitives and had gone to consult Levi Coffin as to measures for their removal along the Underground Railroad and was returning, when he found the house surrounded by the masters of the slaves, with officers and a posse of men.

The doors and windows were barred, but a window was soon battered down, and, although the slaves made a brave resistance, several shots being fired and slaves and officers wounded, the fugitives were soon overcome and dragged from the house. At this moment Margaret, seeing that escape was hopeless, seized a butcher-knife that lay on a table and with one stroke cut the throat of her little daughter, whom she probably loved best. She then attempted to kill herself

and the other children, but was overpowered. The whole party was then arrested and lodged

in jail.

The trial lasted two weeks, during which time the court-room was crowded. Colonel Chambers, of Cincinnati, and Messrs. Wall & Tinnell, of Covington, appeared for the claimants; Messrs. Joliffe & Getchell for the slaves. The counsel for the defence proved that Margaret had been brought to Cincinnati by her owners, a number of years before, and, according to the law which liberated slaves who were brought into free States with the consent of their masters, she had been free from that time, and her children, all of whom had been born since, were likewise The Commissioner, however, decided that a voluntary return from a free to a slave State reattached the conditions of slavery.

A futile attempt was made to try Margaret for murder and the others as accessories, and State warrants were issued. Lawyer Jolliffe pressed the motion to have them served, for said he, "The fugitives have all assured me that they will go singing to the gallows rather

than be returned to slavery."

They were finally indicted for murder, but owing to the provisions of the law of 1850 they could not be tried on that charge while

in their owner's custody.

Margaret was a bright-eyed, intelligentlooking mulatto, about twenty-two years of age. She had a high forehead, arched eye-brows, but the thick lips and broad nose of the African. On the left side of her face were two scars. When asked what caused them she said: "White man struck me." That was all, but it betrays a story of cruelty and degradation and perhaps gives the keynote of her resolve rather to die than go back to slavery.

During the trial her bearing was one of extreme sadness and despondency. "The case seemed to stir every heart that was alive to the emotions of humanity. The interest manifested by all classes was not so much for the legal principles involved as for the mute instincts that mould every human heart—the undying love of freedom that is planted in every breast—the resolve to die rather than to submit to a life of degradation and bond-

age.

After the trial the slaves were returned to

Kentucky.

It was reported that Margaret while being transported down the Ohio river had jumped off the boat with her babe in her arms, that the deck hands rescued her, but the child was drowned. Her subsequent fate is wrapped in obscurity.

Hugh Peters was born in Hebron, Conn., in 1807, and being educated for the law, came to Cincinnati to practice, and was drowned in the Ohio river at the early age of twenty-four years, it was supposed by suicide. He was a young man of high moral qualities, the finest promise as a writer of both prose and verse, and was greatly lamented. One of his poems, "My Native Land," is one of the best of its character. We annex a few of its patriotic verses. It was written while sailing from the shore of his native State, Connecticut, at the moment when it had shrunk in his vision to one "blue line between the sky and sea."

MY NATIVE LAND.

The boat swings from the pebbled shore, And proudly drives her prow; The crested waves roll up before: You dark gray land, I see no more— How sweet it seemeth now! Thou dark gray land, my native land,
Thou land of rock and pine, I'm speeding from thy golden sand; But can I wave a farewell hand To such a shore as thine?

But now you've shrunk to you blue line Between the sky and sea, I feel, sweet home, that thou art mine, I feel my bosom cling to thee. I see thee blended with the wave, As children see the earth Close up a sainted mother's grave; They weep for her they cannot save, And feel her holy worth.

And I have left thee, home, alone, A pilgrim from thy shore;

The wind goes by with hollow moan, I hear it sigh a warning tone,
"Ye see your home no more."
I'm cast upon the world's wide sea,
Torn like an ocean weed:
I'm cast away, far, far from thee,
I feel a thing I cannot be,
A bruised and broken reed.

Farewell, my native land, farewell!
That wave has hid thee now—
My heart is bowed as with a spell.
This rending pang!—would I could tell
What ails my throbbing brow!
One look upon that fading streak
Which bounds yon eastern sky:
One tear to cool my burning cheek;
And then a word I cannot speak—
"My Native Land—Good-bye."

On April 6, 1879, there died at the Good Samaritan Hospital, Cincinnati, Professor Daniel Vaughan. His friend, the late William M. Corry, in his eulogy said: "He was the only man among the hundreds of thousands of our people whose name will survive the next century." He was born of wealthy parents near Cork, Ireland, came to America at the age of sixteen, became a teacher of boys in Bourbon county, Kentucky, but soon moved to Cincinnati, where he passed the remainder of his days. He was drawn thither by his desire for its library privileges — to study the grand topics of science.

For his support he lectured on science and gave private lessons in mathematics, astronomy and the languages. He thus managed to eke out a miserable existence and in almost abject poverty. He lived in a room, cheap, inaccessible and cheerless. A chair, and a bedstead with a pile of rags, a wornout stove, and an old coffee pot, with a few musty shelves of books covered with soot, were all his furniture. An autopsy revealed

the wreck of his vital system and proved that the long and dreadful process of freezing and starving the previous winter had dried up the sources of life.

It was his intense absorption in science that had thus made him a martyr. For that he had overlooked the wants of his body, and suffered. The European scientists through his contributions to scientific journals by correspondence with him had learned of his extraordinary attainments in the most profound topics of human thought. And, whenever a stranger from Cincinnati appeared among them, the first question would be in regard to Professor Vaughan, and to not a few that question was their first knowledge of such an existence. He treated with great originality such topics as "The Doctrine of Gravitation," "The Cause and Effects of the Tides," The Light and Heat of the Sun," "The Remote Planets," "The Geography of Disease," "Origin of Mountains," "The Theory of Probabilities in the Detection of Crime," etc.

It was a bleak, cold, cheerless day on January 13, 1808, in a neat frame on the snow-clad banks of the Connecticut river, in the town of Cornish, New Hampshire, that was born Salmon P. Chase. His father, Ithaman Chase, was a farmer of English and his mother was of Scotch descent. His father died when he was yet a boy, and the family left in straitened circumstances.

Salmon was a studious lad, so when his uncle, Rev. Philander Chase, the earliest Episcopal Bishop, came to Ohio, he sent for him to come and live with him, and for a couple of years he studied with his uncle at Worthington, near Columbus, and then one year with him at Cincinnati. Then his uncle went to England on a visit and Salmon entered Dartmouth College, where he graduated in 1826, paying for his college expenses by school-teaching. He then went to Washington, where he taught a classical school and studied law with William Wirt. Having been admitted to the bar in 1830, he settled in Cincinnati to practise his profession, his age 22 years.

Finding but little business he occupied about two years of his leisure in compiling the Statutes of Ohio, preceded by an outline history of the State. The work, known as "Chase's Statutes," which proved of great service to the profession, was regarded of extraordinary merit. From his Puritan training he had early learned to view all questions in their moral aspects, and so from the very beginning of his career he was the friend of the slave, being when in Washington active in procuring signatures to a petition to Congress for the abolition of slavery in the District of Columbia.

In politics he did not then identify himself with either of the parties. When in 1836 a mob

destroyed the *Philanthropist*, the anti-slavery newspaper, he was engaged by Mr. Birney, the editor, to bring the offenders to justice. About this time miscreants, in and about Cincinnati, not only made it a business to hunt and capture runaway slaves for the sake of reward, but to kidnap free-blacks, carry them across the Ohio and sell them into slavery. In 1837, in what was known as the Matilda case, where a master brought a slave girl to the city and afterwards endeavored to take her back into slavery, Mr. Chase appeared in her behalf, as he frequently did in similar cases without expectation of pecuniary reward. After the case had been closed a gentleman of note who was present said, "There goes a promising young lawyer who has ruined himself," he feeling how unpopular in those days was the defence of the enslaved and defenceless. None but a man of the highest moral courage and humanity would have been willing to endure Governor Hoadley said of the obloquy.

him:
"What helped him—yes, what made him,
was this. He walked with God. The predominant element of his life, that which gave tone and color to his thoughts and determined the direction and color of all he did, was his striving after righteousness. . . Behind the dusky face of every black man he saw his Saviour, the divine man also scourged, also in prison, at last crucified. This is what made him what he was. To this habit of referring to divine guidance every act of his life we owe the closing words of the Proclamation of Emancipation, which Mr. Lincoln added from Mr. Chase's pen as follows: 'And upon this act, sincerely believed to be an act of justice, warranted by the Constitution, upon military necessity, I invoke the favorable judgment of all mankind, and the gracious favor of Almighty God.' He had dainty tastes, disliked the unclean in word or person; but he put his pleasure under his feet when duty led him to the rescue of the lowly. He had a large frame and mighty passions, but they were under absolute control.

When the Liberty party was organized in Ohio, in 1841, Mr. Chase was foremost and wrote the address which gave the issues which were finally settled only by a bloody war. In this he said the Constitution found slavery and left it a State institution—the creature and dependent of State law—wholly local in its existence and character. It did not make it a national institution. . . . Why then, fellow-citizens, are we now appealing to you? . . . It is because slavery has overleaped its prescribed limits and usurped the control of the national government, . . . and that the honor, the welfare, the safety of our country imperiously require the absolute and unqualified divorce of the government from slavery.

Mr. Chase defended so many blacks who were claimed as fugitives from slavery that the Kentuckians called him the "attorney-general for negroes," and the colored people of Cincinnati presented him a silver pitcher

"for his various public services in behalf of the oppressed."

Mr. Chase brought his great legal learning and a powerful mind to the task of convincing men that the Fugitive Slave law could and should be resisted as unconstitutional, because though the Constitution embraced a provision for the return of fugitives, it added no grant of legislative power to Congress over that subject, and, therefore, left to the States alone the power to devise proper legislation.

alone the power to devise proper legislation.

The original of John Van Trompe, in

"Uncle Tom's Cabin," was John Van
Zandt, who was prosecuted for harboring
fugitive slaves, because overtaking a party of
fugitives on the road he gave them a ride
in his wagon, and his defence by Mr. Chase
was one of the most noted. In the final
hearing in 1846 he was associated with Mr.
Seward.

Mr. Chase almost singly wrote the platform for the Liberty party, which in 1843 nominated James G. Birney for the Presidency. In 1840 this party cast but 1 vote in 360, in 1844 I vote in 40, which caused the defeat of Henry Clay. In 1848 Mr. Chase presided over the Buffalo Free Soil Convention, and the party cast 1 vote in 9. In 1849 by a coalition between the Free Soilers and the Democrats in the Ohio Legislature Mr. Chase was elected to the United States Senate. The Democracy of Ohio had declared in convention that slavery was an evil, but when the party in the Baltimore Convention of 1852 approved of the compromise acts of 1850, he dissolved his connection with it. He opposed the repeal of the Missouri compromise, and made such strong, persistent attacks upon it as to thoroughly arouse the North and greatly influence the subsequent struggle.

In 1855 Mr. Chase was elected Governor of Ohio by the newly formed Republican party, formed solely to restrict the extension of slavery and the domination of the proslavery power, and by a majority of 15,651 over the Democratic candidate, Gov. Medill. Ex-Governor Trimble, the candidate of the Know Nothing or Native American party, received 24,276 votes. In 1857 he was reelected governor by 1503 over Henry B. Payne, the Democratic candidate. In the Chicago Republican Convention of 1860, which nominated Mr. Lincoln, the first ballot stood, Seward, 173½; Lincoln, 102; Cameron, 50½; and Chase, 49.

When Mr. Lincoln was called to the presidency, March 4, 1861, he made Mr. Chase Secretary of the Treasury. His consummate management of the finances of the nation was such that a conspicuous leader of the rebellion said, "They had been conquered by our Treasury Department and not by our generalship." Whitelaw Reid said, "Ohio may be indulged, even here in the pardonable pride of an allusion to the part that in this phase of the war as well as in the others 'she led throughout the war.' To take a bankrupt treasury, sustain the credit of the government, feed, equip, arm and pay all

the expenses of a war of four years—this was the work accomplished by Salmon P.

Chase.

On June 30, 1864, Mr. Chase resigned his position as Secretary of the Treasury, was succeeded by Wm. P. Fessenden, of Maine, and on the nomination of Mr. Lincoln, was confirmed on the 5th of December, 1864, Chief-Justice of the United States, an office he filled until his decease. He presided at the impeachment trial of President Johnson in 1868. In his politics he was a Democrat, and his name being frequently mentioned that year as the probable Democratic nominee for the Presidency, he wrote, in answer to a letter from the Chairman of the Democratic National Committee:

"For more than a quarter of a century I have been in my political views and sentiments a Democrat, and still think that upon questions of finance, commerce, and administration generally the old Democratic principles afford the best guidance. What separated me in former times from both parties was the depth and positiveness of my convictions upon the slavery question. . . In 1849 I was elected to the Senate by the united votes of the old-line Democrats and independent Democrats, and subsequently made earnest efforts to bring about a union of all Democrats on the ground of the limitation of slavery to the States in which it then existed, and non-intervention in those States by act of Congress. Had that union been effected, it is my firm belief that the country would have escaped the late civil war and all its evils."

As a public speaker Mr. Chase was not eloquent. His speech was at times labored and hard, but he was impressive from his earnestness and the weight of his thought. The listener felt that he was no common man,

and had the highest good of all only in view. In every position he ever held he always displayed excellent executive capacity. On entering upon the duties of his office of Secretary of the Treasury he had by long and successful professional labors accumulated about \$100,000, and when he left it, after controlling for years the vast pecuniary business of the nation, he was poorer than when he went in.

In appearance he was the most imposing public man in the country—over six feet high, a blonde, with blue eyes and fresh complexion, portly, with handsome features and a massive head. His manners were dignified, but he had but little suavity, had none of the arts of the demagogue, and his great reputation was solely due to his great services and capacity, for he had but little personal popularity; the multitude never shouted for him. His great ambition arose from the patriotic conviction that he could render great public service. He was married thrice, and died a widower, leaving, of six children, two accomplished daughters.

Mr. Chase died in New York, May 7, 1873, of paralysis. He was buried in Washington, and on Thursday, October 14, 1886, his remains were removed to Spring Grove, Cincinnati. On this occasion, ex-Gov. Hoadley, his once partner, gave a masterly oration upon his life and services, in Music Hall, and addresses were made by Congressman Butterworth, Gov. Foraker, and Justice Matthews; James E. Murdoch read a poetical tribute from the pen of W. D. Gallagher. Conspicuous in the crowd who had assembled to pay their last tribute to the distinguished dead were some old colored men who had been slaves, and who felt a debt of gratitude to a man who had done so much for their liberty.

Charles Cist was born in Philadelphia, in 1793; in 1827–28 came to Cincinnati, and died there in 1868. He was the author of "Cincinnati in 1841;" ditto in 1851; ditto in 1859; and "The Cincinnati Miscellany," composed largely of incidents in the early history of the West. He wrote the descriptive article upon Cincinnati in 1847 in the first edition of this work; and here reprinted. He conducted for a term of years Cist's Weekly Advertiser. His editorial columns were largely personal, well sprinkled with "I's"—those "I's" meaning himself—which enhanced their interest. As one read, there appeared to his vision "Father Cist" looking in his eyes, smiling and talking. He was filled with a love of Cincinnati, and ministered to the extraordinary social fraternal feeling that existed among its old people—its pioneers. He would often print some gossipy item like that upon Judge Burnet, who, having used tobacco for a lifetime, had broken off in his old age, and was waxing in flesh under the deprivation. Another week, perhaps, it would be Nicholas Longworth, Judge Este, Bellamy Storer, Nathaniel Wright, or possibly that eccentricity, finical, poetical, and artistical Peyton Symmes, that would come in for an item.

Much he wrote was tinged with humor, and some of his own experiences were comically told. One we remember was about in this wise: "I got," said he, "into the stage-coach at the Dennison House, one day last

week, to go to Oxford, and was the only passenger until we neared Hamilton, which was after night, when half a dozen young college boys came aboard, and, without asking if it was agreeable to me. filled the coach

with tobacco-smoke. It made me deadly sick, but I said nothing. While we changed horses at Hamilton I made a little purchase in an apothecary shop. The coach started again; the boys continued smoking. In a few minutes one and then another exclaimed: 'Whew! what a horrid smell! What is it? Oh! awful!' I sat for a time in silence, enjoying their expressions of disgust. Then I said: Young gentlemen, we have all our especial tastes. You are fond of tobaccosmoking, to me it is excessively disagreeable; I have just made a purchase, which I am rubbing in my hands as an antidote to your smoke, and I must confess I rather enjoy it. You will say it is a curious idiosyncrasy of mine; it is a piece of assafætida.' For a moment the youths were dumbfounded; next they burst into a roar, and then out of the window went their cigars, and my lump of assafætida followed after.'

Lewis J. Cist, his son, who died in 1885, aged sixty-seven, had a local reputation as a poet and writer of music. He published the "Souvenir," the first annual of the West. He was an enthusiastic collector of autographs and old portraits, his collection numbering 11,000 of the former, and one of the largest and most famous in the United States. To him was ascribed the authorship of "The Spotted Frog," a parody on Gallagher's popular ballad, "The Spotted Fawn," spoken of

elsewhere in this work.

HENRY M. CIST, a younger son, born in 1839, is now a lawyer in Cincinnati. He was

a general in the rebellion, and noted for his contributions to war literature, as "Cincinnati with the War Fever," "The Romance of Shiloh," and "Reports of the Society of the Army of the Cumberland." Mr. Cist's father opened and superintended the first Sabbath-school in Cincinnati, and his grandfather, also named Charles Cist, born in St. Petersburg, Russia, and graduated at Halle, was a printer and publisher in Philadelphia, and was the first person to introduce anthracite coal into general use in the United States. He was also the original printer of Paine's

American Crisis.

Bellamy Storer, jurist, was born in Portland, Maine, March 9, 1798, died in Cincinnati, June 1, 1875. He was educated at Bowdoin, and, in 1817, began the practice of the law in Cincinnati. He was in Congress from 1835–1837; in 1844 was a Presidential elector on the Henry Clay ticket; for nineteen years was a judge of the Superior Court of the city. He was popular as a speaker at both political and religious meetings. At one time in his early life Judge Storer was a leading spirit in a religious band of young men, called "Flying Artillery," who went from town to town to promote revivals. When the Superior Court of the city was organized in 1854, the three judges were Spencer, Gholson, and Storer, and they were thus characterized: Spencer as excelling in perception of law principles, Gholson for his knowledge of precedents, and Storer for his great memory and fervid eloquence.

Gen. Ormsby McKnight Mitchel was born of Virginia stock, in Union county, Kentucky. When a four-year-old boy he was taken to Lebanon, Warren county, Ohio, by his parents. He was naturally of a studious disposition, and before he was nine years of age he was reading Virgil. At twelve years of age, the family being poor in circumstances, he was placed out to service as a boy in a store, and working mornings and evenings in the family of his employer. At a little less than fifteen years of age he received a cadet-warrant, and, with knapsack on his back, footed it a large part of the way from Lebanon, Ohio, to West Point, and arrived there in June, 1825, the youngest of his class, and with only twenty-five cents in his pocket.

He resigned from the army after four years of service, and began the practice of the law in Cincinnati, in partnership with E. D. Mansfield, who wrote of him in his "Me-moirs:" "Mitchel was noted at West Point for his gridness of the law in for his quickness and ingenuity. My father, who was professor of philosophy there, used to say: 'Little Mitchel is very ingenious.' He was more than that, for he was what you seldom see, a man of real genius. A great many people are spoken of as men of genius, but I never saw more than half a dozen in my life, and Ormsby Mitchel was one of He was my partner in a profession for which I think neither of us was well adapted; we were really literary men. The consequence was, Mitchel resorted to teaching classes, and I became a public writer.

Both the young men joined Dr. Beecher's

church, where Mitchel became noted for his fervid zeal at prayer meetings. In 1834 Mitchel was appointed professor of mathematics, natural philosophy, and astronomy in the "College of Cincinnati," an office he filled admirably.

When the project was entertained for building what is now known as the Little Miami Railroad, he warmly encouraged it, examined the route, and with Mr. Geo. Neff prevailed upon the city to loan \$200,000. Prof. Mitchel became its engineer. Three or four years of railroad engineering and attention to his college duties kept him busy.

An enthusiast in astronomy he felt the lack of the means for instructive observations for himself and students, and conceived the project of raising the funds for a complete observatory. Neither Boston nor New York

had an observatory. Was it likely that the people of a raw Western town would build one? Yes, for Mitchel could persuade them to do that great thing. And he saw the way. The only man in the world that could see it.

He began by stirring up an interest in astronomy by delivering a series of popular lectures in the College Hall. The first night he had but sixteen to hear him. The next night they brought more, and so it kept on increasing until the whole city had been so aroused by his fervid eloquence that his closing lecture had to be repeated in a city church to an audience of over 2,000. It was a theme in which not one in a hundred had before felt the slightest interest. He spoke without notes. His religious instincts were very strong; he was all alive with feeling; he possessed great fluency and command of language, and he electrified his audience with this most sublime, elevating topic as probably no man living or dead had ever done before.

GEN. O. M. MITCHEL.

At the close he stated his plan for building an observatory. It was by the organization of a joint stock company of 300 shares, the shares to be \$25 each, in all amounting to \$7,500, the shareholders to have certain privileges of admission to look upon the starry world. A few then subscribed, and he then called in person and besieged citizen after citizen until the 300 shares were taken.

Then the professor visited Europe, to secure the instruments; his ambition swelling with his successes, he now resolved to make it the best observatory in the country. Two resolutions he formed, he said, contributed to his success. "First, to work faithfully for five years, during all his time from regular duties, and second, never to become angry under any provocation while engaged in this enterprise." These show the quality of "little Mitchel," who in person was only about five and one-half feet in stature, erect, slender, wiry, but symmetrical, of a dark

complexion, with a keen visage and regular features. He looked the embodiment of will power and nervous energy, and ordinarily

was silent and thoughtful.

He could find neither in London nor Paris such an object glass as he wanted; but at Munich was one unfinished that would take two years to complete, the price to be \$10,000. He had but \$7,500 to pay for building an apparatus. The people of Cincinnati must come further to his aid; and after an absence of only 100 days he was among them. The shareholders indorsed his action, he appealing to their local pride by his statement that, if they did so, their telescope would be excelled by only one other in the world. He remitted \$3,000 to Munich to secure the contract.

Mitchel then worked vigorously to secure the money to erect the building, to be put on a four-acre lot given by Mr. Nicholas Longworth. Workmen were set to work digging for foundations, and preparing the On the 9th of November, 1843, material. occurred the memorable event of laying the corner-stone, by the venerable John Quincy Adams, who was the orator of the occasion. The observatory seemed likely for want of funds to stop with its corner-stone, they being exhausted by the payment for the telescope. Next spring work was resumed with three workmen. But Mitchel kept up his courage. It is the beginning that costs. Will power, faith moves mountains. He worked with his own hands; induced some of the laborers to take part pay in shares. By March, 1845, the great telescope was mounted, and a sidereal clock and a transit instrument were given by Prof. Bache, of

the coast survey.

He had promised his services as astronomer for ten years free of charge, calculating upon his salary in the college for support. Soon the college was burnt, and he was out of business. Nothing daunted, he resolved to give popular lectures as a means of livelihood, and continue his labors at the observahood, and continue his labors at the observa-tory. He began at Boston. The first night the hall was but half full. "Never mind," said he to a friend, "every one that was here to-night will bring a friend the next night." Great success followed. The problem of subsistence was solved. For years he devoted himself to his astronomical studies, was an admirable observer, and showed remarkable inventive genius. By these inventions he revolutionized the system of cataloguing the stars. During 1854-9 he made nearly 50,-000 observations of faint stars. He published the Sidereal Messenger, an astronomical journal. His own books were the "Planetary and Stellar Worlds," his lectures on the "Astronomy of the Bible," and in 1860 his last, "Popular Astronomy." In his "Astronomy of the Bible" he boldly adopted the "Nebular Hypothesis" of La Place; but the theology which he beared from the street was Colvin. which he learned from the stars was Calvinistic. In his final lecture, after showing that the universe was governed by immutable law, he concluded with this eloquent passage:

"No, my friends, the analogies of nature applied to the moral government of God would crush out all hope in the sinful soul. There for millions of ages these stern laws have reigned supreme. There is no deviation, no modification, no yielding to the retion, no modification, no yielding to the re-fractory or disobedient. All is harmony because all is obedient. Close forever if you will this strange book claiming to be God's revelation; blot out forever if you will its lessons of God's creative power, God's super-abounding providence, God's fatherhood and loving grandinghin to man his arring off. loving guardianship to man, his erring offspring, and then unseal the lids of that mighty volume which the finger of God has written in the stars of heaven, and in these flashing letters of living light we read only the dread sentence, 'The soul that sinneth it shall surely die.

In another place, in speaking of the power

of the astronomer, he said:
"By the power of an analysis created by his own mind the astronomer rolls back the tide of time and reveals the secrets hidden by countless years, or, still more wonderful, he predicts with prophetic accuracy the future history of the rolling spheres. Space withers at his touch, Time past, present and future become one mighty now.

Up to the outbreak of the war the observatory remained the best equipped in the

One day, just before the war, standing on our office steps in Cincinnati, there passed by a young man about thirty years of age. He was alone, and as he approached we looked at him with unusual interest. He was rather short in stature, thin in the flanks, but broad, full-chested. His complexion was very fair, and beard long, flowing and silky, and his face frank and genial. walked erect and, as was his wont, very leisurely, and with a side-to-side swing. As his eye met ours a slight smile flit over his face, not one of recognition for there was no acquaintance. Probably his mind was far away and he did not see us, and it was the memory of a happy incident that had lighted his face with the momentary joy. Possibly it was the earnestness of our gaze, if perchance he noticed it, but that was pardonable. His fellow-citizens were proud of him and liked to gaze upon him, being, as he was, to the manor born and a man of poetic genius, WM.

United States, and the reputation of Mitchel as an astronomer was alike high in Europe and America. Then came the rebellion, when he threw himself unreservedly into the conflict. At the fall of Sumter, at the great Union meeting in New York, he was the most effective speaker. When he closed the scene that followed was indescribable. Men and women were moved to tears, voices from all parts of the vast hall re-echoed the sentiments of the speaker.

In August Mitchel was appointed Brig-adier-General of Volunteers, head-quarters Cincinnati, where he at once plunged into his new work with his old zeal, put the city in a posture of defence, supervised the erection of earthworks and drilled the gathering

troops.

Mitchel was popularly known in the army as "Old Stars." Whitelaw Reid says of him, "Amid the stumblings of those early years his was a clear and vigorous head. While the struggling nation blindly sought for leaders his was a brilliant promise. But he never fought a battle, never confronted a respectable antagonist and never commanded a considerable army. Yet what he did so won the confidence of the troops and the admiration of the country that his death was deplored as a public calamity and he was mourned as a great general.

WM. H. LYTLE.

Haines Lytle, the author of "Antony and Cleopatra," whose name was to go down to posterity as the "Soldier Poet." His reputation at the time was that of being highly social and possessed of winning politeness, a modest bearing and chivalrous spirit. One by our side who was under him, as we write, says: "My regiment was marching as an escort to some baggage wagons when an aid

galloped up to me and said, 'General Lytle sends his compliments to Col. Beatty with the request to send a company to the rear to guard against guerillas.'" To be ever courteous seems to have been as a sort of intuition with him, and showed the high refinement of the man. It is said that just before the fatal charge at Chickamauga he drew on his gloves with the remark, "If I must die I will die as a gentleman." Whether true or a myth it matters not: if a myth its invention shows it was characteristic and, therefore, spiritually true.

Wm. Haines Lytle came from a Scotch-Irish stock, and noted for warlike qualities and experiences. He was born in the old Lytle mansion on Lawrence street, November 2, 1826, graduated at Cincinnati College at twenty years of age, following his naturally military instincts became a Captain in Second Ohio in the war with Mexico, studied and practised the law, was a member of the Ohio Legislature, in 1857 was Major-General of the State militia. When the rebellion broke out he was commissioned Colonel of the Tenth Ohio, the Cincinnati Irish regiment, which he led into Western Virginia, and fell wounded at Carnifex Ferry while leading a desperate charge; was again badly wounded and taken prisoner at Perrysville, where his regiment suffered terrible loss. He was commissioned General and commanded the First Brigade of Sheridan's division on the fatal field of Chickamauga, where he fell at the head of his column while charging, pierced by three bullets. "Captain Howard Green, a volunteer aid, sprang from his horse, received the General in his arms, and was rewarded with a smile of grateful recognition. Several officers and orderlies attempted to bear him off the field. The peril of this undertaking may be imagined since two of the orderlies were killed, and Col. Wm. B. Mc-Creary wounded and left for dead on the field.

"General Lytle repeatedly opened his eyes and motioned to his friends to leave him and save themselves. Finally, upon coming to a large tree upon a green knoll, they laid him down. He then handed his sword to one of the orderlies, and waving his hand toward the rear, he thus tried to express with his last breath that his well-tried blade should never fall into the hands of the enemy. So closed the life of the poet-soldier, Lytle. His death found him, as he prophetically wrote years before:

"On some lone spot, where, far from home and friends,

The way-worn pilgrim on the turf reclining, His life, and much of grief, together ends."

Lytle had many friends in the Southern army, and his remains were treated with every mark of respect, his mourners being alike his friends and foes. His body was temporarily buried in a coffin until they could be sent home. Until the outbreak of the war poetry was to him a frequent occupation and amusement. That on which his fame will permanently rest, "Antony and Cleopatra," was originally published, in 1857, in the Cincinnati Enquirer.

ALICE.

THE CARY SISTERS.

PHŒBE.

When preparing for our first tour over Ohio we passed a few days in the rooms of Dr. Randall, Secretary of the Cincinnati Historical and Philosophical Society. The Doctor then mainly constituted the society. A few years later he was shot while dodging somewhere in California behind a counter to avoid the ire of **3**

pursuing ruffian: but the society still survives. He had as an office mate L. A. Hine, then youthful, large and handsome, who was trying to reform a deceptive and deceiving world by publishing a magazine called "The Herald of Truth," wherein was duly set forth a nice project for "Land for the Landless:" and then later he established his permanent home with his family at a spot properly

named for domestic felicity; it being Love Land.

The rooms were on East Fifth street, opposite the old Dennison House, where the well-fed, portly form of Landlord Dennison, father of a then-to-be war Governor, was a daily object for pleasing contemplation. Alongside was the horse market, where for decades were daily sales of horses, sold amid crowds of coarse-grained men, unearthly, confusing yells and poundings of auctioneers, and the scampering to and fro on bareback horses of stable boys through the street to show their points. On looking upon the spot, its vulgarity and coarseness, its yells and shouting, and often oaths, it seemed as though the gates of heaven must be afar: at least there appeared no one in search of them in that vicinity. To enhance the attractions it was at a time when the city was termed Porkopolis, its citizens Porkopolitans, for swine had full liberty of the streets, living upon their findings, or going in huge droves stretching from curb to curb to temporary boarding places in the suburbs on Deer creek.

One day, while there in the rooms of the society, in bounced two laughing, merry country girls. Some jokes passed between them and the Doctor and Hine, and then they bounced out. They were from a rural spot eight miles north of the city, and well named Mount Healthy, their names Alice and Phœbe Cary, girls then respectively 26 and 22 years of age, and just rising into fame.

The portraits as published are not at all as they were then. Phobe had a round, chubby face and seemed especially merry. Alice we again saw and but once years later at a concert by Jenny Lind in the old National Theatre on Sycamore, near Third street. She was then small and delicate with an oval face, expression sedate and thoughtful. She was attired in Quaker-like simplicity, her dark hair parted in the middle and combed smooth over the brow. No maiden could look more pure and sweet than she on that evening. Her appearance remains as "a living picture on memory's wall." By her sat that most superb-looking, rosy-cheeked old man, Bishop M'Ilvaine, whose resemblance to Washington was of almost universal remark. Robert Cary, the father of the Cary sisters, came in 1803 to the "Wilderness of Ohio" from New Hampshire, and in 1814 married Elizabeth Jessup and made a home upon the farm afterwards known as the "Clovernook" of Alice Cary's charming stories.

Their mother, a sweet woman of literary tastes, died in 1835, and two years later their father married again. Alice was then 17 and Phœbe 13 years of age. Their stepmother was unsympathetic with their literary aspirations, which at this time were budding. Work with her was the ultimatum of life, and while they were willing and aided to the full extent of their strength in household labor, they persisted in studying and writing when the day's work was done, while she refusing the use of candles to the extent of

their wishes, they had recourse to the device of a saucer of lard with a bit of rag for a wick after the rest of the family had retired. Alice began to write verses at 18, and Phebe some years after her. For years the Cincinnati papers formed the principal medium by which they became known, then followed the Ladies' Repository of Boston, Graham's Magazine, and the National Era of Washington. Recognition from high authorities at the East then came to their Western home. John G. Whittier and others wrote words of encouragement, and Edgar Allan Poe pronounced Alice's "Pictures of Memory" one of the most musically perfect lyrics in our language.

In 1849 a great event occurred to the sisters—a visit to their home from Horace Greeley. The philosopher had come to the city and wanted the pleasure of an acquaintance with these rural maidens whose simple, natural verses of country life had touched a sympathetic chord, and so went out to their home and gladdened their hearts. We presume after that visit the stepmother wished she had been less close with her candles.

We remember that time well; the philosopher was an old acquaintance; the weather had turned intensely cold, and he said to us he was unprovided with a sufficiently warm clothing for a return by stage coach over

the mountains.

A winter fashion at that time in the Ohio valley was a huge coarse blue blanket with a black border of about six inches. These shawls were extensively made into overcoats, whereon their black zebra-like stripes had full display. A more uncouth appearing garment could not be well imagined either as a shawl or overcoat. It was warm, but absorbed rain like a sponge. The shawls had struck the philosophic eye, they were so peculiarly what was then known as "Western," and to an inquiry we replied we had one not in use to which he was welcome

fully accepted the gift and wore it home as a specimen of Cincinnati fashions, carrying, too, in its meshes a generous quantity of the city's soot, for which the garment had an especial retaining adaptability. To have thus ministered in that long ago to the comfort of an old-time philosopher bent on reforming mankind and inviting young men "to go West" is another pleasing picture on "Memory's walls." Nearly thirty years elapsed ere we again saw the sage—he was on his Presidential canvass, riding through Fourth street in an open barouche. His white, benevolent face had broadened, and he was bowing and smiling to the people, looking "for all the world" like some good old grandmamma when bent on dispensing to the youngsters some good warm gingerbread just out of the oven.

Having obtained recognition from the Eastern literati and some pecuniary success by a volume of their poems, in 1852, the sisters, first Alice and then Phœbe Cary, removed to New York to devote themselves to literature. They established themselves in a modest home, and by their habits of industry and frugality had success from the very start.

Occasionally they visited their old home and resumed the habits of their girlhood days. When they had obtained literary eminence they established on Sunday evenings weekly receptions, when for a term of fifteen years were wont to gather the finest intellects, the most cultured characters of the metropolis and the East. Assemblies so comprehensive in elements, so intellectually varied and harmonious, were never before seen in the metropolis. They were quite informal and

not especially gratifying to the mere butterflies of fashion whom curiosity sometimes prompted to attend.

Alice was frail, and in her last sickness, prolonged for years, she was tenderly nursed by her stronger sister, bearing her great sufferings with wonderful patience and resignation. She died February 12, 1871, and five months later Phœbe followed her. She was naturally robust in health, but she had been weakened by intense sorrow, and then becoming exposed to malarial influences quickly followed her sister. Both were buried in Greenwood cemetery.

It had been pitiful to see Phœbe's efforts to bear up under her dreadful loneliness after her sister's death. "She opened the windows to admit the sunlight, she filled her room with flowers, she refused to put on mourning and tried to interest herself in general plans for the advancement of woman. All in vain. Her writings were largely poems, parodies and hymns."

One of her poems, written when she was only eighteen years of age, has a world-wide reputation. Its title is "Nearer Home," and it has filled a page in nearly every book of sacred song since its composition. Its opening verses are:

One sweetly solemn thought
Comes to me o'er and o'er:
I am nearer home to-day
Than I ever have been before.

Nearer my Father's house Where the mansions be; Nearer the great white throne, Nearer the crystal sea.

The Cary Homestead, "the old gray farm-house," is still standing, in a thick grove about 100 feet back from the road, on the Hamilton pike, just beyond the beautiful suburb of College Hill, eight miles north of Fountain Square. The sisters were born in a humble house of logs and boards on a site about a hundred yards north of it. It is of brick, was built by their father about 1832, when the girls were respectively eight and twelve years of age. It is a substantial, roomy old-fashioned mansion, and is just as the sisters left it when they went to New York to seek their fortune. It has many visitors attracted by memories of the famous sisters, a brother of whom, Warren, a farmer, still lives there. After their decease Whittier, in writing of their original visit to him, thus alluded to it:

Years since (but names to me before)
Two sisters sought at eve my door,
Two song-birds wandering from their nest,
A gray old farm-house in the West.

Timid and young, the elder had Even then a smile too sweetly sad; The crown of pain we all must wear Too early pressed her midnight hair.

Yet, ere the summer eve grew long, Her modest lips were sweet with song; A memory haunted all her words Of clover-fields and singing birds.

One of the attractions of the region is the old family graveyard.

The most interesting single object in this region is what is known as "the Cary tree." It is the large and beautiful sycamore tree on the road between College Hill and Mount Pleasant. The history of this tree is very interesting, as given by Dr. John B. Peaslee, ex-superintendent Cincinnati public schools.

In 1832, when Alice was twelve years old and Phœbe only eight, on returning home from school one day they found a small tree, which a farmer had grubbed up and thrown into the road. One of them picked it up and said to the other: "Let us plant it." As soon as said these happy children ran to the opposite side of the road and with sticks—for they had no other implement—they dug out the earth, and in the hole thus made

Dr. Arthur Le Boutellier, Photo

THE "GRAY OLD FARM-HOUSE."

they placed the treelet; around it, with their tiny hands, they drew the loosened mold and pressed it down with their little feet. With what interest they hastened to it on their way to and from school to see if it were growing; and how they clapped their little hands for joy when they saw the buds start and the leaves begin to form! With what delight did they watch it grow through the sunny days of summer! With what anxiety did they await its fate through the storms of winter, and when at last the long looked-for spring came, with what feelings of mingled hope and fear did they seek again their favorite tree!

When these two sisters had grown to womanhood, and removed to New York city, they never returned to their old home without paying a visit to the tree that they had planted, and that was scarcely less dear to them than the friends of their childhood days. They planted and cared for it in youth; they loved it in age.

Mr. Peaslee was the first person anywhere to inaugurate the celebration of memorial tree-planting by public schools, which he did in the spring of 1882 by having the Cincinnati schools plant and dedicate with musical, literary and other appropriate exercises groups of trees in honor and memory of eminent American authors. The grove thus planted is in Eden Park and is known as "Authors' Grove." At that time the above description was used as part of the exercises around the Cary tree, planted by the Twelfth district school of the city.

The school celebration of memorial treeplanting was the outgrowth of the celebration of authors' birthdays, which had been inaugurated by Mr. Peaslee in the Cincinnati schools some years previously. He had simply carried the main features of authors' birthday celebrations into Eden Park and united them with tree-planting.

The planting of trees and dedicating them to authors, statesmen, scientists and other great men have from this Cincinnati example been adopted by public schools in nineteen States of the Union, the Dominion of Canada, and the beautiful custom has crossed the ocean to England, and as a consequence millions of memorial trees have been planted by school-children.

On our first coming to Ohio, in 1846, the praises of a young Whig orator, then thirty-two years old, Gen. Samuel F. Carv. were in many mouths. He was born in Cincinnati, educated at Miami University and the Cincinnati Law School, and then became a farmer. He served one term in Congress, 1867–9, as an Independent Republican, and was the only Republican that voted against the impeachment of President Johnson. In 1876 he was nominated by the Greenback party for Vice-President on the ticket with Peter Cooper for President. He has been interested in the temperance and labor reform movements, and there are few men living who have made so many speeches. Hon. Job E. Stevenson, in his paper on "Political Reminiscences of Cincinnati," truly describes him as "a man of national reputation as a

temperance and political orator, endowed with wonderful gifts of eloquence, highly developed by long and varied practice in elocution, of fine presence, and a voice of great power and compass." To this we may say, one may live a long life and not hear a public speaker so well adapted to please a multitude. In his case the enjoyment is heightened by seeing how strongly he enjoys it himself. In a speech which we heard him deliver at the dedication of the Pioneer Monument, at Columbia, July 4, 1889, we saw that at the age of seventy-five his power was not abated. We, however, missed the massive shock of black hair that in the days of yore he was wont to shake too and fro, as he strode up and down the platform, pouring forth, with tremendous volume of voice, torrents of indignation upon some great public wrong, real or imaginary, with a power that reminded one of some huge lion on a rampage, now and then relieving the tragic of his speech by sly bits of humor.

On our original tour over Ohio we happened once in the office of the Cleveland Herald, when there came in a youth of scarcely twenty years. We were at once interested in him, though we had never before met, for our fathers had been friends, and he was a native of our native town, New Haven Conn., where he was born July 31, 1825. The young man was pale, slender, with keen, dark eyes, nimble in his movements, quick

GEORGE HOADLY.

as a flash with an idea, and enthusiastic. This was George Hoadly; upon his high history, blood and training have since asserted their power. He is of the old Jonathan Edwards stock; his great-grandmother, Mary

Edwards, who married Major Timothy Dwight, was a daughter of the great divine. His father, George Hoadly, was a graduate of Yale; was for years mayor of New Haven; moved in 1830 with his family to Cleveland, where he was elected five times mayor, 1832–1837, during which time he decided 20,000 suits; mayor again in 1846–1847. He was a horticulturist, arborist, botanist, and learned in New England family history—a gentleman of unusual elegance and accomplishments. His mother was a sister of the late President

Woolsey, of Yale.

George Hoadly graduated at Western Reserve College and Harvard Law School, and in 1849 became a partner in the law-firm of Chase & Ball, Cincinnati. In 1851, at the age of twenty-five, he was elected a judge of the Superior Court of Cincinnati, and was city solicitor in 1855. "In 1858 he succeeded Judge Gholson on the bench of the new Superior Court. His friend and partner, Gov. Salmon P. Chase, offered him a seat upon the Supreme Court bench, which he declined, as he did also, in 1862, a similar offer made by Gov. Tod. In 1866 he resigned his place in the Superior Court and resumed legal practice. He was an active member of the Constitutional Convention of 1873–74, and in October, 1883, was elected governor of Ohio, defeating Joseph B. Foraker, by whom he was in turn defeated in 1885. During the civil war he became a Republican, but in 1876 his opposition to a protective tariff led him again to affiliate with the Democratic party. He was one of the counsel that successfully opposed the project of a compulsory reading of the Bible in the public schools, and was leading counsel for the assignee and creditors in the case of Archbishop Purcell. He was a professor in the Cincinnati Law School in 1864-1887, and for many years a trustee in the University. In March, 1887, he removed to New York and became the head of a law-firm."

George Ellis Pugh was born in Cincinnati, Nov. 28, 1822, and died July 19, 1876. He was educated at Miami University; became a captain in the 4th Ohio in the Mexican war; attorney-general of Ohio in 1851; and from 1855 until 1861 served the Democratic party in the United States Senate. In the National Democratic Convention, in Charleston, S. C., in 1860, he made a most memorable speech of indignation, in reply to William L. Yancey, in the course of which, alluding to the demands of the ultra proslavery partisans upon the Northern Democracy, he said (we write from memory): "You would humiliate us to your behests to the verge of degradation, with our hands on our mouths, and our mouths in the dust." His plea in behalf of Clement L. Vallandigham was regarded as one of his ablest efforts. This was in the habeas corpus proceeding before Judge Leavitt, involving the question as to the power and the duty of the judge to relieve Mr. Vallandigham from military confinement Mr. Pugh was gifted with a very strong voice, a power of vehement, earnest

utterance, and with a marvellous memory that was of great advantage over all opponents, enabling him, as it did, to cite authority after authority, even to the very pages, so that he could at any time, when prepared, go into court without any yellow-arrayed breastworks, in the form of piled-up law books. His last years were greatly marred by excessive deafness.

At the age of seventy-one, on July 14, 1883, on his beautiful place at North Bend, there died Dr. JOHN ASTON WARDER, a

DR. JOHN A. WARDER.

most beneficent character. He was born in Philadelphia of Quaker parentage, and in early life saw at his father's house and associated with those eminent naturalists, Audubon, Michaux, Nuttal, Bartram, and Darlington, from whom he acquired great fond-ness for nature, and how to woo her sweet delights. He studied medicine in Philadelphia, practised eighteen years in Cincinnati, and then moved to North Bend to give his entire attention to horticulture. Meanwhile he did everything in his power to advance education and science, and was a leader through his capacity and love. The public schools, the Astronomical Society, Western Academy of Natural Sciences, Horticultural Society, Ohio Medical College, and Natural History Society all felt his guiding power.

Warren Higley, President of Ohio State Forestry Association, wrote of him: "His early surroundings and associations were powerful allies in his education as a naturalist. He read and studied and mastered the book of Nature in its varied teachings as but few have mastered it. A seed, a bud, a leaf, a plant, a branch, a tree, a shell, a rock, attracted his notice and elicited investigation. He was a veritable student of Nature, and his love among men was as lovingly beautiful as it was among his plants and trees. . . . He is justly called the Father of American Forestry.

Associated for a time, about the year 1854, with Dr. Warder, in the publication of the "Botanical Magazine and Horticultural Review," was JAMES W. WARD, a gentleman highly accomplished by varied attainments in science, literature, art, and both a poet and the nephew of a poet. The best remembered of his verses by the older citizens is a parody of Henry W. Longfellow's "Hiawatha," entitled "Higher Water," descriptive of a freshet on the Ohio river; other of his pieces were characterized by delicate fancy and re-

fined instincts.

ROBERT CLARKE was born in Annam, Dumfrieshire, Scotland, May 1, 1829. He removed with his parents to Cincinnati, Ohio, in 1840, was educated at Woodward College, and became a bookseller and publisher in that city. He edited George Rogers Clarke's "Campaign in the 'Illinois' in 1778-9" (Cincinnati, 1869), James McBride's "Pioneer Biographies" (1869), Capt. James Smith's "Captivities with the Indians" (1870), and is the author of a pamphlet entitled "The Prehistoric Remains which were Found on the Site of the City of Cincinnati, with a Vindication of the Cincinnati

Tablet," printed privately, 1876.—Appleton's Cyclopedia of American Biography.

The mystery of the fate of Sir John Franklin for a long term of years aroused the sympathy of the civilized world. He had sailed from England in May, 1845, in two British ships, the Erebus and Terror, on a voyage of discovery of the northwest passage across our continent, and never returned. Several expeditions were sent in search, two from our country, De Haven's and Griffith's in 1850, and the last under Dr. E. K. Kane in 1853. The last under Mc-Clintock sailed from England in 1857 in the little steam-yacht Fox, purchased by Lady Franklin, and brought back from the Eskimos intelligence of the sad fate of the expedition, with many relics.

All further search for them in England was then considered as ended. Not so in this There was one individual—then a country. citizen of Cincinnati, and personally known to us as a singularly modest and worthy man, doing business as a seal engraver at No. 12 West Fourth street—Charles Francis HALL, a native of Rochester, New Hampshire, born there in 1821, where he began life as a blacksmith. For years he had been an enthusiastic student of Arctic exploration, and when the mystery over the fate of Sir John Franklin had aroused universal sympathy he was intensely excited. He pondered over the subject by day and dreamed of it by night, and felt as though there might be some poor souls yet surviving of the lost mariners among the Eskimos, whom to relieve from their savage, dreary, deathlike existence he was personally called upon to attempt by

every attribute of humanity.
Some of his townsmen, when they finally learned of his preparing to start off on a self-constituted expedition in search of the survivors of the Franklin Expedition, and, moreover, heard that he designed making scientific observations of natural phenomena, replied, with supercilious smiles: "Pshaw! what in the way of Arctic explorations and scientific investigations can this fellow do? Why he is nothing but a common seal engraver," they said, "who has received but the common schooling, and perhaps only from a common Yankee school-marm at that, and who in all his life has accomplished no greater feat than engraving the initials of sundry nobodies upon wedding-rings, 'With this do I thee wed!''

Such commentators, with any amount of

CHAS. F. HALL.

scholarly drill, prove incapable of a fresh thought, or else it would flash upon them, as it would upon any bright, well-read lad of fifteen, that the great names that come down to us from Moses to Socrates, from Shakespeare to one Ben Franklin, and almost the entire line of original inventors, Edison inclusive, are largely those of individuals who were powerless to display parchments of graduation. They seem dead to the fact that upon the basis of a common school education, with the abundant printed aids of our time—advantages which "Moses and the prophets," Socrates and the popes, had not-for the investigation of almost any single topic, that the naturally clear brain when will and enthusiasm absorb its entire power is capable of the most subtle fingerings, of giant grasps and far-reaching conquests. His townsmen little realized that in the person of this

modest, quiet seal engraver was to be demonstrated from the days of the Norsemen to our days no greater hero in all Arctic history. and moreover that he was to win the singular distinction of penetrating nearer to the North Pole than any human being before him, and then filling the northernmost grave on the

When Hall returned from his first expedition he brought two natives, the Eskimos Joe and Hannah, afterwards of the Polaris Expedition, and came to Cincinnati with them. About that time Lady Franklin, who had come to this country to meet Hall, was also in Cincinnati, and gave a reception to such of the citizens as desired to call upon her in the ladies' parlor of the Burnet House, when John D. Caldwell, Ohio's "Universal Secretary," acted as chaperon.

This was in the war time, the winter of

1863-4. One evening at that period we saw Hall and Joe together in the Gazette office. The Eskimo, or more properly Innuits, are a small race, the men under five feet in stature. Joe looked alongside of Hall as a pigmy beside a giant. Hall was a tall, fleshy man, with rather a small head, the last man one would pick out for a hero, possessing very little self-assertion or fluency of speech. What may seem strange, his Eskimo companions Joe and Hannah on their arrival in this country, consequent upon the inhospitality of our climate, had caught severe colds. As we looked upon Joe that winter evening in the Gazette office, we felt we would like to know his emotions on a first introduction to "What a civilized life. Ruskin said: thought that was when God first thought of We felt we would like to know Joe's emotions when he first saw a tree. He was of a race of our fellow-creatures who never see a tree nor a shrub their entire lives through, but dwell in seeming utter desolation and solitude, where the whole earth lies dead under an eternal snowy shroud.

EDWARD FOLLENSBEE NOYES was born in Haverhill, Mass., October 3, 1832, and becoming an orphan served five years apprenticeship in the office of the Morning Star, a religious newspaper published at Dover, N. H. He then prepared and "went through" Dartmouth College, graduating near the head of his class, moved to Cincinnati and graduated in the Cincinnati Law School in 1858. When the civil war broke out he was one of the members of the Literary Club who enlisted. He changed his law office into recruiting headquarters and was commissioned July 27, 1861, Major of the 39th Ohio Infantry, and later its Colonel. He was with his regiment in every march and in every battle and skirmish in which the command was engaged, until he lost a leg in an assault on the enemy's works at Ruff's Mills in the Atlanta campaign. While yet on crutches he reported for duty to Gen. Hooker, and was assigned to the command of Camp Dennison, and later was commissioned Brigadier-General. In 1871 he was chosen Governor of Ohio; at the next election was defeated;

in 1877 he was appointed by his old friend and club mate, President Hayes, Minister to France. During his service there he was sent on an especial mission to the East, visiting all the countries that border on the Mediterranean. He resigned in 1881 and resumed his law practice in Cincinnati. He possesses fine oratorical powers, and is re-

GEN. E. F. NOYES.

markable for his enthusiastic, cheery disposition and kindly manners. He was so beloved by the soldiers that he induced a larger number of veterans to re-enlist in his regiment than was secured to any other in the National army from Ohio. He died Sept. 4, 1890.

In our boy days we often saw in our father's bookstore in New Haven, Alphonso Taft, then a Yale student. He was tall, broad—even as a youth—heavy and strong, and then noted for his strong common sense and masculine grasp of intellect. He was a warm admirer of Daniel Webster, whom in some important aspects he resembled, and of the many eulogies pronounced upon that great man his tribute to his life and services is regarded by the family and friends of Mr. Webster as the most truthful and masterly. He once made a remark that is worth any printer's ink: "It is a pretty bad case that has not to it two sides."

Judge Taft was born in Townsend, Vermont, November 5, 1810; graduated at Yale in 1833; tutor there, 1835–1837; in 1838 admitted to the bar and after 1840 practised in Cincinnati, where he won high reputation. In 1856 he was a delegate to the National Republican Convention, and in the same year was defeated for Congress by George H. Pendleton; from 1866 to 1872 was Judge of the Superior Court of Cincinnati, when he resigned to associate himself in practice with two of his sons. "In 1875 he was a candi-

date for the Republican nomination for the governorship; but a dissenting opinion that he had delivered on the question of the Bible in the public schools was the cause of much opposition to him. The opinion that defeated his nomination was unanimously affirmed by the Supreme Court of Ohio, and is now the law of the State. He became Secretary of War March 8, 1876, on the resignation of Gen. William W. Belknap, and on 22d May following was transferred to the attorney-generalship, serving until the close of Gen. Grant's administration. Judge Taft was appointed United States minister to Austria April 26, 1882, and in 1884 was transferred to Russia, where he served till August 1, 1885. He has been a trustee of the Univer-

ALPHONSO TAFT.

sity of Cincinnati since its foundation, and in 1872–82 served on the corporation of Yale, which gave him the degree of LL.D. in 1867." Four of his sons have graduated at that institution. He died May, 21 1891.

AARON F. PERRY, like Judge Taft, is from the Green Mountain State, born at Leicester, Vermont, January 1, 1815—like him was educated at Yale, and cast his fortunes in Ohio, first settling in Columbus, where he had as successive law partners Gov. Dennison and Gen. Carrington. In 1854 he removed to Cincinnati and became a law partner with Judge Taft and Col. Thomas M. Key. As a lawyer he has made enduring marks upon the history of his country—notably in the case of Vallandigham against Burnside, involving the legal right to arrest a private citizen for indulgence in the freedom of speech in opposition to the measures of a government struggling for its life against citizens in armed rebellion. Mr. Perry in his politics was originally a Whig, then a Republican,

and in 1870 was elected to Congress by the Republicans, where he took a leading part. During the war era no man, in our judgment, in the Cincinnati region, was so effective as he in upholding the hands of government by public addresses, irresistible from their grasp and clearness of statement, beauty of diction with keenness of wit, and delivered with a grace and ease of manner and a power that so captivated the multitudes that ever assembled to hear him, that they were always sorry when he closed. So important were his services to Ohio at this period, that Gov. Dennison thanked him in his annual message. Although suffering from a malady, deafness, that warps the disposition of many sensitive natures, Mr. Perry seems not at all affected by it, but everywhere and to every one appears with an overflow of good feeling that renders his presence, and after thoughts of him, to a high degree pleasant.

REUBEN RUNYAN SPRINGER.

REUBEN RUNYAN SPRINGER, philanthropist, was a descendant of the early Swedes who settled in Delaware in the seventeenth century. His father was a soldier under Gen. Wayne in the Indian war, and later became the postmaster in Frankfort, Ky., where Reuben was born, November 16, 1800. He in turn became postmaster, a clerk on a river steamboat running between Cincinnati and New Orleans, and then acquired an interest. Later he became a partner in a wholesale grocery house in Cincinnati, and retired in 1840 from ill health, and never resumed active business.

"He went abroad repeatedly, buying many works of fine art, which are now mostly the property of the Art Museum. He gave to the Music Hall, the Exposition Building, the Odeon Theatre and the Art Museum, in all,

\$420,000; to private charities of the Roman Catholic church—of which he was a member—more than \$100,000, and at least \$30,000 annually in the way of benevolence, beside contributing liberally and regularly to various charities and public enterprises. He died in 1884, left by will about \$3,000,000 to nearest of kin—having no children; also annuities to the College of Music, the Music Hall and the Art Museum, and nearly \$400,000 to various Roman Catholic charitable institutions, among these \$40,000 to the Cathedral School, \$30,000 to St. Peter's Benevolent Society, and \$100,000 for the education of priests." A fine statue to his memory is in the Music Hall, the work of Clarence Powers. Mr. Springer was in person tall and erect, with dark eyes, and dignified and quiet in manner, and impressed the casual observer as one of the highest type of gentlemen.

CALVIN WASHBURN STARBUCK, printer, born in Cincinnati in 1822; died there in 1870; was the fastest type-setter in Ohio; established the *Times*, the progenitor of the *Star-Times*; was remarkable for his philanthropy to various charitable institutions of the city both by cash and personal labor. During the civil war he strove by voice and pen to establish the National credit. To the families of his employés who enlisted he continued their full wages while they were in the service, and in 1864 volunteered and bore his musket as one of the one hundred-

day men.

DAVID SINTON, so widely known for his benefactions, was born in County Armagh, Ireland, early in the century, of mingled Scotch and Anglo-Saxon blood; the family name was originally Swinton. His father's family came to this country and settled at Pittsburg when he was three years of age. His life business has mainly been the manufacture of iron, the location of his furnaces, Lawrence county. His residence has been mainly Cincinnati. He is entirely a selfmade man; has a large, strong person with strong common sense, and therefore moves solely on the solid foundation of facts. His residence is the old Longworth mansion on Pike street, built by Martin Baum early in the century. Mr. Sinton's only living child is the wife of Chas. P. Taft, editor of the Times-Star.

To be a public man of note renders such an one an object of interest to the public, to say nothing of the gratification in that fact to the public man himself. One such, a fellow-townsman in Cincinnati, we seldom failed to look upon as we passed him on the street from his personal attractions and general reputation as a man. He was rather short in stature but a full-chested, erect, plumply-built and very handsome man, with dark smiling eyes, a noble, massive head adorned with a wealth of dark luxuriant hair: life seemed to go pleasant with him. We never heard the sound of his voice; but once, just before the civil war, we were simultaneously in each other's eyes. We had met and passed on a side street, each of us alone; then we turned to gaze upon

him at the same moment he had turned to gaze on us. The reader has had a like experience and appreciates the mutual mortification of the moment. Which of us felt the meanest is an unsolved problem. When on our late tour over Ohio we were in the Tom Corwin mansion, at Lebanon, Judge Sage, whose home it is and who was with us, said with pride, as enhancing the attrac-

DAVID SINTON.

tions of the mansion, "In the room over us George H. Pendleton passed several days when he was an infant." This was the full-rounded man we met as above described. His fellow-townsmen called him "Gentleman George" from his suave manners and courtly ways. Then he was "well fixed" for pleasant contemplation, possessing, as reputed, ample means, the best social relations, the best Virginia blood of the revolutionary war coursing through his veins, and as the mother of his children one of the most beautiful, sweetly-mannered of women, and of the blonde order, a daughter of Francis Scott Key, author of the never-to-be-forgotten ode, "The Star-Spangled Banner." Her tragic death in Central Park a few years ago, thrown from her carriage, is remembered with a pang.

with a pang.

George Hunt Pendleton was born in Cincinnati 25th July, 1825, and educated to the law. He was elected as a Democrat to Congress in 1856, serving till 1865, where he was on the Committees on Military Affairs and Ways and Means.

"In 1860, at the time of the division of the Democratic party at the Charleston Convention, Mr. Pendleton warmly supported Mr. Douglas. On sectional questions he was moderate and conservative. If dissolution was inevitable, he preferred it should be a peaceful one; if war was to be waged, he warned Congress to 'prepare to wage it to the last extremity;' and accordingly voted for all measures required to enable the government to maintain its honor and dignity."

He was on the ticket for the Vice-Presidency, with George B. McClellan for President, in 1864; was unsuccessful on the Democratic ticket for Governor of Ohio in 1869 against R. B. Hayes. In 1878 was elected U. S. Senator, and became Chairman of the Committee on Civil Service Reform. In 1885 he was appointed by President Cleveland U. S. Minister to Germany.

He died of apoplexy in Brussels, Nov. 24, 1889. His remains lie buried in Spring Grove. He was regarded as "the very pink of honor; performed many generous deeds; but no apoples."

Col. George Ward Nichols, small in person but great in will, was born in Fremont, Mt. Desert, on the coast of Maine, in 1837, and died in Cincinnati in 1885. He was a school-boy in Boston; then travelled in Europe, making his headquarters in Paris. His tastes were for the fine arts, and he learned to draw and paint. In the war period he was aid both to Fremont and to Sherman, on his march to the sea. Then he

GEORGE H. PENDLETON.

came to Cincinnati, where he was for a time engaged in drawing and painting. His life there is a part of the history of the city. His father's house had been a musical home, and love of music was his master passion. He became the originator and organizer of the May Musical Festivals, the Opera Festivals, and the College of Music, founded in 1879, and "was its president, and placed the col-

lege where envy could not reach it." The important educational influences of such work and the honorable reputation it has given the city, is not to be lightly measured. He was author of "The Story of the Great March to the Sea;" "Art Education Applied to Industry," and "Pottery: How it is Made." CHARLES W. WEST, whose great benefac-

CHARLES W. WEST, whose great benefaction for an Art Museum in Cincinnati is a lasting memorial of beauty and pleasure, was born in Montgomery county, Pa. In 1810 worked on a farm, until he was twenty-one years of age, and at thirty-one established himself in Cincinnati as a merchant and had

great success.

In September, 1880, he offered to contribute \$150,000 toward the erection of an art museum building, provided that an equal amount was raised by subscription: on the condition being fulfilled he gave twice as much as he had promised. The building was begun in 1882 and finished in 1885; but Mr. West did not live to see it finished, he dying the year before aged seventy-four years. His portrait in the museum is in seeming that of a genial gentleman, full of sociality and good fellowship, which indeed were his characteristics. His offer came as a grand surprise. On the opening of the Exposition of 1880, its President, Hon. Melville E. Ingalls, the famed railroad manager, read a letter, later termed the "famous letter," from Mr. West, making his magnificent offer. When the Exposition closed "in glory," having been a great success financially and artistically, Mr. Ingalls gave a public dinner to its friends, whereupon fifty-three gentlemen obligated themselves to increase the fund for the Art Museum \$1,000 each, in all \$53,000. assured success.

After the death of Mr. Joseph Longworth, the first President of the Museum, Mr. Ingalls was elected its president, and has since held the office by continuous elections, he managing things with the same vim as he has the "Big Four." Like Col. George W. Nichols, already sketched in these pages, Mr. Ingalls is a native of Maine, born at Harrison, Sept. 6, 1842. As a matter of honoring record, we annex the names of the fifty-three who each gave one thousand dollars for the Art Museum; and in this connection inquire what other city can produce such a fifty-

three?

Thomas H. Skinner, A. Gunnison, C. I. St. L. & C. R. R., by M. E. Ingalls, George W. McAlpin, E. W. Cunningham and wife, A. J. Mullane, Mrs. George Carlisle, Robert Mitchell, Chaffield & Woods, S. J. Broadwell, Wm. P. Hulbert, John Shillito, Walsh & Kellogg, Elliott H. Pendleton, Oliver

Perin, B. S. Cunningham and wife, J. H. Rogers, George Hofer, Joseph Kinsey, J. N. Kinney, B. F. Evans, A. H. Hinkle, George H. Hill, Robert Clarke & Co., C. W. Short, George H. Pendleton, M. E. Ingalls.

STANLEY MATTHEWS was born in Cincinnati, July 21, 1824, the son of a college professor. He graduated at Kenyon, where he was a classmate of R. B. Hayes, and lifelong friend. He adopted the profession of the law and at one time edited an anti-slavery newspaper, the Cincinnati Herald. He be-

STANLEY MATTHEWS.

came judge of the Court of Common Pleas, held other offices, entered the army as Lieut. Col. of the 23d Ohio, W. S. Rosecrans being its Colonel, and R. B. Hayes, Major; remained in the army until April, 1863, when he was elected by the Republicans judge of the Superior Court of Cincinnati; soon resigned and engaged in a large and lucrative law practice. On the Electoral Commission he rendered efficient service to the claims of Mr. Hayes. In 1877 he succeeded John Sherman in the Senate. In 1881 he was appointed associate justice of the United States Supreme Court. He died March 21, 1889, leaving the reputation of being a great lawyer and a most lovable man. In person he was tall, manly and approachable to everybody. "If he had lived," said Senator Payne, "he would have been the foremost jurist in the land." Another said, "Few stronger men have been born: he embodied extraordinary powers," and with him "Religion was a worship and not a show."

WILLIAM S. GROESBECK was born July 24, 1815, in New York city; was educated to the law and came to Cincinnati. In 1851 was a member of the State Constitutional Convention; in 1852 one of the commission

to codify the State laws; in Congress 1857–1859, serving on the committee on foreign affairs; a member of the peace congress in 1861, and in 1862 of the Ohio Senate; a delegate to the National Union Convention in 1866; one of President Johnson's counsel on his impeachment trial, 1868; was in 1872 the Presidential candidate of the Liberal Republicans in opposition to Horace Greeley and received one electoral vote for Vice-President, for which office he had not been nominated. In 1878 was delegate to the International Monetary Congress, held in Paris. His reputation for capacity is of the highest. And by his endowment of \$50,000 for free open air concerts in Burnet Woods Park, strains of sweet music are to soothe the cares of multitudes long after he shall have passed away.

ALFRED TRABER GOSHORN was born in Cincinnati, July 15, 1833; graduated at Marietta, and also at the Cincinnati law school. In the war period he was commissioned Major of the 137th O. V. I., and served until its close. He passed four memorable years in Philadelphia as Director General of the first National exhibition observed by the people of the United States, in commemoration of the Declaration of American Independence, a position to which he had been called by his extraordinary genius for organizing, illustrated by his experience in the Cincinnati expositions. He retired from that high place covered with honors, thanks, titles and decorations from the leading governments of Europe in recognition of his services and courtesies to their representatives while occupied on this great occasion of peace and good will. The citizens of Philadelphia also ex-

pressed their gratitude by the present of an elegant library, while his own citizens on his return gave him a banquet. Naturally as a Cincinnati production they felt proud of him,

ALFRED TRABER GOSHORN.

and now having become known of all men and to many nations he is giving its Art Museum the benefit of his great experience, while snowing up for his patriarchal years.

THE GERMAN ELEMENT IN CINCINNATI.

The German element comprises one-third of the population of Cincinnati. It has had a surprising influence upon its art development—as music, painting and sculpture—also upon its politics and business. It has given some highly prominent men to the community.

The first mayor of Cincinnati was Major David Ziegler, a German from Heidelburg, elsewhere noticed. Another eminent man was Martin Baum. He was of high Dutch parentage; his father was from Strasburg, his mother of the Kershner family, but he was born at Hagerstown, Md., June 14, 1765. In 1795, at the age of thirty, he came to Cincinnati, engaged in merchandising, and became its most wealthy and influential business citizen. In 1804 he married Miss Anna Somerville Wallace. In 1803 he founded the first bank in the West, the Miami Exporting Company. This company at the same time carried on a great transportation business, and became one of the most important promoters and improvers of the navigation of the West. He called into life the first sugar-refinery, the first iron-foundry, the first steam flouring-mill, and started into the West the first stream of influential German emigrants from the ships at Philadelphia—as Zachariah Ernest, the Stablers, Schnetz, Simon Oehler, Schenebergers, Hoffner, etc. Moreover, had the first ornamental garden, the first vineyard, and was active in founding the first public library (1802); of the Western Museum (1817); of the literary society (1817); the first agricultural society (1818), etc., etc. He was a leader in establishing schools, markets and churches; personally was one of the main pillars of the first Presbyterian church. He eventually purchased that extensive tract from Pike street to the top of Mount Adams and bounded by Congress and Fifth streets. Here he built the elegant residence, later occupied by Nicholas Longworth, and now by David Sinton. His hospitable home was open to all intellectually great men who visited Cincinnati, and German literary men were especially welcome. This great and useful man died December 14, 1831, of epidemic influenza, now known as "La Grippe."

CHRISTIAN BURKHALTER, formerly secretary to Prince Blucher, in 1837 founded a

German Whig newspaper, the Westlicher Merkur. In 1836 he had joined James G. Birney in the publication of the *Philanthro*pist, an Abolition newspaper, which was destroyed by a mob. ALBERT VON STEIN came to Cincinnati in 1817, and gained eminence as a civil engineer. He was builder of the Cincinnati water works, the first in the country to be worked by pumps; made drawings for "Wilson's Ornithology;" built the Appomatox canal, and water-works for Richmond, Lynchburg, Petersburg, New Orleans, Nashville and Mobile. He died in 1876, aged 84 years. Dr. FRIEDRICH REESE, a very learned man (in 1825), was the first German Catholic priest in Cincinnati, later was bishop of Detroit; he was the founder of the Scientific School and of the Athenæum—the nucleus from which sprang St. Xavier College. Dr. WILHELM NAST, born in 1807, studied theology and philosophy with David Strauss in the celebrated Turbingen Institute; emigrated in 1828; in 1831 and 1832 went over to the Methodist church, and is considered as the father of German Methodism in America. He founded here two German Methodist newspapers. His theological works are very numerous, and he "has persuaded many to study in German universities, although he must have been aware that they would change their narrow religious views for wider and riper ones." In 1826 appeared the first German newspaper, Die Ohio Chronik. In 1834 the Germans formed a German society, that they might aid each other to assure a better future, and to secure generally those charitable aims which are "impossible to the single individual.'' Among those who formed this was HEINRICH RODTER, journalist and lawyer. He was editor of the *Volksblatt*, founded in 1836 as the organ of the Democrats. In 1847-48, as a member of the Ohio Legislature, he had passed the law which secures workingmen a lien on houses built by them, and also a law reducing the cost of naturalization to foreigners. Although a Democrat, he voted against the black laws and was antislavery in his sentiments; at one time was a law partner with the eminent J. B. Stallo. He died in 1857. KARL GUSTAVE REEMELIN was born in Wurtemburg in 1814, and at the age of 18 years arrived in this country. was on the eve of the election of Andrew Jackson, when he became attached to the Democratic party, to which he has always adhered. "His studies and experience at home had already given him an enthusiasm for free trade and a prejudice against paper money and a banking system; and he thought he saw in the Whig party an inclination to-ward puritanism which was naturally repugnant to the genuine German nature. name Democracy had a certain charm for the Germans; and as the wealthy classes mostly belonged to the Whig party they classed them with the European aristocracy. Reemelin became one of the founders of the Volksblatt, studied law but never practised, and entered into politics. As a member of the Ohio Legislature he criticised very sharply the then defective method of taxation, and

evinced a thorough study of political economy." He was a leading member of the Constitutional Convention in 1850–51; the article in the constitution is due to his exertions which prevents the legislature from making arbitrary divisions in the electoral districts. Through this great abuses had arisen, minorities at times having gained a majority in the legislature. He visited the reform schools in Europe, and guided by his report the legislature established the Reform School at Lancaster. Becoming tired of politics he eventually retired to his beautiful farm and vineyard near Cincinnati, where he has written much for agricultural journals—one upon "The Climate of Ohio." He has published "The Vine Dresser's Manual," "The Wine Maker's Manual," and "Politics as a Science."

The fact that Cincinnati owns the finest zoölogical garden in the country is due to another German gentleman, Mr. Andrew Erkenbrecher, lately deceased. It was his original conception and was pushed to consummation with characteristic energy. He was born in Bavaria in 1822, and came to

this country in his fourteenth year.

EMIL KLAUPRECHT, born at Mainz, in 1815, first carried on lithography in Cincinnati and then turned to journalism. In 1843 he published the first belles-lettres periodical, the Fliegende Blatter, with lithographic illustrations, the first German illustrated paper in the United States. He was at one time United States consul for Stuttgart. He edited a Whig paper, the Republicaner, which for ten years was the principal organ of his party in the Western States. He wrote several novels and an historical work, "Deutsche Chronik in der Geschichte des Ohio Thales." The Germans have supplied to Cincinnati other literary men of marked ability, as Heinrick Von Martels, Dr. Joseph H. Pulte, founder of the Pulte Homœopathic College; Heinrich A. Rattermann, founder of the German Mutual Insurance Company. "Mr. Rattermann has written poetry in both the German and English; has worked with especial industry in the history of civilization, and has taken upon himself to vindicate a just estimate of German emigration, and showing therein a sharp and critical judg-ment." The names of others connected with editorship or education can be mentioned, but we have no room for details, as Dr. Friedrich Roelker, August Renz, Joseph Anton Hemann, Stephen Molitor, Nikolaus Hofer, Rev. Geo. Walker, Ludwig Rehfuss, founder of the Lafayette Guard in 1836, the first German military company, Pastor August Kroll, etc.

In art the Germans have been especially prominent, as the names of many Cincinnati artists testify. As early as 1826 Gottfried Schadow founded here an Academy of Fine Arts, and had for a pupil Hiram Powers. He died of cholera and with him perished his academy. He made busts of Governor Morrow and President Harrison, the first of

which is now in the State library.

Even away back to 1823 existed here a German musical society. In 1849 the first great German musical festival of the United States was held in this city. Then was founded the first German Saengerbund of North America, whose musical festivals have now gained a world-wide reputation, and prepared the way for the foundation of the Grand Music Hall and College of Music.

The great lithographic business of the city is almost entirely the work of Germans, and the largest furniture factory of the world employing 1500 hands, that of Mitchell & Rammelsburg, owes its foundation mainly to Freidrich Rammelsburg, a Hanoverian, who died in 1863. In 1831 Mathias Schwab started here the first organ factory in the

west, if not in the Union.

The most remarkable man among the German lawyers of Ohio, "a man of whom all the Germans in the United States should. be especially proud is JOHANN BERNHARD STALLO." He came from a race of schoolmasters, and was born in 1823, in the Grand Dukedom of Oldenburg, and came to Cincinnati in 1839, where he was first a teacher in a private school when he compiled a German A, B, C, spelling-book, a great want, the superior merits of which led the directors of the newly founded Catholic St. Xavier's College to appointed him a teacher in that institution. The study of the higher mathematics led him to German philosophy, and in 1848 appeared his "General Principles of the Philosophy of Nature," and in 1882 his "Concepts and Theories of Modern Physics." Mr. Stallo adopted the profession of law and from 1852 to 1855 was Indeed of law, and from 1853 to 1855 was Judge of the Court of Common Pleas. Returning to practice he gained a most brilliant reputation by an argument before the Superior Court of Cincinnati against the retention of Bible reading and religious instruction in public schools. His argument lasted for several hours. Although the Cincinnati Court decided adversely, the Supreme Court of Ohio reversed their decision and sustained the views of Stallo and the liberals. It was on the ground that religion is wholly a matter of individual freedom, over which the State by its Constitution has no power. This celebrated speech was regarded as a wonderful illustration of striking logic, wealth of philosophical truth and historical illustration. He was appointed minister to Italy in 1885. Mr. Stallo possesses a strikingly refined, scholarly presence, and is of the light hair, blue-

eyed German type.

SAMUEL N. PIKE, the builder of the magnificent opera houses in Cincinnati and New York, was of Jewish parentage. The family name was Hecht, the German for Pike. He was born near Heidelberg, and in 1827, when five years of age, came to America, and in 1844 to Cincinnati. He gained colossal wealth in the liquor business, and having been a great admirer of Jenny Lind, he built for the Muse of Song a temple which he said should do honor to Cincinnati. On February 22, 1859, the opera house, the largest

and most beautiful in America, was opened with song. It was burnt in 1866, and later rebuilt. He was a silent, calm man, and while it was building none knew his object, and when from the roof of the Burnet House he saw the structure of his pride and ambition vanishing in the flames, he quietly smoked his cigar as unruffled as the most indifferent spectator, and while thus standing gazing in this calm, contemplative attitude one of the light-fingered gentry as calmly relieved him of his watch, of course, a first-class time-keeper.

The Grand Opera House in New York was begun at this time. He sold it to James Fisk, Jr., for \$850,000. A gigantic speculation in land, reclaiming the Jersey marshes, near New York, brought him immense profits, so that at his death, in 1875, his fortune was well up in the millions. He used to say he "could not see why he should make money—he never fretted himself—he

couldn't help it.'

In the war of the rebellion the Germans took a very active part. Familiar with the conflict of arms in the old country they saw sooner than the native Americans that war was inevitable, and were therefore very early in the field. Three general officers of the Union army were supplied by the Germans of Cincinnati. Gen. August Moor, born in Leipsic in 1814, who had been captain in the Mexican war, started as Colonel of the 28th Ohio Volunteer or 2d German regiment; the 1st German regiment or 9th Ohio was under Robert McCook. Moor gained a high reputation. Gen. August V. Kautz, born in Baden in 1828, was a private in the Mexican war, later a lieutenant in the regular army. He is the author of several small military treatises. Gen. Gottfried Weit-ZEL, born at Winzlen in 1835, came to this country in early childhood, graduated high in his class at West Point, and was assigned to the engineer corps. While in command of a division in the operations against Petersburg, he greatly distinguished himself, the taking of which led to the fall of Richmond. "He was the first one who, at the head of his command, entered Richmond by the side of President Lincoln. Strange coincidence! The German General Schimmelpfenning was the first to lead a brigade into Charleston, and another German general was the first to carry the flag of the Union into Vicksburg. The first bayonet charge of the war was made in the Union victory at Mill Spring by the 1st German regiment (9th Ohio), composed mainly of the Cincinnati Turner Society, and commanded by Col. Robert McCook, later murdered by guerillas. A portrait and sketch of him is in Vol. i., page 367.

LEOPOLD MARKBREIT, a native of Vienna, came to Cincinnati with his parents in 1848, when six years of age. He studied law with his half-brother, the talented Fred. Hassaurek; became a law partner with Rutherford B. Hayes; then went into the Union army, where he eventually attained the rank of colonel; from 1869 to 1873 was U. S.

Minister to Bolivia and now edits the Volks-

In the war period he was taken prisoner, and sent to Libby Prison in Richmond. Through the story of his sufferings there he

attained a sad celebrity.

"After five months of ordinary imprisonment, he and three other victims were selected as hostages and placed in close confinement, to prevent the execution of four rebels, who were charged with recruiting within the Union lines in Kentucky (which charge was of a rather doubtful nature, as that part of Kentucky would be considered as disputed ground), and had been sentenced to death as spies by a military court convened by Gen. Burnside The four hostages were placed in a subterranean dungeon of the Libby, where they had hardly room enough to lie down at night. For months they were lying buried in this hole, and received only one meal a day. Even this meal was insufficient to appease their hunger, for it consisted generally only of a handful of corn meal (into which the cobs had been ground). a little This food was not enough for life, and too much for absolute starvation. The unfortunate men were soon reduced to skeletons, and would, doubtless, have died, if the negroes employed in the Libby prison had not, from time to time, smuggled in some food to them. The rats, which the prisoners killed with pieces of wood in their dungeon, were cooked for them by the kind-hearted negroes, and

taken back to their cells. The sufferings the poor prisoners had to endure were beyond all comprehension; and only when they were transported to Salisbury, N. C., a change for the better took place. From Salisbury Col. Markbreit was taken to Danville, Va., and from there back to Libby, till at last, in February, 1865, his half-brother, F. Has-saurek, succeeded in having him liberated He had been imprisoned for more than thir teen months. His health had been so injured by these sufferings that he never fully recovered." Mr. Markbreit is tall in person, and dignified and courteous in manner. In his South American experience he was an eye-witness to several bloody revolutions, and at the risk of his own life often protected the lives of the members of overthrown govern-ments who sought refuge with the United States legation.

Allusion has been made in the foregoing to Mr. Hassaurek. Appleton's "Cyclopedia of American Biography" gives this outline of his career: "Friedrich Hassau-9th October, 1832; died in Paris, France, 1st October, 1885. He served in the German revolution of 1848, and was twice wounded. He came to the United States in 1848, settled in Cincinnati, Ohio, and engaged in journalism, politics, and the practice of law. He was U. S. minister to Ecuador in 1861-5, and during the latter year became editor of the *Volksblatt*. He published "Four Years among the Spanish Americans."

John Cleves Symmes was born on Long Island in 1742. Removed to New Jersey, and was prominent during the Revolution as colonel of a militia regiment in active field service. He was one year Lieutenant-Governor of New Jersey; six years a member of the Council; two years a member of the Continental Congress, and twelve years a judge of the Supreme Court of New Jersey. In August, 1787, Judge Symmes, encouraged by the success of the Ohio Company, obtained from Congress a grant for a purchase of a tract of land fronting on the Óhio river between the two Miamis, and extending north to the tenth township. Having been unable to pay for the whole, after much negotiation, he closed a contract, in 1792, for 1,000,000 acres. The continued rise in government securities made it impossible to pay for this, and in 1794 a patent was granted him for between 300,000 and 400,000 acres, including the front on the Ohio river and extending back to the third township. He was appointed one of the judges of the Northwest Territory, 1788. He died, Cincinnati, Ohio, 1814. Judge Symmes was ree times married. He left two daughters—one, Maria, married Major Peyton short; one, Anna, became the wife of William Henry Harrison, afterward Pres ident of the United States. (See "McBride's Pioneer Biography.")

The name T BUCHANAN READ is identified with the war period at Cincinnata.

He was born in Chester county, Pa., March 12, 1822. His mother, then a widow, apprenticed him to a tailor, but he ran away to Philadelphia, learned to make cigars, and at fifteen years of age came to Cincinnati, found here a home with the sculptor Clevenger, painted signs, and at intervals went to school. Through the liberality of Nicholas Longworth he was enabled to open a studio and painted portraits. Not finding many sitters, after a little he led a wandering life, by turns painting portraits, painting signs and making cigars. At nineteen he went East to New York and Boston, and at the age of twenty-one published several lyric poems. In 1843 he first visited Europe and again in 1853, where he passed five years as a painter in Florence. He afterwards passed much time in Philadelphia and Cincinnati, but in the last years of his life made Rome his principal residence; but he regarded Cincinnati as more especially his home, where he is

pleasantly remembered as a gentleman, small in person, delicate and refined in aspect. During the civil war he gave public readings for the benefit of the soldiers, and recited his war songs. The most famous of these was "Sheridan's Ride," which was written in Cincinnati: the details of its production are given under the head of Perry county. He died in New York city, May 11, 1872, aged fifty years. His "Complete Poetical Works" were published in Boston in 1860. Later he wrote his "Wagoner of the Alleghenies," and in 1865–1867 were issued at Philadelphia a quite full edition of his poetical works in three volumes.

"His paintings, most of which deal with allegorical and mythological subjects, are full of poetic and graceful fancies, but the technical treatment betrays his lack of early training. He possessed a much more thorough mastery in the art of poetry than in painting. His

THOMAS BUCHANAN READ.

poems express fervent patriotism and artistic power, with a delicate fancy for the scenes of nature." Nothing can be more pathetically sweet than these lines:

THE WAYSIDE SPRING.

fair dweller by the dusty way,
Bright saint within a mossy shrine,
The tribute of a heart to-day,
Weary and worn, is thine.

The earliest blossoms of the year,
The sweetbrier and the violet,
The pious hand of spring has here
Upon thy altar set.

And not to thee alone is given
The homage of the pilgrim's knee;
But oft the sweetest birds of heaven
Glide down and sing to thee.

Here daily from his beechen cell
The hermit squirrel steals to drink;
And flocks, which cluster to their bell,
Recline along thy brink.

And here the wagoner blocks his wheels,
To quaff the cool and generous boon:
Here, from the sultry harvest fields,
The reapers rest at noon.

And oft the beggar masked with tan, In rusty garments gray with dust, Here sips and dips his little can, And breaks his scanty crust.

And lulled beside thy whispering stream,
Oft drops to slumber unawares,
And sees the angels of his dream
Upon celestial stairs.

Dear dweller by the dusty way,
Thou saint within a mossy shrine,
The tribute of a heart to-day,
Weary and worn, is thine.

A prominent and most useful man to Cincinnati and the State in the war-period was Col. Leonard A. Harris, who was born there in 1824 and died there in July, 1890. He was a captain at the first battle of Bull Run, and later was Colonel of the Second Ohio Infantry. At Perrysville he commanded a division, and behaved with singular bravery and skill. Breaking down from disease he was obliged to resign and returned to Cincinnati. The year 1863 had troublous times, and the office of mayor required a firm and cool head; the public eye was

fixed upon Col. Harris as just the man; and he was elected. In the fall came on the Vallandigham campaign, and there were several outbreaks of the riotous ele-

ments in the city, which he squelched with an iron hand.

His great distinguishing work was in drafting the famous "hundred day-men" law, Governor Brough having taken him into his counsel for that purpose. By this law Ohio sent 43,000 men, National Guard, into the field as her quota; and these, uniting with the avalanche from other States under Lincoln's call, led to the overwhelming of the exhausted South.

In 1865 he was re-elected mayor by 8,000 majority, his personal popularity having been great. He was the principal founder of the famed Cuvier Club, and for years, by appointment from Congress, one of the managers of the Soldiers' Homes. His qualities were kindliness, generosity, modesty, courage, power of intellect and executive capacity. Rarely has any public man in the city been so

personally popular.

HENRY VAN-NESS BOYNTON—soldier, journalist and author—was born in West Stockbridge, Mass., 22d July, 1835. He removed with his father, a distinguished minister, to Ohio, when quite young, and graduated at the Woodward High School, Cincinnati, in June, 1855. Wishing to become a civil engineer he entered the Kentucky Military School, and received through its training and instruction all that could have been given him at West Point. When the late civil war broke out he volunteered, and was elected and commissioned Major of the Thirty-fifth Ohio Infantry, 27th July, 1861. He was promoted Lieut.-Colonel 19th July, 1863, and commanded the regiment during the Tennessee campaigns, and was brevetted Brigadier for gallant conduct at the battles of Chickamauga and Missionary Ridge. At the last-named fight he fell, badly wounded, as he led his regiment up that famous height. General Boynton was regarded by his men, brother and superior officers, as the bravest of the brave. To this courage he added a soldierly turn of mind that would have made him invaluable in an indipendent command where such quality is called for. As it is, his fine mind and vast stores of information make him a great critic on war matters. His comments on W. T. Sherman's "Memoirs" created a wide excitement and interest in war circles. Of like sort is his valuable contribution to history in his famous papers on the Chickamauga campaign and battle.

On leaving the army at the end of the war, General Boynton entered journalism, and almost immediately became the Washington correspondent of the *Cincinnati Gazette*. His keen, incisive efforts in that line gave his journal a national reputation. He was soon put at the head of the Washington Bureau, in which a syndicate of several leading papers was formed, and to-day he is regarded as at the front in his profession; one of the most noted, loved, feared and respected of journalists. General Boynton's great quality in the army was his high courage, that was ani-

mated by the purest and deepest patriotism.

His distinguishing characteristic as a journalist is his sterling integrity, inspired by a seuse of justice, that can be appealed to at all times. He is feared by knaves of all sorts, for his singularly incisive style, backed by his courage, makes him terrible in his assaults on wrong. He has driven some of the worst lobbyists from Washington, and is feared as no other man ever was by the entire lobby. General Boynton's latest achievement was the selection and dedication of the Chickamauga battle-field as a public park. He was greatly assisted in this by General Henry M. Cist, of Cincinnati; but General Cist, with the frankness of a true soldier, gives General Boynton full credit for this great work. The post-office nearest the battle-field has been called Boynton, and ere long a bronze bust will mark the place where he so gallantly fought, in token of the affectionate feelings and admiration of his brother soldiers.

MAJOR DAVID ZEIGLER.

Originally an officer under Frederick the Great and then of the army of the American Revolution, Commandant of Fort Washington and the first President or Mayor of Cincinnati.—Written for this work by MARY D. STEELE, Dayton.

"In the Indian border warfare, between 1788 and 1795," says Rosengarten, in his 'German Soldier in the Wars of the United States,' "a leading figure was that of DAVID ZEIGLER, whose story is typical of that of many of our early German soldiers." He also "won great praise" for courage and military ability during the Revolution, and took much pride in having the best drilled company in the regiment. He began his military career as an officer in Frederick the Great's army, and also served in the Russian army in the reign of Catherine Second, during the campaign against the Turks, which ended with the cession of the Crimea to Russia. Major Denny states, in his "Military Journal," that Zeigler was also at one time in the Saxon service.

DAVID ZEIGLER was born at Heidelberg in 1748. He emigrated to America in 1775, for the purpose of entering the Revolutionary In June, 1775, he was commissioned third lieutenant in Captain Ross's company, which was recruited in Lancaster county, Pennsylvania, and immediately sent to escort a supply of powder, of which Washington's army was desperately in need, to Cambridge. On the 25th of June, 1775, Zeigler was promoted first lieutenant and adjutant of Col. William Thompson's battalion of riflemen. This regiment was more than half made up of Germans, and was "the second in Pennsylveria to., list for the second in Pennsylveria to., list for the second in Pennsylveria to. sylvania to enlist for the war under Washington." January 16, 1777, Zeigler was commissioned first lieutenant of a company in the First Pennsylvania Continental Infantry, and December 8, 1778, was promoted captain. From his promotion till the end of the Revolution he served as senior captain in this famous regiment, which General Wayne said, "always stepped the first for glory." It distinguished itself in the battles of Long Island, Brandywine, Monmouth and Bergen's Point. The same day that he was commissioned, Captain Zeigler was made Brigade Inspector of the Pennsylvania Brigade Department of the South.

Once during the Revolutionary war he was taken prisoner. The following account of the adventure is given by the American Pioneer: General Samuel Findlay, Major Zeigler, late of Cincinnati, the first marshal of Ohio, and Major Thomas Martin, were captured by the British and imprisoned in Philadelphia. They made their escape, Martin killing the British officer in pursuit with a club. Reaching a Dutchman's house, Major Martin passed Zeigler—who was a Prussian—for a Dutch doctor, who, by making pills of bread mixed with a little spittle, cured the landlady and escaped a bill of charges. A niece of the major often related this story, but she said that he cured the landlady with hair powder, shaken from a powder-puff which he carried in a box in his pocket—His powder-puff figured in many a joke at a later date. He was very witty and fond of a good story, and numerous humorous anecdotes about him used to be in circulation among his old friends.

In 1780, just before the mutiny of the troops at Morristown, when an effort was at last being made to satisfy their just demands, Zeigler was appointed by Pennsylvania State clothier and issuing commissary of State storés, and was sent to President Reed with an estimate of the clothing needed for the troops by Wayne, who ended his letter with the words: "Captain Zeigler will be able to inform your excellency of matters I don't choose to commit to paper."

After the mutiny the First Pennsylvania, of which Harmar was now colonel, was sent to Virginia, where it distinguished itself at Yorktown. January 4, 1782, it joined Greene in South Carolina, remaining a year and a half, and being present at the investment and surrender of Charleston.

In June, 1783, it returned by sea to Philadelphia. Major Zeigler was a member of the Society of the Cincinnati; an honor which he valued highly. In a beautiful miniature in our possession, painted on ivory by Pine, at Philadelphia in 1799, he wears the Continental uniform, and the gold eagle badge of the Society, fastened by its blue ribbon to the breast of his coat.

After the disbandment of the Continental army Congress raised a new regiment, of which Harmar was made colonel and Zeigler was commissioned captain of one of the four Pennsylvania companies, August 12, 1784. In September the four companies marched for Fort McIntosh, twenty-nine miles below Pittsburg, where they remained till the fall of 1785, when the regiment was reorganized and Zeigler went to Pennsylvania to recruit. He returned in November with his company to McIntosh, leaving there in the spring for Fort Finney, at the mouth of the Great Miami. A high flood led to the abandonment of this fort, and another of the same name was built at the Rapids of the Ohio in July, where Zeigler remained till winter. In January, 1787, his company and two others were at Fort Harmar—"officers and men in close quarters."

In the summer of 1787 Zeigler accompanied Harmar on his Western expedition, for the purpose of treating with Indians and deciding difficulties among settlers about public

and private property. They went by water from what is now Louisville to Port St. Vincent or Vincennes, Indiana. Zeigler's company returned on foot through the woods to Fort Finney near Louisville. Here, October 28, Harmar received his commission as brigadier-general, and the troops left at once by water for Fort Harmar, where they spent the winter. The regiment was only enlisted for a year, and in the spring Zeigler went East to recruit. He returned to Harmar September 9, escorting from Fort Pitt Gen. Butler, Capt. O'Hara, and the friendly chief, Cornplanter, with about fifty Seneca Indians, who came to negotiate a treaty with the United States Government. Major Denny says that "Zeigler and his party were received with a salute of three rounds of cannon and the music;" and Buel says, "We saluted them with our field-pieces, which they returned with a running fire from their rifles."

"Soon after we left the Point," Dr. Cutter writes in his 'Journal,' "saw the soldiers and a pumbor of Indian are as the first terms."

"Soon after we left the Point," Dr. Cutter writes in his 'Journal,' "saw the soldiers and a number of Indians, expected from Fort Pitt, coming down on the other side of Kerr's Island. We crossed the river and met them. Captain Zeigler commanded the company of new levies of fifty-five men. There were about fifty Indians in canoes lashed together. The soldiers were paraded in a very large boat, stood up on a platform, and were properly paraded, with the American flag in the stern. Just as we got up to them they began to fire by platoons. After they had fired, the Indians fired from their canoes singly or rather confusedly. The Indians had two small flags of thirteen stripes. They were answered from the garrison by train, who fired three field-pieces; flag hoisted."

Zeigler was noted as a drill-master and disciplinarian, as well as for personal bravery. Major Denny says in his "Military Journal:" "Zeigler is a German, and has been in the Saxon service previous to our late war with England. Takes pride in having the handsomest company in the regiment; to do him justice, his company has been always considered the first in point of discipline and appearance. Four-fifths of the company have been Germans. Majority of the present are men who served in Germany." In fierce and cruel engagements with Indians, in which half the army was killed, he exhibited the coolness and courage which were characteristic of him. On one occasion, duty obliging him to remain for some time stationary on a spot exposed from every direction to the bullets and tomahawks of the savages, he seated himself on the stump of a tree, took out his pipe, filled and tranquilly smoked it, apparently utterly fearless of danger and oblivious of the harrowing sights around him.

In December, 1789, General Harmar left Marietta for Fort Washington with three hundred men, leaving Captain Zeigler at Fort Harmar with twenty soldiers. Those who remained received their pay the day before Christmas, as is shown by Captain David Zeigler's receipt, dated December 24, for the \$859.45 paid himself and his company, which

is still preserved. In September, 1790, Harmar undertook the expedition against the Indian villages, near the present city of Fort Wayne, which ended in a retreat to Fort Washington. The real object of the campaign was however accomplished by a party of 600 militia, under Col. Harden, including fifty regulars commanded by Captain Zeigler. They burned the deserted villages, destroyed corn, fruit trees, provisions, and all the property of the Indians. After disbanding his army, Harmar resigned his commission and demanded a court of inquiry, which met at Fort Washington, September 15, 1791. Capt. Zeigler was one of the principal witnesses. He attributed the defeat to the insubordination of the militia. Harmar and Zeigler were warm friends through life.

At the close of this campaign Zeigler was ordered back to Harmar, where he remained in command till St. Clair's expedition was organized. After his disastrous defeat St. Clair went to Philadelphia, leaving Major Zeigler, promoted December 29, 1791, at Fort Washington, where he continued in command of the United States army for about six weeks. In January, 1792, a Congressional Committee was appointed to inquire into the causes of St. Clair's defeat. Major Zeigler was summoned as a witness, and in his testimony shifted the blame of the disaster from St. Clair's to the inefficient quartermaster's shoulders. In 1792, probably while in Philadelphia as a witness for St. Clair, Zeigler resigned his commission in the army. He actived at Cincipnatic expenience extension

He settled at Cincinnati, opening a store, where, according to a bill that has been preserved, he sold "muslin, hardware, groceries, He was a successful merchant, and made what at that day was considered a for-He owned two shares in the funds of the Ohio Company and many acres of military bounty land; but these wild lands were of little value, and his income was principally derived from his Cincinnati speculations. The territorial legislature incorporated the town of Cincinnati, January 2, 1802, and Major Zeigler was appointed president of the In 1804 he was appointed by President Jefferson the first marshal of the Ohio district. From 1809-1811 he was surveyor of the port of Cincinnati. In politics he was a Democrat. Judge Burnet says in his "Notes:" "Only four individuals in Cincinnati are now remembered who then (1800) advocated the election of Mr. Jefferson against Mr. Adams. These were Major David Zeigler, William Henry Harrison, William McMillan and John Smith.

In the spring of 1789 Captain Zeigler, then stationed at Fort Harmar, married, at Marietta, Lucy, youngest child of Benjamin and Hannah Coggeshall Sheffield. She was a native of Jamestown, R. I., and came to Marietta, Dec. 17, 1788, with her mother, then a widow. Mrs. Sheffield owned four shares in the funds of the Ohio Company. Judging from tradition and the printed testimony of friends, few pioneer women were more highly esteemed and influential than

Mrs. Zeigler. Mrs. Ludlow writes from Cincinnati: "Major Zeigler said to me, on his first visit (April, 1797).: 'Our ladies are not gay, but they are extremely affectionate one to the other. I believe he spoke the truth. Perfect harmony and good-will appear to exist in all their intercourse." Certainly this could have been truly said of Mrs. Zeigler.

Visitors to Cincinnati, when it was a mere village, were surprised by the luxurious manner of living, and the generous hospitality of the merchants and retired army officers who lived there. Major Zeigler shared the prevailing tastes and habits, and loved to enter-A letter, written from Cincinnati in the fall of 1806, says, "The girls had a variety of amusements—plays, balls and tea-parties." A curious old ball ticket, addressed to one of these girls, dated Cincinnati, Feb. 17, 1809, and printed, as was then the fashion, on the back of a playing card (the queen of hearts) is still preserved. The ball was given ' commemoration of Washington's birthday, at the Columbian Inn, on Wednesday evening, the twenty-second, at six o'clock. William Ruffin, E. H. Stall, J. Baymillar, J. W. Sloan, managers." Mrs. Ludlow, describing Cincinnati in 1797, says "that it was then a village of wooden buildings, with a garrison of soldiers. The society consisted of a small number of ladies, united by the most perfect good-will and desire for mutual happiness. The gentlemen were social and intelligent.' For several of the gentlemen, among whom she mentions Major Zeigler, she felt "an almost fraternal regard;" a regard which others whom the kindly major, at that or a later day, welcomed with cordial and genial

hospitality, shared with her.
Major Zeigler died at Cincinnati, December, 1811, aged sixty-three years.

PIONEER ART IN CINCINNATI.

BY CHAS. T. WEBBER.

The beginning of art in Cincinnati is to be accredited to Frederick Eckstein, although possibly John Wesley Jarvis may have made a halt, so to speak, here at an earlier date; but as Lexington, Louisville and later Columbus were his particular haunts, he is hardly to be considered an habitué of the Queen City of the Eckstein founded his academy here in 1826.

Frederick Eckstein, a man of high education and culture, man of business and affairs, made art something more than a pastime, than an adjunct to the means of "getting along," as his pursuits therein were governed by the high and unselfish purpose of improving the taste and refinement of his neighbors, the early pioneers of the West, and of planting the civilization of his own native Germany in his chosen American home, although facilities for the practice of that branch of art, sculpture, in which Mr. Eckstein chiefly exhibited his superior skill, were exceedingly meagre, those productions which have been preserved will compare favorably with most of that which has followed.

To Mr. Eckstein Hiram Powers owed his first lessons, as well probably his first impulse, in the direction of art. Clevenger afterwards opened a studio in this place, and the three, Eckstein, Clevenger and Powers, were in constant contact and sympathy. Corwin, Minor Kellogg and Charles Soule, in painting, came later. The latter was a disciple and imitator of Jarvis, and executed many beautiful and strongly characteristic portraits. Like Jarvis, he used the camera lucida to make his drawings; hence he never became the master in drawing that he was in color, merely from the want of practice. He painted in Cincinnati and afterwards in Dayton. Waldo and Jewett, painting in partnership, were not of Cincinnati, but rather, in their Western experience, of Lexington; but as many interesting portraits of pioneer heroes came from their hands, less commercial than their association would seem to indicate, and as their work exerted a decided influence upon the rising art, they should be mentioned here. Many of their heads, and some by their unknown compeers, are worthy, in their simple and untrammelled truth, of a place by the side of Holbein.

Jewett, of a Kentucky family, painted portraits of such remarkable truth, beauty of color and refinement, at the same time naturalness of composition, that their influence was felt in the formation of a taste here as well as elsewhere in the James H. Beard, still living, came to Cincinnati about 1830 or 1832; studied his art, portrait painting, here in nature's school and at the National Academy in New York. He made frequent visits to New Orleans and the South,

painting portraits for the wealthy planters, entertaining them the while with inimitable stories. He afterwards went to the dogs; but his dogs lacking, perhaps, the refinement and dignity of those of Landseer, are so powerful in expression and consummate wit, sometimes almost human, that we are inclined to forgive him for the transfer of his artistic affections. His portraits were very fine; notably that of Mr. Gibson and also one of Durbin Ward.

Henry Worrall although, perhaps, more practically devoted to music than to the art of design, carried, with his intense and genuine love for the latter, such a genuine helpfulness, giving them his ever-ready tact and the strength of his manly arm over the rough ways, especially when their representative happened to be a talented and attractive girl, as most girls are to whom the muse of art is revealed, that the history of our art cannot be truthfully outlined without his honored name gracing the page. He was born in England and came to America when a mere boy and soon to Cincinnati. He came with almost the first canvass upon which some unknown artist might record his conceptions of the beautiful. scheme, looking to the better condition of art and the happier relation of its practitioners, was sure to find Worrall at the helm or trimming the sails for the propitious breeze. To him, among many other enterprises for a similar purpose, we owe the first institution of the Cincinnati Sketch Club, out of which proceeded very many advantages to art. It had its influence in the evolution of nearly all the Cincinnati artists who have, in the last quarter of a century or more, exhibited The Sketch Club so formed numbered among its members particular excellence. Beard, Frankenstein, McLaughlin, Mosler, Farny, Read, Quick, Lindsay and many others, who gave at each meeting a sketch in illustration of a subject previously named, the sketches belonging to the member who on that occasion happened to be the host. This club continued in excellent harmony until some preachers and wealthy merchants were introduced as honorary members, who, by an excess of goodfellowship and conviviality proved the unsuspecting club's un-Previously its habits had been simple, as befitted a pioneer association of Worrall carries the spontaneous germ of Sketch Club with him wherthe West. He now lives in Topeka, Kansas, and there, at his word, a sketch ever he goes. club comes into being, with the additional grace of a membership composed of most beautiful and talented ladies.

The brothers Frankenstein, John and Godfrey, from 1832 to 1875 and 1881, are only to be spoken of in terms of the highest praise—Godfrey in landscape and John in all branches of art. They were both born in Germany, but came to Cincinnati with their parents when small children. Godfrey was the younger and painted many beautiful landscapes, closely and carefully studied from nature, finding his themes all the way from the White Mountains to the Knobs of Indiana, including Niagara, of which latter place he painted hundreds of views, uniting most of them in a famous and very effective panorama. He was an affable and honorable gentleman; qualities which, together with his acknowledged talent, secured for him many warm friends.

John, the elder brother, equally honorable and equally a friend of his fellow man, was not, unfortunately, of so equable a temper, but more nervous and somewhat moody, was not always understood at his real personal worth; no one knowing him, however, could fail to appreciate his just impartiality towards other artists, or the fearless integrity with which, regardless of self-interest, he stood for the rights of man.

In his art his works show him to be pre-eminent, particularly in sculpture, his landscape studies and his painting of the human head in his happiest experiments (for experiment he often did), and in his drawing and painting of the human figure, he is beyond and above criticism. A consummate anatomist, an acute observer, there is nothing to be found in his works that has been carelessly considered. His portrait of his brother Godfrey impresses me, as I remember it, as the grandest work of art I ever saw; and his sculptures, particularly the head of

THE DEXTER MAUSOLEUM, SPRING GROVE.

LONGWORTH'S VINEYARD.

This drawing was made about 1856 of one of Longworth's vineyards on the Ohio hills, four miles above the city. The cultivation of the grape for wine has ceased, being found by change of climate unprofitable.

McLean and also that of Dr. Mussey, have not been surpassed, if they have been equalled, in the last two thousand years. His painting led all that the later pilgrims to Munich have essayed, and his sculpture may stand, unbelittled, by the

side of that of the Greeks in their best period.

There were several artists, now dead, who came upon the Cincinnati stage later than the Frankensteins. Thomas Buchanan Read, more celebrated as a poet than as a painter, exhibited, according to John Frankenstein, extraordinary genius in the commencement of his artistic career (about 1840), and attained very considerable power, considering that his direct preparatory studies were curtailed by his more intimate and assiduous attention to his poetic muse. He wrote the warballad, "Sheridan's Ride," and afterwards painted a noble and spirited picture of the subject. His portrait heads are characterized by a peculiar grace and refinement rather than by the exact rendering of the ordinary physical facts. His studies in painting never enabled him to embody in pictures the sublime, the pathetic, or even the beautiful, with that perfection or fullness of power which he has shown in his verse, and which, in many instances, enables him to abide in memory with the greatest bards that have ever lived.

J. O. Eaton, born Feb. 8, 1829, in Licking county, Ohio, came to Cincinnati about 1845, and attained prominence in portrait painting. Many of his best heads have not, in several respects, been surpassed. With good drawing, so far as the head and bust are concerned, and superb color, he had naturally, from the very first almost, a certain dexterity of handling that should set the neophytes of the present day who affect technique crazy with despair. His female heads are particularly lovely in pose, light and shade, color, and, more than all, expression. Lily Martin Spencer, a native of Ohio, worked in Cincinnati until about 1855, and her works, mostly genre subjects, attracted much deserved attention and praise. Her later life has been passed mostly in New York, where she has been highly appreciated. Miss Gengembre, born in France of a talented family, her father having been a designer in the employ of the French government, distinguished herself here by the beauty of her works, showing the way to more truthful process of study. She afterwards married Mr. Anderson, a talented engraver, and now resides in London, where her works are highly prized.

These great artists, and others possibly that escape my mind at this moment, have rendered a boon to mankind that will be more appreciated as time rolls on, and comparison is drawn between their works and those of artists working close

by the protecting walls of the established schools of Europe.

Duncanson's landscapes were, on account of their peculiar poetical conception, much prized, not only in this country but in England and Scotland. Among the friends of the colored Americans (for Duncanson, a most genial gentleman as well as accomplished artist, was a light quadroon) they were in especial demand, finding favor with such cultured critics and outspoken believers that negroes have

souls as Charles Sumner and his illustrious compeers in Europe.

All of the present generation will remember the versatile Wm. P. Noble, the talented but erratic Theodore Jones, the poetic painter and writer, Wm. P. Brannan, who painted splendid portraits of Lyman Beecher and Father Collins, and was the author of the extravaganza known as "The Harp of a Thousand Strings;" also T. D. Jones, the sculptor, who executed the portrait busts of Gen. Taylor, of Ewing, of Abraham Lincoln, and several other prominent statesmen and soldiers, all from life; while somewhat mechanical and having but little of the plastic qualities of fine sculpture, they are, nevertheless, good and expressive likenesses. A sculptor of great promise as well as (for one so young, he having died at about twenty-four or twenty-five years of age) of great achievements was Frank Dengler. His works were masterly busts and ideal groups. He studied in Munich, worked in Cincinnati, and during the last year or so of his life, through the friendly appreciation of Prof. Morse, became a teacher in the Boston Art School.

In painting, latterly, we had the works of Dennis and Mulvaney, the former

born in Kentucky, the latter in Ireland, or at least of Irish parentage—both studied in Munich, the former finding his themes in the primitive pioneer life, the latter choosing, principally, the wild frontier, camp-life, and scenes among the mines of Colorado, the Custer battle, etc. Both of these artists have left some magnificent specimens of their skill. There are several living artists who are doing splendid work, but of them I hardly deem in proper to speak in this limited paper, making exception in the case of James H. Beard and others who were pioneers; for to do them justice, and treat all with equal candor and delicacy, would be likely to consume more space than is allotted to my use.

An important factor in the growth of art in our section, indeed throughout the country, has been the addition of a distinct department of art to the popular Expositions that, following the lead of the first one here, have become a feature in all of our principal Western cities. The first Exposition held in Cincinnati, under the auspices jointly of the Board of Trade, the Chamber of Commerce and the Mechanics' Institute, in 1870 (the Mechanics' Institute had held previously, up to the commencement of the war, a purely mechanical exhibition), had not intended an art display, and it was at the intercession of the writer of this sketch that one was agreed upon, and the artists of the city assented to the proposal, on the ground that no prize should be awarded, their works sent for display only. A prize was, however, surreptitiously awarded; still the gathering of the works of our artists (the time was too short to communicate with others) had the good effect of initiating the Exposition Art Gallery at the West, which continues, although unwisely conducted in many respects, an influence in art education, both among the people and the artists, inferior to no other in existence. Wealthy citizens have loaned the rare gems of art which they have brought from abroad, and artists generally have contributed liberally from their studios. St. Louis, Louisville, Chicago, Denver, Milwaukee, and many other cities of the South and West, have in this way been enabled to place before their citizens works of art than which the world has seen little better. The last Exposition of this kind in Cincinnati was that in celebration of the Centennial Anniversary, in 1888, of the settlement of Hamilton county and the State of Ohio. At that Exposition there should have been a collection of paintings and sculpture showing the condition and progress of art during our first century, but, by some oversight, it was neglected.

FORT FINNEY.

With the exception of the transient block houses built by the war parties of Kentuckians on the site of Cincinnati, the first work for human habitation built by whites between the Miamis was Fort Finney. It stood in the peninsula formed by the junction of the Great Miami with the Ohio, about three-quarters of a mile above the mouth, and near the southeast corner of the once farm of the late John Scott Harrison. As late as the winter of 1866, it is said, some remains of the fort were still to be seen.

This fort was built in the late fall and early winter of 1785, when General Richard Butler, with a company comprising Parsons, Zane, Finney, Lewis and others, who voyaged down from Fort Pitt, built it, dwelt for some months therein, and concluded a treaty with the Indians. General Butler and his fellow-commissioners left the fort February 8, 1786, in three large boats, with their messengers and attendants, up the Ohio on their return to civilization. The soldiers, however, remained with Major Finney, Capt. Zeigler—the Major Zeigler later commandant at Fort Washington—Lieut. Denny and others in command.

The place was evacuated prior to Jan. 1, 1789, the troops going to the Indiana side of the Ohio opposite Louisville, where a small work was also erected and likewise called Fort Finney. The first was long referred to by Judge Symmes as the "Old Fort," but there is no record that it was ever garrisoned again. There is a somewhat famous ancient work called "Fort Hill," with walls now about three feet high and enclosing some fifteen acres. It stands north of the old J.

Scott Harrison place, and was described by Gen. Harrison in 1838, in an address before the Historical Society of Ohio.

NORTH BEND IN 1846.

North Bend is situated sixteen miles below Cincinnati and four from the Indiana line, at the northernmost point of a bend in the Ohio river. This place, which was of note in the early settlement of the country, has in later years derived its interest from having been the residence of Gen. Wm. H. Harrison, and the spot where rest his mortal remains. The family mansion stands on a level plat, about 300 yards back from the Ohio, amid scenery of a pleasing and retired character. The eastern half of the mansion, that is, all that part on the reader's right, from the door in the main building, is built of logs; but the whole of the building being clapboarded and painted white has the same external appearance. The wings were alike: a part of the southern one was destroyed by fire since the decease of its illustrious occupant, a memento of which disaster is shown by the naked chimney that rises like a monument over the ruins. The dwelling is respectably though plainly furnished, and is at present occupied by the widow of the lamented Harrison, long distinguished for the virtues which adorn the female character.

About a quarter of a mile south of the family mansion, and perhaps half that distance from the river, is the tomb of Harrison. It stands upon the summit of a small oval-shaped hill, rising about 100 feet from the plain, ornamented by a few scattering trees, and commanding a view of great beauty. The tomb is of brick, and is entered by a plain unpainted door on its western end. There is no inscription upon it, nor is any required to mark the resting-place of Harrison.

About thirty rods, in a westerly direction from the tomb of Harrison, on an adjacent hill, in a family cemetery, is the grave of Judge Symmes. It is covered by a tablet, laid horizontally upon brick work, slightly raised from the ground. On it is the following inscription:

Here rest the remains of

JOHN CLEVES SYMMES,

who, at the foot of these hills, made the first settlement between the Miami rivers.

Born on Long Island, State of New York, July 21, A.D. 1742.

Died at Cincinnati, Feb. 26, A.D. 1814.

Mr. Symmes was born at Riverhead, on Long Island, and early in life was employed in land surveying and in teaching school. He served in the war of the Revolution, and was in the battle of Saratoga. Having removed to New Jersey, he became chief justice of the State, and at one time represented it in Congress. As early as 1787, and at the same time with the agents of the Ohio Company, he made application to Congress, in the name of himself and associates, for the purchase of a large tract of land lying between the two Miamis. "The price was sixty-six cents per acre, to be paid in United States military land warrants, and certificates of debt due from the United States to individuals. The payments were divided into six annual instalments. His associates were principally composed of the officers of the New Jersey line who had served in the war of the Revolution. Among them were General Dayton and Elias Boudinot, LL.D. His

first contract was for one million of acres, made in October, 1788, but owing to the difficulty of making the payments, and the embarrassments growing out of the Indian war, the first contract was not fulfilled, and a new one was made for two hundred and forty-eight thousand acres, in May, 1794, and a patent issued to him and his associates in September following." Meanwhile, in the spring of 1789, Judge Symmes had located himself at North Bend, where he laid out "Symmes' city," the fate of which has already been stated. The residence of Judge Symmes stood about a mile northwest of his grave. It was destroyed by fire in March, 1811, and all his valuable papers consumed. It was supposed to have been the act of an individual, out of revenge for his refusal to vote for him as a justice of the peace. At the treaty of Greenville, the Indians told him and others that in the war they had frequently brought up their rifles to shoot him, and then recognizing him, refrained from pulling the trigger. This was in consequence of his previous kindness to them, and speaks volumes in praise of his benevolence.

On the farm of the late Wm. Henry Harrison, Jr., three miles below North Bend, and two from the Indiana line, was a settlement made at the same time with North Bend. It was called the Sugar Camp settlement, and was composed of about thirty houses. The settlers there erected a block-house, near the Ohio river, as a protection against the Indians. It is now standing, though in a more dilapidated condition than represented in the engraving. It is built of logs, in the ordinary manner of block-houses, the distinguishing feature of which is, that from the height of a man's shoulder, the building, the rest of the way up, projects a foot or two from the lower part, leaving, at the point of junction between the two parts, a cavity through which to thrust rifles on the approach of enemies.—Old Edition.

REMINISCENCES.

In my original visit to North Bend, in 1846, I passed a day or two with the Harrison family, and was there the guest of Col. W. H. H. Taylor, whose wife was daughter of Gen. W. H. Harrison. While preparing these pages for the press, I unexpectedly got a letter from him; he learning I was living only a few days before its date—June 25, 1889. As I had saved no memoranda of my old-time visit, I thereupon wrote a request for his reminiscences of that visit, together with a ground plan of the Harrison mansion so famed in history. His reply,

GROUND PLAN OF THE OLD HARRISON MANSION AT NORTH BEND AS IT WAS IN 1846. SKETCHED FROM MEMORY IN 1889 BY COL. W. H. H. TAYLOR.

together with an engraving from his plan, is annexed. This gentleman is a Virginian by birth; was in the civil war Colonel of the Fifth Ohio Cavalry, and his two eldest sons in the Union army—one in the Eighteenth U. S. Infantry and the other on the staff of Gen. W. T. Sherman. Col. Taylor is now State Librarian for Minnesota, residence St. Paul. When he wrote me, he stated that he was in his seventy-ninth year, and was able to attend to business, although much troubled with rheumatism contracted in the army.

Drawn by Henry Howe in 1846.
RESIDENCE OF THE LATE PRESIDENT HARRISON, NORTH BEND.

Drawn by Henry Howe in 1846.

Tomb of President Harrison.

Drawn by Henry Howe in 1846.

BLOCK HOUSE, NEAR NORTH BEND.

Henry Howe at North Bend in 1846.—When you visited us at North Bend in 1846, Mrs. Gen. W. H. Harrison was living there, and you saw her at meal times. I was managing the farm for her. My first wife, her youngest daughter, and seven children were there. You remained two nights with us. The day after your arrival, you and I walked down the Ohio river bank to an old blockhouse four miles below the Bend, of which you made a sketch; then we went a mile farther, and took dinner with the Hon. John Scott Harrison, the father of the present President, then a lad of thirteen years of age.

After dinner, in company with Mr. Harrison, we visited Fort Hill, which was on his farm, overlooking the three States of Ohio, Indiana and Kentucky. You examined the fort thoroughly, and I think made a drawing

of it, and we then walked back to North Bend. The next day you viewed the ruins of the house of Judge John Cleves Symmes on the Miami, the first settler in the Miami valley, and the father of Mrs. Harrison. You then left us and, I think, returned to Cincinnati. [Yes; was carried thither by a canal boat.]

I send you a ground-plan of the noted log cabin of 1840, which I occupied when you visited us, and in which I was living on the 25th of July, 1858, when it was set on fire by a she-devil of an Irish woman and burned to the ground; myself and family getting out with our night robes only, leaving everything in the way of clothing, furniture, library and all the relics of 1840, of which we had a great many, and many that had been in the family for two hundred years.

The widow of General Harrison is distinct in my memory. She was of rather slender, delicate figure, with dark eyes and modest, quiet manners; then seventy years of age. She was born at Morristown, New Jersey, in the year of the Declaration of Independence, and soon after her mother died. Her father, Judge Symmes, then a colonel in the Continental army, was so anxious to place her with her grandmother, then residing at Southold, Long Island, that, when she was near four years of age, he assumed the disguise of a British officer's uniform, to enable him to pass through their lines with her on his way thither, a perilous undertaking. Incidents of that journey she remembered to her last years.

Mrs. Harrison lived to the advanced age of eighty-nine years, dying in 1864, and leaving the sweetest of memories. Rev. Horace Bushnell, the blind preacher of Cincinnati, long her pastor and friend, preached her funeral sermon from a text she had selected for him years before—"Be still, and know that I am God." She lies buried beside her husband at North Bend.

VILLAGES AND LOCALITIES.

Avondale is on the hills, three miles north of Fountain Square, and was incorporated as a municipality in 1854. It is one of the most important and beautiful of the suburbs; practically is but a continuation of the city. It adjoins the city north of Walnut Hills, while the latter, formerly a village with a slight population, is now a part of the city, with about 40,000 inhabitants.

The Hills come up close to the Ohio valley in places quite abrupt and about 400 feet above it. In calm summer nights, standing on the hill verge, the voices of the people below, on the narrow marge between the foot of the hill and river, often rise to the hearing. The views up the river are here very grand, and from its most elevated points one can see highlands south in Kentucky, twenty-five miles away, and alike far north in Ohio.

The long-noted Lane Seminary is on Walnut Hills, with some fine new buildings, with their backs turned to the old, which yet stand humbly behind them. Walnut Hills, for grandeur of scenery, united with beauty of its homes, with lawns and gardens more or less in undulating dimpling spots, has scarcely an equal within our knowledge. It has such a surprising variety of domestic architecture, palatial and especially cottage odd and ornate, apparently the creations of architects on a strife to outdo each other in novel blending of materials, in contrast of colors, in proportions, pinnacles and points, that one might define it as a locality where domestic architecture was out on a frolic. From these the inhabitants daily rapidly go whisking down in cable and electric cars to their business in the basin below, to provide the means to continue to dwell in their beautiful homes above. One of these lines—a horse-car line it is—goes through Eden Park to the spot,

Mount Adams, where, forty years ago, astronomer Mitchel had his observatory; and looked through his big telescope at Jupiter and his family of moons. Then the car, with its occupants, horses and all go down the inclined plane in about one minute, when the horses draw the car from the platform, and pursue their journey into the house-lined streets.

MOUNT AUBURN, also now a part of the city, lies west of Walnut Hills, being separated from the last by the valley of Deer creek. It also abounds in elegant

residences.

CLIFTON lies west of Avondale and north of Burnet Woods Park, and was incorporated as a town in 1849. It derives its name from the Clifton Farm, comprises about 1,200 acres, is beautifully diversified with hill and dale, and has about 1,200 inhabitants. In its precincts it has neither shop, factory, saloon nor division fences. It has seventeen miles of avenues, lined with fine shade trees, of which thousands have been planted; also some magnificent residences. The town hall contains the school-room, and its main hall is elegantly frescoed. The ladies of the Sacred Heart have also a school for girls, with spacious and beautiful grounds.

PRICE'S HILL is west of the city plain, some 400 feet above it, and is in the city limits. It is reached by an inclined plane and the Warsaw Pike. It commands extensive views of river, city and country, and has elegant residences, con-

vents and colleges.

CUMMINSVILLE, a part of Cincinnati by annexation, is five miles north of the business centre of the city. The place was named after David Cummins, owner of a tannery, whose extensive property and that of another family named Hutchison, comprised nearly the entire site of the present town. The early settlement was known as Ludlow Station, established, in 1790, by Israel Ludlow, Daniel Bates, Thomas Goudy (said to have been the first Cincinnati lawyer), John N. Cummins, Uriah Hardesty and others. This station is noted as being the place where Gen. St. Clair organized his army in 1791. It was deserted and reoccupied by turns until peace was established with the Indians in 1795. Newspaper: Transcript, Independent, A. E. Weatherby, editor. Churches: 1 Protestant Episcopal, 1 Presbyterian, 1 Methodist Episcopal, 1 Christian, 2 Catholic, and 1 Colored Methodist Episcopal.

Harrison, on the Indiana State line, is twenty-five miles northwest of Cincinnati, on the C. I., St. L. & C. R. R. Newspaper: News, Independent, Walter Hartpence, editor and proprietor. Churches: 1 Christian, 1 Presbyterian, 1 Methodist, 1 German Lutheran, 1 Catholic, and 1 German Protestant. Industries: Furniture factories, 2 distilleries, 3 flouring mills, etc. Banks: Citizens' (Frank Bowles), Frank Bowles, cashier; J. A. Graft, James A. Graft, cashier. Population in 1880, 1,850. School census in 1886, 588. R. Maxwell Boggs,

superintendent.

This village is noted as the point where John Morgan on his raid entered Ohio. It was a thorough surprise. About one o'clock, in the afternoon of July 13, 1863, the advance of the command was seen streaming down the hill, on the west side of the valley, and the alarm was at once given. Citizens hurried to secrete valuables and run off horses; but in a very few minutes the enemy were swarming all over the town. The raiders generally behaved well; no woman nor other person was harmed, and no house robbed. They entered the stores, and in the aggregate a large amount of goods was taken. They were eccentric in their robbing. A druggist was despoiled of nothing but his soap and perfumery. They stayed a few hours, carried off some horses, and that night, going east, were abreast of Cincinnati, and the next day out of the county, after a tremendous midsummer march of thirty hours.

Mt. Washington is five miles east of Cincinnati, on the C. G. & P. R. R. Newspaper: Cincinnati Public School Journal, Educational. Churches: 1 Methodist Episcopal, 1 Methodist Protestant and 1 Baptist. Industries: Colter Pack-

ing Co., fruit canning, 100 employees. Population in 1880, 393. School census

in 1886, 160. D. G. Drake, superintendent.

LOCKLAND is twelve miles north of Cincinnati, on the C. C. & I. and C. H. & D. R. R., and on the Miami and Erie Canal. It has four churches and, in 1880, 1,884 inhabitants. Water-power is supplied to the establishments here by four locks in the canal, which have unitedly forty-eight feet fall and give name to the place.

Industries and Employees.—The Stearns & Foster Co., cotton batting, etc., 98 hands; The Lockland Lumber Co., builders' wood-work, etc., 85; The Friend & Fox Paper Co., 75; George H. Friend Paper Co., 25; J. H. Tangeman, papermaking, 15; The Holdeman Paper Co., 34; The Holdeman Paper Co., 30; The

George Fox Starch Co., starch, 107.—State Report, 1888.

Reading lies just east of Lockland and had, in 1880, a population of 2,680. Diehl's long-noted fireworks are here manufactured; 60 hands are employed. WYOMING lies west of Lockland, on the other side of the C. H. & D. R. R.; it had, in 1880, 840 inhabitants.

MADISONVILLE is seven and a half miles from Cincinnati, on the C. W. & B. R. R., has churches, Baptist, Methodist, Christian, Presbyterian, Lutheran, Episcopal and Catholic. Population in 1880, 1,247. Norwood is on the same rail-

road, six miles from Cincinnati, and has about 800 inhabitants.

CARTHAGE is on the C. H. & D. and C. C. & I. R. R. and Miami Canal, ten miles from Cincinnati. It has four churches, the County Infirmary and Longview Insane Asylum. Population in 1880, 1,007. The Erkenbecker Starch Factory is here, which employs 120 hands; the clothing-making industry is also carried on here. Hartwell lies a little northeast of Carthage, on the opposite side of Mill creek, and on the C. H. & D. and Short Line Railroads. Population in 1880, 892. Elmwood adjoins Carthage on the south.

While others of these treesy-named villages, as Maplewood and Woodlawn, are not afar; also Park Place and Arlington. Then there is Addyston, which, increasing the number to be mentioned, has a suggestion in its name of the arithmetical. Outside of the city limits, on the line of Mill creek, which is threaded by the C. H. and Bee Line Railroads for sixteen miles north, there are nineteen flourishing towns, many of them running into each other.

St. Bernard is an extensive suburb, just south of the Marietta and Cincinnati Railroad, seven miles north of the city, and is largely inhabited by Germans, who have here the St. Clement's Catholic church. Population in 1880, 1,073. BOND

HILL is near it, on the line of the M. & C. R. R.

GLENDALE is on the C. H. & D. Railroad, fifteen miles north of Cincinnati, and is one of the most beautiful of the suburban villages. The Glendale Female College is located here. It has three parks, and a pretty lake of four acres from natural springs. It was laid out in 1852 for suburban homes by wealthy Cincinnatians, and has been noted as the residence of some eminent characters, as Stanley Matthews, Robert Clarke, R. M. Shoemaker, Crafts J. Wright, etc.; also for the literary tastes of its population, which has been noted for its quality rather than its numbers. Population in 1880, 1,403.

College Hill is about eight miles from the city and is reached by a narrow gauge railway. It is especially noted as the seat of Farmer's College and of a Female College. Two miles north of it is Mount Pleasant, post-office name Mount Healthy, which many years ago was noted for holding conventions of the

Anti-Slavery or Liberty Party.

IVORYDALE lies seven miles north of Cincinnati, on the C. H. & D., C. W. & B. and C. C. & I. Railroads. Here Proctor & Gamble have about 500 employees in the manufacture of their famed "ivory soap," who labor on the cooperative plan, sharing profits with the owners. The Emery Lard and Candle Manufacturing Company is also here, post-office Ludlow Grove.

The following are the names of villages and localities in the county, with their

populations in 1880: Home City, 422; Riverside, 1,268 (now in the Cincinnati limits, post-office Sedamsvlle), where, in 1887, the Cincinnati Cooperage Company employed 565 hands; Westwood, 852; Cleves, 836; North Bend, 412; Linwood, 723; and Springdale, 284.

In the northwestern corner of the county is the village of Whitewater, where, since 1824, there has been a small settlement of Shakers. The grave of Adam Poe, the renowned Indian fighter, who had the noted fight with Big Foot, is in the Shaker burying-ground.

Census of 1890 of Villages.

HANCOCK.

Hancock County was formed April 1st, 1820, named from John Hancock, first President of the Revolutionary Congress. The surface is level; soil is black loam, mixed with sand, and based on limestone and very fertile. Its settlers were generally of Pennsylvania origin. Area, about 540 square miles. In 1887 the acres cultivated were 169,013; in pasture, 44,809; woodland, 77,310; lying waste, 1,569; produced in wheat, 567,704 bushels; rye, 38,264; buckwheat, 764; oats, 491,677; barley, 1,376; corn, 1,667,873; broom-corn, 2,000 pounds brush; meadow hay, 26,271 tons; clover, 10,351 bushels seed; flax, 2,839 pounds fibre; potatoes, 74,601 bushels; butter, 686,107 pounds; sorghum, 3,544 gallons; maple syrup, 16,598; honey, 14,803 pounds; eggs, 647,165 dozen; grapes, 11,445 pounds; sweet potatoes, 363 bushels; apples, 10,435 bushels; peaches, 486 bushels; pears, 652 bushels; wool, 206,987 pounds; milch cows owned, 8,316. School census, 1888, 11,316; teachers, 274. Miles of railroad track, 129.

Population of Hancock in 1830, 813; 1840, 10,099; 1860, 22,886; 1880, 27,784, of whom 23,102 were born in Ohio, 2,209 Pennsylvania, 270 New York, 252 Virginia, 143 Indiana, 35 Kentucky, 882 German Empire, 89 Ireland, 76 France, 64 England and Wales, 47 British America, and 11 Scotland.

The central and southern part of this county is watered by Blanchard's fork of the Auglaize and its branches. The Shawnee name of this stream was Sho-poqua-te-sepe, or Tailor's river. We state on the authority of Col. John Johnston that Blanchard, from whom this stream was named, was a tailor, or one that sewed garments. He was a native of France, and a man of intelligence; but no part of his history could be obtained from him. He doubtless fled his country for some offence against its laws, intermarried with a Shawnee woman, and after living here thirty years, died in 1802, at or near the site of Fort Findlay. When the Shawnees emigrated to the West, seven of his children were living, one of whom was a chief. In the war of 1812 a road was cut through this county, over which the troops for the Northwest passed. Among these was the army of Hull, which was piloted by Isaac Zane, M'Pherson and Robert Armstrong.

Findlay in 1846.—Findlay, the county-seat, is on Blanchard's fork, ninety miles northeast of Columbus. It contains one Presbyterian and one Methodist church, one academy, two newspaper printing offices, thirteen mercantile stores, one foundry, one clothing, one flouring and one grist mill, and 112 families. A branch railroad has been surveyed from Cary, on the Mad river railroad, to this place, a distance of sixteen miles, which will probably ere long be constructed. Findlay derives its name from Fort Findlay, built in the late war by James Findlay, who was a citizen of Cincinnati, a colonel in the late war, and afterwards a member of Congress. This fort stood on the south bank of Blanchard's fork, just west of the present bridge. It was a stockade of about fifty yards square,

with block-houses at its corners and a ditch in front. It was used as a depot for military stores and provisions.

About 9 o'clock one dark and windy night in the late war, Capt. William Oliver (now of Cincinnati), in company with a Kentuckian, left Fort Meigs for Fort Findlay, on an errand of importance, the distance being about thirty-three miles. They had scarcely started on their dreary and perilous journey, when they unexpectedly came upon an Indian camp, around the fires of which the Indians were busy cooking their suppers. Disturbed by the noise of their approach, the savages sprang up and ran towards them. At this they reined their horses into the branches of a fallen tree. Fortunately the

horses, as if conscious of the danger, stood perfectly still, and the Indians passed around the tree without making any discovery in the thick darkness. At this juncture Oliver and his companion put spurs to their horses and dashed forward into the woods, through which they passed all the way to their point of destination. They arrived safely, but with their clothes completely torn off by the brambles and bushes, and their bodies bruised all over by contusions against the trees. They had scarcely arrived in the fort when the Indians in pursuit made their appearance, but too late, for their prey had escaped.

The town of Findlay was first laid out by ex-Gov. Joseph Vance and Elnathan Corry, in 1821, and in 1829 relaid out, lots sold, and a settlement systematically commenced. In the fall of 1821, however, Wilson Vance (brother of the above) moved into Findlay with his family. There were then some ten or fifteen Wyandot families in the place, who had made improvements. They were a temperate, fine-looking people, and friendly to the first settlers. There were at this time but six other white families in the county besides that of Mr. Vance. Mr. V. is now the oldest settler in the county. For the first two or three years all the grain which he used he brought in teams from his brothers' mills in Champaign county, about forty miles distant. To this should be excepted some little corn which he bought of the Indians, for which he occasionally paid as high as \$1 per bushel, and ground it in a hand-mill.

There are some curiosities in the town and county worthy of note. At the south end of Findlay are two gas-wells. From one of them the gas has been conducted by a pipe into a neighboring dwelling and used for light. A short distance west of the bridge, on the north bank of Blanchard's fork, at Findlay, is a chalybeate spring of excellent medicinal qualities, and from which issues inflammable gas. In the eastern part of the town is a mineral spring possessing similar qualities. Three miles south of Findlay is a sycamore of great height, and thirty-four feet in circumference at its base. Ten miles below Findlay, on the west bank of Blanchard's fork, on the road to Defiance, are two sugar-maple trees, thirty feet distant at their base, which, about sixty feet up, unite and form one trunk, and thus continue from thence up, the body of one actually growing into the other,

so that each lose their identity and form one entire tree. Old Edition.

FINDLAY, county-seat of Hancock, about 85 miles northwest of Columbus, about 45 miles south of Toledo, is on the L. E. & W.; T. C. & S.; and I. B. & W. railroads. The largest natural-gas wells in the world supply manufacturers here with fuel at a nominal cost; private consumers pay fifteen cents a month per stove while in use, and for illuminating purposes five cents per month per burner. Oil is also abundant, is piped elsewhere, and some refined here.

County Officers in 1888.—Auditor, William T. Platt; Clerk, Presley E. Hay; Commissioners, Isaac M. Watkins, George W. Krout, Calvin W. Brooks; Coroner, Jesse A. Howell; Infirmary Directors, James M. Cusac, Alexander R. Morrison, Wm. R. McKee; Probate Judge, George W. Myers; Prosecuting Attorney, James A. Bope; Recorder, John B. Foltz; Sheriff, George L. Cusac; Suproport Hyese K. Stringfollow: Treesurer Andrew J. Moore

Surveyor, Ulysses K. Stringfellow; Treasurer, Andrew J. Moore.

City Officers in 1888.—Wm. L. Carlin, Mayor; Jacob H. Boger, Clerk; Jacob Huber, Treasurer; J. W. Bly, Marshal; Jas. A. Bope, Solicitor; Godfrey Nus-

ser, Street Commissioner.

Newspapers.—Courier, Democratic, Fred. H. Glessner, editor and publisher; Jeffersonian, Independent Republican, A. H. Balsley, editor and publisher; Gas-

GEN. James Findlay, from whom Findlay was named, was born in Franklin county, Pa., in 1770, of an eminent family. "About the year 1795 he removed to Ohio, by way of Virginia and Kentucky, eventually settling in Cincinnati. There he for a number of years filled the position of receiver of public moneys in the Land Office. In 1805–6 and in 1810–11 he served as Mayor of Cincinnati. In the war of 1812 he served as colonel of a regiment, and was present at Hull's surrender of Detroit. For his meritorious conduct in the war he was shortly afterwards promoted to the rank of brigadier-general of the Ohio State militia, in which capacity he served for a considerable period. He erected Fort Findlay, from which Findlay was named. Naturally reserved in manner, he presented to strangers an air of austerity, but he was the soul of kindness and geniality; had great decision of character and an unsullied reputation. He died in Cincinnati in 1835.

There died at Findlay, May 12, 1856, at the age of 68 years, Andrew Coffinberry. He was born in Virginia; came to Mansfield about 1808; after the war he studied law there with John M. May, and then for nearly half a century

he practised in nearly all the counties of Northwestern Ohio, beginning with their organization. He was, says Knapp, conspicuous among the old-time lawyers of the Maumee valley, and beloved by his professional brethren and by all with whom he came in contact.

He obtained the soubriquet of the good Count Coffinberry by reason of his kindly nature, genteel address and extraordinary neatness of dress. When traversing the circuit from county-seat to county-seat, the journeys always being on horseback, he carried a considerable apparel. From his resemblance to the German Count or Baron Puffendorf, he was sometimes called Count Puffendorf. Many comical stories are told of him.

In 1842 the count came before the public in the role of a poet in a small volume printed by Wright & Legg at Columbus. It was entitled "The Forest Rangers: a Poetic Tale of the Western Wilderness in 1794, connected with and comprising the march and battle of General Wayne's army, and abounding with interesting incidents of fact and fiction, in seven cantos."

The scene of the book is of course the "Black Swamp Region," the Maumee country, wherein the words of the poem:

"Mustered strong the Kas-Kas-Kies, Wyandots and the Miamies, Also the Potawatamies, The Delawares and Chippewas, The Kickapoos and Ottawas, The Shawanoes and many strays From almost every Indian Nation, Had joined the fearless congregation, Who after St. Clair's dread defeat Returned to this secure retreat."

The main subject is the story of the capture, captivity and final rescue of the maiden Julia Gray and the wedded Nancy Gibbs. The poem gives personal narratives, dialogues, Indian speeches, drinking-songs of Wayne's soldiers, death-songs of savages, etc. It also describes natural scenery wherein Hog creek for the purposes of euphony appears under the name of "Swinonia," thus:

"From Blanchard to Swinonia, he Hied o'er to see, who there might be.

To make it true to nature the illiterate frontier characters speak their own vernacular in doggerel rhyme. For instance, Mrs. Nancy Gibbs, who states her "maiding name was Nancy Jarred," in describing her courtship by Gibbs, says:

"His ways was all so dreffle nice, What maiding could reject the splice?"

The book stretches out for 200 pages, and is such a curious conglomeration of intensely realistic jingle, and, as a whole, is such a strange eccentric conception that any allusion to it in the presence of those acquainted with it seldom fail to bring a twinkle in their eyes. His old friends on the bench and at the bar, and they were a host, at the time of its appearance, now nearly half a century gone, enjoyed it hugely, for it brought the good count and his oddities so vividly before them.

THE GAS WELLS OF FINDLAY.

In our first edition as among the curiosities of this region we said, "At the south end of Findlay are two gas wells. From one of them the gas has been conducted by a pipe into a neighboring dwelling and used for light." The public did not imagine that the little obscure town stood over a great reservoir of natural gas and petroleum, which, on discovery, was to render it one of the most famed spots geologically considered on the globe. The following history of its discovery and the development at Findlay up to May 20, 1887, is copied from carefully prepared articles by Mr. Frank B. Loomis, published at the time:

The tendency of people to grasp with frantic eagerness every business or social sensation that presents itself is powerfully illustrated by the widespread interest which the recent discovery of natural gas in large quantities has attracted. A few years ago no geologist or practical driller would have advised a friend or patron to put down a well in Western Ohio. But conditions change with dramatic celerity in this country, and today Northwestern Ohio is the scene of an intense and contagious excitement.

A few days ago the largest gas well in the world was struck near Findlay. Its daily

output of gas is 20,000,000 cubic feet. There are in the aggregate forty-five gas wells in and about Findlay. Together they pour forth 100,000,000 cubic feet of gas daily, an equal amount in heating capacity to 3,000 tons of coal.

The Ohio natural gas is said to be richer in heat producing properties than the Pennsylvania gas by fifteen per cent., according to the tests and estimates of scientific men.

There is a very important and significant geological fact in connection with the Ohio gas and oil discoveries. Both fluids come from the Trenton limestone, a widespread

Zay, Photo., Findlay.

FINDLAY IN 1890.

formation of the lower silurian age. In order that gas or oil may be given forth in valuable quantities there must always be some structural peculiarity in the Trenton limestone formation so that an arch will be formed to serve as a storehouse for the fluids to accumulate in. The town of Findlay, which is the centre of the gas region, is built over such a fold or arch in the limestone. The western extremity of this arch is coincident with the north and south line made by the Main street of Findlay, so that a well may be drilled anywhere east of that street, and dry gas will be found in abundance at a depth of about 1,150 feet. A person cannot dig a cellar or well without setting some gas free, and it is said, in jest, that difficulty is found in setting fence posts on account of the pressure of gas from beneath.

The people of Findlay saw indications of gas for half a century without suspecting the remarkable treasure underlying them. One man in the town, a German physician named Charles Oesterlen, read the signs with an intelligent and prophetic eye. Forty years ago he became convinced that an enormous reservoir of natural gas lay beneath the town of Findlay. He told his belief and was scoffed at-men called him the "gas fool," and until 1884 he was regarded as a vain dreamer. But patience and perseverance at last prevailed, and three years ago he succeeded in organizing a stock company to drill for gas. The well was a successful one, and when the gas gushed forth with a panting roar and shot a column of flame sixty feet into the air, people were alarmed for a time. But the faith of Dr. Oesterlen was vindicated and the truth of his theories established.

Findlay was a small and almost unknown town when gas was struck. It took a year for the news of the wonderful discoveries to spread, and it was not till 1886, when the great Karg well, with a capacity of 15,000,000 cubic feet daily, was struck, that the attention of the public was arrested by the developments and possibilities at Findlay.

The great Karg well was discovered on January 20, 1886, by a boring of 1,144 feet. The gas was conducted forty-eight feet above the ground through a six-inch pipe, and when lighted the flame rose from twenty to thirty feet above the pipe; with a short pipe the flames ascended to the height of sixty feet. The gas leaves the well with a pressure of 400 pounds to the square inch, and with so much force that it has raised a piece of iron weighing three tons more than 100 feet above the ground.

above the ground.

It is difficult to imagine the magnificent effect of this burning well at night. The noise of the escaping gas which, at the rate of forty million cubic feet per day, is like the roar of Niagara or like the thunder of a dozen railroad trains, drowning all conversation. On the nights of the first winter it was opened the ground was frozen and the

people not being used to it within the radius of a half a mile were disturbed in their slumbers, especially when there was a change of wind. The sound under extraordinally conditions of the atmosphere has been heard fifteen miles away, and on a dark night the light reflected on the clouds discerned for fifty miles.

Prof. G. Frederick Wright, who visited on an evening a month after it was opened. wrote: "Although the snow had covered the ground to a depth of several inches, in every direction for a distance of 200 yards in circumference the heat of the flame had melted the snow from the ground and the grass and weeds had grown two or three inches in height. The crickets also seemed to have mistaken the season of the year, for they were enlivening the night with their cheerful song. The neighborhood of the well seemed also a paradise for tramps. I noticed one who lay soundly sleeping with his head in a barrel, with the rest of his body lying outside on the green turf, to receive the genial warmth from the flame high up in the air." Cold as it was he slept in perfect comfort, with no danger of suffering so long as he was within the charmed circle.

The daily amount of heat from this single well is said to equal that from the burning of one thousand tons of soft coal.

The cost of drilling a well is about \$1,500, but gas is supplied so cheaply to consumers that no one thinks of drilling a well except for a factory or mill. The city owns a number of fine wells and has pipes under all the streets. Gas is furnished to consumers for fifteen cents a month for each grate or stove, and the consumer is permitted to burn as much or as little as he chooses.

The gas has a distinct and penetrating sulphuric odor, so that it is safer for household use than manufactured gas, as it cannot escape without being quickly detected. Gas is a great luxury as a fuel. There is no smoke, dirt or expensive manipulation connected with it. It is easily managed and burns with a beautiful blue flame that emits an intense heat which never varies in degree.

There was a great deal of speculation in farms in the gas belt, and one agent told me he had sold the same farm ten times. Hundreds of farmers have been made rich, but I cannot think they have gained as much in contentment as they have in wealth. One odd character sold his farm for \$75,000 and came to the town to live. He brought with him three strapping daughters, and this strange quartet, in garments cut in styles that were popular a quarter of a century ago, wander about the streets in a helpless and hopeless sort of a way, wondering what to do with their money now that they have got it. The land which Senator Sherman paid \$30,000 for has advanced in three months to \$150,000 in value. The population of Findlay has grown from 5,000 to 15,000 in a year.

THE GREAT NATURAL GAS JUBILEE.

On the second week in June, 1887, three days—Wednesday, Thursday and Friday—were given to celebrating the first anniversary of the practical application of natural gas to the mechanical arts in Findlay. It was on the 9th of June, 1885, that the Biggs Iron and Tool Company first welded iron and steel together in Northern Ohio with natural gas. It was a novel occasion—the first jubilee of its kind in history.

"Forty thousand visitors poured into the town to participate in the natural gas jubilee. The bustling city was ablaze with light and decorations, radiant in all the glory of flags, evergreens, bunting, and flowers. The main street was spanned by fifty-eight arches, bearing jubilant mottoes illuminated by the flame of thousands of gas jets. Thirty thousand such jets were burning all over the city and turning the night into day. The first day (Wednesday) was devoted chiefly to the reception of distinguished guests. On Thursday morning the exercises consisted of the laying of the corner-stones for four new manufacturing establishments, in addition to those which had been laid the day before. Early in the day Senator John Sherman and other dignitaries arrived, and in the afternoon Gov. Foraker, accompanied by Adjutant-General Axline and staff, and the regular army officers who were to act as judges of the military contest, reached the city, and were accorded a most hearty reception. Other arrivals were about 1,000 uniformed members of the Knights of Pythias, from Springfield, Toledo, Dayton, Cleveland, Sandusky, Bluffton, and other points, all accompanied by bands of music. The \$1,000 prize drill, later in the day, attracted 5,000 spectators.

"All day long the burning gas on the street arches flared in the light rains. It was cheaper to let it burn than to employ men to put it out and light it again. In the evening there was a grand banquet, at which appro-priate addresses were made by Senator Sherman, Gov. Foraker, Charles Foster, Murat Halstead, Gen. Thomas Powell and others. The evening's illumination was a grand success. Hundreds of sheets of flame leaped from the arches, and the brilliancy of the burning gas flooded the city in a blaze of light. A continuous display of fireworks was made from seven o'clock until midnight, while 70,000 people packed roadway, walks, windows and roofs, and manifested in repeated applause their admiration of the spectacle. Friday, the last day, was occupied with processions, military parades, prize drills, band contests at the Wigwam, the laying of various corner-stones, and of the first rails of the belt and electric railroads; the festivities concluding in the evening with the awarding of prizes and a display of fireworks. In the drill the first prize of \$1,000 was won by the Toledo Cadets, while the State University Cadets won the second prize of \$500, and the Wooster Guards the third prize of \$250.

Mt. Blanchard is 10 miles southeast of Findlay. It is on the line of the C. & W. Railroad. It is in a fine farming and wool-growing district, and oil and gas are found in abundance. Churches: 1 Methodist Episcopal, 1 Methodist Protestant, and 1 Presbyterian. Population in 1880, 285.

McComb is 85 miles northwest of Columbus, 40 miles south of Toledo, and 116 miles west of Cleveland, on the line of the N. Y. C. & St. L. and McC. D. & T. Railroads. It is surrounded by fine farming lands. Oil and natural gas are found in abundance. Newspaper: *Herald*, S. B. Davis, editor and publisher. Churches: 1 Presbyterian, 1 Methodist Episcopal, 1 Disciples, and 1 German Lutheran. *Principal Industries*: Manufacturing handles of all kinds, planing mills, etc. Population in 1880, 417. School census, 1886, 337; H. Walter Doty, superintendent.

ARCADIA, on the L. E. & W. and N. Y. C. & St. L. Railroads, is $9\frac{1}{2}$ miles northeast of Findlay. It has 1 Methodist, 1 Presbyterian, and 1 Lutheran church. Population in 1880, 396.

Vanlue, on the I. B. & W. Railroad, 10 miles east of Findlay. Population in 1880, 364. School census, 1888, 142.

VAN BUREN is on the T. C. & S. Railroad, 7 miles north of Findlay. Population in 1880, 130.

Benton Ridge is 8 miles southwest of Findlay. Population in 1880, 179. School census, 1888, 96.

HARDIN.

Hardin County was formed from old Indian territory, April 1, 1820. Area about 440 square miles. In 1887 the acres cultivated v = 132,898; in pasture, 30,697, woodland, 47,516; lying waste, 8,167; produced in wheat, 359,060 bushels; rye, 12,526; buckwheat, 635; oats, 340,047; barley, 315; corn, 1,187,035; meadow hay, 22,771 tons; clover hay, 5,243; flax, 2,012 lbs. fibre; potatoes, 114,506 bushels; butter, 550,396 lbs.; cheese, 574; sorghum, 1,488 gallons; maple syrup, 2,810; honey, 25,358 lbs.; eggs, 524,031 dozen; grapes, 5,085 lbs.; sweet potatoes, 40 bushels; apples, 53,791; peaches, 255; pears, 403; wool, 209,683 lbs.; milch cows owned, 5,954. School census, 1888, 9,306; teachers, 264. Miles of railroad track, 91.

Population of Hardin, 1840, 4,583; 1860, 13,570; 1880, 27,023; of whom 22,328 were born in Ohio; 1,047 Pennsylvania; 480 Virginia; 320 New York; 187 Indiana; 85 Kentucky; 738 German Empire; 386 Ireland; 147 England and Wales; 57 British America; 20 Scotland; and 18 France.

Although Hardin was formed from old Indian territory as early as 1820, it was not organized until January 8, 1833, previous to which it formed for judicial purposes a part of Logan county, and when Champaign was organized of that county. About half of the county is level and the remainder undulating, and all capable of thorough drainage. The soil is part gravelly loam and part clayey and based on limestone and rich. Its original forests were very heavy in timber and of the usual varieties.

Originally the deep woods of the county were singularly free from underbrush, so that the pioneers could see a long distance between the trees. It is supposed that this arose from a habit of the Indians of annually burning the underbrush to facilitate the capture of game. Owing to the heavy timber the county slowly settled, so that as late as 1840 it had but nine inhabitants to the square mile. The county, like Marion, is on the great watershed of the State, the southern part being in the Mississippi valley and the northern part in the Lake Erie basin. Its principal streams are the Scioto and the Blanchard, the waters of the first going into the Ohio and the other into Lake Erie. The Blanchard, Hog Creek and the north branch of the Miami head in this county, while the Scioto heads in Auglaize county, enters Hardin from the southwest, flows through the great Scioto marsh, first goes northeast and then southeast by Kenton.

Col. John Hardin, from whom this county was named, was an officer of distinction in the early settlement of the West. He was born of humble parentage, in Fauquier county, Virginia, in 1753. From his very youth, he was initiated into the life of a woodsman, and accuired uncommon skill as a marksman and a hunter. In the spring of 1774 young Hardin, then not twenty-one years of age, was appointed an ensign in a

militia company, and shortly after, in an action with the Indians, was wounded in the knee. Before he had fully recovered from his wound he joined the noted expedition of Dunmore. In the war of the revolution, he was a lieutenant in Morgan's celebrated rifle corps. He was high in the esteem of General Morgan, and was often selected for enterprises of peril, requiring discretion and intropidity. On one of these occasions, while

with the northern army, he was sent out on a reconnoitring expedition, with orders to take a prisoner, for the purpose of obtaining information. Marching silently in advance of his party, he ascended to the top of an abrupt hill, where he met two or three British soldiers and a Mohawk Indian. The moment was critical. Hardin felt no hesitation-his rifle was instantly presented, and they ordered to surrender. The soldiers immediately threw down their arms—the Indian clubbed his gun. They stood, while he continued to advance on them: but none of his men having come up, and thinking he might want some assistance, he turned his head a little and called to them to come on; at this moment, the Indian, observing his eye withdrawn from him, reversed his gun with a rapid motion, in order to shoot Hardin; when he, catching in his vision the gleam of light reflected from the polished barrel, with equal rapidity apprehended its meaning, and was prompt to prevent the dire effect. He brings his rifle to a level in his own hands, and fires without raising it to his face-he had not time, the attempt would have given the Indian the first fire, on that depended life and death—he gained it and gave the Indian a mortal wound; who, also, firing in the succeeding moment, sent his ball through Hardin's hair. The rest of the party made no resistance, but were marched to camp. On this occasion Hardin received the thanks of General Gates. In 1786 he settled in Washington county, Kentucky, and there was no expedition into the Indian country after he settled in Kentucky, except that of General St. Clair, which he was prevented from joining by an accidental lameness, in which he was not engaged. In these, he generally distinguished himself by his gallantry and success. In Harmar's expedition, however, he was unfortunate, being defeated by the Indians when on detached command. near Fort Wayne. Colonel Hardin was killed in the 39th year of his age. He was—savs Marshall, in his history of Kentucky, from which these facts are derived—a man of unassuming manners, and great gentleness of deportment; yet of singular firmness and inflexibility as to matters of truth and justice. Prior to the news of his death, such was his popularity in Kentucky, that he was appointed general of the first brigade.

Colonel Hardin was killed by the Indians in 1792. He was sent by General Washington on a mission of peace to them—and was on his way to the Shawnees' town. He had reached within a few miles of his point of destination, and was within what is now Shelby county, in this State, when he was overtaken by a few Indians, who proposed encamping with him, and to accompany him the next day to the residence of their chiefs. In the night, they basely murdered him, as was alleged, for his horse and equipments, which were attractive and valuable. His companion, a white man, who spoke Indian, and acted as interpreter, was uninjured. When the chiefs heard of Hardin's death, they were sorry, for they desired to hear what the messenger of peace had to communicate. A town was laid out on the spot some years since, on the State road from Piqua through Wapakonetta, and named at the suggestion of Col. John Johnson, Hardin, to perpetuate the memory and sufferings of this brave and patriotic man: it is about six miles west of Sidney.

FORT M'ARTHUR was a fortification built in the late war, on the Scioto river, in this county, and on Hull's road. It was a low, flat place, in the far woods, and with but little communication with the settlements, as no person could go from one to the other but at the peril of his life, the woods being infested with hostile Indians.

The fort was a stockade, enclosing about half an acre. There were two blockhouses; one in the northwest and the other in the southeast angle. Seventy or eighty feet of the enclosure was composed of a row of log corn-cribs, covered with a shed roof, sloping inside. A part of the pickets were of split timber, and lapped at the edges: others were round logs, set up endways, and touching each other. The rows of huts for the garrison were a few feet from the walls. It was a post of much danger, liable at any moment to be attacked.

The site of this fort is about three miles southwest of Kenton, and not a vestige of it now remains. It must have been an exceedingly dreary spot and largely fatal to the soldiers, as it is in the vicinity of the great Scioto marsh. The graves of sixteen of the garrison are near by. The prompt building of this fort reflects great credit upon the foresight of Governor Meigs. On the 11th of June, 1812, one week before the declaration of war, he despatched Duncan M'Arthur with a regiment of soldiers from Urbanna, to open a road in advance of Hull's army and build a stockade at the crossing of the Scioto. On the 19th Hull arrived with the residue of his army. His trace is still discernible, after a lapse now of seventy-seven years, in various places through the northwestern counties as he passed on his way to Detroit. Not a vestige of the fort now re-

COURT HOUSE SQUARE, KENTON.

mains, but remnants of M'Arthur's corduroy through the boggy forest are yet to be found.

On page 705 is a sketch of Thomas Coke Wright, who gave for our first edition this interesting incident. It was at one time commanded by Captain Robert M'Clelland, who recently died in Greene county. He was brave, and when roused, brave to rashness. While he commanded at Fort M'Arthur, one of his men had gone a short distance from the walls for the purpose of peeling bark. While he was engaged on a tree, he was shot twice through the body, by a couple of Indians in ambush, whose rifles went off so near together that the reports were barely distinguishable. He uttered one piercing scream of agony, and ran with almost superhuman speed, but fell before he reached the fort. An instant alarm was spread through the garrison, as no doubt was entertained but that this was the commencement of a general attack, which had been long expected. Instead of shutting the gates to keep out danger, M'Clelland seized his rifle, and calling on some of his men to follow, of which but few obeyed, he hastened to the place of ambush and made diligent search for the enemy, who, by an instant and rapid retreat, had effected their escape; nor did he return until he had scoured the woods all around in the vicinity of the fort.

The old M'Arthur road, or "Hull's trail," was for many years the principal highway from Bellefontaine to Detroit, while Fort

M'Arthur remained garrisoned for some time after the close of the war.

According to tradition the first family to locate in the county was that of Alfred Hale, who came to Fort M'Arthur in 1817, and in 1819 was born their son Jonas, their fourth child. Hale was a hunter and squatter, and remained but a short time. The first permanent settlement was made near the site of Roundhead, in the spring of 1818, by Peter C. M'Arthur and Daniel Campbell, where they built cabins, and after planting corn went back to Ross county to bring their families, but from fear of a sudden outbreak of Indians, did not return until 1822. The nearest settlement was about Bellefontaine. It is said that their fire at one time going out, M'Arthur was compelled to walk to that point to obtain a fresh supply. Upon his return he met a squaw, who, laughing at his ignorance, showed him how to make a fire with a flint and a piece of punk. About the next family in that vicinity was that of Samuel Tidd, a blacksmith, who at one time did much work for the Indians. He came in February, 1822, and settled in the forests, where was born, November 15 of the next year, their daughter Jane, the first fe-male child born in Hardin county. In the county history appears her portrait, as Mrs. Jane Tidd Rutledge, a good, strong, womanly

The first court held in the county was held March 8, 1834, in a block-house, the residence of Hon. William McCloud, at M'Arthur, McCloud being one of the associate judges. The first county officers were elected the next month. The total vote was only sixty-three. Little or no business was done at the first term of court.

The next year a trial jury was required. The farmers were busy, the country sparsely settled, and the sheriff found great difficulty in impanelling a jury. On the morning of the second day, the judge opened court and asked the sheriff if the jury was full. The sheriff is said to have replied "Not quite full yet. I have eleven men in the jail and my dogs and deputies are after the twelfth

man." The jail at that time was a log-cabin near the fort. The court-room was a shed constructed from the side of the block-house, with clapboards, with forked saplings for uprights. The benches for jury and spectators were split clapboards, with auger holes for legs. The "bench" were provided with a table and chairs. The jury retired to the woods for their deliberation.

Kenton in 1846.—Kenton, the county-seat, is on the Scioto river and Mad river railroad, seventy-one miles northwest of Columbus, and seventy-eight from Sandusky City. The view shown was taken southwest of the town. The railroad is shown in front, with the depot on the left: the Presbyterian church appears near the centre of the view. In the centre of the town is a neat public square. From the facilities furnished by the railroad, Kenton promises to be an inland town of considerable business and population. It now contains eight drygoods and four grocery stores, one newspaper printing office, one foundry, one grist and one saw mill, one Presbyterian and one Methodist church, and had, in 1840, 300 inhabitants, since which it is estimated to have more than doubled its population. There is a house in this town, the rain flowing from its north ridge

finds its way to Lake Erie, and that from its south ridge to the Gulf of Mexico. —Old Edition.

The old view, excepting that of Xenia, is the only one that shows a railroad in all the 180 engravings of our original edition. The hut in the centre stood a little southwest of the site of Young Brothers' present office. The church in the centre was the old Presbyterian, now down; and the taverns on the right were those of the American House, kept by Judge David Goodin, and the Mansion House, built by William Furney.

The railroad shown was opened to Kenton, July 4, 1846, the very year the view was taken, and amid great rejoicings, an excursion train having come from Sandusky. Its name was the Mad River and Lake Erie, then running from Sandusky to Dayton; later, changed to the Cleveland, Sandusky and Cincinnati. The house which shed its rain for both Lake Erie and the Ohio was then the residence of John W. Holmes. The site is the present residence of General Robinson. About the highest point in the county is Silver Creek Summit, 1118 feet above tide. See page 60.

In the spring of 1833 the State committee appointed by the legislature selected a site for the county-seat, on the north bank of the Scioto, on part of sections 33 and 34 in Pleasant township, George Houser, Jacob Houser and Lemuel Wilmoth giving forty acres of their land as an inducement. The committee having decided upon the site were unable to agree upon the name, but after its selection rode over three miles west with William McCloud to Fort M'Arthur, where he resided in a block-house, to get dinner. McCloud, who was a great hunter, and his good lady, had provided an appetizing feast of wild meat, for they were very hungry. The subject of the name being discussed, they left it to the decision of Mrs. McCloud, who declared in favor of Kenton, in honor of the friend of her husband, and nobody ever regretted the choice.

A sketch of him will be found on page 376. Father Finley, in his own memoirs, gives these interesting details of his conversion in his mature years to the truths of Christianity.

Simon Kenton was the friend and benefactor of his race. In the latter part of his life he embraced religion; in the fall of 1819 General Kenton and my father met at a camp meeting on the waters of Mad river, after a separation of many years. Their early acquaintance in Kentucky rendered this interview interesting to both of them. The meeting had been in progress for several days without any great excitement until Sabbath evening, when it pleased God to pour out his spirit in a remarkable manner. Many were awakened, and among the number were several of the General's relatives.

His heart was touched, and the tear was seen to kindle the eye and start down the furrow of his manly cheek. On Monday morning he asked my father to retire with him to the woods. To this he readily assented, and as they were passing along in silence, and the song of the worshippers had died upon their ears, addressing my father, he said, "Mr. Finley, I am going to communicate to you some things which I want you to promise me you will never divulge." My father replied, "If it will not affect any but ourselves, then I promise to keep it forever." Sitting down on a log the General commenced to tell the story of his heart, and disclose its wretchedness; what a great sinner he had

been, and how merciful was God in preserving him amid all the conflicts and dangers of the wilderness. While he thus unburdened his heart and told the anguish of his sin-wounded spirit, his lip quivered and the tears of penitence fell from his weeping eyes. They both fell to the earth and, prostrate, cried aloud to God for mercy and salvation. The penitent was pointed to Jesus, the Almighty Saviour; and after a long and agonizing struggle, the gate of eternal life was entered, and

"Hymns of joy proclaimed through heaven The triumphs of a soul forgiven."

Then from the old veteran, who immediately sprang to his feet, there went up a shout toward heaven which made the woods resound with its gladness. Leaving my father he started for the camp, like the man healed at the beautiful gate, leaping and praising God, so that the faster and farther he went the louder did he shout glory to God. His appearance startled the whole encampment; and when my father arrived he found an immense crowd gathered around him, to whom he was declaring the goodness of God, and his power to save. Approaching him, my father said, "General, I thought

we were to keep this matter a secret." He instantly replied, "Oh, it is too glorious for If I had all the world here I would tell of the goodness and mercy of God.

At this time he joined the Methodist Episcopal Church, lived a consistent, happy Christian, and died in the open sunshine of a Saviour's love. If there is any one of all the pioneers of this valley to whom the country owes the largest debt of gratitude, that one is General Simon Kenton. His

body sleeps on the waters of Mad river. about six miles north of Zanesville, and

"When that winding stream shall cease to

And those surrounding hills exist no more. His sleeping dust reanimate shall rise, Bursting to life at the last trumpet's sound; Shall bear a part in nature's grand assize, When sun, and time, and stars no more are found.

Kenton, county-seat of Hardin, is forty-eight miles northwest of Columbus, seventy south of Toledo, on the dividing ridge of the State, the water running north and south. It is on the I. B. & W. and C. & A. R. R. County Officers, 1888: Auditor, George W. Rutledge; Clerk, James C. Howe; Commissioners, Wilber F. Pierce, Andrew Dodds, John L. Clark; Coroner, John Watters; Infirmary Directors, John Wilson, Samuel M. Andrews, Samuel Utz; Probate Judge, James J. Wood; Prosecuting Attorney, Charles M. Melhorn; Recorder, Dennis W. Kennedy; Sheriff, John S. Scott; Surveyor, Sidney F. Moore; Treasurer, Edward Sorgen. City Officers: Mayor, W. H. Ward; Clerk, George W. Binckley; Treasurer, A. B. Charles; Marshal, Michael Flanigan; Solicitor, Frank C. Daugherty; Street Commissioner, W. H. Miller. Newspapers: Das Wochenblatt, German, Louis Schloenbach, editor; Democrat, Democratic, Daniel Flanagan & Co., editors and publishers; News, Prohibition, Henry Price, editor and publisher; Republican, Republican, E. L. Miller, editor and publisher; Herald, Republican, L. I. Demarest, editor and publisher. Churches: one German Lutheran, one Episcopalian, one Presbyterian, one African Methodist Episcopal, one Methodist Episcopal, one Disciples, one Baptist, one Catholic. Banks: First National, S. L. Hoge, president, H. W. Gramlich, cashier; Kenton National, Asher Letson, president, Curtis Wilkin, cashier; Kenton Savings, L. Merriman, president, James Watt, cashier.

Manufactures and Employees.—Champion Iron Fence Company, iron fencing, etc., 125 hands; John Callam & Co., doors, sash, etc., 12; John Callam & Co., building material, 6; G. H. Palmer & Co., chair stock, etc., 52; Scioto Straw Board Company, straw boards, 33; Pool Bros., carriages, etc., 6; Smith & Smith, wood and iron novelties, 10; Curl & Canaan, chair stock, etc., 24; J. C. Schwenck, handles, etc., 9; Kenton Milling Company, flour, etc., 7; Kenton Milling Company, flour, etc., 6; Young & Bro., lumber, 19; William Campbell, staves and headings, 33.—Ohio State Reports, 1888. Population in 1880, 3,940; school census 1888, 1,403; E. P. Dean, School Superintendent. Capital invested in industrial establishments, \$583,130. Value of annual product, \$566,000.—Ohio

Labor Statistics, 1887.

The location of Kenton is such that it can be seen on being approached in any direction for five or six miles. Being in a fine agricultural region, it commands a large trade in grain, cattle and pork, as well as lumber, staves, etc. All the principal streets are graded and gravelled. Indeed, but few counties in this part of Ohio have such a complete network of gravel pikes as Hardin. They were begun in 1869, now cover about 230 miles, costing about \$2,500 per mile, or a total of over half a million of dollars. They radiate in every direction from Kenton, and the work of building still goes on. The streams are spanned by good bridges, and driving over smooth roads is a luxury to be enjoyed alike in rain and sun.

HISTORIC AND DESCRIPTIVE MISCELLANIES.

THE GREAT MARSHES.—The marsh lands of this county cover 25,000 acres, or an area of about thirty-nine square miles. The largest

of these is the "Scioto Marsh," having about 16,000 acres inside of the timber line. It is in the southwest part, through which runs the Scioto river. Next is the "Hog Creek Marsh" with about 8,000 acres in the northern part, and then also a part of Cranberry Marsh of Wyandotte county, of which about 1,000 acres lie in this county. These low prairies attracted large numbers of deer and other wild animals that often found a safe retreat in the high grass, which the Indians would burn to drive them aways. Since their departure an annual crop of grass often ten feet high has been added to the other accumulations of these basins. The bottoms of marshes are drift clay, which is covered from two to ten feet with the vegetable accumulations of centuries and is very rich. The margins, as with the banks of rivers, are lined with willows.

The subject of draining these marshes has long agitated the people. They have been a constant source of malarial poison, and retarded settlement. In 1859 a contract was made by the county with Mr. John Mc-Guffey to reclaim the waste lands of the Scioto Marsh by ditching the marsh and the clearing out the drift of the Scioto for three miles. The work failed it is said from the lack of sufficient fall in the river below the marsh. In 1883 the work under different plans was again begun, and is now progressing to a successful completion. The surface is peaty, and beneath it are found shell, marl and sandy deposits. The marsh is in the shape of a ham, and it is supposed was once a small lake. The main ditch we are told is from 45 to 60 feet wide, 7 feet deep and some $12\frac{1}{2}$ miles long. In all, thus far, 150 miles of ditching have been done therein, and 20 miles of the Scioto cleared and straightened. The work on Cranberry Marsh was begun in 1865 and finished in three years by a main ditch 20 feet wide and 4 feet deep with two lateral ditches. The water is carried into Blanchard river, and the soil is of the finest, deep, rich and inexhaustible.

Hog Creek Marsh, comprising twelve and one-half square miles, is mainly in Washington township. By ditching and also by deepening, widening and straightening the channel of Hog creek for a distance of four miles, which took six years of labor, from about 1868 to 1874, these marsh lands have been reclaimed. Thirty years ago these lands were almost worthless, a hot-bed of malaria, the resort of all sorts of venomous reptiles. The lands will now average sixty dollars per acre, and are among the most valuable in the Scioto Valley. The expense of draining was about thirteen dollars per acre.

The wide ditches are cut by huge dredges worked by steam-power; the small lateral ditches are cut by spade. A picture of one of the dredges is before us, an improved dredge-boat, the invention of Colonel C. H. Sage. It is a scow drawing two and a half feet of water, twenty-six feet wide and seventy-two feet long, at work in the Scioto marshes, and the colonel himself is supposed to be on board, as he has charge there. The view is from the rear, and the scene around is wild and picturesque. A clearing wide as a road

has been cut through the original forest, through which is a wilderness vista for miles. A large area of the ditch is in the foreground, at the rear of the boat, where the water looks as placid and pure as a mountain lake, and reflects upon its surface, in pleasing vividness, forest, sky and scow.

The dredge has a roof on posts some seven feet high, but is open at the sides and rear, into which we can gaze. In front are some huge spars coming to a point about twenty feet above the prow of the scow, with another beam, the pioneer of the concern, from the point of which hangs a huge bucket or dipper, which swings to alternate sides of the ditch and deposits mud as it goes, fifty-four feet from the centre of the turn-table. Evidently it was not made for ocean navigation; but it is a fact that some years ago in an adjoining county, near the head-waters of the St. Mary's we believe it was, a scow-dredge was built in a swamp and then dug its way out until it floated into a river and got an ex-

perience of river navigation.

The Ditch Laws of the State are admirable. The system is very simple. Parties wishing their land ditched petition the county commissioners, who first examine, by sending an engineer to run the necessary levels, and, if his report and plans are favorable, they grant the request and assume the expense and supervision of the work. To meet the expense the county issues its bonds, running a term of years. The interest on the bonds, and finally the principal, are met by increase on the tax value of the land.

It is by this system that the Black Swamp and other low wet lands of the Northwest are becoming the garden of Ohio. The people no longer shake with the chills and fever, the snakes have wriggled away, and big crops, sunshine and gladness have come over the land.

GREAT TREES.

This county had some noted trees. One termed "Hardin's Great Walnut" has thus been described by Mr. James Cable: It stood 22 miles east of Kenton, in the centre of the Marion pike. Its roots—large spurs—extended twenty feet from the body each way, the body growing well to the ground. It died in 1832, and was cut in 1837. The diameter is not known, but its body measured seventy-two feet to the forks, and large rail-cuts were made from each fork. Large stiles had to be cut in the body to notch it for the saw. The tree was without a blemish. Mr. Cable said it was the best tree he had ever seen

Walnut was abundant in the vicinity. On section twelve, near by, Mr. Johnson, an old Indian scout, reported that a walnut was cut in 1789 which measured four feet and a half in diameter. It was cut for bees by a white man. The stump was standing late as 1879. It was reported that a white man was killed near it by an Indian. This was probably the first tree cut in Hardin county.

CAPTURE AND ESCAPE OF DR. JOHN KNIGHT.

The earliest known incident of striking interest occurring within the limits of this county was the escape of Dr. John Knight in June, 1782. He was brother-in-law of Col. Crawford, and had been captured with the Colonel and two others near what is now Leesville, Crawford county. After the burning of Crawford, Knight was painted black and next morning put in charge of an Indian named Tutelu, a rough-looking fellow, to be taken to the Shawnee town of Wakatomika for execution.

It is a well-received tradition that the precise spot where the Doctor outwitted, overpowered and escaped from his Indian guard was in Section 8, Dudley township, on the north bank of the Scioto, near the residence of the late Judge Portius Wheeler. The spot is on the old Shawnee trail, from the Wyandot and Delaware villages on the Sandusky and Tymochtee to the Shawnee towns on the Big Miami and Mad rivers, passing through what is now known as the townships of Goshen, Dudley, Buck Hall, and Taylor Creek. The details, as told by Knight, are these

They started for the Shawnee towns, which the Indian said were somewhat less than forty miles away. Tutelu was on horseback and drove Knight before him. The latter pretended he was ignorant of the death he was to die, though Simon Girty told him he was to die; affected as cheerful a countenance as possible, and asked the savage if they were not to live together as brothers in one house when they should get to the town. Tutelu seemed well pleased and said, "Yes." He then asked Knight if he could make a wigwam. Knight told him he could. He then seemed more friendly. The route taken by Tutelu and Knight was the Indian trace leading from the Delaware town to Wakatomika, and ran some six or eight miles west of what is now Upper Sandusky. Its direction was southwest from Pipetown to the Big Tymochtee. They travelled, as near as Knight could judge, the first day about twenty-five miles. The Doctor was then informed that they would reach Wakatomica the next day a little before noon.

The Doctor often attempted to until himself during the night, but the Indian was very watchful and scarcely closed his eyes, so that he did not succeed in loosening the tugs with which he was bound. At daybreak Tutelu got up and untied the Doctor. They had built a fire near which they slept. Tutelu, as soon as he had untied the Doctor, began to mend the fire, and as the gnats were troublesome, the Doctor asked him if he should make a smoke behind him. He said, "Yes." The Doctor took the end of a dogwood fork, which had been burnt down to about eighteen inches in length. It was the longest stick he could find, yet too small for the purpose he had in view. He then took up another small stick, and taking a coal of fire between them, went behind the Indian, when, turning suddenly about, he struck the Indian on the head with all his force. This so stunned him that he fell forward, with both his hands in the fire. He soon recovered, and springing to his feet ran howling off into the forest. Knight seized his gun, and with much trepidation followed, trying to shoot the Indian; but using too much violence in pulling back the cock of the gun, broke the main-spring. The Indian continued his flight, the Doctor vainly endeavoring to fire his gun. He finally returned to the camp from the pursuit of Tutelu, and made preparations for his homeward flight through the wilderness. He took the blanket of the Delaware, a pair of new moccasins, his "hoppes," powder-horn, bullet-bag, together with the Indian's gun, and started on his journey in a direction a little north of east.

About half an hour before sunset he came to Sandusky Plains, when he laid down in a thicket until dark. He continued in a northeasterly direction, passing through what is now Marion. Morrow, Richland, Ashland, Wayne, and so on, until evening of the twentieth day after his escape, he reached the mouth of Beaver creek on the Ohio, in Beaver county, Pa., and was then among friends. During the whole journey he subsisted on roots, a few young birds that were unable to fly out of his reach, and wild berries that grew in abundance through the forest.

THE TORNADO OF 1887.

On the night of Friday, May 14, 1887, the western part of Ohio was visited by one of the most destructive storms known in the history of the State. While great damage was done to property throughout other counties, its effects in Hardin and Greene counties were particularly disastrous. The destruction in Greene was largely caused by flood, the damage in Hardin principally by the great force of the wind; it partook more of the character of a tornado, the effects being similar to those of the tornado which had visited Fayette county the preceding September, nearly destroying the entire town of Washington C. H.

Commencing in the western part of Hardin county the storm travelled in a northeasterly direction over a course of about eight miles, leaving destruction in its path. It passed out of Hardin at the northeast corner, and did great damage in Wyandot county.

TRAVELLING NOTES.

At Kenton on this tour we met Gen. James S. Robinson. We were glad to meet him again, having made his acquaintance on our original tour, but had not seen him since. In the interim he had an unusual career, civil and military. He was born of English parentage, near Mansfield, October 14, 1827. He was bred a printer and editor, looks like the typical John Bull, but is every inch an American. He is a tall, somewhat huge man, with clear, weighty voice, one with strong convictions and frank in their expression. He was secretary of the first Republican State Convention ever held in Ohio, of which Salmon P. Chase was president; has held many other political and civil offices; is the only person ever elected to Congress from Hardin county, first in 1880 and then in 1882; was Secretary of State from 1885 to 1889.

He enlisted in the civil war as a private, and ere its close had become a full brigadier and brevet major-general. He was in the Virginia campaign under Fremont; was in Sherman's march to the sea, and had some interesting experiences at Gettysburg, incidents of the first day's fight and what he saw while he lay wounded and a prisoner within the enemy's lines. We abridge from a published account.

He entered the fight as commander of the Eighty-second O. V. I., two other colonels ranking him. But in five minutes one was wounded and the other (Colonel Musser, of the Seventy-fifth Pennsylvania) killed while engaged in conversation with him, which devolved upon him the command of the brig-

GEN. JAMES S. ROBINSON.

ade. The firing was from the right flank and front and was very destructive of human life. His regiment went into action on the morning of the first day's fight with 19 officers and 236 men. It lost all but 2 officers and 89 men. After the death of General Reynolds and other disasters an order was

issued assigning to Robinson the command of the division, but ere it reached him he was struck in the left breast by a minie-ball, which passed clear through his body, making

a gaping wound.

This was just at the edge of Gettysburg, and as he fell his troops were forced to give way before the overwhelming forces of the enemy, who swept on and over the field on which he lay wounded. He was taken to the residence of a couple of maiden ladies by the name of McPherson, sisters of Hon. Edward McPherson, late Clerk of the House of Representatives, where he lay upon the kitchen floor during the night. The following day he was taken up-stairs and placed in a bed, looking out upon the busy scenes being enacted in the town. In the meantime he had had no treatment whatever. Some water was brought him, which he poured through his wound and which ran through his body like through a sieve. To this the general attributes his recovery from a wound which would have killed almost any other man.

After an examination of his wound the

After an examination of his wound the surgeon coolly told him that he could not possibly recover and that he had better complete at an early moment whatever arrangements he wanted to make preparatory to a voyage across the dark river. But the colonel intimated that he had some faith in his recovery and that he had some faith in his recovery and that he had no arrangements to make just yet. Another surgeon came who succeeded in finding a small dose of morphine. This gave relief, and he was able to sleep for a few hours. During both days of the battle he could hear the rattle of the musketry and the roar of artillery on all parts of the field.

On the afternoon of the third day, when the signal-gun was fired and the artillery opened from both lines, the shock was terrific. It fairly shook the building which he occupied. Then came a lull and after that the rattle of musketry. Just as the sound of musketry died away an officer belonging to General Lee's staff came riding through the town opposite the general's window, evidently carrying orders from General Lee to General Johnson on the left. The rebel provost marshal, who was commanding in the town, occupied the hotel office as his headquarters. He was heard asking Lee's staff officer for the news at the front.

officer for the news at the front.

The officer replied: "Glorious! Long-street is driving the Yankees to h—l." The general says that that was an anxious moment for him. Finally the roar of battle entirely ceased and only an occasional shot was heard along the line. Just then a captain on Lee's staff came riding down with orders to Johnson, probably countermanding the previous order. The rebel provost marshal again asked the staff officer for the news at the front. He said: "Bad enough. Long-street has been repulsed, with terrible slaughter, and everything is going to the rear in utter confusion."

Those were words of good cheer to the old soldier. He called to a soldier who had remained with him to come forth from his hiding-place and requested him to open the back shutters of the house and raise him

back shutters of the house and raise him up and let him look over the battle-field. He saw great confusion in Lee's lines. Ambulances, caissons and ammunition wagons were going to the rear in great confusion. The retreat continued all night long.

As he lay there wounded, seeing the panic and confusion that had seized Lee's troops, he longed to get word to Meade that he might pursue. Meade had 16,000 fresh troops, and had he done so he has always felt that then and there the rebellion would have ended.

About daybreak, on the morning of the 4th, he heard the welcome voices of his own regiment, as they came marching through the town, calling upon some rebel soldiers who had taken refuge in a barn to surrender.

We again visited Kenton Wednesday, September 11, 1889. This was Pioneer Day on the County Fair grounds, a memorable occasion, the dedication of the pioneer cabin, which had just been completed, to commemorate the virtues of the fathers and mothers who had laid the foundations in the wilderness of Hardin. Among the multitude who poured in from the country were many who had brought the old-time tools and implements and placed them in the cabin, as spinning-wheels, flax-boards, Dutch ovens, tables, chairs, reels, knives, forks, spoons, pewter and wooden utensils, guns, cabinlamps, etc., that had done grand service in the olden time, even as far back, perhaps, as the days of Lexington, for there were some old flint-lock guns that must have flashed their light in or near that dim remote. Indeed, even in the present sense, it was a dim remote, as shown by the specimens of the cabin-lamps, for the pioneers must have had the vision of bats to have seen much by them. They consisted simply as receptacles for a lump of grease, with a rag laid in for

a wick. These were either shoved into crevices between the logs of the cabin or, if they were extra splendid, they were hung by a wire. Our engraving is from one of this

A LOG-CABIN LAMP.

splendid kind, brought on to the ground by Mr. John P. Richards, a pioneer from Buck township, which came from his father, who used it in New Hampshire about a century back. Its material is brass, and it is black with age and use. To our vision, having tried it, we discover that it has a decided advantage over a respectable-sized lightning-bug—that is, the light is more steady.

The exercises consisted mainly of speeches by Gen. Gibson, Col. Cessna, Henry Howe, etc.; singing by the Old Fogy singers, of Logan county, winding up with grateful resolutions by the committee of the whole to Col. W. T. Cessna, president, and Dr. A. W. Munson, secretary, of the Pioneer Association, for their services in bringing the building of the cabin to such a happy conclusion, wherein about every log was the gift of some one family who had hauled it on to the ground as their especial pet log, in some cases miles away, from the "dim remote" of their free lands. The Old Fogy singers were a most attractive feature, in the quaint costumes of the olden time, with their hair smoothly parted in the middle, with not even a solitary "bang" to molest the dome of thought. Then their old hymns and fuguing tunes reminded of one especial fugue that was sung in the ancient days wherein the treble and alto would start out and sing:

"Oh! for a man; Oh! for a man; Oh! for a mansion in the skies."

And then the tenors and basses reply

"Bring down sal;—bring down sal;—bring down salvation from above."

The Old Stage Driver.—Among the old pioneers present at the dedication was Harvey Buckminster, born in 1800, the last year of the last century, whose unusual experience has thus been often related, and should have this permanent record. He was a Vermonter, and came to Ohio in 1828, when 28 years old, first settling on the Sandusky plains, where, in the person of Miss Abigail Brown, he obtained a good wife and made many friends among the Indians. He borrowed money—three dollars—to pay for his marriage license, and mauled 1,200 rails at twenty-five cents a hundred, to pay it back. During the summer after he was married he engaged to mow the meadow of a neighbor who lived five miles away, and walked there and back daily, receiving as compensation for each day's work six pounds of pickled pork, then worth about four cents a pound. He then engaged in driving stage on the deep muddy roads through dense forests between Bellefontaine and Upper Sandusky, the home of the Wyandots, in the night season, when it was often so dark that he could not see the wheel-horses, when he would be compelled to carry a lantern, and with a pole pry out the stage coach from the deep holes or over stumps in

the road. He followed this occupation for six years, and eventually bought a tract of woodland and cleared it at a place called Grassy Point, now in Hale. There he opened a house of entertainment in a primitive style for travellers on the road. The Shawnees and Wyandots were quite numerous, and he was often visited by them, and became on friendly terms with their leading men. For thirteen winters he bought furs for the Northwestern Fur Company in northwestern Ohio and Michigan, paying out some \$5,000 annually to the Indians and white hunters, by which he secured a competency.

He used to relate this incident, which occurred under his observation, in one of his trips to Sandusky. A young Indian having been found guilty of killing another Indian by a council of the Wyandots, was sentenced to be shot. The culprit was taken to his place of execution, pinioned, blindfolded and made to kneel by his coffin, when five young men—Wyandots—being supplied with rifles, four of which only were loaded with balls, at the word "fire" simultaneously discharged their pieces, when four balls entered close together the breast of the unfortunate young man. The wife of the doomed man was present at the execution. She was at the time with child, and when it was born there were four distinct red marks of the bulletholes, and the appearance of blood trickling down from them on the breast of the child.

OHIO NORMAL UNIVERSITY.

ADA is fourteen miles northwest of Kenton, sixty south of Toledo, on the line of the P. Ft. Wayne & C. Railroad. It derives its main interest from being an educational point. It was laid out in 1853, and was called Johnstown until incorporated in 1861. It is the seat of the Ohio Normal University, the largest institution of the kind in the State, and which has been recognized by the government by its sending an army officer and ordnance to give instruction in military tactics. It has thirty instructors, male and female; H. S. Lehr, president. Its enrolment of pupils for 1889 was 2,473, many for brief courses. The town is lighted by electricity and the fuel used is natural gas. Newspapers: Record, neutral, Agnew Welsh, editor and proprietor; University Herald, college, Herald Company, publishers; One Principle, religious, Rev. J. M. Atwater, publisher;

Holiness Conservator, religious, Revs. Rowley and Rice, publishers. Churches: one Methodist Episcopal, one Wesleyan Methodist, one Presbyterian, one Evangelical Lutheran, one Baptist, one Catholic, one United Brethren, one Reformed and one Disciples. Bank: Citizen's, P. Ahlefeld, proprietor. Population in 1880, 1,760. School census in 1886, 763; Alexander Comrie, superintendent.

FOREST is twelve miles northeast of Kenton, at the crossing of the P. Ft. W. & C. and I. B. & W. Railroads. It is surrounded by a fine grain and fruit producing country. Its principal manufactures are lumber, tile, brick and handles. City Officers, 1888: Matthew Briggs, Mayor; Fred. Hune, Marshal; W. P. Bowman, Clerk; J. F. Nye, Treasurer; J. L. Woodward, Street Commissioner.

Newspapers: Review, Independent; Harvey S. Horn, editor and publisher. Churches: 1 Presbyterian, 1 Methodist Protestant, 1 Methodist Episcopal. Bank: Nye's (John F. Nye), J. F. Nye, cashier. School census in 1886, 413; C. F. Zimmerman, Superintendent. Population in 1880, 987.

Mt. Victory is in the southeastern part of the county, on the line of the C. C. C. & I. Railroad. It is surrounded by a fine farming and grazing country. It has one newspaper, *Observer*, Independent, E. E. Lynch, editor. Churches: 1 Methodist Episcopal, 1 United Brethren, and 1.Wesleyan Methodist. Principal industries are M. E. Burke & Co., flouring mill, and Boyd Bros.' handle factory. Population in 1880, 574.

DUNKIRK is an incorporated town on the P. Ft.W. & C. R. R., twenty-six miles east of Lima and ten miles north of Kenton. Churches: 1 Methodist Episcopal, 1 United Brethren, 1 Wesleyan Methodist, 1 Presbyterian, 1 Adventist, 1 African Baptist. Newspaper: Standard, Independent, O. Owen, editor. Bank: Woodruff's, John Woodruff, president; A. B. Woodruff, cashier. City Officers: D. F. Fryer, Mayor; Calvin Gum, Marshal; Gage Helms, Clerk; J. M. Hutchinson, Treasurer; Jacob Rinehart, Street Commissioner. The surrounding country is very productive, and all kinds of grain are raised in abundance. Population in 1880, 1,131. School census, 1888, 431. H. B. Williams, Superintendent of Schools.

Patterson is ten miles northeast of Kenton, on the I. B. & W. R. R. School census, 1888, 141.

RIDGEWAY is on the C. C. C. & I. R. R., ten miles south of Kenton. School census, 1888, 83.

ROUNDHEAD, a hamlet in the southwest corner of the county, was named from Roundhead, a Wyandot chief, who had a village there. Major Galloway, who visited it about the year 1800, stated that there were then quite a number of apple trees in the village, and that the Indians raised many swine. Roundhead, whose Indian name was Stiahta, was a fine-looking man. He had a brother named John Battise, of great size and personal strength. His nose, which was enormous, resembled in hue a blue potatoe, was full of indentations, and when he laughed it shook like jelly. These Indians joined the British in the late war, and Battise was killed at Fort Meigs.

HARRISON.

Harrison County was formed January 1, 1814, from Jefferson and Tuscarawas, and named from Gen. Wm. H. Harrison. It is generally very hilly; these hills are usually beautifully curving and highly cultivated. The soil is clayey, in which coal and limestone abound. It is one of the greatest wool-growing counties in the Union, having in 1847, 102,971 sheep, and in 1887, 137,891.

Area about 320 square miles. In 1887 the acres cultivated were 53,153; in pasture, 122,743; woodland, 34,105; lying waste, 489; produced in wheat, 198,991 bushels; rye, 1,465; buckwheat, 346; oats, 196,930; barley, 575; corn, 517,601; broom corn, 1,000 lbs. brush; meadow hay, 62,708 tons; clover hay, 1,050; potatoes, 33,324 bushels; butter, 415,440 lbs.; cheese, 10,000; sorghum, 2,645 gallons; maple syrup, 2,851; honey, 14,559 lbs.; eggs, 414,588 dozen; grapes, 8,900 lbs.; wine, 90 gallons; sweet potatoes, 141 bushels; apples, 18,558; peaches, 8,199; pears, 1,305; wool, 826,386 lbs.; milch cows owned, 4,993. School census, 1888, 6,529; teachers, 181. Miles of railroad track, 55.

Population in Harrison in 1820 was 14,345; in 1830, 20,920; 1840, 20,099; 1860, 19,110; 1880, 20,456, of whom 18,272 were born in Ohio; 915 in Pennsylvania; 341 in Virginia; 54 in New York; 46 in Indiana; 17 in Kentucky; 230 in Ireland; 104 in England and Wales; 30 in German Empire; 10 in Scotland; 8 in British America, and 3 in France.

In April, 1799, Alex. Henderson and family, from Washington county, Pennsylvania, squatted on the southwest quarter of the section on which Cadiz stands; at this time Daniel Peterson resided at the forks of Short Creek, with his family, the only one within the present limits of Harrison. In 1800, emigrants, principally from Western Pennsylvania, began to cross the Ohio river; and in the course of five or six years there had settled within the county the following-named

persons, with their families, viz.:

John Craig, John Taggart, John Jamison, John M'Fadden, John Kernahan, John Huff, John Maholm, John Wallace, John Lyons, Rev. John Rea, Daniel Welch, William Moore, Jas. Black, Samuel Dunlap, James Arnold, Joseph and Samuel M'Fadden, Samuel Gilmore, James Finney, Thos. and Robt. Vincent, Robert Braden, Jas. Wilkin, Samuel and George Kernahan, Thos. Dickerson, Joseph Holmes, James Hanna, Joseph, William and Eleazer Huff, Baldwin Parsons, James Haverfield, Robert Cochran, Samuel Maholm, Hugh Teas, Jos. Clark, Morris West, Jacob Sheplar, Martin Snider, Samuel Osborn, Samuel Smith, and perhaps others, besides those in Cadiz and on Short Creek; Thomas Taylor, John Ross, Thomas Hitchcock, Arthur and Thomas Barrett, Robert and Thomas Maxwell, Absalom Kent, John Pugh, Michael Waxler, Wm. M'Clary, Joseph, Joel and William Johnson, George Layport, William Ingles, Thomas Wilson, and perhaps others on Stillwater; John M'Connell, George Brown, John Love, William and Robert M'Cullough, Brokaw and others, on Wheeling creek. Robert Maxwell, William and Joseph Huff and Michael Maxler were great

hunters, and the three former had been Indian spies, and had many perilous adventures with the Indians. On one occasion, after peace, an Indian boasted, in the presence of Wm. Huff and others, that he had scalped so many whites. Towards evening, the Indian left for his wigwam, but never reached it. Being, shortly after, found killed, some inquiry was made as to the probable cause of his death, when Huff observed, that he had seen him the last time, sitting on a log, smoking his pipe; that he was looking at him and reflecting what he had said about scalping white people, when suddenly his pipe fell from his mouth, and he, Huff, turned away, and had not again seen him until found dead.

Beside frequent trouble with the Indians, the first settlers were much annoyed by wild animals. On one occasion, two sons of George Layport having trapped a wolf, skinned it alive, turned it loose, and a few days after it was found dead.

One mile west of the east boundary line of Harrison county, there was founded, in 1805, a Presbyterian church, called "Beach Spring," of which Rev. John Rea was for more than forty years the stated pastor. Their beginning was small; a log-cabin, of not more than 20 feet square, was sufficient to contain all the members and all that attended with them. Their log-cabin being burnt down by accident, a large house, sufficient to contain a thousand worshippers, was raised in its room, and from fifty communing members they increased in a short time to nearly 400, and became at one period the largest Presbyterian church in the State.—Old Edition.

Cadiz in 1846.—Cadiz, the county-seat, is a remarkably well-built and city-like town, 4 miles southeasterly from the centre of the county, 115 easterly from Columbus, 24 westerly from Steubenville, and 24 northerly from Wheeling. It contains 1 Presbyterian, 1 Methodist Episcopal, 1 Associate (Seceder), and 1 Associate Reformed Church. It also contains 2 printing presses, 12 dry-goods, 7

grocery and 2 drug stores, and had, in 1840, 1,028 inhabitants.

Cadiz was laid out in 1803 or '4, by Messrs. Biggs and Beatty. Its site was then, like most of the surrounding country, a forest, and its location was induced by the junction there of the road from Pittsburg, by Steubenville, with the road from Washington, Pa., by Wellsburg, Va., from where the two united, passed by Cambridge to Zanesville; and previous to the construction of the national road through Ohio, was travelled more, perhaps, than any other road northwest of the Ohio river. In April, 1807, it contained the following named persons, with their families: Jacob Arnold, innkeeper; Andrew M'Neeley, hatter and justice of the peace; Joseph Harris, merchant; John Jamison, tanner; John M'Crea, wheelwright; Robt. Wilkin, brickmaker; Connell Abdill, shoemaker; Jacob Myers, carpenter; John Pritchard, blacksmith; Nathan Adams, tailor; James Simpson, reed-maker; Wm. Tingley, school-teacher, and old granny Young, midwife and baker, who was subsequently elected (by the citizens of the township, in a fit of hilarity) to the office of justice of the peace; but females not being eligible to office in Ohio, the old lady was obliged to forego the pleasure of serving her constituents.

The first celebration of independence in Cadiz was on the 4th of July, 1806, when the people generally, of the town and country for miles around, attended and partook of a fine repast of venison, wild turkey, bear meat, and such vegetables as the country afforded; while for a drink, rye whiskey was used. There was much hilarity and good feeling, for at this time men were supported for office from their fitness, rather than from political sentiments.

About one and a half miles west of Cadiz, on the northern peak of a high sandy ridge, are the remains of what is called the "standing stone," from which a branch of Stillwater derived its name. The owner of the land has quarried off its top some eight feet. It is sandstone, and was originally from sixteen to eighteen feet high, about fifty feet around its base, and tapered from midway up to a cone-like top, being only about twenty feet around near its summit. It is said to have been a place of great resort by the Indians, and its origin has been a subject of specu-

lation with many people. It is, however, what geologists term a bounder, and was brought to its present position from, perhaps, a thousand miles north, embedded in a huge mass of ice, in some great convulsion of nature, ages since.—Old Edition.

Cadiz branch of the P. C. & St. L. Railroad. County Officers in 1888: Auditor, George A. Crew; Clerk, Martin J. McCoy; Commissioners, M. B. Frebaugh, Robert B. TRAVELLING NOTES.

Came last evening (June 7) from Steubenville by the P. C. & St. L. R. R., and thence by a short line of railroad eight miles to Cadiz, which I found much as I left it in the last days of February, 1847. The old county buildings looked as of yore. They were the last things I had sketched in Ohio on my tour of 1846–1847, and two days later I was in a stage-coach going over the mountains on my way home. I am told Cadiz has a large proportion of colored people; on the cars were some finely dressed people of color. The place it is claimed contains more wealth than any other of its size in the State. The banking capital is especially large. Here reside families who having accumulated fortunes from prosperous farming, largely woolgrowing, and tired of the isolation of farmlife make it their permanent home. Among its good things is a public library of 4,000 volumes, which speaks well for the character of its population, and especially so for Mrs. Chauncey Dewey, its founder.

Eminent Characters.—Cadiz is on a hill, as it should be, for it has been the home of some eminent characters. Bishop Simpson, whom Abraham Lincoln said was the most eloquent orator he ever heard, was born here. Secretary Stanton began his law practice in Cadiz, and it has been long the residence of John A. Bingham, the silver-tongued orator of national fame. Prof. David Christie, author of "Pulpit Politics" and "Cotton is King," was born in this county, edited a paper here, the Standard, and afterwards was a professor at Oxford. He and Simpson in their younger days were great

friends, and vied with each other in the writing of acrostics. I knew Christie in the antibellum days—a somewhat tall, large man. He had shaved his beard and dyed his hair, and he told me, because, in the eyes of the public, a man had about outlived his usefulness if he showed signs of getting "snowed up." Judge John Welch (see p. 275) is also a native of this county.

Mr. Bingham has recently returned from Japan, where he has been twelve years our ambassador. I called upon him at his residence early this morning, a plain, square brick house with a hall running through the centre. He personally answered my ring, and I made an appointment to meet him again in the afternoon. But we stood on the porch and talked some time. He is seventy-one years of age, a rather large gentleman, a blonde, with mild, blue eye and kindly face—an elegant, easy talker, scattering unpremeditated poetical similes through his speech. To illustrate, I had passed some compliments upon the beauty of the country around, whereupon he replied:

"Mr. Howe: if you can sketch for your book the hills which girdle this village and the fields of green and primeval forests, all seen under your eye from my door, you will have a picture of quiet beauty scarcely surpassed anywhere, certainly not in any part of this great country of ours, so far as I have seen, and I have seen much the greater part, nor in that foreign land, Japan, the 'Land of the Morning,' famed for its landscapes."

JOHN A. BINGHAM.

County Buildings. Cadil

Thinking that this speech of beauty about Cadiz from this eminent man should be preserved for the gratification of its people after he had passed away, I wrote it from memory and presented it for his inspection on my second call, when he went on to thus comment: "The Japanese had called Japan the 'Land of the Rising Sun.' but the expression 'Land of the Morning' I believe is original with me. We cannot tell from whence thoughts come. They drop from the brain like rain from heaven. I used the expression in a speech I made at Yokohama in the fall of 1873, which was reported by an English gentleman, Mr. Dixon, and printed both in Japanese and English. Five years later Mr. Dixon published a work upon Japan and entitled it 'The Land of the Morning.' The \mathbf{The} expression pleased the Japanese, and now it stands for all time.

He thought he could improve his little speech to me, and at my request, after some reflection, thus wrote in my note-book:

"DEAR MR. HOWE:

"The hills and primeval forest and green fields which girdle this village make a picture of quiet beauty which, I think, is scarcely surpassed in any part of our country which I have seen, or in Japan, the Land of the Morning.

"Jno. A. Bingham. "CADIZ, OHIO, JUNE 8, 1886."

I give both for the benefit of the young, to illustrate the respective qualities of amplification and terseness in composition.

Animal Intelligence.—I now return to an incident in my morning call. As we stood at the door, in the mild rays of the early sun, two house-dogs came up to welcome me, Jack and Jake. Jack was a smart little black-andtan, and observing my evident pleasure in their approach, Mr. Bingham said: "He has made the half circuit of the globe. I brought him from Japan, but he is a native of London; his ancestry known way back to the time of Queen Anne. The other dog, Jake, is a Newfoundland, with a cross of the St. Bernard. As for him," and he said it with evident pride at the thought, "he is a native of this great State." Then he continued: "It was a mystery to me how he got into the yard when the gate was closed, it swinging outward, and asking my little grand-son, he replied, 'Why, grandpapa, don't you know there is a knot-hole near the bottom; he puts his nose in that and backs with it. 'Then how does he get out?' 'Oh, he pushes!'' I might have told him, if I could have foreseen the fact, that one day I was to own a dog that would open a door with a latch or one with a knob—the first by striking, the other by placing his paws on each side of the knob and rubbing. And he is yet living, answering to the name of Black Ear, but we do not consider him as extra intelligent—that is, for a dog.

The intellects and passions of our animals, as far as they go, I believe, are identical with our own; and it is certainly enlarging to us to study their qualities and be pleased with their And as for the insect world, we are of those who can stoop down and watch with solid satisfaction a procession of ants, bringing up huge stones from out their underground habitations.

Furthermore, if one could not come into this world as a human being but could as an ant, he should be advised to embrace the opportunity, as thereby he could act as a teacher, illustrating, as an ant certainly does, the good effects of systematic industry which, in the case of the ant, seems cheering. For if not, after having deposited his stone, why should he hurry back, fast as his little legs

can carry him, for another?

An Old Contributor.—I called to-day upon Mr. W. H. Arnold, editor of the Sentinel, who remembered my former visit; his age at the time six years. His father, Mr. William Arnold, who died in 1874, aged seventy-six, contributed about all the historical material for my article on Harrison county. He was a native of Fayette county, Pa.; came here at the age of twelve; was justice of the peace thirty-three years, during which time he married 300 couple. In the war of 1812 all his brothers were in the army, and he, being too young for service, made gunpowder for the soldiers during every winter of the war. Powder was then very scarce, and as the government seized it wherever they could find it, and he could get a higher price for it in Steubenville, he took it there and sold it. The hut where he made it was about half a mile north of the town. He was a remarkably fine rifle-shot: one moonlight night he

shot eleven wild turkeys near his powder-mill.

Bishop Simpson's Early Days.—On inquiry, I learn that the house in which Bishop Simpson was born (June 20, 1811) stood on the site of the National Bank. He derived his name, Matthew, from his bachelor uncle, Matthew Simpson. He was a State Senator for many years, and by profession a schoolteacher and a man of superior acquirements; a walking encyclopædia; unprepossessing in appearance; small head and body. He lived to a great age, dying somewhere in the nine-ties. To eke out a living he manufactured reeds for the old hand-loom for home-made linen and jeans, and sold them to the country people, who wore homespun. The Bishop's father died when he was two years of age, and his uncle became his foster-father and took great interest in the lad. To his care the Bishop got his intellectual bent.

An old citizen, Mr. H. S. McFadden, says to me: 'The Bishop was an awkward, gawky, barefooted boy, and, when about seventeen, so shy that he was afraid of society, and so miserable in health that it was supposed he would soon perish of consumption; tall of his age and round-shouldered. He wrote acrostics for the Harrison Telegraph, and was fond of visiting the printingoffice. The people here were astonished at

his success in life.

The Itinerant's Nest.—On a corner near the

border of the village I was pointed out a long, low, old cottage, in which Bishop Simpson passed many of his boyhood days. It was then the home of William Tingley, his mother's brother, a man of note in his day. He was for forty years clerk of court, was prosperous, had excellent sense, and some sheep-raising man—it must have been—told me he was in his day the "bellwether" of the Methodist church here.

The sight of an old time weather-beaten structure like this, brown as a rat too, is always picturesque. This was particularly so, from its associations; attached to it and facing the street was another cottage of a single room in front, overgrown with vines. This the good man built solely for the accommodation of travelling Methodist ministers, a nest for itinerants. As I entered it, I felt, from its peculiar moral associations, I was more blessed than to have entered a palace. Here many a brother in Israel, in the olden time, after ambling for many a weary mile through the wilderness on his little nag, often eating parched corn for his sustenance, and preaching the same old sermon a thousand times, has looked forward to this little nest provided for him by Brother Tingley as one of the choice havens, where he could rest under the protecting wings of a brother's

love, and smoke his pipe in peace.

Comic Anecdotes.—This advent of the itinerants to the cabins of the pioneers, in the lonely wilderness condition of the country, was always a great blessing aside from their especial mission as spiritual messengers. They were eminently a social body of men,

and were welcomed with a hospitality that knew no bounds. Of course they had bouncing appetites. Their outdoor lives insured that, especially with their occasional fasts, when lost or belated in the wilderness. To feed them well was the pride of the log-cabin dwellers; whenever they tarried forays were invariably made upon the poultry. So certain was this that the term "chickeneaters" was often applied to the circuit riders. Many comical anecdotes were told in this regard, and none enjoyed them better than the circuit riders themselves.

One of them, whom one may call Brother Brannen, as the story goes, who used to amble on his nag through Eastern Ohio, early in the century, was especially favored with gastronomic powers. His voice and person were huge as his appetite, and he seemed proud of his eating capacity. He used to say that "a turkey was an unhandy bird—rather too much for one person and not quite enough for two." On an occasion he stopped at the eabin of a widow, who was of course all aglee to give him the best she had. After a little the good brother, going out to attend to his nag, was attracted by the sound of a child crying, and tracing his way by it found the widow's son, and he perhaps her only son. seated behind a corn-crib with a chicken under his arm. "What's the matter, sonny?" said he, in tender tones. "I am crying," he replied, "because mother sent me out for this chicken, and what between the hawks and the circuit riders it is the last chicken left on the place."

A WALK AND A SHEEP-TALK.

Last evening, June 9, near sunset, I took a walk with Mr. Stewart B. Shotwell, and ascended Boyle's Hill, half a mile west of the town. As we neared the summit a flock of sheep in their timidity descended the other side. We could see over a large part of Harrison county. Cadiz loomed up pleasantly on a companion hill. Under our eyes was the great dividing ridge, on one side of which the flowing waters descended and made their way into the Tuscarawas, on the other into the Ohio. The view was a succession of rolling grass-carpeted hills interspersed with forests. A warm rain had clothed them in the richest green, on which flocks of sheep were grazing. Down in a little modest valley a train of cars was approaching Cadiz on the short junction railroad. Dwindled by distance and our height, it seemed as a little toy affair, a child's plaything, playing bo-peep as it dodged in and out from behind the hillocks that at times hid it from view. The sky was somewhat overcast and the setting sun was reddening a mass of striated clouds over a scene of pastoral beauty.

Bah!—As we stood there on the very summit enjoying the scene to the full, and talking largely about sheep, there was a pause in our conversation, and we were about to leave, when I was astonished by a loud Bah! I then saw what had before escaped my eye. The sheep, which had fled at our approach and got out of sight, had taken courage and again mustered to the number of hundreds in a huge triangular mass on the grassy slope below us. At its very apex, and not sixty feet away, was the bellwether of the flock, all of which had stood in silence looking up at us, and apparently listening to our conversation; and I could not help thinking that this startling bah! from the bellwether was expressive of his

contempt at our conversation upon wool. By this time the shadows of evening were settling upon Cadiz, but I could discover nothing Spanish in the air.

Sheep Statistics.—Harrison, by the statistics of 1880, to the square mile leads all other counties in Ohio in the number of sheep and production of wool; the number of sheep was 209,856 and pounds of wool 1,090,393. Licking county, Ohio, which has nearly double its area, exceeded it about one-quarter in sheep, having been 251,989. Venango county, Pa., had 461,120 sheep and produced 2,416,866 pounds of wool. This we believe is the largest sheep-producing county in the Union, while Harrison ranks the third. Ohio is the greatest sheep-producing State. Its number in 1880 was 4,902,486, sheep clip 25,003,756 pounds; next was California, 4,152,349 sheep, clip 16,798,036 pounds; Texas 2,411,633 sheep, clip 6,928,019 pounds; Michigan 2,189,389 sheep, clip 11,858,497 pounds; New Mexico 2,088,831 sheep, clip 4,019,188 pounds. Missouri and Wisconsin next lead each with less than a million and onehalf of sheep. The entire number of sheep in the United States exclusive of spring lambs was, in 1880, 42,192,074, or a little less

than one sheep to one person.
"Wool," said Mr. Bingham, "is the prime clothing for man. As sheep increase civilization advances." As sheep increase blessing in the way of warmth and clothing, there is a good moral thought in the fact that wool is the natural outgrowth of an animal divinely chosen as the type of innocence and amiability. "Feed my lambs." And then the care of sheep seems to have a reflex action upon the owners in the character of their visitors and the things they see,

as is illustrated by the old hymn:

"While shepherds watched their flocks by night, all seated on the ground, The angel of the Lord came down, and glory shone around.

Job, I take it, is an especially interesting character to this people, he owned so many sheep: in the early part of his life 7,000, and in the latter part 14,000, and they tell me he ought to have lived in Harrison county, for the climate is so healthy that he would have escaped at least one of his evils -boils.

Great as were Job's possessions, there are to-day in Australia sheep ranges, the property of single owners, whereupon are raised over 150,000 sheep; 20,000 is but a moderate sized range. Three acres there is generally allowed for a single animal, sometimes ten acres. Sheep are not seen there in flocks, owing to the scant herbage; there sheep consequently are scattered over vast areas, a range for a flock of 200 requiring as much land as an Ohio township. What may seem strange, one may travel over a station whereupon are tens of thousand of sheep, and not have over three or four of the animals in one view in any place.

The great drawback to Australia has been the terrible drouths by which in entire districts the sheep all perish. Of late years this evil has been lessened by the sinking of artesian wells and extensive tree planting, by which the annual rainfall has been increased. The lives of the wool-growers there are desolate from the vast size of their ranges, their nearest neighbor often being fifteen or twenty miles away. In 1888 Australia had about eighty millions of sheep, and the United States about fifty millions, so the former is now the greatest wool-producing country on the globe, we ranking second, South America third and Russia the fourth.

Profits of Sheep-raising.—As our talk upon the sheep industry in Harrison county began on Boyle's Hill, it was finished in Mr. Shotwell's office in the evening, of which I took notes, and here repeat verbatim. "I do not know," said he, "a single farmer who has followed for life the growing of sheep, without diversion to other crops, but what has become wealthy. Land pastured by sheep improves year by year from their droppings. The tendency of sheep in summer is to seek the highest point of a hill to get the cool breezes. In winter they also get near the summit, but on the leeward side if there be any wind; the coldest air, being the heaviest, always sinks into the valleys. The result is that the rain distributes their manure from the top to all the lower parts of the field.

"Some years ago the late Judge Brinkerhoff, of Mansfield, was riding with me in this region, and inquired, 'Why is it that your hills are all so fertile? Our hill-tops are generally poor soil; our best lands are the valleys.' 'Because,' I replied, 'we raise The products of the hill soil—hay, sheep.' grass, corn, oats, etc.—are of a more nutritive nature than those of the rich bottom lands of the Tuscarawas and Ohio valleys, although the growth is not so rapid. Our experienced farmers therefore pay five cents more a bushel for our hill corn than for that raised elsewhere. This hill land will produce from twenty to forty bushels more to the acre than the alluvial soil. I own valley lands on the Tuscarawas and Stillwater, and I get nearly twice the quantity per acre of corn, grass, etc., from the hills, and the richest of butter and cheese is made from hill grass.

"As I have spoken of the profits of sheepraising, I will give you some statistics. On a farm of a quarter of a section, 160 acres, 325 sheep can be conveniently pastured. Such a farm would be valued at about \$5,000. The value of such a flock now would be about \$650. With proper care and feeding corn and hay, all of which one man alone could do, the annual clipping would be about seven pounds per sheep; total, 2,275. At $33\frac{1}{3}$ cents, the present price, this gives \$758.33 for the wool. Then the increase of sheep is double at the end of the year, which, at \$2 each, is \$650. This added to the product of the wool, gives \$1,308 as the annual production of the farm. There is still another item of profit. With a view to avoid over-stocking, the farmers select in the fall their largest, strongest sheep of the older class, and fatten them over winter, and in the spring, after clipping, they are sold East for mutton purposes. About 200, generally wethers, are annually sold on such a farm, at \$5 each, thus enhancing the total profits to \$2,308.

"The more you feed and care for a sheep in the winter, the heavier and better in the staple will be his fleece. Just after the war wool brought as high as \$1.10 per pound. The very old ewes are sold in the fall at fair prices—say \$2 each—are shipped eastward to the neighborhood of the cities, and then sold to a class of farmers who manage to have them drop their lambs early in February, feed the ewes on milk-producing slops, which rapidly fattens and increases the weight of the lambs. These lambs are tender and delicious, and

often bring \$5 each. The ewes are then clipped and slaughtered, the carcass thrown to the hogs, and the pelts turned over to the leather men. The large bank deposits in our town are mostly from the wool-growers of Harrison county.

"The sheep, as his coat shows, belongs to a cold climate; hence he flourishes in the mountain countries of Europe north of the 40° latitude, or in Australia south of the 40°

latitude, where it is alike cold."

Sheep-raising in Texas is comparatively a failure. To find there the proper climate, elevation is required, and then grass is scant. On the warm lowlands his wool is not required, and nature allows him to grow hair.

The most certain productive crop in our county is the corn, which averages seventy-five bushels to the acre—have known 120 bushels. The average wheat is twenty-five bushels—have known forty. Oats average from sixty to 100 bushels; hay, one and a half to two tons—often have the heaviest hay on the summit of the hills.

We append to the sheep statistics from Mr. Shotwell, some items from an article, "The American Wool Industry," by E. H. Ammidown, in the *North American Review*, August, 1888.

The American wool-clip amounts to about 300,000,000 pounds per annum, and varying in value from \$75,000,000 to \$95,000,000. It stands sixth in value as an American agricultural product, being surpassed only by corn, hay, wheat, cotton and oats. Our 50,000,000 of sheep are worth over \$2 each, say in all \$100,000,000. If the annual product of mutton for food, and the increase of the flocks, were added to this, it would totalize \$125,000,000. Sheep husbandry is the only great farm industry in which every section of our country shares. The annual gain

from the fertilization of the soil by the droppings of the sheep is estimated to be fully \$50,000,000.

If this industry was abandoned, the decline in value of the sheep-farm lands, comprising 112,000,000 of acres—much of which would be then unused and all deteriorate in fertility—at \$2.50 an acre, would be \$280,000,000. So the advantages of continuing the industry seem imperative to the well-being of the country. We now supply one-sixth part of the wool produced in the world, so far as is statistically known.

REMINISCENCES OF EDWIN M. STANTON.

Edwin M. Stanton, the great war Secretary, had his beginning in Cadiz as a lawyer. The great example of his life was intensity of purpose. Not another member of Mr. Lincoln's Cabinet, not even Mr. Lincoln himself, could perhaps here compare with him. He was a giant in will, with mighty passions to enforce it. To crush out the rebellion at all hazards absorbed his full powers. Governor Morton, in acknowledging on a certain occasion receipt of money from Mr. Stanton, wherein authority was assumed to meet a great patriotic end, wrote him: "If the cause fails, you and I will be covered with prosecutions, and probably imprisoned or driven from the country." To this Stanton replied: "If the cause fails, I do not wish to live." Whatever he undertook he went in to the death. If death was to come, it would be for him no more than for others; he could die but once. His care was in what he engaged, and, as a lawyer, never undertook what he thought was a bad case. The cause succeeded, but his intense labors, under the might of an intense patriotism, killed him as effectually as ever soldier was killed by bullet.

It has been our privilege to make the acquaintance here of Mr. Stewart B. Shotwell, attorney-at-law, who was a student two years in the office with Mr. Stanton. To us, in conversation, he made the following statement:

Drawn by Henry Howe in 1886.

PORTRAIT AND BIRTHPLACE OF GENERAL G. A. CUSTER.

Stanton I knew intimately. He first studied law in Steubenville with Daniel L. Collier. He came to Cadiz in 1836, and went into partnership with Chauncey Dewey, and remained here until 1840, but the partnership existed until 1842. Dewey was an old lawyer of the Whig persuasion, and shortly after his coming, Stanton was elected prosecuting attorney on the Democratic ticket—an office he held three years.

Dewey was a man of very decided ability, had been educated at Schenectady, a pupil of the celebrated Dr. Nott, was a thoroughly read lawyer, and had especial ability with a Stanton was then but twenty-two years of age, with broad shoulders, but light in person, weighing about 125 pounds, and height five feet eight inches. He was very near-sighted. The people here at first called

him "Little Stanton."

He appreciated the ability and skill of his senior partner, at once placed himself under his tutelage, and owed much of his early success to him. He would often say to us, "Well, we are all Dewey's boys." Often, in coming into the office in the morning, Dewey would say, "Stanton, what do you think about this case?" After Stanton had expressed his ideas, Dewey would take pen and put the points as he thought they should be presented, and hand the paper to Stanton, and Stanton invariably followed his guidance: he was his mentor. Mr. Dewey was then forty years of age; he died in 1880, aged eighty-four.

Stanton was very methodical, kept his papers and office in perfect order, and his in-dustry was marvellous. He would read law sixteen hours a day and keep it up ever. I never saw a man with such capacity for work. I have known him to work all day in court and until nine o'clock at night, trying cases and then filing them. Then he would get into his buggy, ride to Steubenville for some paper or authority bearing on the case, be back at court-time next morning, after riding a distance of fifty miles, and work all day fresh as ever. He was physically compact; put up exactly for the labor a lawyer has to endure.

Ordinarily he cared nothing for society of women, but he was exceedingly attached to his first wife. When she died he shut himself in his room and spent days in grief. Then seeing it was breaking him down, he rallied and plunged into business.

He seemingly was of a cold nature; never any gush. He was thoroughly upright; and if he had an important case he would make full preparation to win, even eating in reference to it, so as to have full possession of his powers. He was temperate; but sometimes, if he had a tight place to go through, would take a little stimulus. He spoke with ease, voice on a high key, and monotonous in manner, but strong and combative, hanging on with a bull-dog like tenacity, brow-beating and ridiculing witnesses. He did not care if the whole public was against him. He $_{\mathrm{He}}$ would face them all, and feel he was their

I once heard this anecdote, which illustrates how everything had to bend to his main purpose. He had travelled into the then wilderness of Illinois, in pursuit of evidence in an important case, when, in a cabin where he had put up for the night, he found the family were originally from Steubenville and neighbors, living within a square of him. They had known him in his child days; he had been playmate with their son, but he had outgrown their recollections. Any other man, in the glow of feeling consequent upon such a discovery, would have made himself known, but he refrained, from the thought that it might in some way militate against his success in the main object of his journey, if it should be known he was in the country, and so left as he came—an entire

Ordinarily men would wilt under his denunciations; sometimes feel like retorting with physical violence. He knew this, and sometimes, when the court adjourned, asked the sheriff to take his arm and accompany him to his office, as I believed for protection. This was not from cowardice, but because he felt it was wise to avoid a physical combat. He stood in awe of no human being. Every man was alike so far as that was concerned. His moral courage was immense. His likes and dislikes were very strong, and with his especial friends he was exceeding social and courteous. He was profound in legal principles, a safe lawyer in a good case; but if he thought a case was desperate, would not go into court. The stories of his rough language to the people who came to the waroffice are true. Simon Cameron, his predecessor, when he sent for Gen. McClellan, would wait for hours; when Stanton summoned him there was no delay.

TRAVELLING NOTES.

VISIT TO THE BIRTHPLACE OF A HERO.

After Cadiz, my next objective point was New Rumley, a hamlet high on the hills, three miles northeasterly from Scio, at which last I arrived by the cars about noon. New Rumley is a spot of historic interest, for here was born, Dec. 5, 1839, Gen. Geo. A. Custer, the famed cavalry leader of the war. I wished to sketch his birthplace and learn of his beginnings. I had scarcely got off the cars at Scio, and was standing on a narrow platform running from the depot on a line by the railroad track, when a young man at my side cried, "Look out!"

It was the Pittsburg and St. Louis express coming at forty or fifty miles an hour, and close on to us. In a twinkling I saw an object coming for me, end over end. I gave a spring and as it came threw my entire weight on my right leg, and as it passed it struck the other a stinging but glancing blow on the inner side. Then I saw it was the Scio mail-bag.

I limped up to the village tavern, dined and then found a farmer who was going within two miles of New Rumley, and would take me in his wagon there for a consideration. I got in, we turned round a little hill, left Scio behind, and went up the valley of Alder creek, Thursday, 1 P. M., June 11, 1886. My companion was a little man with black hair and little black beads of eyes set back far in his head, his face thin and shrivelled, and, what is rare for a farmer, he wore glasses. He said his age was forty-three years, his name G. M. Toussaint and that he and Gen. Pierre Gustavus Toussaint Beauregard, of the Confederate army, were second cousins, their grandfathers having been brothers. It enhanced my interest in him to thus learn he was of French Huguenot stock, for I have a sprinkling of the same blood in my veins.

A Ride with a Farmer.—The wagon we were in was on springs, drawn by two mares, each having a little colt trotting lithe and pretty by its side, so we counted in all six, two of a kind, two men, two mares and two colts. He was anxious to know my business; thought I had something to sell. telling him, he said his wife went to school with Custer. He was quite a dressy young man, and when he came home on furlough from West Point, brought home among other things full twenty pair of cadet's white pantaloons for his folks to wash. My companion was a horse-fancier, and bragged about his horses; they were of an honored ancestry, and he went on to give their pedigree. On naming over their ancestors, he was astonished that I had never heard of them; he doubt-less would have been more astonished if I had told him what was a fact, that in my entire life I had never put a horse in a carriage, nor had buckled on a curry-comb. The colts as I looked down upon their petite, graceful-rounded forms, each trotting by the side of its mother, looked very sweetly. asked him about how much each would weigh. He replied two hundred pounds. I could scarcely believe this until he told me he had failed only a few days before in an effort to carry one of them into his barn.

A Bit of Natural History.—The valley we

A Bit of Natural History.—The valley we were passing up was perhaps a third of a mile wide, with bounding hills of some two hundred feet high. We passed some sheep grazing. At one piace they stood still and in silence in a ring, perhaps fifty of them, their heads down to the ground and noses together; their bodies ranged like the spokes of a wheel from a centre. I inquired, "What is that for?" There had been a slight shower, and the sun had come out warm. "The flies bother them, stinging their noses," he said. In the fence-corners were other sheep and their noses were also to the ground. I subsequently learned it was an instinct of nature. There is a peculiar fly, the Oestrus ovis, which crawls into the nostrils of a sheep and deposits an egg. This hatches a worm

which makes its way into the brain and invariably kills the sheep. From this doubtless originated the expression as applied to a human being, "He has got a maggot in his head."

Everything that has life, man, animal or vegetable, appears to receive injury from some other life. The innocent sheep are not the only victims to the winged enemies. Late in the summer there is a large fly, the Oestrus bovis, large as a bumble-bee, which annoys cattle, punctures the skin and deposits an egg along the spine. Under the spring sun that egg develops into a grub with an ugly black head, and makes his way out of the hole to the infinite annoyance of the animal. The grub is thus occupied for weeks, while the itching at times is so intolerable that the animal runs around the field with tail out, perfectly frantic. Then the common expression among the farmers is that it has "the warbles." Often twenty or thirty grubs will at once make their way out. When an animal has largely been infected with the pests, it injures the hide for the purpose of leather.

Having come out, the grub goes into the ground and after a little he puts on wings—they are not angel wings—and some day he starts on his aerial flight, becomes the great ugly fly we have described, to follow the same egg-hatching, egg-depositing business of his illustrious ancestors. The fly from which the horse gets into his greatest trouble is the Oestrus equi. He often alights on the front of the horse, where stinging him the animal nips at, catches and swallows the fly. That is just what the fly was after—to be swallowed. Housed in the stomach of the horse, he then proceeds about his business, to lay eggs. These hatch grubs sometimes to the number of a hundred or more, which attach themselves to the coats of his stomach and feed thereon and often to the death of the horse. This affliction is called "the bots."

Friend Toussaint opened upon another topic dear to his heart—religion. A neighbor of his was far gone in consumption; notwithstanding, seemed as worldly-minded as ever

"I told him," said he, "he ought not to be thinking about driving sharp trades—that he ought to go and get religion, for in a few weeks probably, he would have to meet his God. For ought he knew, it might be no more than two weeks." Then he dwelt upon the influence of religion here on earth, illustrating it by the story of a travelling man he once read of, who stopped at a strange house in a wild, lonely spot, and he didn't like the looks of the people, was on a sort of tremble; was afraid he might be robbed and murdered in his sleep. But when bed-time came, his ferocious-looking host opened a little cupboard, took out a book and said, "Let us pray," whereupon a load was lifted from the heart of the travelling man, and he slept that night "like a top." Thus my friend with interesting talk upon horses, sheep, Custer and religion, beguiled the way.

New Rumley appears.—A mile or more before reaching New Rumley I saw in the far distance, on the top of a very high hill, a cluster of trees, roof tops, and a church spire, and that my companion pointed out as New Rumley. I looked at it with intense interest, the birthplace of a hero; ached to be there. When we had ascended nearly to the top of the hill, the horses rested for a few moments, while the colts kneeled down each beside its respective mother, and rested also, while I made notes. Another short pull up hill, then a sudden turn to the right, and we were in New Rumley. The first objects at its entrance I found to be two churches, just alike, facing each other as sentinels, on opposite sides of the road. They were freshly painted, and white as snow. It was pleasant thus to have the gospel greet one at the very threshold of the place. I couldn't help thinking so, but the huge white forms, spread out to the right and left of me so broodingly, somehow made me think of angels' wings, ready to bear people up to heaven. On one side of the street it was done after the manner of the Methodist brethren, and on the other of what they speak of abridgingly as the "You Bees,"—and spell out "United Brethren."

New Rumley is little more than a name—a hamlet set on a hill—a single street with a single store, that of T. H. Cunningham, and a few scattered dwellings, of which only three or four can be seen at one view. The highest part is where they put the angels' wings, and the birthplace of him whom Sitting Bull called the "Yellow Hair." From thence the street descended; there was a sort of hollow spot in the wavy ground and then it ascended in a lesser wave, and where its farther course was hidden by trees. Where

it went then I know not, only I was told the followers of Martin Luther had a sanctuary somewhere there. I went into the store, a little room, and made the acquaintance of Mr. Cunningham, an elderly person. Some barefooted boys seeing me, a stranger, go in, entered and stood in silence listening. Where they came from I don't know, but men and women lived together around in little, half-concealed cottages, and where that happens, boys and girls will spring up fresh and healthy as daisies in an old cow-pasture. I inquired if there was a General Custer growing up among them; got no reply. The boys seemed to think with the poet

"Das Schweigen ist ihr bester Herold."

That is-"Silence is golden."

Custer's birthplace in the early part of this century, 1820, was a log tavern, kept by one Andrew Thompson. It was clapboarded fifty years ago. It is brown, going to decay, some clapboards off, and others hanging by a single nail Locust trees stand before it; their fragile leaves tremble in the softest zephyrs. I borrowed a backless chair and drew the pretty scene shown, with the conical spire of the "You Bees" in the distance.

Having made the sketch, I went to the house. Some women were sitting in the front room, sewing and chatting, passing away their lives in simplicity and comfort apparently, with little possessions and little cares. They were simply clad. There was no bric-à-brac about to dust, no card basket for calling visitors. No splendid equipage with liveried footman and gaily attired visitors had ever called to inspire jealousy and create heartaches up to that door, but the air was pure, and on June days it oft came in laden with the fragrance of new-mown hay.

The place seemed as the top of the world, and the eye possessions of its inhabitants vast. From it to the west I could look down the pretty valley through which I had come with friend Toussaint of pious frame and sprightly colts, and then all around met my eye a leafy world of hills for miles and miles away; and in one spot far to the north, a little village peeped forth in the vast outspread of living green. A Sabbath-like calm rested upon all things. This was the high spot of earth, where the "Yellow Hair" first opened his eyes; where the wintry winds have a high old time, and silvery toned bells wake the echoes on Sabbath day mornings.

A Sabbath in the country. How beautiful it is! Rest, music, prayer and thoughts of the heavenly choir. Glory Hallelujah!

The high places of earth like this are the glory spots for the lifting the heart of man. Earth and sky are there full spread before his vision to bring his spirit into the very presence of the Infinite. At night the stars pass over him in their grand procession athwart the mighty dome, and by day the bright sun moves over the vast expanse, the sun, blessing mother of morning, noon and night, which in its day's journey typifies the life of man.

And cloud land is all above him, ever moving between earth and sky, and ever changing in its forms, its lights and its shadows, which it runs over the whole earth; often throwing all around in gloom while the far distant peaks stand out like hope, bright in the light of a heavenly effulgence. Clouds seem as if from the hands of God while dispensing refreshing showers, and by their beauty oft fill the sensitive heart with gratitude in its sense of possessing such an exquisite source of joy; and this sense will sometimes give expression as here in my verse.

SUMMER CLOUDS.

The gorgeous Alps of summer skies
In softest tints oft mass in view,
Where seraph forms in fancies' dreams
Recline beneath the tender blue.

And floating on their beds of fleece,
Those spirits of the azure deep
Look down upon our earthly fields,
Where Time his generous harvests reap.

While we in Fate's remorseless chains
May hapless seem in vales of woe;
Still onward float the beauteous clouds,
Still cheer us with their genial glow.

O summer clouds! our hearts like thee But take their beauty from on high; The light that gives the charm to life, The love that soothes us when we die.

PARTING DAY.

By the patriarch's dying couch Some angel hand the curtain lifts; While parting day's celestial tints Enchanting spread beyond the rifts.

Then grandly glows the mighty dome,
While silence rests on earth below;
Save where the distant tides of life
In dying murmurs faintly flow.

Then soft and sweet, bright isles of bliss Seem floating in an ocean sky; A spirit realm of light and love— The happy immortality.

In mantling night the vision melts,
While worlds afar their glories spread;
And thus alike through mists and stars
The soul of man is upward led.

The wondrous orb, great source of light,
To other lands glad morning brings;
Day never ceases with his work,
Nor Time to speed with aging wings.

Ride with a Doctor.—The next point was to get back to Scio, so I took the ridge road; thought I could, notwithstanding the lameing blow of the mail-bag, manage to walk there. In a few minutes I was overtaken by a gentleman in a buggy, with a little two-year-old girl on his lap, and I accepted his invitation to a seat beside him. It was Dr. George Lyle, a country physician, educated in Cincinnati, and I found knew some of my medical friends there. He told me he had been a schoolmate of Custer. He described him as an apt scholar, a leader among the boys, mischievous and full of practical jokes; withal very plucky.

One evening, at some lecture where the audience were on the ground floor, a ragamutin of a boy unable to get in flatted his nose against the window pane and made wry faces at George, whereupon the latter drove his fist through the glass into his face. The next day three boys accosted him, saying they were going to thrash him. He replied by drawing a pocket-knife, saying—"I will fight all three of you with my fists if you will come one at a time, but if you come all at once you shall have this," at the same opening the blade. The boys pursued the topic no farther. "Das Schweigen ist ihr bester Herold."

Presently the road narrowed to a mere lane, now in the woods and then in the open, when some flies lit behind the horse's ears, when he stopped the vehicle, stood upright, gathered the lash and stock tightly in his hand, and with the tautened curve thus made at the end of the whip, slowly, carefully slid it under the offending insects. They respected the hint for the time, but came again, when he stopped the carriage, got out and gathering twigs of leaves from the woods put them as a defence in the trappings of the horse's head. Then the little one said something in its baby tones, making a request, I did not hear what, when he again went into the woods and returned with flowers in his hands and love in his heart, and taking her in his lap we soon descended a hill, made a turn and then were in Scio.

A TALK WITH JOHN GILES OF SCIO.

After supper in the tavern at Scio, I was enjoying a quiet smoke, when I heard a voice at my side. It was that of an old man of about seventy years of age, who had accosted me. He was in his shirt-sleeves, tall, patriarchal white beard and hair, blue eyes, fresh complexion and expression of great amiability. It was John Giles, of Scio. He wanted to tell me what he knew about the Custers, and I let him. The original spelling was Kuster. Their first ancestor in this country

was from Hesse-Cassel, came over in the Revolutionary war time and fought "mit de Hessians."

Emanuel Custer, the father of the General, was a blacksmith and justice of the peace. "My wife and Squire Custer are cousins," said he, "and he married us." I used to keep school, and taught George his A, B, C; his father and myself were always great friends. George was irrepressible as a boy. One thing I recollect. His father and myself were walking by a barn yard, when we heard a child screaming; a moment later little George, then a boy in his frock, appeared bursting through a line of currant bushes, with a huge gander fastened by his talons to his back. George had been attracted by the sight of young goslings, and going for them the gander had alighted on him and was whipping him with his wings.

"About this time we organized a military company, 'cornstalk militia,' in New Rumley, and the child followed us about all day. From that moment his passion to become a soldier originated and grew with his years. His family tried in vain to dispel this ambition. He desired to go to West Point, but his father told him as he was personally a Democrat and Mr. Bingham, the member of Congress in whose power it lay to obtain a cadet warrant, a Whig, he would not give it to him. How he obtained it Mr. Bingham had told me only two days before this conversation with Mr. Giles.

"I received," said Mr. Bingham, "a letter from Custer, then at school at Hopedale, in Greene township, asking for the appointment. This was about the year 1857. Its honesty captivated me. It was written in school-boy style. In it he said that he understood it made no difference with me whether he was a Republican boy or a Democrat boy—that he wanted me to understand he was a Democrat boy. I replied, if his parents consented, I would procure it for him.

"He was at West Point but three years. Such was the want of officers at the beginning of the war, that his class, before graduating, were commissioned; he as Lieutenant of Cavalry in a company commanded by Captain Drummond, son of Rev. Dr. Drummond, of this place (Cadiz). He was in the first battle of Bull Run. The day after I saw a young officer ride up to my door in Washington and dismount. He had long, yellow hair hanging like Absalom's. He came up to me and introduced himself as Lieutenant Custer. Up to that moment I had never seen him. In the December before he had passed his twenty-first birthday. He said: "Mr. Bingham, I have been in my first battle, and I've come to tell you I've tried not to show the coward."

Mr. Giles told me he was a soldier in the Potomac army, and at one time was in camp near the command of Custer. "One evening," said he, "I heard footsteps approaching my tent; a moment later in came General Custer to see me. He inquired why I had not called upon him. I replied, I had so desired, but I thought it would not do; he had now got to be a great man, a General, and I was only a common soldier. "Humph," he rejoined, "I thought you knew me better, that I was above all such nonsense as that, especially with an old friend, and the friend of my father." And then he playfully added: "I expect the old man is the same darned old Copperhead yet, aint he?" I had to acknowledge I thought he was.

Mr. Giles took me to his cottage, close by, and showed me finely framed and colored portraits of the General's parents. In his simplicity—stranger as I was—he wanted to loan them to me. It seemed like sacrilege to accept his offer—would not take such a responsibility of their safe-keeping, even had I wanted them.

Custer's father had a large, strong-looking face, with a straight, firmly set mouth. On seeing that expression one could easily imagine how, having been born a Democrat, he had set that mouth of his grim and defiant to die one. From him it was that his son got his light golden hair, and the impulse that belongs to that temperament. portrait of the mother was in profile. She was a brunette. The whole air of the woman showed a high degree of refinement, with a tinge of sadness resting upon her countenance. "She never had," said Giles, "any especial social opportunities, but she was a born lady, thoughtful, dignified and always inspiring high respect. At the time of the massacre, with Custer was killed his two brothers, Thomas and Boston, both officers, Captain Calhoun, her brother-in-lawthat is, her sister's husband—and Mr. Reed, a civilian, on a visit to the General; also Louis Clem, younger brother of Johnnie Clem, the drummer boy of Shiloh. The mother never rallied from the terrible blow; it broke her heart, and she sank and died. The father is still living in Michigan, and is of a naturally cheerful temperament; but as long as I knew him, on any allusion to the death of his sons, he would swell up and leave the room.

As I pass these notes over to the printer, I copy from a note-book: "Died July 13, 1889, John Giles, of Scio:" that is, three years after this talk with me.

We annex some items, mainly from Whitelaw Reid's "Sketch of Custer," wherein are given some of the brilliant points of his brilliant military career. At the battle of Williamsburg he accompanied the advance as aid-de-camp under

Gen. Hancock, and captured the first battle-flag ever captured by the army of the Potomac. . . . He was the first person to cross the Chickahominy, which he did by wading up to the armpits in the face of the enemy's pickets. . . . At Gettysburg he held the right of the Union line, and utterly routed Hampton's cayalry. In this battle he had two horses shot under him, and in the course of the war eleven horses. . . . At the battle of Trevillian Station five brigades attacked his Against such odds he fought for three hours. His color-bearer was shot, when the flag was only saved by Custer tearing it from its standard and concealing it around his body. . . . At Winchester he took nine battle-flags, and took more prisoners than he had men engaged. . . . When Sheridan arrived at Cedar creek, after his famous ride, he said, "Go in, Custer." Custer went in, drove the enemy for miles, captured a major-general, many prisoners, and forty-five pieces of artillery. For this he was brevetted Major-General of Volunteers. It would be beyond our limits to recapitulate his many successes; but he was the first to receive the white flag from Gen. Lee, and Sheridan presented Mrs. Custer the table on which Lee signed the surrender. . . . He never lost a gun or a color; he captured more guns, flags, and prisoners on the battle-field than any other general not an army commander, and his services throughout were most brilliant.

Gen. Custer was nearly six feet in height, of great strength and endurance, broadshouldered, lithe and active, with a weight never above 170 pounds. His eyes were blue, his hair long and golden. At the age of twenty-three he was made a brigadiergeneral; at twenty-five a major-general, the youngest man of his rank in the army. Reid says: "For quick dashes and vigorous spurts of fighting he had no superiors and scarcely an equal. His career was disastrously closed in an attack, on the 25th of June, 1876, on an Indian encampment, on Little Horn river, in Montana, when his command of 277 cavalrymen were overwhelmed by about 1600 Sioux Indians, under Sitting Bull, and massacred to a man—not one spared to tell the tale. The old chief, a year or two later, was asked at a conference the particulars, wheremon Sitting Bull replied, "I do not know where the Yellow Hair died."

Gen. Terry, who commanded the forces of the expedition, in all amounting to about 1,400 infantry and cavalry, and against whose implied orders the attack had been made, arrived with the main body upon the scene a day later. He ordered the burial of the slain, and in 1879 it was made a national cemetery.

MATTHEW SIMPSON, D.D., LL.D., was born in Cadiz, 20th June, 1811, and died in Philadelphia, Pa., 18th June, 1884. His father died when he was two years of age. His uncle, from whom he was named, was a man of literary ability and gave his mind a literary bent. He graduated at what is now Allegheny College, and at eighteen became a tutor. He first began the practice of medicine; and then, at the age of twenty-two, entered the ministry, the Pittsburg Conference. He preached first on the St. Clairsville Circuit; in 1837 became Vice-President and Professor of Natural Sciences of Allegheny College, and in 1839 was chosen President of Indiana Asbury (now De Pauw)

University, Greencastle, which position he held for nine years and gained great popularity

Appleton's "Cyclopædia of American Biography" says: "His eloquence made him in great demand on the pulpit and on the platform. His personal qualities gave him an extraordinary influence over students, and made him efficient in raising money for the endowment of the college. In 1844 he was elected to the General Conference, and in 1848 he was re-elected. He appeared in 1852 in the conference as the leader of his delegation, and at this conference he was made bishop."

In 1857 he was sent abroad as a delegate to the English and Irish Conference of the Wesleyan connection, and was also a delegate to the World's Evangelical Alliance which met in Berlin.

His preaching and addresses made upon this tour attracted great attention, particularly his sermon before the alliance, which extended his fame as a pulpit orator throughout the world. After its adjournment he travelled through Turkey, Palestine, Egypt and Greece. In 1859 he removed from Pittsburg to Evanston, Ill., and became nominally President of Garrett Biblical Institute. Subsequently he removed to Philadelphia. His powers as an orator were displayed during the civil war in a manner that commanded the admiration and gratitude of the people.

President Lincoln regarded him as the greatest orator he ever heard, and at his funeral in Springfield Bishop Simpson officiated. He made many addresses in behalf of the Christian Commission, and delivered a series of lectures that had much to do with raising the spirit of the people. His official duties took him abroad in 1870 and 1875. In 1874 he visited Mexico. At the Œcumenical Council of Methodists, in London, he was selected by the representatives of all branches to deliver the opening sermon. After the

news of the death of President Garfield he delivered an address at Exeter Hall. was selected by the faculty of Yale to deliver a series of addresses before the students of the theological department, which were published as "Lectures on Preaching" (New York, 1879).

In later years his appearance was patriarchal. His eloquence was simple and natural, but increasing in power from the beginning to the close. It was peculiar to himself and equally attractive to the ignorant and the learned. One of his natural advantages was his remarkable voice. When he was at his best few could resist his pathetic appeals. Though his eloquence is the principal element of his fame, he was a man of unusual soundness of judgment, a parliamentarian of re-markable accuracy and promptitude, and one of the best presiding officers and safest of counsellors. He was present in the General Conference in Philadelphia in 1884. Though broken in health, so as not to be able to sit through the sessions, his mind was clear and his farewell address made a profound impression. Bishop Simpson published "Hundred Years of Methodism" (New York, 1876), and "Cyclopædia of Methodism" (Philadelphia, 1878, 5th ed. revised 1882). After his death a volume of his "Sermons" was edited by Rev. Geo. R. Crooks, D.D. (1885). A window in his memory is to be placed by American admirers in City Road Chapel, London, where John Wesley preached. JOHN A. BINGHAM, late United States

Minister to Japan, sometimes called "the silver-tongued orator," and so long and highly eminent and useful in the councils of the nation, was born January 21, 1815, in Mercer,

In his childhood he resided four years in Ohio; then passed two years and a half in learning printing in Mercer; was then educated in the Mercer Academy and Franklin College, and in 1840 came to Ohio and followed the practice of the law. In the Harrison campaign he took an active part as a Whig orator, and twice held public discussions with Edwin M. Stanton, having been challenged by him.

In the National Whig Convention of 1848 he proposed a resolution which it was thought too dangerous to adopt, but which was the key-note to his subsequent course, viz.: "No more slave States; no more slave Territories; the maintenance of freedom where freedom is, and the protection of American industry. He was first elected to Congress in 1854, and served in all sixteen years; in 1873 he was appointed by Grant Minister to Japan, where he resided until the advent of Mr. Cleveland's

administration.

In the sixteen years of his service in Congress he served on the most important committees. For four years he was chairman of the Judiciary Committee. He was chairman of the managers on behalf of the House on the trial for the impeachment of President Johnson. He was author of the first section to the Fourteenth Amendment to the Constitution, save the introductory clause thereof. He was appointed special judge-advocate for the trial of the assassin of Abraham Lincoln. He was given other important official trusts, spending in all eighteen years in Washington, giving unwearying labor to the nation in its most eventful period. Besides his many speeches in Congress, he has spoken in half the States for "the Union and Constitution."

FREEPORT is eighteen miles southwest of Cadiz, on the C. L. & W. Railroad, and on a branch of the Tuscarawas river. Newspaper: Press, independent, Mc-Math & Williams, editors and publishers. Churches: one Methodist Episcopal, one Presbyterian, one Friends. Population, 1880, 387.

Scio is on the P. C. & St. L. Railroad, nine miles north of Cadiz. It is the seat of Scio College, E. J. Marsh, president. Newspapers: Herald, independent, Herald Printing Company, editors and publishers; Collegian, students of Scio College, editors and publishers. Churches: one Presbyterian, one United Presbyterian, one Methodist. Bank: Scio (Hogue & Donaldson); R. S. Hogue, cashier. Population, 1880, 509.

BOWERSTON is on the P. C. & St. L. Railroad, eighteen miles northwest of Cadiz. Newspaper: Gazette, independent, Charles G. Addleman, editor and pub-Churches: one Methodist, one United Brethren, one Lutheran.

lation about 500.

Jewett is on the P. C. & St. L. Railroad, seven miles north of Cadiz. house was built in 1803, by George Dowell. The village was laid out in 1851, by John Stall, and called Fairview. Name was changed to Jewett in 1881. Churches: one Presbyterian, one Methodist Episcopal, one Lutheran Evangelical. Population about 600.

NEW ATHENS, on the St. Clairsville and Cadiz pike, seven miles south of Cadiz, is the seat of Franklin College. Bank: John Dunlap, Jr. Churches: one Presbyterian, one United Presbyterian, one Protestant Episcopal. School census, 1888, 156.

DEERSVILLE is twelve miles west of Cadiz. School census, 1888, 99.

HOPEDALE is six miles northeast of Cadiz. It is the seat of Hopedale Normal College; president, W. G. Garvey. School census, 1888, 106.

HARRISVILLE is ten miles southeast of Cadiz. Churches: one United Presbyterian, one Methodist Episcopal, one Methodist Protestant. School census, 1888, 143.

HENRY.

Henry County was formed April 1, 1820, from old Indian territory, and named from Patrick Henry, the celebrated Virginia orator of the revolutionary era. Area about 430 square miles. In 1887 the acres cultivated were 102,558; in pasture, 5,377; woodland, 49,895; lying waste, 1,064; produced in wheat, 487,986 bushels; rye, 80,539; buckwheat, 1,319; oats, 303,186; barley, 14,787; corn, 938,584; broom corn, 275 lbs. brush; meadow hay, 10,945 tons; clover hay, 4,670; potatoes, 59,647 bushels; butter, 435,113 lbs.; sorghum, 6,338 gallons; maple syrup, 1,037; honey, 9,131 lbs.; eggs, 598,334 dozen; grapes, 2,967 lbs.; sweet potatoes, 17 bushels; apples, 22,883; peaches, 706; pears, 456; wool, 40,811 lbs.; milch cows owned, 5,480. School census, 1888, 8,337; teachers, 225. Miles of railroad track, 80.

Population in 1840 was 2,492; in 1860, 8,901; in 1880, 20,585; of whom 15,721 were born in Ohio; 712 in Pennsylvania; 457 in New York; 181 in Indiana; 145 in Virginia; 17 in Kentucky; 2,106 in German Empire; 140 in Ireland; 140 in British America; 127 in England and Wales; 116 in France; and 21 in Scotland. Census of 1890, 25,080.

A greater part of this county is covered by the famous "Black Swamp." This tract reaches over an extent of country of one hundred and twenty miles in length, with an average breadth of forty miles, about equalling in area the State of Connecticut. It is at present thinly settled, and has a population of about 50,000; but, probably, in less than a century, when it shall be cleared and drained, it will be the garden of Ohio, and support half a million of people. The surface is generally high and level, and "sustains a dense growth of forest trees, among which beech, ash, elm, and oak, cotton wood and poplar, most abound. The branches and foliage of this magnificent forest are almost impenetrable to the rays of the sun, and its gloomy silence remained unbroken until disturbed by the restless emigrants of the West." It is an interesting country to travel through. The perfect uniformity of the soil, the level surface of the ground, alike retaining and

alike absorbing water, has given to the forest a homogeneous character: the trees are all generally of the same height, so that when viewed at a distance through the haze the forest appears like an immense blue wall, stretched across the horizon. It is yet the abode of wild animals, where flocks of deer are occasionally seen bounding through its labyrinths. Throughout the swamp, a mile or two apart, are slight ridges of limestone, from forty rods to a mile wide, running usually in a westerly direction, and covered with black walnut, butternut, red elm, and The top soil of the swamp is about a foot thick, and composed of a black, decayed vegetable matter, extremely fertile. Beneath this, and extending several feet, is a rich yellow clay, having large quantities of the fertilizing substances of lime and silex. Lower still is a stratum of black clay of great depth. The water of the swamp is unpleasant to the taste, from containing a large quantity of sulphur; it is, however, healthy and peculiarly beneficial to persons of a costive habit, or having diseases of the blood. The soil is excellent for grain and almost all productions—garden vegetables and fruit thrive wonderfully. were shown an orchard of apple trees, some of which had attained the height of twenty feet, and measured at their base twenty inches, which, when first planted, five years since, were mere twigs, but a few feet in height, and no larger than one's finger.—Old Edition.

The foregoing description is copied from our original edition, issued forty-three years ago. In the meantime this entire region—the Maumee valley—has undergone extraordinary changes. Napoleon, the county-seat, was then so insignificant that our entire description was contained in three lines: "Napoleon, the county-seat, is on the Maumee river and Wabash canal, 17 miles below Defiance, 40 above Toledo, and 154 northwest of Columbus. It is a small village, containing

about 300 inhabitants."

Knapp, in his history of the Maumee valley, published in 1872, has given some valuable historical items, in regard to both town and county, which we here

conv:

¹⁷ Napoleon was platted in 1832, and the first dwelling, a log-cabin, erected that year. By the census of 1830, two years previous, the entire county had but 262 inhabitants, and its tax valuation in 1823 was but \$262. The following were residents of Napoleon in 1837: Judge Alexander Craig, James G. Haley, Gen. Henry Leonard, James Magill, John Powell, Hazell Strong, George Stout, and John Glass. There were three small frame houses, the others being made of logs. The first house erected in the place was a log-cabin, twelve by fourteen feet, and was offered to the public by Amos Andrews as a tavern.

"On the usual road, on the north side of the river, between Maumee city and Fort Wayne, thirty-five years ago [1836], after leaving the former place, the first house the traveller would meet would be at Waterville, six miles above Maumee city, where he would find five or six dwellings. Passing up seven or eight miles farther, he would reach the tavern of Mr. Tiehean, a half-breed Indian. The next house, eighteen miles above, would be in a group of three or four, standing at Providence; thence he would reach the hospitable house of Samuel Vance, occupying the site of a farm which was found by Wayne's army in a high state of cultivation, in 1794, and which was then known as Prairie du Masque, and now as Damascus. This point would bring the traveller twenty-seven miles above Maumee city. The next house, about two miles above Damascus, was a tavern and trading-post owned by John Patrick. Three miles above this the traveller would reach Napoleon, where he would discover the settlers above enumerated.

"In 1871 there were five church buildings in Napoleon: Presbyterian, Methodist, Catholic, Episcopalian, and German Lutheran. The Swedenborgians have also a church organization. There are two well-conducted newspapers: *The Northwest*, by L. Orwig & Co., and the *Napoleon Signal*, by P. B. Ainger; two

banks: the First National, organized February, 1872, and that of Sheffield & Norton, a private institution, established in 1866."—Knapp's Maumee Valley.

Napoleon, the county-seat, about 105 miles northwest of Columbus, thirtysix miles southwest of Toledo, is on the Maumee river, Miami and Erie canal, and W. St. L. & P. R. R. County Officers for 1888: Auditor, George Russell; Clerk, James Donovan; Commissioners, William N. Zierolf, Andrew J. Saygers, George Daum; Coroner, Conrad Bitzer; Infirmary Directors, Peter Schall, Edward Dittmer, Henry Bostleman; Probate Judge, Michael Donnelly; Prosecuting Attorney, James B. Ragan; Recorder, Thomas W. Durbin; Sheriff, Elbert T. Barnes; Surveyor, Charles N. Schwab; Treasurer, James C. Waltimire. City Officers, 1888: Mayor, John Thiesen; Clerk, E. C. Dodd; Treasurer, Oliver Higgins; Marshal, Oscar Rakestraw; Street Commissioner, Daniel Hess. Newspapers: Democratic Northwest, Democratic, L. L. Orwig, editor and publisher; Henry County Democrat, German, C. F. Clement, editor and publisher; Henry County Signal, Republican, J. P. Belknap, editor and publisher; Catholic Companion, Catholic Juvenile, Schmil & Brennen, editors and publishers. Churches: one Methodist, two Lutheran, one Presbyterian, one Catholic, one Evangelical. Bank: Meekison's, W. H. Brownell, cashier; J. C. Sauer & Co.

Manufactures and Employees.—A. Bruner, hoops, 47 hands; Thiessen & Hildred, doors, sash, etc., 8; Joseph Shaff, carriages, etc., 4; John Miller, carriages, etc., 4; T. Ludwig, potash, 3; A. J. Saggers, lumber, 4; M. Britton, boat oars, etc., 12; Napoleon Woolen Mills, flannels, blankets, etc., 25; C. Vock, flour, etc., 4; F. Roessing, beer, 5; J. Koller & Co., flour, etc., 6; C. F. Beard, founder and machinist, 5; Napoleon Foundry, castings, 5; Napoleon Elevator, grain ele-

vator, 2.—Ohio State Reports, 1887.

Population, 1880, 3,032. School census, 1888, 1,053; W. W. Weaver, school superintendent. Capital invested in industrial establishments, \$119,000; value of annual product, \$179,500.—Ohio Labor Statistics, 1887.

In our original edition we stated, "The notorious Simon Girty once resided five miles above Napoleon, at a place still called 'Girty's Point.' His cabin was on the bank of the Maumee, a few rods west of the residence of Mr. Elijah Gunn. All traces of his habitation have been destroyed by culture, and a fine farm now

surrounds the spot."

Our authority for this statement, in the lapse of time, it is now impossible to trace, but probably some old pioneer whom we interviewed. It is now known that it was George Girty, the brother of Simon, that resided there. He was an Indian trader, and alike infamous in character. Opposite the spot is a beautiful island of about forty acres, called Girty's Island, with an extremely dense growth of vegetation. Girty's cabin and trading-house were on the left bank of the river, and it was said, "When he was apprehensive of a surprise he would retire to the island, as a tiger to his jungle, with a sense of almost absolute security from his pursuers."

After making our original statement, as above given, we followed with an article upon the Girtys, which we repeat here *verbatim*:

Simon Girty was from Pennsylvania, to which his father had emigrated from Ireland. The old man was beastly intemperate, and nothing ranked higher in his estimation than a jug of whisky. "Grog was his song, and grog would he have." His sottishness turned his wife's affection. Ready for seduction, she yielded her heart to a neighboring rustic, who, to remove all obstacles to their wishes, knocked Girty on the head and bore off the trophy of his prowess. Four sons of this interesting couple were left, Thomas, Simon, George and James. The three latter were

taken prisoners, in Braddock's war, by the Indians. George was adopted by the Delawares, became a ferocious savage, and died in a drunken fit. James was adopted by the Shawnese, and became as depraved as his other brothers. It is said, he often visited Kentucky, at the time of its first settlement, and inflicted most barbarous tortures upon all captive women who came within his reach. Traders who were acquainted with him say, so furious was he, that he would not have turned on his heel to save a prisoner from the flames. To this monster are to be at-

Napoleon.

tributed many of the cruelties charged upon his brother Simon; yet he was caressed by

Proctor and Elliott.

Simon was adopted by the Senecas, and became an expert hunter. In Kentucky and Ohio he sustained the character of an unrelenting barbarian. Sixty years ago, with his name was associated everything cruel and fiendlike. To the women and children, in particular, nothing was more terrifying than the name of Simon Girty. At that time it was believed by many that he had fled from justice and sought refuge among the Indians, determined to do his countrymen all the harm in his power. This impression was an erroneous one. Being adopted by the Indians, he joined them in their wars, and conformed to their usages. This was the education he had received, and their foes were his. Although trained in all his pursuits as an Indian, it is said to be a fact susceptible of proof

that, through his importunities, many prisoners were saved from death. His influence was great, and when he chose to be merciful, it was generally in his power to protect the imploring captive. His reputation was that of an honest man, and he fulfilled his engagements to the last cent. It is said, he once sold his horse rather than to incur the odium of violating his promise. He was intemperate, and, when intoxicated, ferocious and abusive alike of friends and foes. Although much disabled the last ten years of his life, by rheumatism, he rode to his hunting grounds in pursuit of game. Suffering the most excruciating pain, he often boasted of his warlike spirit. It was his constant wish, one that was gratified, that he might die in battle. He was at Proctor's defeat, and was cut to pieces by Col. Johnson's mounted men.

The above we derive from Campbell's sketches. We have, in addition, some anecdotes and facts which throw doubt over the character of Simon Girty, as there given.

In September, 1777, Girty led the attack on Fort Henry, on the site of Wheeling, during which he appeared at the window of a cabin, with a white flag, and demanded the surrender of the fort in the name of his Britannic Majesty. He read the proclamation of Governor Hamilton, and promised the protection of the crown if they would lay down their arms and swear allegiance to the king. He warned them to submit peaceably, and admitted his inability to restrain his warriors, when excited in the strife of battle. Colonel Shepherd, the commandant, promptly replied, that they would never surrender to him, and that he could only obtain possession of the fort when there remained no longer an American soldier to defend it. Girty renewed his proposition, but it was abruptly ended by a shot from a thoughtless youth, and Girty retired and opened the siege, which proved unsuccessful. Baker's station, in that vicinity, was also attacked, not far from this time, by Girty and his band, but without success.

In August, 1782, a powerful body of Indians, led by Girty, appeared before Bryan's station, in Kentucky, about five miles from Lexington. The Kentuckians made such a gallant resistance that the Indians became disheartened, and were about abandoning the siege; upon this, Girty, thinking he might frighten the garrison into a surrender, mounted a stump, within speaking distance, and commenced a parley. He told them who he was, that he looked hourly for reinforcements with cannon, and that they had better surrender at once; if they did so, no one should be hurt; but otherwise, he feared they would all fall victims. garrison were intimidated; but one young man named Reynolds, seeing the effect of this harangue, and believing his story, as it was, to be false, of his own accord answered him in this wise: "You need not be so particular to tell us your name; we know your name and you too. I've had a villanous, untrustworthy cur dog this long while, named Simon Girty, in compliment to you; he's so like you just as ugly and just as wicked. As to the cannon, let them come on; the country's roused, and the scalps of your red cut-throats, and your own too, will be drying on our cabins in twenty-four hours; and if, by chance, you or your allies do get into the fort, we've a big store of rods laid in, on purpose to scourge you out again." This method of Reynolds was effectual; the Indians withdrew, and were pursued a few days after, the defenders of the fort being reinforced, to the Blue Licks, where the Indians lay in ambush and defeated the Kentuckians with great slaughter. Girty was also at St. Clair's defeat and led the attack on Colerain.

Dr. Knight, in his narrative of his captivity, and burning of Colonel Crawford (see Wyandot County), speaks of the cruelty of Simon Girty to the colonel and himself. Colonel John Johnson corroborates the account of Dr. Knight. In a communication before us he says: "He was notorious for his cruelty to the whites who fell into the hands of the Indians. His cruelty to the unfortunate Colonel Crawford is well known to myself, and although I did not witness the tragedy, I can vouch for the facts of the case, having had them from eye-witnesses. When that brave and unfortunate commander was suffering at the stake by a slow fire, in order to lengthen his misery to the longest possible time, he besought Girty to have him shot, to end his torments, when the monster mocked him by firing powder without ball at him. Crawford and Girty had been intimately acquainted in the early settlement of Pennsylvania; I knew a brother of the latter at Pittsburg in 1793."

When Simon Kenton was taken prisoner, his life was saved through the interposition of Girty. (See a sketch of Kenton in Champaign County.)

Mr. Daniel M. Workman, now living in Logan county, gave us orally the following respecting the last years of Girty. In 1813 (1816), said he, I went to Malden and put up at a hotel kept by a Frenchman. I noticed in the bar-room a gray-headed and blind old man. The landlady, who was his daughter, a woman of about thirty years of age, inquired of me, "Do you know who that is?" pointing to the old man. On my replying, "No!" she rejoined, "It is Simon Girty!" He had then been blind about four years.

In 1815 I returned to Malden and ascertained that Girty had died a short time previous. Simon Kenton informed me that Girty left the whites, because he was not promoted to the command of a company or a battalion. I was also so informed by my father-in-law, who was taken prisoner by the Indians. Girty was a man of extraordinary strength, power of endurance, courage and sagacity. He was in height about 5 feet 10 inches and strongly made.

Oliver M. Spencer, who was taken prisoner by the Indians while a youth in 1792, in his narrative of his captivity makes some mention of the Girtys. While at Defiance, the old Indian priestess, *Cooh-coo-Cheeh*, with whom he lived, took him to a Shawnee village, a short distance below, on a visit. There he saw the celebrated chief, Blue Jacket, and Simon Girty, of whom he speaks as follows:

One of the visitors of Blue Jacket (the Snake) was a plain, grave chief of sage appearance; the other, Simon Girty, whether it was from prejudice, associating with his look the fact that he was a renegado, the murderer of his own countrymen, racking his diabolic invention to inflict new and more excruciating tortures, or not, his dark, shaggy hair, his low forehead, his brows contracted, and meeting above his short flat nose; his gray sunken eyes, averting the ingenious gaze; his lips thin and compressed, and the dark and sinister expression of his countenance, to me, seemed the very picture of a villain. He wore the Indian costume, but without any ornament; and his silk handkerchief, while it supplied the place of a hat, hid an unsightly wound in his forehead. On each side, in his belt, was stuck a silvermounted pistol, and at his left hung a short broad dirk, serving occasionally the uses of a knife. He made of me many inquiries; some about my family, and the particulars of my captivity; but more of the strength of the different garrisons; the number of American troops at Fort Washington, and whether the President intended soon to send another army against the Indians. He spoke of the wrongs he had received at the hands of his countrymen, and with fiendish exultation of the revenge he had taken. He boasted of his exploits, of the number of his victories, and of his personal prowess; then raising his handkerchief, and exhibiting the deep wound in his forehead (which I was afterwards told was inflicted by the tomahawk of the celebrated Indian chief, Brandt, in a drunken frolic) said it was a sabre cut, which he received in battle at St. Clair's defeat; adding with an oath, that he had "sent the d—d Yankee officer" that gave it "to h—l." He ended by telling me that I would never see home: but if I should turn out to be a good hunter and a brave warrior, I might one day be a chief. His presence and conversation having rendered my situation painful, I was not a little relieved when, a few hours after ending our visit, we returned to our quiet lodge on the bank of the Maumee.

Just before Spencer was liberated from captivity, he had an interview with James Girty, and not a very pleasant one either, judging from his narration of it.

Elliot ordered Joseph to take me over to James Girty's, where he said our breakfast would be provided. Girty's wife soon furnished us with some coffee, wheat bread, and stewed pork and venison, of which (it being so much better than the food to which I had been lately accustomed) I ate with great gout; but I had not more than half breakfasted, when Girty came in, and seating himself opposite me, said, "So, my young Yankee, you're about to start for home." I answered, "Yes, sir, I hope so." That, he said, would depend on my master, in whose kitchen he had no doubt I should first serve a few years' apprenticeship as a scullion. Then, taking his knife, said (while sharpening it on a

whet-stone), "I see your ears are whole yet, but I'm d—n—y mistaken if you leave this without the Indian ear mark, that we may know you when we catch you again." I did not wait to prove whether he was in jest, or in downright earnest; but leaving my breakfast half finished, I instantly sprang from the table, leaped out of the door, and in a few seconds took refuge in Mr. Ironside's house. On learning the cause of my flight, Elliot uttered a sardonic laugh, deriding my unfounded childish fears, as he was pleased to term them; but Ironside looked serious, shaking his head, as if he had no doubt that if I had remained, Girty would have executed his threat.

We finished this notice of the Girtys by a brief extract from the MSS. of Jonathan Alder (then in my possession), who knew Simon—showing that he was by no means wholly destitute of kind feelings.

I knew Simon Girty to purchase at his own expense several boys who were prisoners, take them to the British and have them

educated. He was certainly a friend to many prisoners.

This finishes our original account of the three Girtys, viz., Simon, James and George. Simon was the leading one of these renegades. It was his name especially that during the Revolution struck terror in every backwoods cabin in Pennsylvania and Virginia. The annals of that period were so full of conflicting statements in regard to them, while their lives from boyhood to old age were to a large extent so tragically romantic, as to lead the historian, Consul Willshire Butterfield, to devote his leisure moments to obtain a full and correct history of them so far as it was possible to obtain it at this late day. The result is the publication of a large octavo volume of over 400 pages, "History of the Girtys: A Life Record of the Three Renegades of the Revolution," Cincinnati, Robert Clarke & Co., 1890. The book will greatly enhance his reputation "as a most industrious gatherer of information and as a foreible writer of history." From his work these statements are gathered and are reliable.

Simon Girty, Sr., was an Irishman who settled on the borders of Pennsylvania, and became an Indian trader. About 1737 he married Mary Newton, an English girl, by whom he had four children, all sons, viz.: Thomas, born in 1739; Simon, in 1741; James, in 1743; and George, 1745. In 1751 Simon, Sr., was killed in a drunken frolic in his own house, by an Indian named "The Fish." John Turner, who lived with Girty, avenged his murder by killing "The Fish."

Two years later Turner married Mrs. Girty, who was a reputable woman. In August, 1756, the year after Braddock's defeat, Turner with his family were in Fort Granville, a stockade, on the Juniata, which was taken by the French and Indians, and Turner, wife and children were carried into captivity. Turner, according to tradition, was recognized as the slayer of "The Fish," and his fate was sealed, and on their arrival at Kittaning he was doomed to death. "They tied him to a black post; danced around him; made a great fire; and having heated gun barrels red hot, ran them through his body! Having tormented him for three hours they scalped him alive, and at last held up a boy with a hatchet to give him the finishing stroke." Mrs. Turner and her four children were compelled to witness the horrid scene.

The family were soon separated. Mrs. Turner and an infant son by John Turner were claimed by the Delawares, and first taken to Fort Duquesne, the infant baptized there by a Récollect priest, Denys Baron, and later carried into the wilderness. Thomas Girty, the oldest son, soon after escaped, and ever lived

a useful life. He raised a family and died on Girty's Run, near Pittsburg, in 1820.

The three remaining boys were adopted by the savages—Simon, then fifteen years old, going with the Senecas; James, then thirteen years, by the Shawanese; and George, then eleven years, by the Delawares. They with their mother and her infant John Turner remained with the Indians three years, until 1759, when as a result of a treaty with the Indians all their prisoners were brought to Pittsburg and surrendered.

Simon was at this time eighteen years of age, and became to a certain extent a man of influence. He was illiterate, never having learned to read or write. For about thirteen years after his return his employment to a great extent was that of Indian interpreter. James worked as a common laborer and sometimes as an interpreter for the traders. George for a time traded with the Indians on his own account. While living with the Indians the Girtys were kindly treated. Having been taken at a tender age it was natural for them to have become attached to those simple children of nature, who had many virtues.

In the Dunmore expedition, in the fall of 1776, Simon Girty acted as scout, and accompanied John Gibson in his celebrated interview with the Mingo chief, Logan. (See Pickaway County.) Girty from recollection translated Logan's "speech" to Gibson, and "the latter put it into excellent English, as he was

abundantly capable of doing."

In the war of the Revolution, up to February, 1778, Simon Girty had sided with the Whigs. On the night of March 28 seven persons secretly absconded from Fort Pitt for the Indian country, on their way to Detroit, to join there Lieut. Governor Hamilton, the British commandant. Three of these eventually became notorious allies of the enemy. They were Simon Girty, Matthew Elliot, an Indian trader, Irish by birth, and Captain Alexander McKee, also Indian trader, a native of Pennsylvania. On their way they stopped first among the Delawares at Coshocton, then at the Shawnee towns on the Scioto, near the site of They met there James Girty, who was engaged in trade with the Indians, and easily persuaded him to espouse the British cause, to remain with the Shawanese, and to help those of the tribe who were yet wavering from all thoughts of peace with the United States. James then appropriated presents that had been intrusted to him by government for the Indians. On their arrival all three, Simon Girty, McKee and Elliot, entered the British Indian Department under regular pay, Simon Girty as interpreter for the Six Nations, at two dollars His brother James joined him a few months later, and both from that time forth were devoted to the British interest. They were sent by Hamilton to live with the savages in the Ohio wilderness, Simon to the Mingoes, and James to the Shawanese, to do the best possible service in interpreting or fighting.

George Girty was at this time a Lieutenant in the Continental army; a year later, May 4, 1779, he deserted to the British, and made his way to Detroit, where he entered the Indian Department as interpreter, and was sent to the Shawanese, with headquarters at Wapatomica. There is reason to believe that the Girtys when joining Hamilton at Detroit had no idea of going upon the war path with the Indians; but Hamilton eventually required this of them, and they most

ferociously performed that duty.

Simon, a poor, ignorant young man, had been persuaded to desert the American cause by McKee and Elliot, men of education and influence. That his brothers should have joined him was natural, considering the attachment they had formed to the Indians, and for a wild, free life, united to the influence in general of an older brother.

The statement that has gone into history, that in September, 1777, Girty led the attack on Fort Henry, on the site of Wheeling, and demanded the surrender of the fort in the name of his British Majesty, is a fiction, for the Girtys did not enter the British service until 1778. In 1782 there was a second and incon-

sequential attack on Fort Henry. James Girty was present, but he had no com-

mand of the savages.

The incidents of the attack on Bryan's Station, in Kentucky, in August, 1782, are given as originally published about 1835, in McClung's "Sketches of Western Adventure," but it was under the command of Captain Caldwell, not of Simon Girty, although Girty was with him. There is strong evidence adduced by Butterfield to show that there was no cessation of the attack when begun, and that the bantering scene between young Reynolds and Girty was purely fiction.

The remainder of my account of the Girtys must be correct, including the testimony of Col. Johnson, Oliver M. Spencer, and my interview with Daniel M. Workman, and the extract from the MSS. of Jonathan Alder, which last I had in my personal possession and copied from just forty-four years ago. Butterfield states that it must have been in 1816 and not 1813 that Workman saw Simon Girty at Malden, as he was not there at that date, although there before and after. In 1784 Simon married Catherine Malott, a white girl, who had been captured on the Ohio in 1780. He eventually took up his residence just below Malden, where he died, in February, 1818, and was buried on his farm, on land given him by the British government for his loyalty. British soldiers from Malden fired a salute over his grave. Simon was about five feet nine inches in stature, eyes black and piercing, and in his prime very agile.

George Girty married a Delaware Indian woman, and in his latter days was an habitual drunkard. He died at a trading-post on the Maumee, belonging to his brother James, about two miles below Fort Wayne, just before the war of 1812. James married Betsy, an Indian woman of the Shawnees. Before the war he gave up his business and retired to his land at Gosfield, Canada. He was tall in person, temperate in his habits, and had acquired by trading considerable property, beside receiving large donations in land from the British. His general rep-

utation for cruelty was on a par with that of his brothers.

DESHLER is situated at the crossing of the B. & O., D. & M. and McC. D. & T. Railroads, 37 miles south of Toledo and 18 miles southeast of Napoleon. It has 1 newspaper: Flag, neutral, W. H. Mitchell, editor and proprietor. Three churches: 1 Methodist Episcopal, 1 Catholic, and 1 Free Methodist. Factories and employees: A. W. Lee, heading and staves, 90; J. P. Gates, potash, 2; Ball & Smith, lumber and pickets, 16; A. A. Luber, machinery and molding, 6; Mitchell & Widner, lumber, tile and feed, 16; Heidelbach & Bros., tobacco boxes, etc., 8.—State Report, 1888. Population in 1880, 752. School census, 1888, 389; H. G. Gardner, superintendent.

LIBERTY CENTRE is 7 miles northeast of Napoleon and 29 miles southwest of Toledo via W. St. L. & P. Railroad. It has 1 newspaper: *Press*, Independent, J. H. Smith and D. S. Mires, proprietors. Four churches: 1 Methodist Episcopal, 1 German Reformed, 1 Adventist, and 1 United Brethren. Population in

1880, 504.

HOLGATE is 10 miles south of Napoleon and 42 miles southwest of Toledo, at the crossing of the T. C. & St. L. and B. & O. Railroads. It has 1 newspaper: *Times*, Independent, W. E. Decker, editor and publisher. Four churches: 1 Methodist Episcopal, 1 Presbyterian, 1 Lutheran, and 1 Catholic. Factories and employees: Chris. E. Whitlock, lumber, 10; Shelly & Bros., hoops and staves, 60; Bray Bros., staves and heading, 40; G. Laubenthal, lumber, etc., 10.—*State Report*, 1888. Population in 1880, 595. School census, 1886, 353; W. E. Decker, superintendent.

HIGHLAND.

Highland County was formed in May, 1805, from Ross, Adams and Clermont, and so named because on the highlands between the Scioto and the Little Miami. The surface is part rolling and part level, and the soil various. As a whole it is a wealthy and productive county. Area about 470 square miles. In 1887 the acres cultivated were 119,588; in pasture, 128,380; woodland, 54,430; lying waste, 4,728; produced in wheat, 323,884 bushels; rye, 3,434; buckwheat, 47; oats, 134,249; barley, 796; corn, 1,192,567; broom corn, 10,095 lbs. brush; meadow hay, 19,965 tons; clover hay, 1,952; potatoes, 24,083 bushels; tobacco, 25,940 lbs.; butter, 560,802 lbs.; cheese, 150; sorghum, 4,044 gallons; maple syrup, 6,486; honey, 2,748 lbs.; eggs, 598,205 dozen; grapes, 5,100 lbs.; wine, 16 gallons; sweet potatoes, 2,464 bushels; apples, 2,132; peaches, 760; pears, 327; wool, 88,442 lbs.; milch cows owned, 6,536. School census, 1888, 9,189; teachers, 256. Miles of railroad track, 50.

Population in Highland in 1820 was 12,308; in 1830, 16,347; 1840, 22,269; 1860, 27,773; 1880, 30,281, of whom 26,373 were born in Ohio; 1,120 in Virginia; 527 in Pennsylvania; 367 in Kentucky; 134 in Indiana; 123 in New York; 382 in Ireland; 214 in German Empire; 156 in France; 64 in England and Wales; 51 in Scotland, and 21 in British America. Census, 1890, 29,048.

This county was first settled about the year 1801; the principal part of the early settlers were from Virginia and North Carolina, many of whom were Friends. The first settlement was made in the vicinity of New Market, by Oliver Ross, Robert Huston, Geo. W. Barrere and others. Among the settlers of the county was Bernard Weyer, the discoverer of the noted cave in Virginia, known as "Weyer's cave," who is yet living on the rocky fork of Paint creek. The celebrated pioneer and hunter, Simon Kenton, made a trace through this county, which passed through or near the site of Hillsboro': it is designated in various land titles as "Kenton's Trace." The fight between Simon Kenton with a party of whites and another of Indians under Tecumseh took place in what is now Dodson township, south of Lynchburg, as described in full in Vol. I., page 328, of this work.

Hillsborough in 1846.—Hillsborough, the county-seat, is on the dividing ridge between the Miami and Scioto, in a remarkably healthy situation, sixty-two miles south from Columbus, and thirty-six westerly from Chillicothe. It was laid out as the seat of justice in 1807, on land of Benjamin Ellicott, of Baltimore, the site being selected by David Hays, the commissioner appointed for that purpose. Prior to this, the seat of justice was at New Market, although the greater part of the population of Highland was north and east of Hillsborough. The original town plat comprised 200 acres, 100 of which Mr. Ellicott gave to the county, and sold the remainder at \$2 per acre. It contains 1 Presbyterian, 1 Methodist, and 1 Baptist church, 2 newspaper printing offices, 14 stores, and had in 1840,

868 inhabitants. It is a neat village, the tone of society elevated, and its inhabitants disposed to foster the literary institutions situated here.

The Hillsborough academy was founded in 1827; its first teacher was the Rev. J. McD. Mathews. A charter was obtained shortly after, and the funds of the institution augmented by two valuable tracts, comprising 2,000 acres, given by Maj. Adam Hoops and the late Hon. John Brown, of Kentucky. A handsome brick building has been purchased by its trustees, on a beautiful eminence near the town, which is devoted to the purposes of the institution. It has the nucleus for a fine library, and ere long will possess an excellent philosophical and chemical apparatus. It is now very flourishing, and has a large number of pupils; "the classical and mathematical courses are as thorough and extensive, as any college in the West;" instruction is also given in other branches usually taught in colleges. Especial attention is given to training young men as teachers. It is under the charge of Isaac Sams, Esq. The Oakland female seminary, a chartered institution, was commenced in 1839, by the Rev. J. McD. Mathews, who has still charge of it. It now has over 100 pupils, and is in excellent repute. Diplomas are conferred upon its graduates. The academy is beautifully located in the outskirts of the village, and is well furnished with maps, apparatus, etc., and has a small library.—Old Edition.

HILLSBOROUGH, county-seat of Highland, about 60 miles southwest of Columbus, 61 miles east of Cincinnati, is at the terminus of the Hillsborough branch of the C. W. & B. Railroad, and on the O. & N. W. Railroad.

County Officers, 1888: Auditor, George W. Lefevre; Clerk, John H. Keech; Commissioners, John M. Foust, Isaac Larkin, George W. Miller; Coroner, R. A. Brown; Infirmary Directors, E. V. Grim, Richard Crosen, George W. Smith; Probate Judge, Le Roy Kelly; Prosecuting Attorney, J. B. Worley; Recorder, Samuel N. Patton; Sheriff, M. S. Mackerly; Surveyor, Nathaniel Massie; Treasurer, E. O. Hetherington. City Officers, 1888: A. Harman, Mayor; W. H. Ayres, Clerk; G. W. Rhoades, Marshal; James Reece, Treasurer; D. Q. Morrow, Solicitor; Patrick McCabe, Superintendent of Public Works.

Newspapers: Gazette, Democratic, A. E. Hough, editor, Hough & Dittey, publishers; News-Herald, Republican, News-Herald Publishing Company, editors and publishers. Churches: 1 Protestant Episcopal, 2 Methodist Episcopal, 1 Presbyterian, 1 Baptist, 1 Catholic, 1 Wesleyan Methodist (colored), 1 Baptist (colored). Banks: Citizens' National, C. M. Overman, president; O. S. Price, cashier. First National, John A. Smith, president; L. S. Smith, cashier. Merchants' National, Henry Strain, president; E. L. Ferris, cashier.

Manufactures and Employees: Carroll & Downham, carriages, etc., 20; J. S. Ellifritz & Co., blankets, etc., 13; J. W. Pence, building material, 5; Enterprise Planing Mill, doors, sash, etc., 8; Evans & McGuire, flour, etc., 5; C. S. Bell & Co., bells, etc., 60; Richards & Ayre, flour, etc., 3; J. M. Boyd & Co., flour, etc., 21; C. A. Roush & Co., lumber, 7.—State Report, 1888.

Population, 1880, 3,234. School census, 1888, 1080; Samuel Major, school superintendent. Capital invested in manufacturing establishments, \$85,500. Value of annual product, \$90,350.—Ohio Labor Statistics, 1888. Census, 1890, 3,645.

The site of Hillsborough is commanding. It stands like Rome "on seven hills," 753 feet above the Ohio, and with beautiful surroundings. It has an excellent public library of 6,000 volumes, supported by town taxation. Its people possess a high reputation for culture; a natural consequence of its long-enjoyed advantages as an educational centre. Here are located the "Highland Institute," the "Hillsborough Conservatory of Music," Rev. G. R. Beecher, president, with nineteen teachers in music, art, and elocution, and one hundred and eighty-one pupils; also the Hillsborough College, which admits pupils of both sexes. It has a faculty of sixteen members, J. H. McKenzie, president; its entire course occupying four years. It has a gymnasium and a military department, under

Major Wm. E. Arnold, by which "stooping forms become erect, narrow chests

expanded, and the whole bearing more manly."

As is natural on such a spot some of its citizens have ventured into the realms of authorship, viz.: Henry S. Doggett, by a biography of Prof. Isaac Sams; Samuel P. Scott, by "Travels in Spain," "elegant in illustrations, accurate and full in its facts;" Chas. H. Collins, of the Hillsborough bar, by a book of poetry, "Echoes from the Highland Hills;" also by "Highland Hills to an Emperor's Tomb," combining travels with poetry; Henry A. Shepherd, a lawyer also, in a "History of Ohio," which was only partially printed when he suddenly died broken-hearted. His history in connection with that work is sad; his materials, after years of industry, having been twice destroyed by fire. Another author of great promise was Hugh S. McNicol, who died young of consumption. Otway Curry, journalist and poet, was born in Greenfield, this county, in 1804; and Rev. Jas. B. Finley, who wrote books, was one of the first settlers, married here, and began life as a hunter.

THE WOMEN'S TEMPERANCE CRUSADE.

In 1873 there was inaugurated at Hillsborough, Ohio, the most remarkable movement against intemperance in the history of the world. Unique in its methods, widespread in its results; and although a failure, as regards its direct purpose, nevertheless it accomplished much good, and advanced public sentiment

toward the reformation of the great evils of the vice of intemperance.

It had its origin in an address delivered in Hillsborough, on December 23, 1873, at Music Hall, by Dr. Dio Lewis, before a large audience. The lecture was an eloquent and effective appeal. Dr. Lewis graphically portrayed the misery of his childhood home, caused by an intemperate father. In the New York village in which his parents resided, many of the fathers were intemperate and neglected their families, which were supported by the wives and children, who worked in mills and factories. He told how his mother, driven to desperation, started and led a movement in which most of the women of the village participated.

These women met in the village church, appealed to God to aid them and crown their efforts with success; and, kneeling before the altar, solemnly pledged themselves to persevere until victory was won. Their plan of operations was to go in a body to the liquor sellers, appeal to their better nature to cease a traffic that was carrying sorrow, degradation, and poverty to so many of their homes. The movement was successful, and the sale of liquor stopped in that village.

Dr. Lewis appealed to the women of Hillsborough to do likewise. He then asked if they were in favor of trying the experiment there, and received a unanimous affirmative response. All who were willing to act as a committee to visit the liquor-dealers were requested to rise, and more than fifty promptly

rose.

A committee of fifty leading citizens was formed to aid the women by moral and financial support More than \$12,000 was pledged.

Next morning a meeting was held at the Presbyterian church. Addresses were made by all the pastors present, and Col. W. H. Trimble, Hon. S. E. Hibben, and Judge Matthews. The ladies all signed a solemn compact, as follows: "With God's help, we will stand by each other in this work, and persevere therein until it is accomplished;

and see to it, as far as our influence goes, that the traffic shall never be revived."

On Christmas morning, at nine o'clock, having completed the organization, one hundred and fifteen women filed out of the church, formed a procession, and marched to the drug stores. These were the first to receive their attentions, and on this first morning two proprietors of the four drug stores—J. J. Brown and Seybert & Isamenn—signed the pledge; the third offered to sell only on his own prescription, but the fourth, Mr. W. H. Dunn, refused any dictation.

On Friday, December 26, the saloons were visited; and Mrs. J. H. Thompson, daughter of the late Gov. Trimble, made the first prayer in a liquor saloon. There were eleven of these in the town, and they presented a defiant front; so that no signatures were secured as a result of this first day's work.

The next morning they received a communication from Mr. Dunn, the druggist, in reply to the appeal of the Committee of Visita-

tion. It was as follows:

"Ladies: In compliance with my agreement, I give you this promise: That I will carry on my business in the future as I have in the past; that is to say, that in the sale of intoxicating liquors I will comply with the

SINGING BEFORE A SALOON.

law; nor will I sell to any person whose father, mother, wife or daughter sends me a written request not to make such sale."

Dunn was represented as a man of frank, open disposition, and with a high sense of honor, which rendered the people unprepared for the strong opposition which he manifested. He was moved by no prayers, and would listen to no entreaties. For a while he made no objection to the ladies coming into his store and carrying on their devotions; but at length, one Friday morning, they found the door locked upon them, and were thereafter inexorably excluded. This picture of the scenes there was thus described:

"However bitter the cold or piercing the wind, these women could be seen, at almost any hour of the day, kneeling on the cold flag-stones before this store. In the midst, with voice raised in earnest prayer, is the daughter of a former governor of Ohio.

"Surrounding her are the wives and daughters of statesmen, lawyers, bankers, physicians, and business men—representatives from nearly all the households of the place. The prayer ended, the women rise from their knees, and begin, in a low voice, some sweet and familiar hymn, that brings back to the heart of the looker-on the long-forgotten influences of childhood. Tears may be seen in the eyes of red-nosed and hard-hearted men, supposed to be long since past feeling. Passers by lift their hats and pass softly. Conversation is in subdued tones, and a sympathetic interest is depicted on every face. Then follows another subdued prayer and a song, at the close of which a fresh relay of women come up, and the first ones retire to the residence of an honored citizen, close at hand, where a lunch is spread for their refreshment. Soon it is their turn to resume their praying and singing; and so the siege is kept up from morning till night, and day after day, with little variation in method or incidents.

Meanwhile the saloons were not neglected. The war upon them made slow but certain progress

By January 30th, five saloons and three drug-stores had yielded, and about the same number of saloons and one drug-store remained.

The following amusing "inside view" of one of these saloon visits appeared in a Cincinnati paper. It, was given by a young blood who was there. He and a half dozen others, who had been out of town and did not know what was going on, had ranged themselves in the familiar semicircle before the bar, and had their drinks ready and cigars prepared for the match, when the rustle of women's wear attracted their attention, and looking up they saw what they thought a crowd of a thousand women entering. One youth saw among them his mother and sister; another had two cousins in the invading host, and a still more unfortunate recognized his intended mother-in-law. Had the invisible prince of

the pantomime touched them with his magic wand, converting all to statues, the tableau could not have been more impressive. For full one minute they stood as if turned to stone; then a slight motion was evident and lager-beer and brandy-smash descended slowly to the counter, while segars dropped unlighted from nerveless fingers. Happily, at this juncture the ladies struck up:

"Oh, do not be discouraged, For Jesus is your friend."

It made a diversion, and the party escaped to the street, "scared out of a year's growth." On the morning of January 31st Mr. Dunn had printed and distributed about the town a "Notice to the Ladies of Hillsborough," which addressed some thirty ladies and nearly the same number of men by name, and warned them that further interference with his business would be followed by suit at law for damages and trespass.

Notwithstanding this notice it was resolved to go on with the work. The mayor's consent was given for the erection of a temporary structure on the street in front of the store. This was called the "Tabernacle." It was constructed of canvas and plank, and the ladies at once took possession. Dunn applied to the Court, and Judge Safford issued an injunction, and the "Tabernacle" was quietly taken down that night. came the trial of the case. High legal talent was employed on both sides. It was a long and weary contest, and the verdict was not reached until May, 1875, when a decision in favor of Mr. Dunn awarded him five (\$5) dollars damages. From this judgment an appeal was made to the Supreme Court, but the case was finally compromised and never came to trial.

The day after inaugurating the "Crusade" at Hillsborough, Dr. Lewis started the movement at Washington Court-House, the plan being the same as that adopted at Hillsborough, and it met with such success that in eleven days eleven saloons and three drugstores had capitulated. Not a drop of liquor could be bought within the corporate limits of Washington Court-House; but there were two obdurate saloon-keepers just outside the corporate limits. One of these, named Slater, resorted to several plans for freezing the ladies out of his establishment. He allowed his fire to go out, opened all the windows, and wet the floor down with water until it stood in pools. It was bitter January weather and the cold was very severe on the ladies. But one morning Mr. Slater was surprised to find before his door a small portable building, hastily constructed of boards, supplied with seats and a stove. The side facing him was open. Comfortably seated in this, the first "Tabernacle" of the Crusade, the besieging party continued praying and singing, but the besieged held out against "moral suasion" until about the middle of January, when he was brought to terms by a criminal prosecution under the Adair law.

From Washington Court-House the movement extended to Wilmington and other towns and villages, until finally almost every town and village in Southern Ohio had its band of "Crusaders." The outside world began to grow interested. The public press said it was destined to be the sensation of the day, and special correspondents were detailed to chronicle its history and incidents.

A number of women under the stimulus of the movement developed into powerful public speakers, with a wonderful power of expression and fervor. These were called from their native places to do missionary work in other localities. Prominent among these were Mother Stewart, of Springfield; Mrs. Runyan, wife of a Methodist minister

of Wilmington, and Mrs. Hadley, a softspoken Quakeress of Wilmington.

The most refractory individual with whom the ladies had to deal during this "Crusade" was John Van Pelt. An account of this case is given in the Clinton county chapter of this work.

About the 1st of February, 1874, the Cincinnati Gazette published statistics showing that, in twenty-five towns, 109 saloons had been closed and twenty-two drug-stores pledged not to sell intoxicating liquors. An effort was made to start the movement in larger cities, such as Columbus and Cincinnati, but without success, and a few months later the whole movement had gradually subsided and died out.

ALLEN TRIMBLE was born in Augusta county, Va., November 24, 1783. His parents were of Scotch-Irish stock. His father, Captain James, removed to Lexington, Ky., and shortly after his death, which occurred in 1804, Allen settled in Highland county, where he was clerk of the courts and recorder in 1809–16. In the war of 1812 he commanded a mounted regiment under Gen. Wm. Henry Harrison, and rendered efficient service. He was sent to the Ohio House of Representatives in 1816; was elected State Senator in 1817; was made Speaker of that body, and held the position until January 7, 1822, when he became acting Governor and served to the end of that year. In 1826 he was elected Governor, and re-elected in 1828. In 1846–48 was President of the first State Board of Agriculture.

As governor he did much to extend and improve the common school system, encourage manufactures and promote penitentiary reform. He was a man of strong religious feeling, of strict integrity, shrewd and with much of what is commonly called "good common sense." These qualities made his career of greater service to the people of Ohio than if he had possessed more brilliant parts without balance. He died at the age of eighty-seven, at Hillsboro, Ohio Fahrnary 3, 1870

Ohio, February 3, 1870.

The Hon. Wm. A. Trimble was born in Woodford, Ky., April 4, 1786. His father, Captain James Trimble, had emigrated with his family from Augusta, Va., to Kentucky. In the year 1804, being deeply impressed with the evils of slavery, he was about to remove into Highland, when he was taken unwell and died. His son William graduated at Transylvania University, after which he returned to Ohio, spent some time in the office of his brother Allen, since Gov. Trimble, later studied law at Litchfield, Conn., and returned to Highland and commenced the practice of his profession.

At the breaking out of the war of 1812, he was chosen major in the Ohio volunteers, was at Hull's surrender and was liberated on his parole. Some time in the following winter he was regularly exchanged, and in March was commissioned major in the 26th regiment. In the defence of and sortie from Fort Erie, he acted with signal bravery, and received a severe wound, which was the prominent cause of his death, years after.

He continued in the army until 1819, with the rank of brevet lieutenant-colonel, at which time he was elected to the national senate, to succeed Mr. Morrow, whose time of service had expired. In December, 1819, he took his seat, and soon gave promise of much future usefulness. He progressed for two sessions of Congress in advancing the public interest, and storing his mind with useful knowledge, when nature yielded to the recurring shocks of disease, and he died, December 13, 1821, aged 35 years.

JOSEPH BENSON FORAKER was born July

Joseph Benson Foraker was born July 5, 1846, in a log-cabin, about one mile north of Rainsboro. His ancestors came to Ohio from Virginia and Delaware on account of distaste of slavery. Bred on his father's farm he assisted him on the farm and in the grist and saw mill thereon. One day when a small boy he tore his only pair of pants. There was no suitable cloth at hand to make a new pair and time was too precious to send any one to town; in this dilemma his mother made him a pair out of a coffee sack. He protested against wearing these to school, saying, "All the boys will laugh at me." "Never heed what the boys say," replied his mother. "If you become a useful man nobody will ask what kind of pantaloons you wore when a child."

At the age of sixteen he enlisted in the 89th Ohio infantry, and distinguished him self wherever duty called him. He was made sergeant in August, 1862; first lieutenant in March, 1865; was brevetted captain "for efficient services." He was at the bat-

Kratzer, Photo.

RESIDENT STREET, HILLSBORO, 1890.

Kratzer, Photo.

BUSINESS STREET, HILLSBORO, 1890.

tles of Missionary Ridge, Kennesaw Mountain, Lookout Mountain, and was with Sherman in his march to the sea. Ryan's History of Ohio says of him: "He was mustered out

JOSEPH BENSON FORAKER.

of the army, after a brave and brilliant service, when but nineteen years of age. After the war he spent two years at the Ohio Wesleyan University, Delaware, Ohio, and thence went to Cornell University. He graduated there July 1, 1869.

In 1879 he was elected Judge of the Superior Court of Cincinnati, which position he held for three years. In 1883 he was nominated for governor, but was defeated by Judge Hoadly, the Democratic candidate. In 1885 he was again nominated and elected. He was renominated and re-elected in 1887. [In 1889 he was again renominated, but was defeated by the Democratic candidate, James E. Campbell, of Butler county.]

His administrations have been marked by a brave and conscientious execution of all duties that are made his under the law. As an orator, for fearless and passionate eloquence, he has no superior in the State. He is aggressive, yet attractive in his public declarations, and is recognized by men of all parties as honest and courageous."

In his person Gov. Foraker is remarkably symmetrical, with a well-poised head, and his carriage graceful. In his social intercourse he is winning and attractive to an extraordinary degree.

The family are Methodists, and he was named Joseph Benson, the name of the author of the Methodist Commentary on the Bible. That he should when a lad of sixteen be enabled to recruit for the war more men for his company than any other person evinced extraordinary natural persuasive pow-

ers. When in service he kept a daily journal, from which we make brief extracts to illustrate the savagery of war.

January 4, 1864.—Would like to be in Hillsboro' to-day to go to church. Many a poor soldier to-day hovers over his smoky fire, while the cold, heartless winds come tearing through his thin tent, almost freezing him to death, and yet you hear no word of complaint. They are the bravest men that ever composed an army; and while my suffering is equal to theirs, I feel proud of my condition—a clear conscience that I am doing my duty: and this affords me more comfort than all the enjoyments of home. I feel a pride rising in my bosom in realizing that I am a member of the old Fourteenth corps of the Army of the Cumberland.

CHATTANOGA, December 4, 1863.—Reached the regiment just in time to go into a fight. Don't like fighting well enough to make a profession of it. War is cruel, and when this conflict is over I shall retire from public life.

New Year's Day.—Cold as Greenland. Nothing to eat, scarcely any wood to burn, and enough work for ten men.

work for ten men. CHATTANOGA, Tenn., December 1, 1863. Arrived just in time to engage in the fight. I found the regiment under arms. The army charged Missionary Ridge. Our brigade charged on double quick over two miles and up an awfully steep mountain. I commanded two companies, A and B—brave boys. I threw myself in front

THE OLD MILL.

and told them to follow. They kept as pretty a line as I ever saw them make on drill. The rebs had two cross fires and a front one. They knocked us around. I reached the top of a hill without a scratch, but just as I leaped over their breastworks a large shell burst just before me. A small fragment put a hole in my cap, knocking it off my head. As soon as I got into the breastworks and the rebs began to fall back, I commenced rallying my men. I had the company about formed when Capt. Curtis, Gen. Turchin's adjutant-general, galloped up and complimented me. . . . I never wish to see another fight. It is an

awful sight to see men shot down all around you

as you would shoot a beef.

December 2.—There is a hospital in the rear of our camp. You can hear the wounded screaming all through the day. Legs, arms and hands lie before the door . . . They are cutting off more or

less every day War sickens me . . . have about thirty men left out of the one hundred and one we started with over a year ago. The regiment does not look the same Come regiment does not look the same Come what will, I shall stick to the company, if I die

OHIO'S WONDERLAND.

About thirteen miles east of Hillsborough, near the county line and road to Chillicothe, the Rocky Fork of Paint creek passes for about two miles, previous to its junction with the main stream, through a deep gorge, in some places more than a hundred feet in depth, and forming a series of wild, picturesque views, one of which, at a place called "the narrows," is here represented. In the ravine are numerous caves, which are much visited. One or two of them have been explored for a distance of several hundred yards.

The above paragraph is all that is given in our original edition of what is now

the most attractive scenic spot in all this region of country.

A writer in the Cincinnati Commercial Gazette, under the title of "Ohio's Wonderland," gives an interesting description, from which we abridge the following:

The lover of the wild, the rugged and the romantic can in this locality find something new at every step he takes. There are no high mountains to climb, but there are caves to explore, and chasms, cascades, terraces, waterfalls, grottos, etc., without number. As the crow flies it is about seventy-five miles east from Cincinnati, and fourteen east of Hillsboro'; a pleasant way to get there from Hillsboro' is by carriage. There is a wellkept hotel conveniently located, with all the outfits necessary for boating, fishing and ex-

ploring.
Prof. Orton, in his geological report for 1870, says: This stream—the Rocky Fork is an important element in the geography of the county, and it also exhibits its geology most satisfactorily. It is bedded in rock from its source to its mouth, and in its banks and bordering cliffs it discloses every foot of the great Niagara formation of the county . . At its mouth it has reached the very summit of the system, and the structure of these upper beds it reveals in a gorge whose ver-tical walls are ninety feet high, and the width of which is scarcely more than two hundred Certain portions of this limestone weather and rain dissolve more easily than the rest, and have been carried away in considerable quantities, leaving overhanging cliffs and receding caves along the lines of its outcrop, and the scenery is the most striking and beautiful of its kind in southeastern Ohio . . . The limestone abounds in very interesting fossils. The great bivalve shell Megalomus Canadensis is especially abundance of the second of the dant, as are also large univalve shells, all of which can be obtained to good advantage near Ogle's distillery.

The custom is to enter the gorge at the "Point" near the hotel, and go up through and along it. Weird wonders are revealed at every step; one moment in the shadow of an overhanging cliff bedecked with trailing vines, and ferns and bright-hued wild flowers nodding and waving in all their beauty, nature's own grand conservatory; then a placid sheet of water comes to view, and cascades dancing in the sunlight; there are overhanging rocks under which a score of people could find shelter, and numerous caverns, aside from

the four large caves.

The "Dry cave" is the first of these. It is not so extensive as the others, having a length only of about 300 feet, but some of the chambers are so beautifully set with stalagmite and stalactite formations that it well repays a visit. The cave is perfectly dry and

the air bracing.

The "Wet cave," so called from a spring of cold water some 600 feet from its mouth, is a series of chambers in which are found large quantities of white, soapy clay. The arches of this cave are of varied and peculiar shapes and formations, the water that constantly percolates through the rocks and crevices having produced many queer shapes These drops reflecting the light from the explorers' torches give a weird effect, looking like diamonds in the uncertain light above.

The "Dancing cave" takes its name from the use it is put to by parties visiting the locality. The large dancing chamber is light and nature has kindly provided stalagmite seats around it for the convenience of her guests. Near this cave are two stone "cairns," but their origin and use are buried in the

mysteries of the past.

Two hundred yards farther up is a glen, the entrance to "Marble cave," one of the most beautiful of the group, being especially rich in variety and formation. There are quite a number of chambers in the Marble cave, all of good size. And here across the glen is

Drawn by Henry Howe in 1846.

ROCKY GORGE OF PAINT CREEK.

FORT HILL ENVIRONS.

"Profile Rock." Following a narrow path you pass through "Gypsy Glen," then gaze with awe at "Bracket Rock," with an altitude of nearly 100 feet. And then there is a halt and expressions of delight as "Mussett Hole" breaks upon the view. A deep little body of water at the base of towering rocks, and on its margin stands a huge monarch of the forest, named the "Boone Tree." Tradition has it that this was a favorite camping ground of the Indians when on their way to Sandusky from Kentucky, and that they always stopped here to rest and fish and hunt.

There is a remarkable little gorge near the "Mussett Hole." But there are scores of surprises awaiting the visitor at every turn

surprises awaiting the visitor at every turn. The Creator has evidently had it all his own way in preparing these caves and chasms, and wise (?) men have not attempted to improve upon his plans with artificial arrangements. One of these days, perhaps, there will be some modern improvements attempted, but for the present this wonderland can be viewed in all its original majesty and magnificence.

FORT HILL.

One of the most interesting of the numerous ancient earthworks in this part of Ohio is Fort Hill; it is especially interesting, because it presents more of the characteristics of a defensive work than any other in the State. It is situated in Brush Creek township, seventeen miles southeast of Hillsborough, and three miles north of Sinking Springs. The work occupies the top of an isolated hill, which has an elevation of five hundred feet above the bed of the East Fork of Brush creek, which skirts the base of the hill on the north and west. The top of the hill is a nearly level plateau of thirty-five acres, enclosed by an artificial wall of stone and earth, excavated around the brink of the hill, interior to the fort. The ditch formed by the excavation is nearly fifty feet wide. The wall or embankment is 8,582 feet long, contains about 50,000 cubic yards of material, has a base averaging twenty-five feet, and an average height of from six to ten feet. There are thirty-three gateways or entrances in the embankment, arranged at irregular intervals, and ranging in width from ten to fifteen feet. At eleven of these openings the interior ditch is filled up.

The space enclosed is almost entirely covered with forest, which extends in all directions to the base of the hill. Within the fort are two small ponds, which could be made to retain in rainy weather large quantities of water. The hill near the top is very precipitous, and the fort, as a place of military defence, would be almost impregnable. It overlooks a wide extent of country. A short distance south are remains of earthworks, which indicate the site of an ancient village, the inhabitants of which probably relied upon the fort as a place of defence and protection against an invading enemy.

Negotiations were entered into for the purchase and preservation of this work by the Peabody Institute, of Cambridge, Mass., but the purchase has not been made as yet. This institution purchased, explored, restored, and turned into a public park the Serpent Mound, in Adams county, and the State has recently purchased Fort Ancient, with a view to its preservation, and we trust that some means may be consummated for the preservation of this important work.

Mr. H. W. Overman has recently made a survey of the fort; the results of which are given in the "Ohio Archæological and Historical Quarterly." He writes:

"The vicinity of Fort Hill is by no means void of natural scenery. The channel of

"The vicinity of Fort Hill is by no means void of natural scenery. The channel of Brush creek has cut its way through an immense gorge of Niagara limestone for a distance of two or three miles, forming numer-

ous cliffs and caverns. On the west side of this gorge, at the foot of Fisher's Hill, is a cave, once occupied by David Davis, an ingenious and eccentric hermit, who made the cavern his home for a number of years from about 1847. He discovered a vein of ore near his abode, from which he manufactured in limited quantities a valuable and durable metallic paint, of a color approaching a rosetint, and of metallic lustre, which gained considerable local reputation. The ore, however, so far as yet discovered, is not in paying quantities. His cave and surrounding scenery, situated as it is in one of the most romantic regions of Southern Ohio, is well worthy of inspection."

THE HARD YEAR.

The year 1807 was called the hard year by the early settlers of Highland county. We abridge from an interesting and valuable series of papers on the "History of the Early Settlement of Highland County," published by the Hillsborough Gazette. In the spring of this year hordes of squirrels overran the southern part of the State. They swam the Ohio river in myriads, and the crop just planted was almost entirely taken up. Replanting was resorted to, for corn must be raised; but with like results. Bread was, of course, the first great necessary, and could only be procured by clearing off and cultivating the soil. Wheat, rye, bailey, and oats

had not yet become articles of common cultivation, the great dependence being Indian corn. Some farmers had commenced growing wheat in the older settlements, and by this time had become somewhat dependent upon it, in part, for bread. But this year the entire crop was sick and could not be eaten by man or beast; and as if to enforce the terrors of famine in prospective, all the new ground corn that escaped the ravages of the squirrels in the spring was literally cooked by severe frosts early in September.

I have known, says one who witnessed it, cases where whole families subsisted entirely on potatoes, cabbage, turnips, etc. Added to this was the almost disgusting and nauseating bread and mush, made of meal ground from the frost-bitten corn, as black as a hat.

The sweeping depredations of the squirrels that year resulted in the passage of an act by the legislature, on the first Monday of December, 1807, entitled "An act to encourage the killing of squirrels." This act made it a positive obligation on all persons within the State, subject to the payment of county tax, to furnish, in addition thereto, a certain number of squirrel scalps, to be determined by the township trustees. This was imperative, and it was made the duty of the lister to notify each person of the number of scalps he was required to furnish; and if any one refused or failed to furnish the specified quantity, he was subject to the same penalties and forfeitures as delinquent tax-payers; and any person producing a greater number than was demanded was to receive two cents per scalp out of the county treasury. This law, however, was rendered inoperative almost immediately afterwards by the interposition of a higher power, for the severe winter of 1807-8 almost totally annihilated the squirrel race, the law was not enforced, and finally, in the winter of 1809, was repealed.

REMARKABLE FORTITUDE OF A BOY.

In the excellent "History of Highland County" by Daniel Scott is related a remarkable instance of courage and fortitude of a boy. We give herewith an abridged account of it.

James Carlisle came from Virginia to Highland county in 1805. He settled on a farm and became a celebrated tobacco planter and manufacturer. He was probably the first one to make a regular business of it; which he commenced in 1805, and continued until his death in 1832. His manufacture of tobacco was about the only kind in use throughout Southern Ohio. It was put up in large twists of two or more pounds in weight and was exceedingly strong.

On day during the summer, when the family were away from home, his two sons, John and James, lads of eight and six years, were at work in the tobacco field. They were engaged in "suckering" the plants, beginning at the top and running their hands to the lower leaves, detecting the suckers by their touch, when James cried out that he

was bitten by a rattlesnake. The snake had been coiled up under the lower leaves of the plant. This was a most alarming condition for the boys. They were well aware of the fatal effects of the bite, but did not know what to do and there were none near to advise them.

But James, with the courage of a true backwoods boy, rapidly settled in his own mind the course to be pursued. They had taken an old dull tomahawk out with them for some purpose and James peremptorily ordered his brother John to take it and cut his hand off, at the same time laying it on a stump and pointing to the place where it was to be cut at the wrist. This John positively refused to do, giving as his reason that the tomahawk was too dull. There was no time to discuss the matter, and James could not cut it himself, so they compromised on the wounded finger, which John consented to cut off. It had already turned black and swollen very much. John made several ineffectual attempts to cut off the finger, which was the first finger of the right hand, but only hacked and bruised it. James, however, held it steady and encouraged his brother to proceed, saying it must come off or he should soon die. John finally got it off, but in doing so badly mutilated the hand. This heroic treatment, however, saved the boy's life. He grew to manhood, and finally removed to Missouri.

THE WOMEN'S RAID AT GREENFIELD.

On September 3, 1864, a young man of good character named William Blackburn was shot and killed while passing by on the sidewalk in front of Newbeck's saloon. At the time a general fight was going on within the saloon, during which a pistol-shot was fired.

The public indignation was very intense, all the more so that the guilty person could not be discovered. The excitement, however, gradually died away, but some ten months later it was again aroused by several occurrences of an evil nature, scenes of distress and violence, fights and wife-beatings, which resulted in the women of Greenfield holding a meeting to determine some method of suppressing the liquor traffic. The meeting was held July 10, 1865, in the African M. E. Church, then used as a school-house and place for public gatherings. The following resolution to be presented to the liquor sellers was passed:

"That the ladies of Greenfield are determined to suppress the liquor traffic in the midst. We demand your liquors, and give you fifteen minutes to comply with our request, or abide the consequences."

Then forming by twos in procession, the ladies marched to the drug store of William S. Linn. Here compliance with their request was refused. They then crossed the street to Hern & Newbeck's saloon and again presented their demand and were again refused compliance therewith, when Mrs. Drusilla

Blackburn, becoming greatly excited, cried out, "Here's where the whiskey was sold that killed my son." Upon this, a passionate attack was begun upon the saloon. Mrs. Blackburn followed by her daughter and a score of other ladies crowded through the door; hatchets, axes, mallets and other implements were drawn from places of hiding, and the work of demolition begun did not end until everything in the place had been destroyed and the liquor spilled and running in the gutters of the street. A crowd of men and boys that had gathered aided and abetted the work. One thirsty individual tried to save some liquor in a broken crock, but one of the women discovered his attempt, and pursued him hatchet in hand, so that he was glad to escape unscathed without crock or liquor. The ladies then returned to Linn's drug store, but finding it locked, forced the door and spilled the liquors. Other places were then visited and the liquor spilled; three saloons and three drug stores. There was no stopping the work of destruction until the passion of the women was exhausted.

On July 14, following, William S. Linn applied for a warrant, and a large number of the ladies and those responsible for their actions arrested. The grand-jury, however, refused to find a bill against them and criminal action failed. A civil suit for damages was resorted to. Eminent legal talent was engaged on both sides. The attorneys Was engaged on both sloes. The attorneys for the plaintiff were Judge Sloane and Messrs. Briggs, Dickey and Steele; for the defendants, Hon. Mills Gardner, Judge Stanley Matthews and W. H. Irwin.

A verdict was returned awarding \$625

A motion was then made for a damages. new trial, but the case was finally compro-

mised.

Ten years later the women of Greenfield were early in the field as "Crusaders," that being the third town in the State to try moral suasion, where violence had failed.

The following are the names of the ladies published in The Highland County News, in January, A. D. 1874, who constituted the band at that time; and among the names are the seventy who first marched on the 24th of December, A. D. 1873:

Mrs. S. Anderson, R. R. Allen, Jas. Anderson, Samuei Amen, C. Ayers, N. P. Ayers. Mrs. A. Bennett, J. M. Boyd, J. Brown, J. J. Brown, C. Brown, J. Bowles, Lizzie Brown, Wm. Barry, C. Brown, J. Bowles, Lizzie Brown, Wm. Brown, J. Bowles, Lizzie Brown, Wm. Barry, C. S. Bell, J. L. Boardman, C. Buckner, Theodore Brown, J. S. Black, W. P. Bernard, Thos. Barry, G. B. Beecher, F. I. Bumgarner, Benj. Barrere, Mary Brown, Julia Bentley, M. Bruce, J. Barrere, Mary B. Bowers. Mrs. F. E. Chaney, Benj. Conard, Ella Conard, T. S. Cowden, S. D. Clayton, S. W. Creed, Allen Cooper, C. H. GREENFIELD, at the intersection of the C. W. & B. and O. & S. Railroads, is 17 miles northeast of Hillsborough. It is beautifully situated on the west bank of Paint creek. It was laid out by Duncan McArthur, while still a part of Ross county, in 1800; and the public square, on which stands the city hall, containing the post-office, mayor's office, etc., was by him dedicated to the public use. The town was incorporated in 1841, and its first mayor was Hon. Hugh Smart.

City Officers, 1888: W. H. Irwin, Mayor; J. C. Strain, Clerk; Scott Powell, Marshal; E. H. Miller, Treasurer; W. H. Logan, Street Commissioner; W. G. Moler, Civil Engineer; J. P. Lowe, Chief Fire Department. Newspapers: Enterprise, Independent, R. R. Sprung, editor and publisher; Success, Independent, J. M. Miller, editor and publisher. Churches: 1 Presbyterian, 2 Methodist Episcopal, 1 Baptist. Banks: Commercial, John Fullerton, president; C. W. Price, cashier; Highland County, E. H. Miller, president; Fay Baldwin, cashier.

Manufactures and Employees.—Greenfield Enterprise, printing, etc., 6; J. P. Lowe & Co., carriages, etc., 10; Greenfield Woollen Mills, blankets, etc., 8; D. Welshimer & Son, flour, etc., 4; Greenfield Planing Mill, doors, sash, etc., 5; E. L. McClain, sweat collars, etc., 168; John M. Waddel Manufacturing Company, coffee mills, 38; The Gig Saddle Company, gig saddles, etc., 22.—State Report, 1888. Population, 1880, 2,104. School census, 1888, 745; W. G. Moler, superintendent of schools. Capital invested in manufacturing establishments, \$65,000.

Value of annual product, \$80,000.—Ohio Labor Statistics, 1888.

Leesburgh is 10 miles north of Hillsborough, on the C. W. & B. Railroad. Newspaper: Buckeye, Neutral, James H. Depoy, editor and publisher. Churches: 1 Methodist Episcopal, 1 African Methodist Episcopal, 1 Christian, 1 Advent. Bank: Leesburgh, J. H. Guthrie, president; M. Redkey, cashier. Population, 1880, 513. School census, 1888, 168; D. S. Ferguson, superintendent of schools. Capital invested in manufacturing establishments, \$15,000. Value of annual product, \$18,000.—Ohio Labor Statistics, 1888. The Leesburgh Shoe Manufacturing Company is the greatest industry here, employing 30 hands.

LYNCHBURGH is 11 miles northwest of Hillsborough, on the C. W. & B. Railroad. Churches: 1 Methodist Episcopal, and 1 Christian. Bank: Lynchburgh, Isma Troth, president; H. L. Glenn, cashier. *Manufactures and Employees*: Freiburg & Workum, whiskies, 60; E. B. Prythero, flour, etc., 2.—*State Report*, 1887. Population in 1880; 664. School census, 1888, 236; J. M. Holiday,

superintendent of schools.

SINKING SPRINGS is 14 miles southeast of Hillsborough. It has 1 Methodist

Episcopal church. Population, 197.

New Petersburgh is 10 miles northeast of Hillsborough. It has 1 Presbyterian and 1 Methodist Episcopal church. Population, 227.

HOCKING.

Hocking County was formed March 1, 1818, from Ross, Athens and Fairfield. The land is generally hilly and broken, but along the main streams level and fertile.

Area about 400 square miles. In 1887 the acres cultivated were 49,087; in pasture, 88,976; woodland, 49,726; lying waste, 2,316; produced in wheat, 323,884 bushels; rye, 2,667; buckwheat, 669; oats, 47,195; barley, 792; corn, 303,707; meadow hay, 11,504 tons; clover hay, 848; potatoes, 24,083 bushels; tobacco, 110 pounds; butter, 293,822; cheese, 150; sorghum, 4,244 gallons; maple syrup, 928; honey, 2,550 pounds; eggs, 267,750 dozen; grapes, 6,865 pounds; wine, 55 gallons; sweet potatoes, 1,729 bushels; apples, 12,027; peaches, 2,971; pears, 202; wool, 199,072 pounds; milch cows owned, 3,487. Tons of coal mined, 853,063, being exceeded only by Perry, Jackson and Athens counties. School census, 1888, 7,982; teachers, 152. Miles of railroad track, 80.

MAIN STREET, LOGAN.

Martin Bros., Photo., January, 1891.

MAIN STREET, LOGAN.

Population of Hocking in 1820, 2,080; 1830, 4,008; 1840, 9,735; 1860, 17,057; 1880, 21,126, of whom 18,459 were born in Ohio, 631 in Pennsylvania, 430 Virginia, 114 Kentucky, 96 New York, 59 Indiana, 423 German Empire, 198 Ireland, 129 England and Wales, 37 Scotland, 18 France and 13 British America. Census of 1890, 22,658.

The name of this county is a contraction of that of the river Hockhocking, which flows through it. Hock-hock-ing, in the language of the Delaware Indians, signifies a bottle: the Shawnees have it, Wea-tha-kagh-qua sepe, i. e., bottle river. John White, in the American Pioneer, says: "About six or seven miles northwest of Lancaster there is a fall in the Hockhocking, of about twenty feet: above the fall, for a short distance, the creek is very narrow and straight, forming a neck, while at the falls it suddenly widens on each side and swells into the appearance of the body of a bottle. The whole, when seen from above, appears exactly in the shape of a bottle, and from this fact the Indians called the creek Hockhocking."

This tract of country once belonged to the Wyandots, and a considerable town of that tribe, situated at the confluence of a small stream with the river, one mile below Logan, gives the name *Oldtown* to the creek. The abundance of bears, deer, elks, and occasionally buffaloes, with which the hills and valleys were stored, together with the river fishing, must have made this a desirable residence. About five miles southeast of Logan are two mounds, of the usual conical form, about sixty feet in diameter at the base, erected entirely from stones, evidently brought from a great distance to their present location.

For the annexed historical sketch of the county we are indebted to a resident.

Early in the spring of 1798 several families from different places, passing through the territory of the Ohio Company, settled at various points on the river, some of whom remained, while others again started in pursuit of "the far west." The first actual settler in the county was Christian Westenhaver, from near Hagerstown, Md., of German extraction, a good, practical farmer and an honest man, who died in 1829, full of years, and leaving a numerous race of descendants. In the same spring came the Brians, the Pences and the Franciscos, from Western Virginia, men renowned for feats of daring prowess in hunting the bear, an animal at that time extremely numerous. As an example of the privations of pioneer life, when Mr. Westenhaver ascended the river with his family, a sack of corn-meal constituted no mean part of his treasures. By the accidental upsetting of his canoe, this unfortunately became wet, and consequently blue and mouldy. Nevertheless it was kept, and only on special occasions served out with their bountiful supply of bears' meat, venison and turkeys, until the approaching autumn yielded them potatoes and roasting ears, which they enjoyed with a gusto that epicures might well envy. And when fall gave the settlers a rich harvest of Indian corn, in order to reduce it to meal they had to choose between the hominy mortar, or a toilsome journey of nearly thirty miles over an Indian

trace to the mill. Notwithstanding these drawbacks, there is but little doubt that for many years there was more enjoyment of real life than ordinarily falls to a more artificial state of society. True, though generally united, disputes would sometimes arise, and when other modes of settlement were unavailing, the *last resort*, a duel, decided all. But in this no "Colt's revolver" was put in requisition, but the pugilistic ring was effectual. Here the victor's wounded honor was fully satisfied, and a treat of "old Monongahela" (rye whiskey) by the vanquished restored perfect good feelings among all parties. As to deciding disputes by law, it was almost unthought of. It is true, there were some few men ycleped *justices of the peace*, generally selected for strong natural sense, who admirably answered all the purposes of their election. One, a very worthy old gentleman, being present at what he considered an unlawful demonstration, commanded the peace, which command not being heeded, he immediately threw off his "warmus," rolled up his sleeves, and shouted, "Boys! I'll be—if you shan't keep the peace," which awful display of magisterial power instantly dispersed the towart tighter multiple. dispersed the terror-stricken multitude. This state of things continued with slow but almost imperceptible alterations until 1818, when the number of inhabitants, and their advance in civilization, obtained the organization of the county.

The warmus above spoken of was a working garment, similar in appearance to a "roundabout," and having been made of red flannel was elastic and easy to the wearer. It was not known, we think, to any extent outside of Pennsylvania and

her emigrants, and we think originated with the Germans. In our original tour over the State, in 1846, when we saw a large number of lobster-back people on the farms or about the village taverns, we always knew that region had been settled by Pennsylvania Germans.

Logan in 1846.—Logan, the county-seat, is on the Hockhocking river and canal, one mile below the great fall of the Hockhocking river, 47 miles southeast of Columbus, 18 below Lancaster, and 38 miles east of Chillicothe. It was laid out about the year 1816, and contains 4 stores, 1 Presbyterian, and 1 Methodist church, and about 600 inhabitants. The view, taken near the American hotel, shows in the centre the court-house, an expensive and substantial structure, and on the extreme right the printing-office.—Old Edition.

Logan was platted by Gov. Worthington. The water-power of the Hocking at the falls was utilized by him, to the extent of a saw-mill and a couple of cornburrs. In 1825 Logan claimed a population of 250. The place did not get a start until about 1840, from the opening of the Hocking canal in 1838, which furnished an outlet for the produce of the valley. In 1839 the town was incorporated: C. W. James was the first mayor.

LOGAN, the county-seat of Hocking, is on the C. H. V. & T. Railroad, and on the Hocking river and canal (a branch of the Ohio canal), 50 miles southeast of Columbus. It is located on the edge of the Hocking coal and iron region on the east and south, and close to a rich agricultural region on the west and north.

County Officers, 1888: Auditor, William M. Bowen; Clerk, D. H. Lappen; Commissioners, Henry Trimmer, John T. Nutter, George Marks; Coroner, Geo. G. Gage; Infirmary Directors, Philip Hansel, Andrew Wright, Isaac Mathias; Probate Judge, William T. Acker; Prosecuting Attorney, Virgil C. Lowry; Recorder, David M. O'Hare; Sheriff, John Gallagher; Surveyor, James W. Davis; Treasurers, John Notestone, Benjamin H. Allen. City Officers: A. Steiman, Mayor; George G. Gage, Clerk; W. P. Price, Solicitor; Andrew Hall, Jr., Treasurer; Edward Juergensmeier, Commissioner; Geo. Deishley, Marshal. Newspapers: Hocking Sentinel, Democratic, Lewis Green, editor and publisher; Republican Gazette, Republican, F. S. Pursell, editor; Ohio Democrat, Democratic, A. H. Wilson, editor; G. W. Brehm, proprietor. Churches: 1 Catholic, 2 Lutheran, 2 Methodist, 1 Presbyterian. Banks: First Bank of Logan, John Walker, president; Chas. E. Bowen, cashier; People's, L. A. Culver, president; R. D. Culver, cashier.

Manufactures and Employees.—Frank Kessler, doors, sash, etc., 6; Reynes & Wellman, flour, etc., 9; The Logan Woollen Mills, blankets, etc., 10; The Logan Manufacturing Co., furniture, etc., 54; C. H. V. & T. Railroad Shops, railroad repairs, 45; Motherwell Iron and Steel Co., bridges, etc., 83.—State Report, 1888, Population in 1880, 2,666. School census, 1888, 1,125. Capital invested in industrial establishments, \$187,500. Value of annual product, \$323,000.—Labor Statistics, 1887. U. S. Census, 1890, 3,119.

The wild scenery in the western part of the county was first brought to general notice, in "Silliman's Journal of Science," by Dr. S. P. Hildreth, who was on the first geological survey of Ohio in 1837. His account, as given in our first edition, is here repeated:

One of the favorite descents of the Indians was down the waters of Queer creek, a tributary of Salt creek, and opened a direct course to their town of old Chillicothe. It is a wild, romantic ravine, in which the stream has cut a passage, for several miles in extent, through the solid rock, forming mural cliffs, now more than one hundred and twenty feet in height. They are also full of caverns and grottos, clothed with dark evergreens of the hemlock and cedar. Near the outlet of this rocky and

narrow valley there stood, a few years since, a large beech tree, on which was engraven, in legible characters, "This is the road to hell, 1782." These words were probably traced by some unfortunate prisoner then on his way to the old Indian town of Chillicothe.

This whole region is full of interesting scenery, and affords some of the most wild and picturesque views of any other of equal extent in the State of Chio.

It was one of the best hunting grounds for

the bear; as its numerous grottos and caverns afforded them the finest retreats for their winter quarters. These caverns were also valuable on another account, as furnishing vast beds of nitrous earth, from which the old hunters, in time of peace, extracted large quantities of saltpetre for the manufacture of gunpowder, at which art some of them were great proficients. One of these grottos, well known to the inhabitants of the vicinity by the name of the "Ash Cave, contains a large heap of ashes piled up by the side of the rock which forms one of its boundaries. It has been estimated, by different persons, to contain several thousand bushels. The writer visited this grotto in 1837, and should say there was at that time not less than three or four hundred bushels of clean ashes, as dry and free from moisture as they were on the day they were burned. Whether they are the refuse of the old saltpetre-makers, or were piled up there in the course of ages, by some of the aborigines who made these caverns their dwelling-places, remains as yet a subject for conjecture.

These ravines and grottos have all been formed in the out-cropping edges of the sand-stone and conglomerate rocks which underlie the coal fields of Ohio, by the wasting action of the weather, and attrition of running water. The process is yet going on in several streams on the southwest side of Hocking

county, where the water has a descent of thirty, forty or even fifty feet at a single pitch, and a fall of eighty or a hundred in a few rods. The falls of the Cuyahoga and the Hockhocking are cut in the same geological formation. The water, in some of these branches, is of sufficient volume to turn the machinery of a grist or saw-mill, and being lined and overhung with the graceful foliage of the evergreen hemlock, furnishes some of the wildest and most beautiful scenery. This is especially so at the "Cedar Falls," and "the Falls of Black Jack." The country is at present but partially settled, but when good roads are opened and convenient inns established, no portion of Ohio can afford a richer treat for the lovers of wild and picturesque views.

There is a tradition among the credulous settlers of this retired spot, that lead ore was found here and worked by the Indians; and many a weary day has been spent in its fruitless search among the cliffs and grottos which line all the streams of this region. They often find ashes and heaps of cinders; and the "pot holes" in a bench of the sandrock in the "Ash Cave," evidently worn by the water at a remote period, when the stream ran here, although it is now eighty or one hundred feet lower, and ten or twelve rods farther north, they imagine, were in some way used for smelting the lead.

As the great natural curiosities of the county are becoming more known and appreciated, we think it best to describe them fully, and this we are enabled to do by a communication from the pen of one perfectly familiar with them, Dr. O. C. FARQUHAR, of Zanesville.

ROCK HOUSE.

Hocking county possesses more points of interest to the lovers of nature than can be found in any other portion of the State. Among the many prominent local places of notoriety and resort that are to be found in this county, nestled away behind the hills, or in the valleys of this seeming wilderness, are the Ash Cave, Rock House, Dead Man's Cave, Cedar Falls, Rock Bridge, and Saltpetre Cave, all stand out in the foreground, although it is impossible for one to go amiss here, who is in search of nature's most grand and beautiful. The Rock House is located about twelve miles southwest of Logan, the county-seat, and six miles in an air line from Adelphi station, Ross county, on a farm of 300 acres, owned by Col. F. F. Rempel, of Logan, who is public-spirited and entertaining, and has recently erected a very simple and comfortable hotel on the Rock House grounds, for the perfect accommodation of the throngs of visitors who come here during the summer months, from all parts of the country.

The Rock House is a house within a wall of massive sandstone formation, which rises to the height of 166 feet, and is covered here and there with ferns and lichens. From out

this solid wall of rock, nature's means of time and the elements have perhaps hewn out this vast Gothic hall and its attendant chambers, giving it windows and portals, and great sandstone columns to bear its massive roof. This cave is wonderful for its peculiar formation. It is about 350 feet in length, 25 feet high, and fully 25 feet in breadth. Instead of its leading into the bosom of the cliff or rocky wall, through a small aperture, as is common with most subterranean passages, the rocks have been rifted lengthwise, forming two Gothic doorways at about half the height of the precipice, affording the means of entrance; while along its front are arranged five massive sandstone pillars; the openings between them give the appearance of Gothic windows.

Here again it appears marvellous how much of human art and skill has been displayed by nature; and yet all is devoid of the handiwork of man. Near the southern end of the cavern is a shelf or ledge jutting out beyond the doorway, and above this overhangs the frowning brow of the great precipice, over which there trickles a little stream of water at both the east and west ends of this lofty precipice of rocks.

In taking a position in the valley or ravine at the base of this rocky wall and its cliffs,

facing the main entrance which leads to the wild, weird-like, mysterious chambers within, and then cast the eyes well up towards the top of the cliff-rocks, permitting the vision to range along the whole frontage for a distance of 500 yards, the view thus afforded is sublime and grand in the extreme.

The whole face of this wall is so evenly and beautifully carved by nature's eroding processes, that the even regularity and beauty of the designs appear to show beyond a doubt that some experienced workman and carver of stone could alone have shaped these grotesque, artistic and fancy forms. "Within this house not made with hands" there are doors, dormitories, windows, rocky porches, rooms, halls, stair-ways and chambers, large

enough to contain more than a thousand people. At the door of this cavern can be seen the form of a book cut in the rock, and on the pages the following letters appear: I. T. F. B. B. B. A. R.—I. T. F. F. A. W. M. T. A. W., which translated means, "In the fall Buck Run bananas are ripe, In the frosty fall a wise man takes a wife." Buck Run bananas is the neighborhood vernacular for paw-paws. There are countless unique inscriptions on the rocks hereabouts. One can very pleasantly, and with profit too, spend a month here delving around among nature's wonders, as only found in the howling wilderness of the Hocking hills, whose citizens are always proud of their barefooted Jay-bird orator.

From another source we learn the cave has six openings, including entrances and windows. These openings are bounded by stone columns, as expressed to us in various colors, red, yellow and green. The dimensions are also thus given: Front of precipice in which it is situated, 133 feet; length of cavern, 200 feet; width 25 to 40, and roof from 30 to 50 feet. In the Ohio Geological Report for 1870 is a brief description and a picture. We now give our correspondent's description of the other curiosities.

ASH CAVE.

One of the most striking and beautiful scenes in Hocking county is so named from the vast quantity of ashes it contains. It has been variously estimated by different persons to contain several thousand bushels. Even as late as this year (1886) there are evidences of many bushels of wood ashes, nearly as pure, dry and free from moisture as on the day when they were burned. The source of this unnatural ashy mystery remains unexplained. It has been conjectured that they are the refuse of old saltpetre or nitrate of potash makers, or whether they were piled up in this cave during the course of ages by some of the aborigines who made these caverns their places of abode, are at best only visionary and speculative.

The cave is formed by a projecting cliff at

The cave is formed by a projecting cliff at the source of a little stream, whose deep valley or gulch parts the bold, rock-ribbed hills whose summits look down upon the tops of the loftiest pines, which grow at their base. At this point, which is the highest rock-exposure in Hocking county, the ledge is not less than 125 feet high, and reaches or projects over from the base not less than 100 feet, forming a semicircular cavern nearly 700 feet in length, ninety feet deep, and about the same in height. At one side of this semicircle, near the rock, lies the great pile of ashes which gives this enchanting and mysterious cavern the name of Ash Cave.

From the centre of the overhanging roof a streamlet leaps into a pool below, lending additional grandeur. beauty and charms to the before sublime picture. For more than a quarter of a mile distance down this valley, on either side, rises to a height of from eighty to 100 feet, a rocky ledge, which for diversity and elegant naturalness forms a scenic view

seldom if ever surpassed. It simply opens out to the view of the awe-impressed beholder a magnificent amphitheatre, where every step and every glance unfolds new and beautiful wonders. Large masses of sandrock are seemingly thrown together with an intention of pure chaotic confusion, many of them beautifully lichened with variegated mosses, rivalling with their gorgeous beauty the finest hues of the most luxuriant Brussels carnets.

From some points or positions of observation, the eye takes in the entire length and breadth of this rocky ledge, from base to summit. At other points are presented the furrowed erosions of the rocky faces, partly hidden by vines that clamber up their sides, and the topmost branches of the scraggy pines that grow up from below. This peculiar, beautiful, weird and extensive cavern, and the scenery in its vicinity, is located in Benton township, about twenty-one miles southwest of Logan, the county-seat. Thousands of people visit the place each summer, generally making one journey take them to both the Rock House, only six miles distant from the cave. Ohio can furnish no more beautiful scenery than is to be found in this county.

ROCK BRIDGE.

This natural rocky wonder is situated in Good-Hope township, Hocking county, on the Hocking river, and the line of the Columbus, Hocking Valley and Toledo Railway, about midway between Lancaster and Logan. This curiosity is a sandstone formation, the under side forming an arch of about thirty degrees curvature. The bridge is level on the top, ranges from ten to twenty feet wide, and is entirely detached from all adjoining rock for a distance of nearly 100 feet. The

Frank Henry Howe, Photo., 1889.

ROCK BRIDGE.

ROCK HOUSE CAVE.

span, measured from the under side, is about 150 feet, and is at an elevation of about fifty feet from the bottom of the gulch it spans. The location and easy accessibility, together with the romantic, wild-like place, its fine

shade and picturesque surroundings, have made it a favorite site for picnic excursions from all points along the line of the Columbus, Hocking Valley and Toledo Railway.

COLONEL WHITTLESEY'S REMINISCENCES.

In the summer of 1886, a few weeks before the decease of Colonel Charles Whittlesey (see page 523), he gave us orally some interesting items, gathered when on geological surveys of Ohio, about forty-five years before. "Early in this century," said he, "before the establishment of courts to try culprits, there was a rude system of justice established by the people. The wilderness region—the hill-country of Southeastern Ohio—at times suffered from the crimes of scoundrels who stole horses from the poor settlers and sometimes committed murder. Whenever they were caught, and evidence certain, the people hung or shot them with but little formality. A considerable number of desperadoes were thus disposed of; but the facts did not go out to the public, as it was before the days of newspapers.

In the north part of Hocking county (the name of the township I don't recollect, only that it was on the south side of S. W. ½ of section 24) is a cave called *Thieves' Cave*, where the horse-thieves gathered their horses—more properly a rock shelter, shelving towards the rear. It was in the form of an ellipse, about 130 feet long and thirty feet to the rear. In the beginning of the century horses were brought here. Here the horse-thieves lived and hunted. As late as 1872 horse-manure was found by me while exploring it geologically.

At New Straitsville, in the adjoining county of Perry, is a rock shelter on the south side of Sugar Run, about 100 feet long and forty broad, where religious meetings and meetings

of miners have been held.

Anciently there was a hunters' trail on the height of land between Lost Run and the West Fork of Snow Fork. This was only a

short distance from the cave. Shortly after the war of 1812, say about 1816, a man with his family, moving West, was overtaken by winter and out of money, about a mile and a half northeast from Thieves' Cave, on the West Fork of Snow Fork, near where it is crossed by the county line of Hocking and Perry. He found there a sand-stone block, which, separated from the main cliff, fell and stood upright, thus forming with the main cliff, two vertical walls. He closed up the rear end and made a door at the other. His only light was from the open door. He had plenty of wood and water. He made shoes all winter for the sparse settlers, and in spring had money enough to pursue his journey.

Lost Run derived its name from a hunter lost. Years after his skeleton was found with gun by his side. He had evidently been sitting by a tree and had frozen to death.

ONE OF "THE OLD GUARD" AN OHIO PIONEER.

There died in Logan county, in June, 1885, Christopher Stahley, aged 104 years and 10 months. He was a "last survivor" of the grand army of Napoleon; a native of Alsace; a typical veteran of the wars, scarred and crippled. He was a man of culture, and grew eloquent when describing his campaigns; and, like all of Napoleon's soldiers, adored his leader and worshipped his memory. We give herewith extracts from Stahley's story, as related to the correspondent of the Cincinnati Enquirer:

"I became a soldier at fifteen, and was one of the thirty thousand men who went with Napoleon to Egypt, and was one of the first to enter the city of Malta. I was with my command at the Pyramids, and participated in the terrible conflict with the Mamelukes. Thence across the desert and through the Isthmus of Suez to Gaza and Jaffa, and saw the 1,500 put to death for breaking their parole, and helped to annihilate the allied army of 18,000 at Aboukir.

"It was in 1804 that we helped to proclaim him Emperor, and saw the preparations made to invade England. But England was spared and Austria punished instead.

. .

.

"Three years of preparation and we were on the road to the Capital of Russia in that memorable campaign of 1812. There were 480,000 of us who went forth to glory. Less than half that number returned, and the most of them after being detained as prisoners. I saw them fall by battalions at Smo-

lensk and Borodino, and perish by grand divisions on the retreat from Moscow to Smorgoni. I personally attended the Emperor to France, when he bade adieu to his soldiers at the latter city.

"I was one of the Old Guard. There is a blank in my memory, and I do not know how I got back to Paris; but I found myself there, and learned that my old commander was a prisoner at St. Helena. Then came the news of his death. I had taken part in fifty engagements, great and small, and had seen men die by the thousand; but that death affected me more than all the rest put together.

"In 1822, in company with my wife, I emigrated to America. We reached Pittsburg by stage. From there we floated down the Ohio on a flat-boat to the mouth of the

Muskingum, and ascended that river to Zanesville in a canoe. From Zanesville I trundled all my earthly possessions in a wheelbarrow to St. Joseph's, near Somerset, where I bought a farm and settled down. Then began my disasters. My oldest son was with me in the forest hewing logs for a barn, and by a false stroke of the broad axe cut off my thumb and finger. A few years later a vicious horse kicked me in the forehead and left this sear that looks like a sabre cut. The next year I fell from a tobacco-house I was helping to raise, and broke four ribs and my collar-bone. Ten years later I slipped and fell into a threshing-machine, and I had my foot torn off. A few years ago I was on my way to church, and my horse ran away, threw me out of the carriage, shattered my elbow, and left me with a stiff arm. I am in constant dread of meeting a fatal accident. Had I remained in the grand army of the Emperor I would feel perfectly safe."

TRIP TO THE HOCKING VALLEY COAL MINES.

The coal mining interests of the Hocking valley have developed enormously within the past ten years. Immense quantities of this coal are carried by rail to Lake Erie, and thence transported by water to points on the lakes, while large quantities of it are reshipped by rail at Duluth and other points, for consumption in the Northwestern States.

The operators of the Hocking valley have ever been ready to take advantage of new improvements in mining machinery and labor-saving devices to increase the output of their mines. An account of a recent visit of the members of the Ohio Institute of Mining Engineers, for purposes of inspection, was published in the Ohio State Journal. We make extracts therefrom:

The first stop was made near Straitsville, where No. 11 mine, owned by the Columbus and Hocking Coal and Iron Company, was visited and the thickness of the great vein was noted. The next stop was made at Sand Run, where the box-car loading machine was in operation. This machine is truly wonderful in its mechanism. The coal runs from a chute into the box-car door, where the coal is received on a portable platform run in through the opposite door. There is a steam-shovel attached to this platform, which works from right to left, throwing the coal to each end of the car. The machine is worked by steam and is under the control of an operator, who regulates the speed of the engine. This labor-saving device takes the place of four men, and with it a box-car can be loaded as quickly as an open car.

Another interesting machine at these works is the endless-rope haulage system. The engine is made on the same plan as a railroad locomotive, and the large drums over which the wire rope runs can be run backward or forward at the will of the engineer. Ten bank-cars are brought out of the mine at a time, making about fifteen tons of coal, or about the average amount loaded on each railroad coal-car. There is a large dial, with a hand attached to the fly-wheel. This en-

ables the engineer to know at all times where the train is.

Leaving Sand Run at 9.10 A. M., the next stop was made at the mines of the Consolidated Coal and Mining Co., at Brashears, where the air-compressor and the Harrison mining machines are in operation. The Lechner air-drills and wire-rope haulage were also in use.

After dinner the party visited the mines of the Ellsworth and Morris Coal Company at Brush Fork, which are the largest mines in the United States. At these mines there is an entry on each side of the valley, tracks leading in a "Y" on the same hoppers, and the coal is dumped over the same tipple. The capacity of the mines at this place is two thousand tons per day. One cannot imagine the magnitude of this great work without seeing it. Seven bank-cars are dumped per minute, or ten and a half tons. The wirerope haulage system is used here also, but on a larger scale. The two last mines visited are fitted out with the latest machinery.

Leaving Brush Fork at two o'clock the next stop was made at Buchtel, where some left the train to visit the large blast furnace, while others went to Happy Hollow to see the coke-ovens of the Nelsonville Coal and Coke Company.

Mr. Thomas E. Knauss, of Columbus, was with the party. Mr. Knauss was formerly located at Nelsonville, and is the pioneer of the wire-rope haulage system in the Hocking valley.

The Haydenville Mining and Manufacturing Company, of which Peter Hayden, of Columbus, was president and principal owner, is a large concern; owning 3,000 acres of valuable mineral land, underlaid by rich deposits of coal and fire-clay; large and substantial building and factories, employing a large force of men, the company turns out immense quantities of sewer-pipe, fire-proofing, terra cotta, and paving-blocks. The industry is a valuable one.

Its development is due to the enterprise of Peter Hayden, he being one of the pioneer coal operators of the Hocking valley, and one who has done as much as any one man for the development of the vast mineral wealth of this region.

Mr. Hayden's death, which occurred April 6, 1888, brought sorrow and grief to many hearts in this valley, as he was renowned for his patriarchal care, his consideration for the comfort and interests, and benevolence to

those in his employ. Men of all classes deemed it an honor to work for him. He employed none but sober, industrious, and intelligent men, and never permitted a good man to leave his service, if money and considerate treatment were an inducement to remain. As a result, his enterprises were singularly free from all labor complications; and his career affords an example to be emulated by all those employing large numbers of men.

HAYDENVILLE is six miles southeast of Logan, on the Hocking Canal and C. H. V. & T. Railroad. Population about 600.

Gore is eight miles northeast of Logan, on the Straitsville branch of the C. H. V. & T. Railroad. Population about 600. School census, 1888, 200.

CARBON HILL is eight miles southeast of Logan, on the H. V. division of the

C. H. V. & T. Railroad. Population about 500.

LAURELVILLE is twenty-two miles southwest of Logan. It has one Cumber-

land Presbyterian and one Baptist Church. Population about 300. School census, 1888, 111.

MILLVILLE is eight miles northwest of Logan, on the C. H. V. & T. Railroad.

Population about 250. School census, 1888, 115.

MURRAY CITY is twelve miles east of Logan, on the C. H. V. & T. Railroad. Population about 500.

South Bloomingville is seventeen miles southwest of Logan. Population, 350.

HOLMES.

Holmes County was formed January 20, 1824, and organized the next year. It was named from Major Holmes, a gallant young officer of the war of 1812, who was killed in the unsuccessful attack upon Mackinac, under Col. Croghan, August 4, 1814. Fort Holmes at Mackinac was also named from him.

Area about 420 square miles. In 1887 the acres cultivated were 99,862; in pasture, 111,913; woodland, 50,474; lying waste, 2,919; produced in wheat, 462,252 bushels; rye, 6,145; buckwheat, 1,096; oats, 553,489; barley, 898; corn, 554,491; broom corn, 1,200 lbs. brush; meadow hay, 23,882 tons; clover hay, 11,440; potatoes, 56,161 bushels; tobacco, 955 lbs.; butter, 499,561; cheese, 197,623; sorghum, 870 gallons; maple syrup, 5,017; honey, 5,505 lbs.; eggs, 550,828 dozen; grapes, 19,550 lbs.; wine, 317 gallons; apples, 24, 153 bush.;

peaches, 24,153; pears, 1,110; wool, 211,529 lbs.; milch cows owned, 6,868. School census, 1888, 7,029; teachers, 171. Miles of railroad track, 47.

TOWNSHIPS AND CENSUS	. 1840.	1880.	TOWNSHIPS AND CENSUS.	1840.	1880.
Berlin,	1,151	1,378	Paint,	1,361	1,381

Monroe,	898	1,054	Washington,	$1,\!457$	$1,\!416$

Population of Holmes in 1830 was 9,123; 1840, 18,061; 1860, 20,589; 1880, 20,776; of whom 17,436 were born in Ohio, 1,345 in Pennsylvania, 105 in Indiana, 96 in Virginia, 74 in New York, 2 in Kentucky, 782 in German Empire, 177 in France, 71 in Ireland, 45 in England and Wales, 9 in Scotland, 5 in British America, and 18 in Sweden and Norway. Census, 1890, 21,139.

The following historical and descriptive sketch of Holmes county and of Millersburg, the county-seat, was carefully prepared by one of its venerable citizens, Mr. G. F. Newton, of Millersburg. It being more full than that in our first edition we substitute it.

The territory included within the county of Holmes was taken from the counties of Wayne, Coshocton and Tuscarawas: from Wayne, 87,440 acres, from Coshocton, 162,200 acres, and from Tuscarawas, 16,200 acres; total area, 267,840. A line running diagonally through the county from east-northeast to west-southwest, commonly known as the "Indian Boundary" line, separates the United States military district and the Indian reservation (new purchase).

The territory north of this line was surveyed into townships of six miles square, and again into sections of 640 acres. That south of said line is surveyed into townships of five miles square, and again into quarter townships of 4,000 acres. Some of these quarter townships were again divided into 100 acre lots for the private soldiers of 1776. Within this county 480 of these 100 acre lots were given to the soldiers of the Revolutionary war. Six of the 4,000 acre tracts of land were set apart as schools-land for the Connecticut Western Reserve and subsequently sold at public sale. The remainder of this territory was surveyed into sections of 640 acres and sold at private entry at Zanesville.

The valley of Killbuck river passes from north to south through the centre of the county; the valley is deep and adjoining hills high and steep. On each side of the river, seven to nine miles distant, is a high ridge of land, separating its waters from those of the Mohican and Tuscarawas. From the valley to the hill-tops are innumerable springs of pure water, many of them very strong, which in their rapid descent to the river furnish good water-power.

In the northwest corner of the county is *Odell's Lake*, a beautiful body of pure water, in places thirty feet deep. It is half a mile broad, two miles long, and abounds in fish. It furnishes water-power sufficient to run a large flouring mill. The P. Ft.W. & C. R. R. has constructed a station on the north side of this lake. Since then it has become a popular place of resort for pleasure and fishing parties.

All the valleys of this county are very productive when properly cultivated, and those of Paint, Martin's and Doughty's creeks are wide and beautiful. The chief productions are wheat, corn, oats, hay, sheep, cattle and horses. Taking into consideration its size, Holmes is hardly surpassed by any county in the State for its productions of wheat and fine horses.

The southwest part of the county is quite broken and hilly; yet its immense quarric? of brown, white and blue limestone, coal and other minerals, make it

equally valuable with other parts. Coal has been successfully mined in every township of the county and in some of them extensively.

FIRST SETTLEMENT.

In July, 1809, Jonathan Grant, of Beaver county, Pa., and his son, then a boy, built the first cabin in the county. They came on foot through the woods, carrying a gun, ammunition and tools for doing their work. Their cabin was on Salt creek, in Prairie township, about one mile east of the Killbuck. They made a clearing and sowed a large patch for turnips. Grant then fell sick, and for twenty-eight days lay on a bed of bark and leaves, and subsisted chiefly on roots, attended only by his son. He became reduced to a skeleton, and the boy was but little better.

An Indian passing along the valley discovered the cabin and stopped. He told Grant that "Pale Face" and his family were encamped in the Killbuck valley, at a big spring, and pointed the direction. The boy went and in a short time returned with Jonathan Butler, who had, with his father-in-law, James Morgan,

reached the valley the day previous.

Through the timely assistance of Butler, Grant soon recovered and became of much service to his new acquaintances. Grant could speak the Indian language, and was with the surveyors as their "lookout" while surveying the "new purchase," and knew all about the country, as well as being a great hunter. His patch of turnips turned out abundantly and of excellent quality, and proved of much service that fall and next spring. Grant did not return home to his family in Pennsylvania until cold weather.

In April, 1810, Edwin Martin, then John L. Dawson, David and Robert Knox, settled on Martin's creek, about one mile south of Grant's cabin. A few days later a dozen or more families settled in that neighborhood, Grant's among them. Settlements were commenced on the east end of this county—then Tuscarawas—along the valleys of Walnut and Sugar creeks, in 1809–10, by the Troyers, Hochtellers, Weavers, Millers, Domers, Bergers and others: also on Doughty, the Carpenters and Morrisons. In 1810–11 Peter Casey and others settled on the Killbuck, near Millersburg; and Abraham Shrimlin farther south on Shrimlin creek. Peter Shimer, Jacob Korn, Thomas Edgar and others, near Berlin; and the Finneys, Mackey, Hevelands and others, in what is now Monroe township, then in Coshocton county. In 1810–11 the Priests, Bonnets, Newkirks, Drakes and Quicks settled in the valley of Mohican, then Wayne county.

In 1812 the settlers fearing the Indians built a block-house on the Dawson land, half a mile east of Holmesville; but the Indians not becoming troublesome it was used but a short time. Col. Crawford on his unfortunate campaign crossed the Killbuck north of Holmes, and camped at night near the "big spring," May 30, 1781; there one of his men died that night, and his burial-place was marked on a beech-tree near by. At this spring Jonathan Butler settled, and February 4, 1810, his daughter Hannah was born. The spring is known as the first burial

and first birth-place of white persons in the county.

On the organization of the county the associate judges of the Court of Common Pleas appointed were: Peter Casey, William Hutchinson and George Luke. They met at Millersburg, February 18, 1825, and organized the court. They appointed James S. Irvine clerk of court and county recorder, and Samuel Robinson county surveyor. They also issued a proclamation for an election to ensue April 4th, for the necessary township and county officers, whereby Daniel Hutchinson was elected sheriff; Anson Wheaton, coroner; Seth Hunt, auditor; for county commissioners, David I. Finney, Griffith Johnson and Frederick Hall. The commissioners at their June term organized the county into townships, which remain unchanged.

Millersburg in 1846.—Millersburg, the county-seat, is situated on elevated

ground, surrounded by lofty hills, on Killbuck creek, eighty-seven miles northeast of Columbus, and about seventy south of Cleveland. It was laid out in 1824, by Charles Miller and Adam Johnson, and public lots sold on the 4th of June of that year. There had been previously, a quarter of a mile north, a town of the same name, laid out about the year 1816. The names recollected of the first settlers in the village are Seth Hunt, Colonel William Painter, Samuel S. Henry, George Stout, Samuel C. M'Dowell, R. K. Enos, Jonathan Korn, John Smurr, John Glasgow, Thomas Hoskins, James Withrow, James M'Kennanthe first lawyer in Holmes, and James S. Irvine, the first physician in the same. A short time previous to the sale three houses were erected. The first was a frame, on the northeast corner of Jackson and Washington streets; the second, a frame, on the northeast corner of Washington and Adams streets; and the last, a log, on the site of S. C. Bever's residence. The Seceder church, the first built, was erected in 1830, and the Methodist Episcopal in 1833. The village was laid out in the forest, and in 1830 the population reached to 320. About fourteen years since, on a Sunday afternoon, a fire broke out in the frame house on the corner of Washington and Adams streets, and destroyed a large part of the village. Among the buildings burned were the court-house and jail, which were of log, the first standing on the northeast corner of the public square, and the other a few rods south of it. Millersburg contains 1 Presbyterian, 1 Episcopal Methodist, 1 Lutheran and 1 Seceder church, 2 newspaper printing-offices, 10 drygoods and 3 grocery stores, 1 foundry, 1 grist-mill, and had, in 1846, 673 inhabitants.—Old Edition.

MILLERSBURG is eighty-three miles northeast of Columbus and eighty-four miles south of Cleveland, on the C. A. & C. Railroad. Newspapers: Holmes County Farmer, Democratic, Newton & Barton, editors and proprietors; Holmes County Republican, Republican, White & Cunningham, proprietors. Churches: 1 Catholic, 1 Disciples, 1 United Presbyterian, 1 Lutheran, 1 German Reformed, 1 Methodist Episcopal, and 1 Presbyterian. Banks: Commercial, Robert Long, president, John E. Koch, Jr., cashier; L. Mayer's Exchange, C. R. Mayer, cashier; J. & G. Adams, A. C. Adams, cashier. County Officers, 1888: Auditor, Edwin A. Uhl; Clerk, Jacob J. Strome; Commissioners, Jacob Schmidt, Philip Petry, Henry Shafer; Coroner, John A. Gonser; Infirmary Directors, Edward E. Olmstead, Joseph Geisinger, John McClelland; Probate Judge, Richard W. Taneyhill; Prosecuting Attorney, Samuel N. Schwartz; Recorders, Theodore H. Thome, Jacob B. Lepley; Sheriff, William S. Troyer; Surveyor, William S. Hanna; Treasurers, A. B. Rudy, Samuel Anderson. City Officers, 1888: Mayor, John P. Larimer; Clerk, J. G. Walkup; Treasurer, Allen G. Sprankle; Marshal, John E. Albertson.

Manufacturers and Employees.—Gray & Adams, planing mill, 4 hands; Henry Snyder, tiles, etc., 12; Maxwell, Hecker & Pomerene, flour, etc., 10.—State Report, 1888. Population in 1880, 1,814. School census, 1888, 590; John A. McDowell, superintendent. Census, 1890, 1,923.

The county has had three court-houses and three jails. The first of these were constructed of wood and burned in 1834; these were replaced by brick structures, since taken down to give place to the present buildings. The present court-house, completed in 1886, is all of stone, in three colors—white, blue and gray—taken from quarries within the county. For beauty and durability they are unsurpassed by any in the State. In the county are ten thriving villages, all having good schools, churches, stores and various mechanical shops.

The county has fifteen school districts, 106 well-built school-houses, many of them having large grounds with trees, vines and flowers; eleven of them with two or more departments, and sixty-one comfortable frame, brick or stone churches, and about as many more worshipping congregations meet in school-houses, which, if the entire population of the county were at once to assemble, would give an average of 120 attendants at each place.

Drawn by Henry Hows in 1846.

MILLERSBURG.

Ross Hall, Millersburg, Photo., 1886.

MILLERSBURG.

Each of the views is taken from the same point, forty years apart in time.

The first newspaper published in the county, the Millersburg Gazette, was printed June 9, 1828. It was Democratic in politics, and as such had a continuous publication as the official paper of the county. In 1840 its name was changed to Holmes County Farmer, which name it still bears. It is now published by D. G. Newton and L. G. Barton; the former has been connected with its publication thirty-three years. In 1835 an opposition paper, the Holmes County Whig, was started. It had many suspensions, revivals and changes of name. In 1870 Messrs. White & Cunningham became proprietors of the Holmes County Republican. Under their management it has been more prosperous, and has had a continuous publication.

The foregoing includes all of Mr. Newton's article. We here remark that the

two views of Millersburg were taken from the same point.

The new court-houses, through Central Ohio more especially, are elegant structures, in which the people of their respective counties have a just affection and pride, for with them cluster the associations connected with the protection of society through the administration of law, the preservation of titles to the savings of honest industry in the form of real estate and its proper distribution to the widow and the fatherless. The church, the court-house and the school-house are the three prime factors of our civilization.

For our original account of the historical facts connected with this place and its vicinity we were indebted to Dr. Robert K. Enos, whose acquaintance we made on our first visit. We substituted the article of Mr. Newton (excepting the old description of Millersburg), because it embodied the same facts with important additions. Dr. Enos died here September 13, 1884, after living a long and highly useful life. He was born in Hanover, Washington county, Pennsylvania, January 7, 1806, and came to this county April 24, 1824. He was one of the leading men in the organization of the county and town; was the oldest inhabitant of Millersburg; cut down the first trees within its limits, preparatory to laying it out; planted the first ornamental shade-trees; practised medicine with the first physician of Millersburg, Dr. James S. Irvine, until his death—thirty-one years; started with him the first bank, and was its cashier; was the first mayor of Millersburg; was twenty-one years clerk of court, and was the chief instrument in bringing the first railroad to the town.

In politics he was an ardent Republican, and, in what his friends took especial pride, as a delegate to the Chicago Convention of 1860, he was one of the memorable Ohio four who in that Convention brought about the nomination of Abraham Lincoln. The circumstances connected with the change of votes which gave this result were published the next morning in the Chicago *Tribune*, under the caption of

The Four Votes.—"During the progress of the third ballot for President, the steady increase of Lincoln's vote raised the expectations of his friends to fever-heat that he was about to receive the nomination. When the roll-call was completed a hasty footing discovered that Lincoln lacked but $2\frac{1}{2}$ votes of election, the ballot standing, for Lincoln, $331\frac{1}{2}$; Seward, 180; scattering, $34\frac{1}{2}$; necessary to a choice 334.

Before the vote was announced, Mr. R. M. Corwine, of the Ohio delegation, who had voted for Governor Chase up to that time, and three other delegates, viz., R. K. Enos, John A. Gurley and Isaac Steese, changed their votes to Lincoln, giving him a majority of the whole convention and nominating him. D. H. Carrter, chairman of the Ohio dele-

gation, announced the change of votes, and before the secretaries had time to foot up and announce the result, whereupon a deafening roar of applause arose from the immense multitude, such as had never been equalled on the American continent, nor since the day that the walls of Jericho were blown down."

Mr. Enos, being a quick accountant, had kept a tally of the vote, and discovered before any one else that Mr. Lincoln lacked but 2½ votes; whereupon he disclosed his knowledge to the three others, and at his request they joined him in the vote for Mr. Lincoln.

Dr. Enos left a wife, three sons and two daughters. One son in California died in 1889; another, Henry, is of the prominent Wall street banking firm of H. K. Enos & Co.

The original settlers of this county were mainly from Pennsylvania, Maryland and Virginia; also among them were some Swiss Germans.

"In the eastern part is an extensive settlement of Dunkards, who originated from eastern Pennsylvania, and speak the German language. They are excellent farmers, and live in a good, substantial style. The men wear long beards and shadbellied coats, and use hooks and eyes instead of buttons. The females are attired in petticoats and short gowns, caps without frills, and when doing out-door labor, instead of bonnets, wear broad-brimmed hats."—Old Edition.

The Pennsylvania emigration to Ohio was the greatest from any State; and this particularly applies to Holmes and all the central part, the great wheat belt, of the State. And we think Washington county, Pa., more than from any other single county, anywhere, helped to populate Ohio. As late as 1846-47 about one-quarter of the members of the Ohio Legislature were natives of Pennsylvania, exceeding the members born in any other State, or all the New England States combined, or were born in Ohio itself. Pennsylvania strongly gave its impress upon the judicial history of Ohio.

On Tuesday, August 31, 1880, was held at "Ingles Sugar Grove," near Millersburg, what was termed the Pennsylvania Picnic. It consisted of all persons born in Pennsylvania then residents of the town and vicinity; these, with their families, attended to the number of about 200. The counties strongest represented were Washington, Cumberland, Allegheny and Lebanon. In all sixteen counties were represented. The day was given up to social pleasure and enjoyment. The Normal School String Band supplied the music. At noon all partook of a sumptuous basket-dinner in "regular old-fashioned Pennsylvania style." We annex a list of the Keystone State representatives, mostly heads of families:

Elias Klopp and wife, Lucinda H. Robinson, Mary G. Barton, Mrs. Frances Long, Robert Long, John Brown, James Hebron, Mrs. E. A. Hebron, John Patterson, Robert Justice, Catherine Justice, R. K. Enos, Mrs. T. B. Cunningham, Mrs. H. M. Cunningham, teen counties were represented. The day

Miss Caddie Shattuck, Fred. Shattuck, Mrs. W. K. Duer, Mrs. E. J. Duer, Aaron Uhler, Mrs. Mary Bowman, J. M. Bowman, Mrs. B. C. Shoup, Wm. C. McDowell, Hosack Reed, Mrs. Susan B. Ingles, Mrs. Leah Hites, Andrew Ingles, Aaron Devore, E. H. Hull, Mrs. Elizabeth Ackamire, A. B. Rudy, John Coffee, James Haines, Thomas J. Arnold, James Hull, Mrs. Thomas P. Uhl, Robert Parkinson, John I. Spencer, Richard Hultz, A. J. Kerr, James Tidball, James T. Forgey, Mrs. C. E. Voorhees, John F. Hudson, Mrs. Harvey Taylor, Mrs. Martha Douglas, Mrs. David McDonald, Mrs. A. B. McDonald, Mrs. Ann Maria Nedrow, Harry las, Mrs. David McDonald, Mrs. A. B. McDonald, Mrs. Ann Maria Nedrow, Harry Davis, Mrs. Eliza Hanna, Mrs. Jane McMurray, Mrs. Margaret Hultz, John Hanna, George Hanna, Mrs. Frank Martin, Mrs. Delila Haines, Mrs. Elizabeth Uhl, Mrs. Harriet Parkinson, Mrs. Malvina Wolgamot, Mrs. E. Lemmon, Mrs. Jane Kirby, Mrs. William Walkup, Mrs. Mary Donald, Mrs. Maria E. Crump, Mrs. Rachel Spencer, Mrs. R. K. Enos. R. K. Enos.

This county has a good military record, and in front of the court-house is a handsome soldiers' monument, shown in our engraving. Among her early settlers were soldiers of the Revolution and the war of 1812, and in the civil war she supplied her full quota. The good name of the county has suffered by an occurrence called "The Holmes County Rebellion," the theatre of which was in Richland, the southwest corner township, a region of hills. It arose in June, 1863, from difficulties met with by the enrolling officer preparatory to a draft for the It was reported to Governor Tod that the malcontents were in large force, were in a regular fortified camp, with pickets, entrenchments and cannon. He accordingly issued a proclamation for them to disperse, and sent 420 soldiers, mainly from Camp Chase, with a section of a battery, under Colonel Wallace. On June 17th they landed at Lake Station, in the western part of the county, remained a few days and then returned. A few arrests were made and a few persons indicted for resisting the United States authorities; but with a single exception the indictments were all nolled. It was a time of intense excitement, just at the opening of the Vallandigham campaign. The air was full of rumors and it was nearly impossible even at that time to obtain correct details; what we possess is so contradictory that we conclude that any further investigation would yield no

Killbuck is six miles southwest of Millersburg, on the C. A. & C. R. R. It has 1 Methodist Episcopal and 1 Disciples' church. School census, 1888, 142.

Winesburgh is fourteen miles northeast of Millersburg. It has 1 German Lutheran Reformed church. School census, 1888, 163.

Holmesville, six miles north of Millersburg, on C. & A. R. R.

Berlin, seven miles east of Millersburg, has 1 Methodist Episcopal and 1 Presbyterian church. Population about 250.

BLACK CREEK, on C. A. & C. R. R., twelve miles west of Millersburg.

Population about 250.

NASHVILLE is eleven miles northwest of Millersburg. Population about 300. Lakeville Station, P. O. Plimpton, Farmerstown, New Carlisle P. O., Walnut Creek, are small villages.

HURON.

HURON COUNTY was formed February 7, 1809, and organized 1815. It originally constituted the whole of "the fire-lands." The name, Huron, was given by the French to the Wyandot tribe: its signification is probably unknown. The surface is mostly level, some parts slightly undulating; soil mostly sandy mixed with clay, forming a loam. In the northwest part are some prairies, and in the northern part are the sand ridges which run on the southern side of Lake Erie, and vary in width from a few rods to more than a mile. Huron was much reduced in 1838, in population and area, by the formation of Erie county. Area about 450 square miles. In 1887 the acres cultivated were 139,956; in pasture, 79,944; woodland, 36,032; lying waste, 2,697; produced in wheat, 495,057 bushels; rye, 5,123; buckwheat, 929; oats, 1,035,918; barley, 5,167; corn, 698,536; broom corn, 200 lbs. brush; meadow hay, 34,880 tons; clover hay, 6,837; flax, 20,300 lbs. fibre; potatoes, 108,166 bushels; butter, 982,978 lbs.; cheese, 347,037; sorghum, 2,218 gallons; maple sugar, 23,087 lbs.; honey, 11,672; eggs, 493,179 dozen; grapes, 3,579 lbs.; sweet potatoes, 89 bushels; apples, 35,552; peaches, 4,052; pears, 923; wool, 539,534 lbs.; milch cows owned, 7,756. School census, 1888, 9,929; teachers, 353. Miles of railroad track, 138.

Population of Huron in 1820 was 6,677; in 1830, 13,340; in 1840, 23,934; 1860, 29,616; 1880, 31,608, of whom 21,728 were born in Ohio; 3,142 New York; 963 Pennsylvania; 124 Indiana; 76 Virginia; 54 Kentucky; 1,783 German Empire; 800 England and Wales; 684 Ireland; 201 British America;

103 France; 69 Scotland, and 3 Sweden and Norway. Census of 1890 was 31.949.

NORWALK IN 1846.—Norwalk, the county-seat, named from Norwalk, Ct., is 110 miles north of Columbus and 16 from Sandusky City. It lies principally on a single street, extending nearly 2 miles and beautifully shaded by maple trees. Much taste is evinced in the private dwellings and churches, and in adorning the grounds around them with shrubbery. As a whole, the town is one of the most neat and pleasant in Ohio. The view given represents a small portion of the principal street; on the right is shown the court-house and jail, with a part of the public square, and in the distance is seen the tower of the Norwalk institute. Norwalk contains 1 Presbyterian, 1 Baptist, 1 Episcopal, 1 Methodist and 1 Catholic Church, 9 dry goods, 1 book and 4 grocery stores, 1 bank, 2 newspaper printing offices, 1 flouring mill, 2 foundries, and about 1,800 The Norwalk institute is an incorporated academy, under the patronage of the Baptists: a large and substantial brick building, three stories in height, is devoted to its purposes; the institution is flourishing, and numbers over 100 pupils, including both sexes. A female seminary has recently been commenced under auspicious circumstances, and a handsome building erected in the form of a Grecian temple. About a mile west of the village are some ancient fortifications.

The site of Norwalk was first visited with a view to the founding of a town, by the Hon. Elisha Whittlesey, Platt Benedict, and one or two others, in October, 1815. The place was then in the wilderness, and there were but a few settlers in The examination being satisfactory, the town plat was laid out in the spring following, by Almon Ruggles [see page 583], and lots offered for sale at from \$60 to \$100 each. In the fall of 1817 Platt Benedict built a loghouse with the intention of removing his family, but in his absence it was destroyed by fire. He reconstructed his dwelling shortly after, and thus commenced the foundation of the village. In the May after, Norwalk was made the county-seat, and the public buildings subsequently erected. The year after, a census was taken, and the population had reached 109. In the first few years of the settlement, the different denominations appearing to have forgotten their peculiar doctrines, were accustomed to meet at the old court-house for sacred worship, at the second blowing of the horn. In 1820 the Methodists organized a class, and in 1821 the Episcopal society was constituted. From that time to the present the village has grown with the progressive increase of the county.

In 1819 two Indians were tried and executed at Norwalk for murder. Their names were Ne-go-sheck and Ne-gon-a-ba, the last of which is said to signify "one who walks far." The circumstances of their crime and execution we take from the MSS. history of the "fire-lands," by the late C. B. Squier, Esq.

In the spring of 1816 John Wood, of Venice, and George Bishop, of Danbury, were trapping for muskrats on the west side of Danbury, in the vicinity of the "two harbors," so called; and having collected a few skins had lain down for the night in their temporary hut. Three straggling Ottawa Indians came, in the course of the night, upon their camp and discovered them sleeping. To obtain their little pittance of furs, etc., they were induced to plan their destruction. After completing their arrangements the two eldest armed themselves with clubs, singled out their victims, and each, with a well-directed blow upon their heads, despatched them in an instant. They show had been until then merely a spectator, to beat the bodies with a club, that he might be made to feel

that he was a participator in the murder and so refrain from exposing their crime. After securing whatever was then in the camp that they desired, they took up their line of march for the Maumee, avoiding, as far as possible, the Indian settlements on their course.

Wood left a wife to mourn his untimely fate, but Bishop was a single man. Their bodies were found in a day or two by the whites under such circumstances that evinced that they had been murdered by Indians, and a pursuit was forthwith commenced. The Indians living about the mouth of Portage river had seen these straggling Indians passing eastward, now suspected them of the crime, and joined the whites in the pursuit. They were overtaken in the neighborhood of the Maumee river, brought back and

Drawn by Henry Howe in 1846.

VIEW IN MAIN STREET, NORWALK.

In front is shown the Court-House, and in the far distance the tower of the Academy.

MAIN STREET, NORWALK.

The view is in the resident part of the street.

examined before a magistrate. They confessed their crime and were committed to jail. At the trial the two principals were sentenced to be hung in June, 1819: the younger one was discharged. The county of Huron had at this time no secure jail, and they were closely watched by an armed guard. They nevertheless escaped one dark night. The guard fired and wounded one of them severely in the body, but he continued to run

for several miles, till, tired and faint with the loss of blood, he laid down, telling his companion he should die, and urging him to continue on. The wounded man was found after the lapse of two or three days, somewhere in Penn township, in a dangerous condition, but he soon recovered. The other was recaptured near the Maumee by the Indians, and brought to Norwalk, where they were both hanged according to sentence.

In this transaction the various Indian tribes evinced a commendable willingness that the laws of the whites should be carried out. Many of them attended the execution, and only requested that the bodies of their comrades should not be disturbed in their graves.—Old Edition.

The larger part of the Indians that settled on the Firelands were tribes of the powerful Iroquois nation. Some of them, considering their environment, were noble characters, and years after, when all hostilities had ceased, and as the country began to fill up, were even disposed to hold not only peaceable but friendly relations with the whites.

The Senecas, who were in the habit of passing through the southern part of Huron county, on their way to eastern hunting-grounds, were particularly fierce in appear-ance, bedecked in their barbaric garb of feathers and skins, but nevertheless were

specially friendly.

On these hunting trips they would trade baskets, trinkets and game with the settlers in exchange for bread, meal or flour. Strong and disinterested friendships sprung up between some of them and the whites. appearance was so frequent, and their actions

so decorous and kindly, that even the children became attached to them, and in some instances strong affections were formed. Seneca John, the famous chief, used to carry the children of Caleb Palmer, the pioneer settler of New Haven, upon his shoulders. So strong was their affection for him, that when they saw a band of Indians coming they would rush forward with cries of delight, and when the tall, stalwart form of Seneca John greeted their eyes, they would run to him, climb to his shoulders and ride thereon to and from school. The children of the whites and Indians intermingled in their games, and each were on as friendly terms with the others as they were with their own kind. Mrs. Platt Benedict, in her last years, said: "We gained the friendship of those denizens of the forest, and they brought us many, many presents in their own rude

NORWALK, the county-seat of Huron, is a beautiful city of the second class, fifty-six miles west of Cleveland, about ninety-five miles north of Columbus, and fifty-seven miles east of Toledo; is on the L. S. & M. S., W. & L. E., and S. M. & N. Railroads. It is on what are known as the "Firelands," in the Western Reserve. On account of its fine streets being well shaded by beautiful trees of that species, it is called the "Maple City." It is surrounded by a rich farming country, has a fine commercial trade, and considerable manufacturing interests. County Officers: Auditor, Jonathan S. White; Clerk, Albert M. Beattie; Commissioners, Commodore O. H. Perry, James A. Fancher, George Bargus; Coroner, Frank E. Weeks; Infirmary Directors, James D. Easton, Uriah S. Laylin, Jonathan W. Huestis; Probate Judge, Henry L. Kennan; Prosecuting Attorney, Theron H. Kellogg; Recorder, Robert A. Bloomer; Sheriff, Alfred Noecker; Surveyor, Luther B. Mesnard; Treasurers, Orin S. Griffin, Amos O. Jump. Newspapers: Chronicle, Republican, F. R. Loomis, editor; Germania, German, George J. Lenz, editor and publisher; Journal, Couch & Beckwith, editors and publishers; Reflector, Republican, C. Wickham and James C. Gibbs, editors; Experiment and News, Democratic, H. L. Stewart, editor. Churches: one Episcopalian, three Catholic, one Congregational, two Methodist Episcopal, one Baptist, one Universalist, one Presbyterian, one Lutheran. Banks: First National, Theodore Williams, president, George M. Cleveland, cashier; Huron County Banking Company, D. H. Fox, president, Pitt Curtiss, cashier; Norwalk National Bank, John Gardiner, president, Charles W. Millen, cashier.

Manufactures and Employees.—G. M. Cleveland & Co., flour, etc., 6 hands; W. B. Lyke, general machinery, 5; B. C. Cartwright, fanning mills, idle; E. S.

Tuttle, grain elevator, 2; C. H. Gove & Co., iron foundry, 3; Stewart Dowel Pin Works, Dowel pins, 17; The A. B. Chase Company, pianos and organs, 160; L. S. & M. S. R. R. Shops, railroad repairs, 80; W. & L. E. R. R. Shops, railroad repairs, 99; Norwalk Machine Works, general machinery, 9; C. H. Fuller, carriages, 9; N. H. Pebbles, carriages, 5; The Laning Printing Company, printing, 26; Norwalk Electric Light and Power Company, electric light, 3; S. E. Crawford, pumps, 3; Theodore Williams & Son, flour, etc., 10; D. E. Morehouse, planing mill, 5; C. W. Smith, planing mill, 10; Smith & Himberger, doors, sash, etc., 8; F. B. Case, tobaccos, 23; Sprague & French, advertising novelties, 225; The Hexagon Postal Box Manufacturing Company, post-office furniture, 20; William Schubert, planing mill, 6; Bostwick & Burgess Manufacturing Company, carpet sweepers, etc., 53.—State Reports, 1888. Population in 1880, 5,704. School census, 1888, 2,338; W. R. Comings, school superintendent. Capital invested in industrial establishments, \$354,250. Value of annual product, \$575,000.—Ohio Labor Statistics, 1887. U. S. census, 1890, 7,195.

Up to 1852, the era of railroads, Norwalk was an academy town. It was the seat of the famous Norwalk Academy, having been the largest and most famous institution of the kind in all the West, and almost as well known to the pioneers as Yale or Harvard. The society of the town comprised mostly the teachers and their families, together with the few families who moved here while educating their children. Charles H. Stewart, Esq., in an address delivered March 27, 1883, at the farewell reunion of the High School alumni, said:

"Everybody kept boarders; in fact, that was the main occupation of about nine-tenths of our able-bodied citizens during that period. Board was very reasonable in those days, too. A young man could get the best room and nicest board in town for from \$1 to \$1.50 per week. Mutton sold for two cents a pound, and as everybody kept cows and pigs and hens, which all ran free in the streets, milk and eggs and pork were almost given away. These rooms were divided up into a large number of smaller ones, where many young men roomed.

"Our late President, R. B. Hayes, and present Governor, Charles Foster, and several of our Congressmen, were dormitory boys, as they used to call them, who cooked and ate and devised mischief there: The boys had their bread baked, did the rest of their cook-

ing, and used to live here nicely for forty cents a week, including room rent, which was \$1 a term. In the fall of the year (as can be guessed), the boys used to live on the fat of the land. On almost any night, along toward midnight's witching hour, mysterious figures could be seen, surreptitiously gliding into the old school-building, with large, mysterious bags on their shoulders. If you would glide up behind one of them, you would see the contents of those bags disgorged in the ruddy glow of the firelight which lit up the laughing faces of half a score of future senators, congressmen, governors, judges, ormust we say it?—preachers. There were big watermelons and roasting-ears, and sweet potatoes, apples, now and then a plump pullet from some neighboring roost, and there was a banquet for the gods."

BIOGRAPHY.

PLATT BENEDICT, the founder of the town, was born in Danbury, Conn., in 1775, and was a four-year-old boy when the British red-coats came to his native town to do mischief, having burned Norwalk, Conn., on their way. Perhaps it was this incident that indirectly paved the way to his founding an Ohio Norwalk. When he came out here in 1817, he was seven weeks on the journey coming out, with his family and household goods, the latter stowed away in a wagon drawn by oxen. He was one of the most sturdy of that strong body of men—the Western pioneers; a man of many virtues. He lived to the grand old age of 91 years, 7 months and 7 days, which he reached October 25, 1866.

George Kennan, the Siberian traveller, was born in Norwalk, February 16, 1845. His father, now 87 years of age, is probably the oldest living telegrapher in the United States, and taught his son the profession. He was educated in the public schools of Norwalk, and at the Columbus High School while working as

PLATT BENEDICT—An Ohio Pioneer.

GEO. KENNAN-The Siberian Traveller.

night operator in that city. In 1864, while working as assistant chief operator in the Western Union office at Cincinnati, he made application for an appointment on the projected overland line from America to Europe, via Alaska, Behring's Straits and Siberia. One night a message came over the wires from General Stager, as follows: "Can you get ready to start for Alaska in two weeks?" "Yes, I can get ready to start in two hours," was the reply. "You may go," replied General Stager.

As a leader of one of the Russo-American Telegraph Company's exploring parties, he spent nearly three years in constant travel in the interior of northeastern Siberia. The manner in which, in the summer of 1867, he received the first notice of the abandonment of the enterprise in which he was engaged, illustrates the complete isolation from civilization of his party.

One day he with some others boarded a vessel in the Okhotsk Sea and approached the captain with the remark: "Good day, sir. What is the name of your vessel?"

The astonished captain of the bark Sea

The astonished captain of the bark Sea Breeze, from New Bedford, Mass., replied: "Good Lord! Has the universal Yankee got up here? Where did you come from? How did you get here? What are you doing?"

Having silenced his interrogation battery, the captain gave them a lot of old San Francisco newspapers, in which they learned that the enterprise upon which they were engaged had been abandoned, on account of the successful laying of the second Atlantic cable; but it was not until the following September that they received official notification and orders to return to America.

In 1870 Mr. Kennan again went to Russia to explore the mountains of the Eastern Caucasus, returning to this country in 1871.

In 1885 he was engaged by the publishers of the "Century Magazine" to visit Russia for the purpose of investigating the Russian exile system. He in company with Mr. Frost, the artist, spent sixteen months on this work, during which they suffered many hardships. Extreme cold, fatigue and sickness were but small trials when compared with the constant fear of discovery of their mission by the Russian government, and the heart sickness caused by sympathy for the horrible misery of the exiles. It required wonderful tact and skill to evade the watchfulness of the Russian emissaries.

They travelled 1,500 miles through northern Russia and Siberia, visited all the convict prisons and mines between the Ural mountains and the head-waters of the Amur river, and explored the wildest part of the Russian Altai. The publication in the "Century Magazine" of the results of these investigations filled the whole civilized world with horror and indignation at the inhumanity of the Russian government in its treatment of political and other offenders.

Mr. Kennan is the author of "Tent Life in Siberia, and Adventures among the Koraks and other Tribes in Kamchatka and Northern Asia." (New York, 1870.)

Among the present citizens of Norwalk is

John Gardiner, who has the distinction of being the oldest banker in Northwest Ohio. He was born in New London county, Conn., September 15, 1816. In 1834 he entered as a clerk in the Bank of Norwalk, which was then the only bank in Northwestern Ohio, and its business embraced what is now all of twenty counties, extending as far south as Mount Vernon and Bucyrus. He has largely been identified with the railroads of this region, and other great public interests of a developing nature; has lately erected a beauti-

ful business block in Norwalk. GIDEON T. STEWART, a lawyer here, born in Fulton county, N. Y., in 1824, has long been identified with journalism and the temperance reform; has been thrice the Prohibition candidate for Governor of Ohio. Throughout the war period he owned and edited the Dubuque Daily Times, then the only union daily in the north half of Wisconsin; later was half owner of the Daily Blade and Daily Commercial of Toledo.

TRAVELLING NOTES.

Mr. C. E. Newman, the librarian of the Firelands Historical Society, an old gentleman, showed me in Norwalk, among the society's possessions, a tin horn which was used, he told me, to summon the people up to church and court; and as he stated by Mr. Ammi Keeler. He was sexton of the Episcopal church, the first church organized, and which was in the old white court-house, and being also deputy-sheriff he brought it into the service of the law as well as religion. The old white court-house was removed about 1835, and now forms part of the Maple City hotel.

Edmonson, Photo.
A HISTORIC HORN.

A few months after Mr. Newman had shown me this horn, which I had photographed, I was in Mansfield, and called in one evening upon Rev. Dr. Sherlock A. Bronson, at one time President of Gambier. He was then about eighty years old, the venerable rector of the Episcopal church, who had come from Waterbury, Conn., in 1807; age then six months, of course recollections of the journey not vivid.

While showing him my various pictures taken for this work, I brought out this one, saying, "This is a photograph of a tin horn used sixty years ago, in the town of Norwalk, to blow the people up to church and to court." "Yes," he rejoined, and to my great surprise added, "I know it, for I am the man that bought and first blew that horn." He then gave me its history. "In 1827," he said, "I attended an Episcopal Convention at Mt. Vernon, and on my way to Norwalk passed through this town, Mansfield, and here bought this horn. From 1827 to 1829 I was assistant teacher to my cousin in the famous Norwalk Academy. The Episcopal society met in the court-house, where I sometimes read service, and it was my wont to go out upon the court-house steps and blow the horn." I had supposed we were alone in our interview, but as he concluded I was again surprised—surprised to hear from a dark part of the double-room a female voice utter, "I want to see that horn." Thereupon he left me, taking the photograph, but I never saw or knew who it was that had wanted to see that horn. And with so much, I close my story of a horn that was not attached to a dilemma.

The next day I saw in Mansfield another venerable gentleman, Mr. Hiram R. Smith, who sixty years ago was a resident of Sandusky, and he gave me another item to add to this blast. "At the starting of Sandusky," said he, "the Sanduskyans were called to church by a horn. It was on a Sunday morning of those times that Bishop Philander Chase, the founder of Kenyon, landed at Sandusky with two Chinese youths he had brought from the East to Ohio for educa-

tion. As the trio stepped ashore the horn rang out on the clear morning air, whereupon one of the lads inquired its meaning. "That," replied the bishop, "is to summon the people to church." "Hoo," rejoined the lad: "New York, Sunday, ring bell for church—Buffalo, Sunday, ring bell for church—Sandusky, Sunday, blow horn."

The people of Norwalk have a natural pride in the fact that General M'Pherson was once a student at their old academy. Mr. Newman told me he boarded with him, and he was a very studious, gentlemanly youth, with the highest reputation for capacity. He narrowly escaped failing to get into the Military Academy. He had applied for and was expecting the appointment when Rudolphus Dickerson, the member of Congress through whom it was to come, suddenly sickened and died. M'Pherson was then in an agony of suspense. No one could give him any information whether the cadet warrant for admission into the academy had been granted. He was already twenty years of age; if delayed a year he would be twenty-one, and too old for admission. At the last moment by bare accident the warrant was found among Dickerson's papers. As it was, he had to hurry and narrowly escaped getting there in time for examination.

Norwalk owes its chief attraction to Main street, its principal avenue. It is built upon for about two miles. The centre being the business part, with the court-house, school buildings and churches; the ends for residences, and these

Edmondson, Photo.

LOVING DOG AND HORSE.

lined with maples, planted at the suggestion of Elisha Whittlesey, one of the original proprietors. But few streets I know of in the centre of any Ohio town is so dense with foliage as the part of Main street shown in our view.

At Edmondson's photograph gallery I saw a picture here copied that exhibited a singular affection between a horse and a dog. They belonged to the firm of Eastman & Read, grocers. The horse was used for the delivery wagon, and it was the habit of the dog, on the return of the horse from a round of serving customers, to run and give and receive a caress.

The thoughtful Miss Martineau, wrote that although human beings had been living for thousands of years in the companionship of animals, there was between the two an inseparable gulf, preventing the mind of the one from closely communicating with the mind of the other. Whether it be so between animals of different kinds or of the same kind is a question.

Bellevue is peculiarly located. It is in Huron and Sandusky counties, part on and part off the Western Reserve, and has a corner also of Erie and Seneca counties. The town is in the midst of a fine agricultural district, which produces large quantities of cereals and fruits, enriching the people of the surrounding country and making the town a prosperous and wealthy centre. It is sixty-five miles west of Cleveland, about ninety-five miles north of Columbus and forty-five miles east of Toledo, and about midway between Buffalo and Chicago on the "Nickel-plate" Railroad, being the terminus of two grand divisions of that line, whose company has here established round-houses and repair-shops. It has three

lines of railways, the L. S. & M. S., W. & L. E. and N. Y. C. & St. L. (or Nickel-plate.) Newspapers: Gazette, neutral, Stoner & Callahan, publishers; Local News, neutral, Geo. E. Wood, editor and publisher. Churches: 2 Congregational, 1 Methodist Episcopal, 1 Reformed, 1 Catholic, 1 Evangelical, 1 Lutheran and 1 Episcopal. Banks: Bellevue, Bourdett Wood, president, E. J. Sheffield, cashier. City Officers, 1888: Mayor, John U. Mayne; Clerk, W. H. Dimick; Marshal, J. P. Kroner; Treasurer, Abishai Woodward. Population in 1880, 2,169. School census, 1888, 854; E. F. Warner, school superintendent.

Manufactures and Employees.—Joseph Erdrich, cooperage, 25 hands; Fremont Cultivator Co., agricultural implements, 61; McLaughlin & Co., flour, etc., 13; Gross and Weber, planing mill, 6.—Ohio State Report, 1888. Capital invested in industrial establishments, \$156,000. Value of annual product, \$538,000.—Ohio Labor Statistics, 1887. United States census, 1890, 3,052.

Greenwich is eighteen miles southeast of Norwalk, on the C. C. C. & I. R. R. Newspaper: *Enterprise*, local, Speek & McKee, publishers. Churches: 1 Congregational, 1 Methodist and 2 Friends. Bank: Greenwich Banking Co., Wm. A. Knapp, president, W. A. Hossler, cashier. Population in 1880, 647. School census, 1888, 276.

Monroeville is an incorporated town about ninety-five miles north from Columbus, fifty-nine miles west of Cleveland and five miles west of Norwalk. Three railroads have a junction here, viz.: L. S. & M. S., W. & L. E. and B. & O., and the "Nickel-plate" crosses the B. & O. four miles north of the town. It is surrounded by rich farming lands, cereals and fruits being the principal products. Its educational facilities are superior, and it has considerable manufacturing interests. Newspaper: Spectator, neutral, Simmons Bros., publishers. Churches: 1 Baptist, 1 Episcopal, 1 Lutheran, 1 Methodist Episcopal, 1 Catholic and 1 Presbyterian. Banks: First National, S. D. Fish, president, H. P. Stentz, cashier.

Manufactures and Employees.—Boehm & Yanquell, flour, etc., 3 hands; Heymon & Co., flour, etc., 9; S. E. Smith, agricultural implements, 6; John Hosford, fanning mills, 2.—State Report, 1888. Population in 1880, 1,221. School census, 1888, 476; W. H. Mitchell, school superintendent. Capital invested in industrial establishments, \$30,000. Value of annual product, \$60,000.—Ohio Labor Statistics, 1887.

NEW LONDON is ninety miles north of Columbus and forty-seven miles southwest of Cleveland via C. C. C. & I. R. R. Its early settlers were from New York and New England. It has one newspaper: *Record*, independent, Geo. W. Runyan, editor and proprietor. City Officers, 1888, D. R. Sackett, mayor; J. L. Young, clerk; C. Starbird, treasurer; H. K. Day, marshal. Three churches: 1 Baptist, 1 Methodist Episcopal and 1 Congregational. Principal industries are dairying, manufacture of flour, tile, churn and butter boxes, tables, carriages and wagons. Bank: First National, Alfred S. Johnson, president; John M. Sherman, cashier. Population in 1880, 1,011. School census, 1886, 295; Jas. L. Young, superintendent.

CHICAGO is seventy-five miles north of Columbus and fifteen southwest of Norwalk. The first building was erected in 1874, and occupied by Samuel L. Boweby as a grocery and hotel. Chicago is an evidence of the rapid growth of a town through the influence of railroads, three divisions of the B. & O. R. R. terminating here and causing the establishment of the town, which has grown to its present proportions notwithstanding serious drawbacks by fire and epidemic. It has one newspaper: *Times*, independent, S. O. Riggs, editor and publisher. Four churches: 1 United Brethren, 1 Methodist Episcopal, 1 Free Methodist and 1 Catholic. The B. & O. R. R. has machine and repair shops located here. Population in 1880, 662.

WAKEMAN is ten miles east of Norwalk, on the L. S. & M. S. R. R. Newspaper: *Independent Press*, Independent, G. H. Mains, editor and publisher.

Manufactures and Employees.—J. J. McMann, wagon felloes, etc., 5 hands; Geo. Humphrey, wagon felloes, etc., 6; S. T. Gibson, flour, etc., 2; J. R. Griffin, cooperage, 4.—Ohio State Report, 1887. Capital invested in industrial establishments, \$13,300. Value of annual product, \$15,200.—Ohio Labor Statistics, 1887.

JACKSON.

JACKSON COUNTY was organized in March, 1816. Area about 410 square miles. In 1887 the acres cultivated were 43,961; in pasture, 101,544; woodland, 42,499; lying waste, 5,226; produced in wheat, 96,726 bushels; rye, 2,890; buckwheat, 137; oats, 66,488; corn, 214,006; meadow hay, 12,918 tons; potatoes, 15,759 bushels; butter, 262,410 lbs.; cheese, 100; sorghum, 4,197 gallons; maple syrup, 194; honey, 2,833 lbs.; eggs, 307,191 dozen; grapes, 1,400 lbs.; sweet potatoes, 293 bushels; apples, 13,571; peaches, 9,094; pears, 76; wool, 47,491 lbs.; milch cows owned, 4,125. School census, 1888, 10,201; teachers, 167. Miles of railroad track, 125.

Also Coal township, formed in 1881. Population of Jackson in 1820 was 3,842; 1830, 5,941; 1840, 9,744; 1860, 17,941; 1880, 23,686, of whom 19,598 were born in Ohio; 1,003 Virginia, 814 Pennsylvania, 277 Kentucky, 71 Indiana, 55 New York, 770 England and Wales, 319 German Empire, 245 Ireland, 14 British America, 9 Scotland, and 7 France. U. S. Census, 1890, 28,408.

In our original edition we said: "The early settlers were many of them Western Virginians; and a considerable portion of its present inhabitants are from Wales and Pennsylvania, who are developing its agricultural resources. The surface is hilly, but in many parts produces excellent wheat. The exports are cattle, horses, wool, swine, millstones, lumber, tobacco, and iron. The county is rich in minerals, and abounds in coal and iron ore; and mining will be extensively prosecuted whenever communication is had with navigable waters by railroads."

Well, that prediction is now fact. Jackson is one of the great mining counties of Ohio; in coal it stands second only to Perry. The "Ohio Mining Statistics for 1888" gave these items: "Coal, 1,088,761 tons mined, employing 2,228 miners, and 332 outside employees; iron ore, 42,206 tons; fire clay, 9,720 tons; limestone, 21,125 tons burned for fluxing; 1,036 cubic feet of dimension stone."

limestone, 21,125 tons burned for fluxing; 1,036 cubic feet of dimension stone."

Prof. Orton, in his "Geological Report for 1884," states: "Four seams of coal are mined in shipping banks in Jackson county. They are as follows: the Shaft

seam, the Wellston coal, the Cannel coal, the Limestone coal.

"The Shaft seam supports two shipping banks at Jackson, in addition to the several furnace mines. There are also several small shipping mines along the

railroad, west of Jackson.

"The Wellston coal is the mainspring of the coal-mining industry of the country. The development of this field has advanced with great rapidity. In 1878 not more than 10,000 tons of coal were shipped from Jackson county. During that year two new lines of railway, built with the special object of reaching this coal, entered the field. The roads are the Ohio Southern (I. B. & W.) and the Toledo, Cincinnati and St. Louis Railway (narrow gauge). In 1880 the shipments reached nearly 300,000 tons, and in 1883 nearly 400,000 tons." Now, as above stated, it exceeds a million of tons.

THE OLD SCIOTO SALT-WORKS.

The old history of Jackson county is very interesting. The famous "old Scioto Salt-works" are in this region, on the banks of Salt creek, a tributary of the Scioto. The wells were sunk to the depth of about thirty feet, but the water was very weak, requiring ten or fifteen gallons to make a pound of salt. It was first made by the whites about the year 1798, and transferred from the kettles to pack-horses of the salt purchasers, who carried it to the various settlements, and sold it to the inhabitants for three or four dollars per bushel, as late as 1808. This saline was thought to be so important to the country that, when Ohio was formed into a State, a tract of six miles square was set apart by Congress, for the use of the State, embracing this saline. In 1804 an act was passed by the legislature regulating its management, and appointing an agent to rent out small lots on the borders of the creek, where the salt water was most abundant to the manufacturers. As better and more accessible saline springs have been discovered, these were now abandoned.

The expression, very common in this region. "shooting one with a pack-saddle," is said to have originated, in early days, in this way. A person, who had come on horseback, from some distance, to the salt-works to purchase salt, had his pack-saddle stolen by the boilers, who were a rough, coarse set, thrown into the salt furnace, and destroyed. He made little or no complaint, but determined

to have revenge for the trick played upon him. On the next errand of this nature, he partly filled his pack-saddle with gunpowder, and gave the boilers another opportunity to steal and burn it, which they embraced—when, lo! much to their consternation, a terrific explosion ensued, and they narrowly escaped serious injury.

These old salt-works were among the first worked by the whites in Ohio. They had long been known, and have been indicated on maps published as early as 1755.

The Indians, prior to the settlement of the country, used to come from long distances to make salt at this place; and it was not uncommon for them to be accompanied by whites, whom they had taken captive and adopted. Daniel Boone, when a prisoner, spent some time at these works. Jonathan Alder, a sketch of whom is under the head of Madison county, was taken a prisoner, when a boy, by the Indians, in 1782, in Virginia, and adopted into one of their families, near the head-waters of Mad river. He had been with them about a year, when they took him with them to the salt-works, where he met a Mrs. Martin, likewise

MINER'S TOOLS.

JACKSON.

a prisoner. The meeting between them was affecting. We give the particulars in his own simple and artless language:

Mrs. Martin's Story.—It was now better than a year after I was taken prisoner, when the Indians started off to the Scioto saltsprings, near Chillicothe, to make salt, and took me along with them. Here I got to see Mrs. Martin, that was taken prisoner at the same time I was, and this was the first time that I had seen her since we were separated at the council-house. When she saw me, she came smilling, and asked me if it was me. I told her it was. She asked me how I had been. I told her I had been very unwell, for I had had the fever and ague for a long time. So she took me off to a log, and there we sat down; and she combed my head, and asked me a great many questions about how I lived,

and if I didn't want to see my mother and little brothers. I told her that I should be glad to see them, but never expected to again. She then pulled out some pieces of her daughter's scalp that she said were some trimmings they had trimmed off the night after she was killed, and that she meant to keep them as long as she lived. She then talked and cried about her family, that was all destroyed and gone, except the remaining bits of her daughter's scalp. We stayed here a considerable time, and, meanwhile, took many a cry together; and when we parted again, took our last and final farewell, for I never saw her again.

CAPTIVITY AND ESCAPE OF SAMUEL DAVIS.

Mr. Samuel Davis, who is now (1846) residing in Franklin county, near Columbus, was taken prisoner by the Indians, and made his escape while within the present limits of this county. He was born in New England, moved to the West, and was employed by the governor of Kentucky as a spy against the Indians on the Ohio. The circumstances of his captivity and escape are from his biography, by Col. John McDonald:

In the fall of 1792, when the spies were discharged, Davis concluded he would make a winter's hunt up the Big Sandy river. He and a Mr. William Campbell prepared themselves with a light canoe, with traps and ammunition, for a fall hunt. They set off from Massie's station (Manchester), up the Ohio; thence up Big Sandy some distance, hunting and trapping as they went along. Their success in hunting and trapping was equal to their expectation. Beaver and otter were plenty. Although they saw no Indian sign, they were very circumspect in concealing their canoe, either by sinking it in deep water, or concealing it in thick willow brush. They generally slept out in the hills, without fire. This constant vigilance and care was habitual to the frontier men of that day. They hunted and trapped till the winter began to set in. They now began to think of returning, before the rivers would freeze up. They accordingly commenced a retrograde move down the river, trapping as they leisurely went down. They had been several days going down the river; they landed on a small island covered with willows. Here they observed signs of beaver. They set their traps, dragged their canoe among the millows and remained quiet till late in the willows, and remained quiet till late in the night. They now concluded that any per-sons, white, red, or black, that might happen to be in the neighborhood, would be in their They then made a small fire among the willows, cooked and eat their supper, and lay down to sleep without putting out their fire. They concluded that the light of their small fire could not penetrate through the thick willows. They therefore lay down in

perfect self-security. Some time before day, as they lay fast asleep, they were awakened by some fellows calling in broken English: "Come, come; get up, get up." Davis awoke from sleep, looked up, and, to his astonishment found himself and companion surrounded y a number of Indians, and two standing over him with uplifted tomahawks. To resist in such a case would be to throw away their lives in hopeless struggle. They surrendered themselves prisoners.

The party of Indians, consisting of upwards of thirty warriors, had crossed the Ohio about the mouth of Guyandotte river, and passed through Virginia to a station near the head of Big Sandy. They attacked the station and were repulsed, after continuing their attack two days and nights. Several Indians were killed during the siege and several wounded. They had taken one white man prisoner from the station, by the name of Daniels, and taken all the horses belonging to the station. The Indians had taken, or made, some canoes, in which they placed their wounded and baggage, and were descending the river in their canoes. As they were moving down in the night they discovered a glimpse of Davis' fire through the willows. They cautiously landed on the island, found Davis and Campbell fast asleep, and awakened them in the manner above related.

Davis and Campbell were securely fastened with tugs, and placed in their own canoe. Their rifles, traps, and the proceeds of their successful hunt, all fell into the hands of the Indians. The Indians made no delay, but immediately set off down the river in their

canoes with their prisoners, while their main force went by land, keeping along the river bottoms with the horses they had taken from the station—keeping near the canoes, so as to be able to support each other in case of pursuit or attack. Early the next day they reached the Ohio. The wounded and prisoners were first taken across the Ohio, and placed under a guard. They returned with the canoes (leaving their arms stacked against a tree), to assist in getting the horses across the river. It was very cold, and as soon as the horses would find themselves swimming they would turn round and land on the same shore. The Indians had a great deal of trouble before they got the horses across the Ohio. The guard who watched Davis and his companions were anxious, impatient spectators of the restive disposition of the horses to take the water. Upon one occasion the guard left the prisoners twenty or thirty yards, to have a better view of the difficulty with the horses. Davis and his fellow-prisoners were as near to where the arms were stacked as were the Indian guard. Dayls, who possessed courage and presence of mind in an eminent degree, urged his fellow-prisoners to embrace the auspicious moment, seize the arms, and kill the guard. His companions faltered; they thought the attempt too perilous. Should they fail of success, nothing but instant death would be the consequence. While the prisoners were hesitating to adopt the bold plan of Davis, their guard returned to their arms, to the chagrin of Davis. This opportunity of escape was permitted to pass by without being used. Davis ever after affirmed that if the opportunity which then presented itself for their escape had been boldly seized their escape was certain.

He frequently averred to the writer of this narrative, that if Duncan M'Arthur, Nat Beasly, or Sam M'Dowel, had been with him upon this occasion, similarly situated, that he had no doubt they would not only have made their escape, but killed the guard and the wounded Indians, and carried off or destroyed the Indians' arms. He said, if it had not been for the pusillanimity of his fellowprisoners they might have promptly and boldly snatched themselves from captivity, and done something worth talking about. The opportunity, once let slip, could not again be recalled. The Indians, after a great deal of exertion, at length got the horses across the Ohio, and hastily fixed litters to carry their wounded. They destroyed their canoes, and went ahead for their own country.

This body of Indians was commanded by a Shawnee chief, who called himself Captain Charles Wilkey. After Wayne's treaty, in 1795, when peace blessed our frontiers, the writer of this sketch became well acquainted with this Captain Wilkey. He was a short. thick, strong, active man, with a very agreeable and intelligent countenance. He was communicative and social in his manners. The first three or four years after Chillicothe was settled, this Indian mixed freely with the whites, and upon no occasion did he show

a disposition to be troublesome. admitted by the other Indians who spoke of him to be a warrior of the first order—fertile in expedients, and bold to carry his plans into execution. Davis always spoke of him as being kind and humane to him.

The Indians left the Ohio and pushed across the country in the direction of Sandusky; and as they were encumbered with several wounded and a good deal of baggage, without road or path, they travelled very slow, not more than ten or twelve miles a day. As many of the prisoners, taken by the Indians, were burned with slow fires, or otherwise tortured to death, Davis brooded over his captivity in sullen silence, and determined to effect his escape the first opportunity that would offer, that would not look like madness to embrace. At all events, he determined to

effect his escape or die fighting.

The Indians moved on till they came to Salt creek, in what is now Jackson county, O., and there camped for the night. manner of securing their prisoners for the night was as follows: They took a strong tug made from the raw hide of the buffalo or elk. This tug they tied tight around the prisoner's waist. Each end of the tug was fastened around an Indian's waist. Thus, with the same tug fastened to two Indians, he could not turn to the one side or the other without drawing an Indian with him. In this uncomfortable manner the prisoner had to lie on his back till the Indians thought proper to rise. If the Indians discovered the prisoner making the least stir they would quiet him with a few blows. In this painful situation the prisoners must lie till light in the morning, when they would be unconfined. As the company of Indians was numerous, the prisoners were unconfined in daylight, but were told that instant death would be the consequence of any movement to leave the line of march, upon any occasion whatever, unless accompanied by an Indian.

One morning, just before day began to appear, as Davis lay in his uncomfortable situation, he hunched one of the Indians to whom he was fastened, and requested to be untied. The Indian raised up his head and looked round, and found it was still dark, and no Indians up about the fires. He gave Davis a severe dig with his fist and bid him lie still. Davis's mind was now in a state of desperation. Fire and faggot, sleeping or awake, were constantly floating before his mind's eye. This torturing suspense would chill his soul with horror. After some time a number of Indians rose up and made their fires. It was growing light, but not light enough to draw a bead. Davis again jogged one of the Indians to whom he was fastened, and said the tug hurt his middle, and again requested the Indian to untie him. The Indian raised up his head and looked round, and saw it was getting light, and a number of Indians about the fires; he untied him. Davis rose to his feet, and was determined, as soon as he could look around and see the most probable direction of making his escape, to make the attempt, at

all hazards. He "screwed his courage to the sticking point." It was a most desperate sticking point." It was a most desperate undertaking. Should he fail to effect his escape, death, instant, cruel death, was his certain doom.

As he rose up to his feet, with this determined intention, his heart fluttered with tremors—his sight grew dim at the thought of the perilous plunge he was about to make. He rose up to his feet-stood a minute between the two Indians to whom he had been fastened, and took a quick glance at the Indians who were standing around him. In the evening the Indians had cut two forks, which were stuck into the ground; a pole was laid across these forks, and all their rifles were leaned against the pole. If he made his start back from the Indian camp, the rifles of the Indians, who were standing round the fires, and who, he knew, would pursue him, would be before them; and as they started after him they would have nothing to do but pick up a rifle as they ran. On the contrary, if he made his plunge through the midst of them, they would have to run back for their guns, and by that time, as it was only twilight in the morning, he could be so far from them that their aim would be very uncertain. All this passed through his mind in a moment. As he determined to make his dash through the midst of the Indians who were standing around the fires, he prepared his mind and body for the dreadful attempt.

The success of his daring enterprise depended on the swiftness of his heels. He knew his bottom was good. A large, active Indian was standing between Davis and the fire. He drew back his fist and struck that Indian with all his force, and dropped him into the fire; and with the agility of a buck, he sprang over his body, and took to the woods with all the speed that was in his power. The Indians pursued, yelling and screaming like demons; but as Davis anticipated, not a gun was fired at him. Several Indians pursued him for some discreament of the several fired at him for some discreament. tance, and for some time it was a doubtful The foremost Indian was so close to him, that he sometimes fancied that he felt his clutch. However, at length Davis began to gain ground upon his pursuers—the breaking and rustling of brush was still farther and He took up a long, sloping farther off. ridge; when he reached the top, he, for the first time, looked back, and, to his infinite pleasure, saw no person in pursuit.

He now slackened his pace, and went a mile or two farther, when he began to find his feet gashed and bruised by the sharp stones over which he had run, without picking his way, in his rapid flight. He now stopped, pulled off his waistcoat, tore it into pieces, and wrapped them around his feet instead of moccasons. He now pushed his way for the Ohio. He crossed the Scioto river, not far from where Piketon, in Pike county, now stands. He then marched over the rugged hills of Sunfish, Camp creek, Scioto Brush creek and Turkey creek, and struck the Ohio river eight or ten miles below the mouth of Scioto. It was about the first of January. He was nearly three days and two nights without food, fire, or covering, exposed to the winter storms. Hardy as he undoubtedly was, these exposures and privations were almost too severe for human nature to sustain. But as Davis was an unwavering believer in that All-seeing eye, whose providence prepares means to guard and protect those who put their trust in him, his confidence and courage never forsook him for a moment during this trying and

fatiguing march.

When he arrived at the Ohio he began to look about for some dry logs to make a kind of raft on which to float down the stream. Before he began to make his raft he looked up the Ohio, and to his infinite gratification he saw a Kentucky boat come floating down the stream. He now thought his deliverance Our fondest hopes are frequently blasted in disappointment. As soon as the boat floated opposite to him he called to the people in the boat—told them of his lamentable captivity and fortunate escape. The boatmen heard his tale of distress with suspicion. Many boats about this time had been decoyed to shore by similar tales of woe, and as soon as landed their inmates cruelly massacred. The boatmen heard his story, but refused to land. They said they had heard too much about such prisoners and escapes to be deceived in his case. As the Ohio was low he kept pace with the boat as it slowly glided

The more pitiably he described his forlorn situation the more determined were the boat crew not to land for him. He at length requested them to row the boat a little nearer the shore and he would swim to them To this proposition the boatmen consented. They commenced rowing the boat towards the shore, when Davis plunged into the freezing water and swam for the boat. The boatmen seeing him swimming towards them, their suspicion gave way, and they rowed the boat with all their force to meet him. He was at length lifted into the boat almost exhausted. (Our old boatmen, though they had rough exteriors, had Samaritan hearts.) The boatmen were not to blame for their suspicion. They now administered to his relief and comfort everything that was in their power. That night, or the next morning, he was landed at Massie's station (Manchester), among his former friends and associates, where he soon recovered his usual health and activity.

Jackson in 1846.—Jackson, the county-seat, was laid out in 1817, and is seventy-three miles southeast of Columbus, and twenty-eight from Chillicothe. It contains 1 Presbyterian, 1 Baptist, 1 Methodist Episcopal, and 1 Protestant Methodist church, 6 or 8 stores, 1 newspaper printing office, and, in 1840, had

297 inhabitants; since which the town has rapidly improved, and is now judged to contain a population of 500. In this vicinity are several valuable mineral springs, and also remains of ancient fortifications; and in this county, about ten years since, was found the remains of a mastodon, described in the public prints of the time.—Old Edition.

Jackson, county-seat of Jackson, is seventy-five miles south of Columbus, on the Portsmouth branch of the C. W. & B. Railroad; on the O. S., and on the D. & I. Railroads. The surrounding country is rich in iron ore, and a superior

quality of coal for smelting purposes is found in unlimited quantities.

County Officers.—Auditor, George J. Reiniger; Clerk, T. J. Williams; Commissioners, Stephen M. Tripp, David D. Edwards, John E. Jones; Coroner, J. F. Morgan; Infirmary Directors, Joseph Hale, Jr., J. H. Harshbarger, Patrick H. Garrett; Probate Judge, Jesse W. Laird; Prosecuting Attorney, Ambrose Leuch; Recorder, James J. Bennett; Sheriff, Isaac C. Long; Surveyor, Evan C. Jones; Treasurer, Lot Davies.

City Officers.—T. A. Jones, Mayor; J. S. Johnson, Clerk; W. J. Jones, Treasurer; Jared Martin, Marshal; Henry Shuter, Street Commissioner; David

Griffith, Weighmaster.

Newspapers.—Jackson Herald, Democratic, Johnson & Hinkle, publishers;

Jackson Journal, Republican, Gerken & Tripp, publishers.

Churches.—1 Methodist Episcopal, 1 Colored Methodist Episcopal, 1 Baptist, 1 Colored Baptist, 1 Catholic, 1 German Lutheran, 1 Presbyterian, 1 Welsh Presbyterian.

Manufactures and Employees.—Tropic Iron Co., pig-iron, 30 hands; May Brothers, eigars, 3; Ruf Leather Co., oak harness-leather, 14; Peters & Huntsinger, flour, meal, and feed, 2; John Dauber, furniture, etc., 4; Franklin Mill Co., flour, etc., 6; Globe Iron Co., pig-iron, 30; Jackson Electric Light Co., electric light, 3; Star Furnace Co., pig-iron, 30; Jackson Mill and Lumber Co., doors, sash, etc., 8; Buckeye Mill and Lumber Co., doors, sash, etc., 8; Franklin Mill Co., blankets, flannels, etc., 17.—State Reports, 1888.

Banks.—First National, T. S. Matthews, president, D. Armstrong, cashier;

Iron, Isaac Brown, president, T. P. Sutherland, cashier.

Population in 1880, 3,021. School census, 1888, 1,476; J. E. Kinnison, school superintendent. Census, 1890, 4,275. Capital invested in industrial establishments, \$47,700; value of annual product, \$57,500.—Ohio Labor Statistics, 1887.

TRAVELLING NOTES.

On my original tour I visited every county in the State but Jackson and three of the Black Swamp counties, viz., Ottawa, Paulding, and Williams, where there was little or no history and mostly all a wilderness, with few inhabitants other than wild animals. When near the close of that tour, the last of February, 1847, I arrived at Chillicothe, I designed to ride over to Jackson Court-House, as they then called it; but the roads were breaking up with the oncoming of spring, and "Old Pomp" had acquired such a habit of stumbling to his knees, that I felt to attempt the journey over the rough road then intervening between the places would be at too serious a peril to life and limb. Since that day Jackson has been a desire for my eyes, and now, on a March day, 1886, I breathe more free, for I have reached Jackson.

When this county was formed Gen. Jackson was in the height of his military glory, and so it was named in his honor. And thus the name is a key to the date of its formation, as it is with other counties around, as Perry, Lawrence, etc.

Jackson is one of the best of sites for a village. It lies upon the summit or backbone of a gentle rolling ridge, about fifty feet above Salt creek. The streets are of great width. Main street, the principal one, on which are the county buildings and most of the business places, crowns the ridge. From it the land falls

away gently in all directions, until the scene is closed by a circumference of low hills a mile or two away. Thus a free circulation of air, perfect drainage, health, and free prospects are supplied to its inhabitants. No gas nor water-works are established here with bills to send out, and no tall, ambitious structures to require a laborious getting up-stairs. At night several furnaces send up from the outskirts their lurid light. The basis for these smelting establishments is "the excellent Jackson block coal," or "the shaft coal."

The town has a large proportion of Welsh people, who are given to mining. The whole country, north and east of Jackson, teems with veins of coal, while

iron is found everywhere in vast quantities.

There is not enough of wheat, oats and hay raised in this county for home consumption. Cattle, horses and sheep are raised largely. It is fair for grass and excellent for fruit, and for the production of a healthy, strong people. In this vicinity were the old Scioto Salt Works, and near here once lived a very valuable man to Ohio, a sketch of whom follows:

William Williams Mather, LL.D., was born May 4, 1804, in Brooklyn, Conn., a descendant from the family of Cotton and Increase Mather. At an early age he showed great aptitude for chemical analysis and the study of mineralogy. When he entered West Point Academy, in June, 1823, he was already proficient in chemical analysis, and soon went to the head of his classes in chemistry and

mineralogy.

On graduating, he remained in the United States service about eight years. In 1829 he was detailed as acting professor of chemistry and mineralogy at West Point. In August, 1836, he resigned from the army to take part in the geological survey of New York, and in 1837 came to Ohio to superintend the first geological survey of this State. After the suspension of the Ohio survey he purchased a tract of several hundred acres, including the Pigeon Roost, north of the court-house in Jackson county, on which he built a house, cleared a farm, and became a citizen of Ohio. Professor Mather was large and dignified in person and an indefatigable worker. held professorships in the Wesleyan University, at Middletown, Conn.; Marietta College and the Ohio University, at Athens, of

which he was vice-president from 1850 to 1854, during which time he was also chemist and secretary of the Ohio State Board of Agriculture. He died February 26, 1859, of paralysis of the heart while rising from his bed. His first wife, Emily M. Baker, died in November, 1850. In August, 1851, he married Mrs. Mary Curtis, of Columbus, Ohio.

A West Point classmate, Col. Charles Whittlesey, has given the following synopsis

of his character:

"Not possessing the genius which dazzles, he had an intellect which continually improved by exercise, achieving valuable results by patient and conscientious industry. . Not indifferent to fame, he never sought it by doubtful or devious courses. His object was to enhance his reputation, but faithfully to do the work before him. . . . In his extensive knowledge of the physical world, in all his scientific investigations, he found nothing to foster the barren spirit of scepticism or a cold and cheerless infidelity. . . The deep recesses of the earth which he explored taught him lessons of the infinite wisdom, force and goodness of the Deity.

Wellston is eighty-five miles southeast of Columbus, 126 miles east of Cincinnati, and ten miles northeast of Jackson, on the Portsmouth branch of the C. W. & B. Railroad, at the terminus of the O. S. Railroad, and on the D. Ft. W. & C. Railroad. Located in the centre of large and valuable fields of iron ore, coal and limestone, practically inexhaustible, it is more than likely to become a

great manufacturing and mining centre.

Newspapers: Argus, Republican, W. E. Bundy, editor; Ohio Mining Journal, Hon. Andrew Roy and W. E. Bundy, editors; Central Free Will Baptist, religious, Rev. T. E. Peden, editor. Churches: one Methodist Episcopal, one Catholic, one Presbyterian, one United Brethren, one Baptist, one Welsh. Bank: First National, H. S. Willard, president, J. H. Sellers, Jr., cashier. City Officers: Mayor, Adam Scott; Clerk, J. M. Baker; Marshal, J. B. Hutchison; Treasurer, George W. Andrews; Solicitor, Thomas Moore; Street Commissioner, Henry Hadker.

Manufactures and Employees.—Hahn, Kruskamp & Murphy, flour, etc., 7 hands; A. B. Leach, doors, sash, etc., 10; Wellston Argus, printing, etc., 4; Milton Furnace, pig-iron, 32; Wellston Foundry and Machine Works, foundry and machine work, 45.—State Report, 1888. Population in 1880, 952. School census, 1888, 1,395; T. S. Hogan, school superintendent. Capital invested in industrial establishments, \$318,000. Value of annual product, \$485,000.—Ohio Labor Statistics, 1887. U. S. census, 1890, 4,694.

MINERAL WEALTH.

The development of Wellston and surroundings, showing, as it does, the vast stores of undeveloped mineral wealth in Southern Ohio, only awaiting the master mind to make it productive, requires that something more than a brief description should be given of a town which, in little more than a decade, developed from a

farm to a place of more than 5,000 inhabitants.

In 1869 the discovery of inexhaustible beds of coal of a superior quality attracted the attention of capitalists to this region, and in November, 1873, the town of Wellston (named in honor of its founder, Harvey Wells) was laid out on a farm purchased of Hon. H. S. Bundy. The new town was well planned, no street being less than seventy-four feet and some of them more than 100 feet in width. February 2, 1874, contracts were made for the construction of the first iron furnace, double blast, for the Wellston Coal and Iron Company. Other furnaces followed, and notwithstanding the panic and hard times prevalent throughout the country, the young town grew and prospered, railroads were projected and built, and new enterprises were entered into. In February, 1876, the village was incorporated; in 1880 the United States Census Reports gave it a population of 952, but in 1887 a conservative estimate placed its population at 5,000, or more, and its sure, rapid and steady growth is destined to make it a large mining and manufacturing centre. In 1885 an important experiment in co-operation was started here by Mr. Harvey Wells, viz., The Wellston Steel and Nail Company. It is the only concern of its kind in the country; its prospects are bright, and its progress as a factor in solving the all-important labor problem will be watched with interest.

We make some quotations as to the resources of this region from an article by Hon. Andrew Roy, which was published in the Wellston Argus, April 30, 1887:

"No mineral region in Ohio or in the United States can bear comparison with Wellston and its surroundings, whether we consider the extent and quality of the mineral treasures or the unparalleled development of the coal and iron industries. There are twelve shafts for mining coal in active operation within a radius of two miles of the town, besides four blast furnaces and one rolling or steel and nail mill. These industries give direct employment to 2,000 men. The capacity of the mines is equal to half a million tons annually, while the capacity of the blast furnaces is fully 300,000 tons of pig-iron.

"The quality of the coal has become so fully established in market that there is no longer cavil or dispute in regard to its rank. It stands at the head of the

bituminous coals of the United States.

"The quality of the limestone ore of this region need hardly be alluded to now, after forty years of successful effort. The Wellston coal does not more surely surpass all other coals in Southern Ohio, than that the limestone iron ore surpasses all other ores.

"The Hanging Rock iron is known all over the United States for its superior quality and its adaptability for the finest purposes of trade—for the manufacture of car-wheels, ordnance, and other castings which require to be made out of un-

usually tough and strong iron.

"The supply of siderate iron ore is practically inexhaustible in Jackson county." OAK HILL is ten miles southeast of Jackson, on the C. W. & B. Railroad. Population in 1880, 646. School census, 1888, 283.

COALTON, five miles north of Jackson, at the point where the O. S. & T. and C. & St. L. Railroads meet, is a great mining centre; another is GLEN ROY, a few miles east of it.

JEFFERSON.

JEFFERSON COUNTY, named from President Jefferson, was the fifth county established in Ohio. It was created by proclamation of Governor St. Clair, July 29, 1797; its original limits included the country west of Pennsylvania and Ohio; and east and north of a line from the mouth of the Cuyahoga; southwardly to the Muskingum, and east to the Ohio. Within those boundaries are Cleveland, Canton, Steubenville, Warren, and many other large towns and populous counties. The surface is hilly and the soil fertile. It is one of the greatest manufacturing counties in the State, and abounds in excellent coal. Area about 440 square miles. In 1887 the acres cultivated were 76,976; in pasture, 86,680; woodland, 39,543; lying waste, 3,474; produced in wheat, 219,812 bushels; rye, 1,320; buckwheat, 168; oats, 309,089; barley, 2,511; corn, 517,398; broom-corn, 3,800 lbs. brush; meadow hay, 36,157 tons; clover hay, 4,201; flaxseed, 39 bushels; potatoes, 74,-795; butter, 472,913 lbs.; cheese, 600; sorghum, 1,740 gallons; maple syrup, 5,146; honey, 4,938 lbs.; eggs, 443,652 dozen; grapes, 9,820 lbs.; wine, 540 gallons; sweet potatoes, 10 bushels; apples, 29,121; peaches, 785; pears, 1,644; wool, 566,680 lbs.; milch cows owned, 5,284. School census, 1888, 11,905; teachers, 250. Miles of railroad track, 83. Coal mined, 243,178 tons, employing 347 miners and 80 outside employees; fire-clay, 144,090 tons.—Ohio Mining Statistics, 1888.

Census, 1890, 39,415.

EARLY HISTORY.

The old Mingo town, three miles below Steubenville, now (1846) the site of the farms of Jeremiah H. Hallock, Esq., and Mr. Daniel Potter, was a place of note prior to the settlement of the country. It was the point where the troops of Colonel Williamson rendezvoused in the infamous Moravian campaign, and those of Colonel Crawford, in his unfortunate expedition against the Sandusky Indians. It was also at one time the residence of Logan, the celebrated Mingo chief, whose form was striking and manly and whose magnanimity and eloquence have seldom

been equalled. He was a son of the Cayuga chief Skikellimus, who dwelt at Shamokin, Pa., in 1742, and was converted to Christianity under the preaching of the Moravian missionaries. Skikellimus highly esteemed James Logan, the secretary of the province, named his son from him, and probably had him baptized by the missionaries.

In early life, Logan for a while dwelt in Pennsylvania, and in Day's Historical Collections of that State is a view in Mifflin county of Logan's Spring, which which will long remain a memorial of this distinguished chief. The letter below gives an incident which occurred there that speaks in praise of Logan. It was written by the Hon. R. P. Maclay, a member of the State Senate, and son of the gentleman alluded to in the anecdote, and published in the Pittsburg Daily American:

SENATE CHAMBER, March 21, 1842.

To George Darsie, Esq., of the Senate of Pennsylvania:

Dear Sir—Allow me to correct a few inaccuracies as to place and names, in the anecdote of Logan, the celebrated Mingo chief, as published in the Pittsburg Daily American of March 17, 1842, to which you called my attention. The person surprised at the spring, now called the Big Spring, and about six (four) miles west of Logan's Spring, was William Brown—the first actual settler in Kishacoquillas valley, and one of the associate judges in Mifflin county, from its organization till his death, at the age of ninety-one or two—and not Samuel Maclay, as contact her Dr. Hildren, I will give your the procedure of I heavel it related her Dr. Hildren, I will give your the procedure of I heavel it related by Under Roome. as stated by Dr. Hildreth. I will give you the anecdote as I heard it related by Judge Brown himself, while on a visit to my brother, who then owned and occupied the Big Spring farm,

four miles west of Reedville:

"The first time I ever saw that spring," said the old gentleman, "my brother, James Reed and myself, had wandered out of the valley in search of land, and finding it very good, we were looking about for springs. About a mile from this we started a bear, and separated to get a shot at him. I was travelling along, looking about on the rising ground for the bear, to get a snot at him. I was travelling along, looking about on the rising ground for the bear, when I came suddenly upon the spring; and being dry, and more rejoiced to find so fine a spring than to have killed a dozen bears, I set my rifle against a bush and rushed down to the bank and laid down to drink. Upon putting my head down, I saw reflected in the water, on the opposite side, the shadow of a tall Indian. I sprang to my rifle, when the Indian gave a yell, whether for peace or war I was not just then sufficiently master of my faculties to determine; but upon my seizing my rifle, and facing him, he knocked up the pan of his gun, threw out the priming, and extended his open palm toward me in token of friendship. After putting down our guns we again met at the spring and shook hands. This was Logan After putting down our guns, we again met at the spring, and shook hands. This was Logan—the best specimen of humanity I ever met with, either white or red. He could speak a —the best specimen of numanity I ever met with, either whate of real. He could speak a little English, and told me there was another white hunter a little way down the stream, and offered to guide me to his camp. There I first met your father. We remained together in the valley a week, looking for springs and selecting lands, and laid the foundation of a friend-ship which never has had the slightest interruption.

"We visited Logan at his camp, at Logan's Spring, and your father and he shot at a mark

"We visited Logan at his camp, at Logan's Spring, and your father and he shot at a mark for a dollar a shot. Logan lost four or five rounds, and acknowledged himself beaten. When we were about to leave him, he went into his hut, and brought out as many deer-skins as he had lost dollars, and handed them to Mr. Maclay—who refused to take them, alleging that we had been his guests, and did not come to rob him—that the shooting had been only a trial of skill, and the bet merely nominal. Logan drew himself up with great dignity, and said: 'Me bet to make you shoot your best—me gentleman, and me take your dollar if me beat.' So he was obliged to take the skins, or affront our friend, whose nice sense of honor would not permit him to receive even a horn of powder in return.

"The next year," said the old gentleman, "I brought my wife up and camped under a big walnut tree, on the bank of Tea creek, until I had built a cabin near where the mill now stands, and have lived in the valley ever since. Poor Logan" (and the big tears coursed each other down his cheeks) "soon after went into the Allegheny, and I never saw him again.

"Yours, R. P. Maclay."

Mrs. Norris, who lives near the site of Logan's spring, is a daughter of Judge Brown; she confirmed the above, and gave Mr. Day the following additional incidents, highly characteristic of the benevolent chief, which we take from that gentleman's work:

Logan supported his family by killing deer, dressing the skins, and selling them to the whites. He had sold quite a parcel to one De Yong, a tailor, who lived in Ferguson's valley, below the gap. Tailors in those days dealt extensively in buckskin breeches. Logan received his pay, according to stipulation, in wheat. The wheat, on being taken to the mill, was found so worthless that the miller refused to grind it. Logan was much chagrined, and attempted in vain to obtain redress from the tailor. He then took the matter before his friend Brown, then a magistrate; and on the judge's questioning him as to the character of the wheat, and what was in it, Logan sought in vain to find words to express the precise nature of the article with which the wheat was adulterated, but said that it resembled in appearance the wheat itself. "It must have been cheat," said the judge. "Yoh!" said Logan, "that very good name for him." A decision was awarded in Logan's favor, and a writ given to Logan to hand to the constable, which, he was told, would bring him the money for his skins. But the untutored Indian—too uncivilized to be dishonest—could not comprehend by what magic this little paper would force the tailor, against his will, to pay for the skins. The against his will, to pay for the skins. The judge took down his own commission, with the arms of the king upon it, and explained to him the first principles and operations of civil law. "Law good," said Logan; "make rogues pay." But how much more simple and efficient woutheless which the Great and efficient was the law which the Great Spirit had impressed upon his heart—to do as he would be done by!

When a sister of Mrs. Norris (afterwards Mrs. Gen. Potter) was just beginning to learn to walk, her mother happened to express her regret that she could not get a pair of shoes to give more firmness to her little step. Logan stood by, but said nothing. He soon after asked Mrs. Brown to let the little girl go up and spend the day at his cabin. The go up and spend the day at his cabin. The cautious heart of the mother was alarmed at such a proposition; but she knew the delicacy of an Indian's feelings—and she knew Logan, too-and with secret reluctance, but apparent cheerfulness, she complied with his request. The hours of the day wore very slowly away, and it was nearly night, when her little one had not returned. But just as the sun was going down, the trusty chief was seen coming down the path with his charge; and in a moment more the little one trotted into her mother's arms, proudly exhibiting a beautiful pair of moccasons on her little feet—the product of Logan's skill.

Logan took no part in the old French war, which ended in 1760, except that of a peace-maker, and was always the friend of the white people until the base murder of his family, to which has been attributed the origin of Dunmore's war. This event took place near the mouth of Yellow creek, in this county, about seventeen miles above Steubenville. The circumstances have been variously related. We annex them as given by Henry Jolly, Esq., who was for a number of years an associate judge on the bench of Washington county, in this State. The facts are very valuable, as coming from the pen of one who saw the party the day after the murder; was personally acquainted with some of the individuals, and familiar with that spot and the surrounding region.* He says:

I was about sixteen years of age, but I very well recollect what I then saw, and the information that I have since obtained was derived from (I believe) good authority. In the spring of the year 1774, a party of Indians encamped on the northwest of the Ohio near the mouth of the Yellow creek. A party of whites, called "Greathouse's party," lay on the opposite side of the river. The Indians came over to the white party, consisting, I think, of five men and one woman, with an infant. The whites gave them rum, which three of them drank, and in a short time they became very drunk. The other two men and the woman refused to drink. The sober Indians were challenged to shoot at a mark, to which they agreed; and as soon as they had emptied their guns, the whites shot them down. The woman attempted to escape by flight, but was also shot down; she lived long enough, however, to beg mercy for her babe, telling them that it was akin to themselves. The whites had a man in the cabin, prepared with a tomahawk, for the purpose

of killing the three drunken Indians, which was immediately done. The party of men then moved off for the interior settlements, and came to "Catfish Camp" on the evening of the next day, where they tarried until the day following. I very well recollect my mother feeding and dressing the babe; chirruping to the little innocent, and it smiling. However, they took it away, and talked of sending it to its supposed father, Col. George Gibson, of Carlisle, Pa., "who was then, and had been for many years, a trader among the Indians." The remainder of the party at the mouth of Yellow creek, finding that their friends on the opposite side of the river were massacred, attempted to escape by descending the Ohio; and in order to prevent being discovered by the whites, passed on the west side of Wheeling island, and landed at Pipe creek, a small stream that empties into the Ohio a few miles below Grave creek, where they were overtaken by Cresap, with a party of men from Wheeling.† They took one Indian scalp, and had one white man

* This statement was written for Dr. S. P. Hildreth, by Mr. Jolly, and published in Silliman's Journal, for 1836.

[†] Cresap did not live at Wheeling, but happened to be there at that time with a party of men, who had, with himself, just returned from an exploring expedition down the Ohio, for the purpose of selecting and appropriating lands (called in the West, locating lands) along the river in choice situations; a practice at that early day very common, when Virginia claimed both sides of the stream, including what is now the State of Ohio.—S. P. Hildreth.

(Big Tarrener) badly wounded. They, I believe, carried him in a litter from Wheeling to Redstone. I saw the party on their return from their victorious campaign. The Indians had, for some time before these events, thought themselves intruded upon by the "Long Knife," as they at that time called the Virginians, and many of them were for war. However, they called a council, in which Logan acted a conspicuous part. He admitted their grounds of complaint, but at the same time reminded them of some aggressions on the part of the Indians, and that by a war they could but harass and distress the frontier settlements for a short time; that "the Long Knife" would come like the trees in the woods, and that ultimately they should be driven from the good lands which they now possessed. He therefore strongly recommended peace. To him they all agreed; grounded the hatchet, and everything wore grounded the hatchet, and everything wore a tranquil appearance; when behold, the fugitives arrived from Yellow creek, and reported that Logan's father, brother, and sister were murdered! Three of the nearest and dearest relations of Logan had been massacred by white men. The consequence was, that this same Logan, who a few days before was a peaific raised the hatchet with a decree was so pacific, raised the hatchet, with a declaration that he would not ground it until he had taken ten for one; which I believe he completely fulfilled, by taking thirty scalps and prisoners in the summer of 1774. The above has often been related to me by several

persons who were at the Indian towns at the time of the council alluded to, and also when the remains of the party came in from Yellow creek. Thomas Nicholson, in particular, has told me the above and much more. Another person (whose name I cannot recollect) informed me that he was at the towns when the Yellow creek Indians came in, and that there was great lamentation by all the Indians of that place. Some friendly Indian advised him to leave the Indian settlements, which he did. Could any rational person believe for a moment that the Indians came to Yellow creek with hostile intentions, or that they had any suspicion of similar intentions, on the part of the whites, against them? Would five men have crossed the river, three of them become in a short time dead drunk, while the other two discharged their guns, and thus put themselves entirely at the mercy of the whites; or would they have brought over a squaw with an infant pappoose, if they had not reposed the utmost confidence in the friendship of the whites? Every person who is at all acquainted with Indians knows better; and it was the belief of the inhabitants who were capable of reasoning on the subject, that all the depredations committed on the frontiers, by Logan and his party, in 1774, were as a retaliation for the murder of Logan's friends at Yellow creek. It was well known that Michael Cresap had no hand in the massacre at Yellow creek.*

During the war which followed, Logan frequently showed his magnanimity towards prisoners who fell into his hands. Among them was Maj. Wm. Robinson, of Clarksburg, Va., from whose declaration, given in "Jefferson's Notes," and information orally communicated by his son, Col. James Robinson, now living near Coshocton, these facts are derived.

On the 12th of July, 1774, Major Robinson, then a resident on the west fork of the Monongahela river, was in the field with Mr. Colburn Brown and Mr. Helen, pulling flax, when they were surprised and fired upon by a party of eight Indians, led by Logan. Mr. Brown was killed and the other two made prisoners. On the first alarm Mr. Robinson started and ran. When he had got about fifty yards Logan called out in English: "Stop, I won't hurt you!" "Yes, you will," replied Robinson, in tones of fear. "No, I won't," rejoined Logan, "but if you don't stop, by — I'll shoot you." Robinson still continued his race, but, stumbling over a log, fell and was made captive by a fleet savage in pursuit. Logan immediately made himself known to Mr. Robinson and manifested a friendly disposition to him, told him that he must be of good heart and go with him to his town, where he would probably be adopted in some of their families. When near the Indian village, on the site of Dresden, Muskingum county, Logan informed him that he must run the gauntlet, and gave him such directions that he reached the council-house without the slightest harm. He was then tied to a stake for the purpose of being burnt, when Logan arose and addressed the assembled council of chiefs in his behalf. He spoke long and with great energy,

^{*} A brother of Capt. Daniel Greathouse, said to have been present at the massacre, was killed by the Indians the 24th March, 1791, between the mouth of the Scioto and Limestone, while emigrating to Kentucky in a flat-boat, with his family. He seems to have made little or no resistance to the Indians, who attacked him in canoes. They probably knew who he was, and remembered the slaughter of Logan's family, as he was taken on shore, tied to a tree, and whipped to death with rods.—S. P. Hildreth.

until the saliva foamed from the sides of his mouth. This was followed by other chiefs in opposition and rejoinders from Logan. Three separate times was he tied to the stake to be burnt, the counsels of the hostile chiefs prevailing, and as often untied by Logan and a belt of wampum placed around him as a mark of adoption. His life appeared to be hanging on a balance; but the eloquence of Logan prevailed, and when the belt of wampum was at last put on him by Logan he introduced a young Indian to him, saying: "This is your cousin; you are to go home with him, and he will take care of you."

From this place Mr. Robinson accompanied the Indians up the Muskingum, through two or three Indian villages, until they arrived at one of their towns on the site of New Comerstown, in Tuscarawas county. About the 21st of July Logan came to Robinson and brought a piece of paper, saying that he must write a letter for him, which he meant to carry and leave in some house, which he should attack. Mr. Robinson wrote a note with ink which he manufactured from gunpowder. He made three separate attempts before he could get the language, which Logan dictated, sufficiently strong to satisfy that chief. This note was addressed to Col. Cresap, whom Logan supposed was the murderer of his family. It was afterwards found, tied to a war club, in the cabin of a settler who lived on or near the north fork of Holston river. It was doubtless left by Logan after murdering the family. A copy of it is given below, which, on comparison with his celebrated speech, shows a striking similarity of style.

CAPTAIN CRESAP:
What did you kill my people on Yellow creek for? The white people killed my kin, at Conestoga, a great while ago, and I thought nothing of that. But you killed my kin again on Yellow creek and took my cousin prisoner. Then I thought I must kill, too. I have been three times to war since then; but the Indians are not angry; only myself.

July 21, 1774.

CAPTAIN JOHN LOGAN.

Major Robinson after remaining with the Indians about four months returned to his home in Virginia. In 1801 he removed to Coshocton county and settled on a section of military land, on the Muskingum, a few miles below Coshocton, where he died in 1815, aged seventy-two years. His son resides on the same

Dunmore's war was of short duration. It was terminated in November of the same year, within the present limits of Pickaway county, in this State, under which head will be found a copy of the speech which has rendered immortal the name of Logan.

The heroic adventure of the two Johnson boys, who killed two Indians in this county, has often and erroneously been published. One of these, Henry, the youngest, is yet living in Monroe county, in this State, where we made his acquaintance in the spring of 1846. He is a fine specimen of the fast vanishing race of Indian hunters, tall and erect, with the bearing of a genuine backwoods-His narrative will be found in Monroe county.

The last blood shed in battle between the whites and Indians in this part of the Ohio country was in Jefferson county, in August, 1793. This action, known as "Buskirk's battle," took place on the farm of Mr. John Adams, on what was then known as Indian Cross creek, now as Battle-Ground run. The incidents given below were published in a Steubenville paper a few years since.

A party of twenty-eight Indians having committed depredations on this side of the river, a force of thirty-eight Virginians, all of them veteran Indian fighters, under Capt. Buskirk, crossed the river to give them battle. And, although they knew they were in the vicinity of the enemy, they marched into an ambuscade, and but for a most singular circumstance would have been mowed down

like pigeons. The whites marched in Indian file with their captain, Buskirk, at their head. The ambush quartered on their flank, and they were totally unsuspicious of it. The plan of the Indians was to permit the whites to advance in numbers along the line before firing upon them. This was done, but instead of each selecting his man every gun was directed at the captain, who fell with thirteen bullet holes in his body. The whites and Indians instantly treed, and the contest lasted more than an hour. The Indians, however, were defeated and retreated towards the Muskingum with the loss of several killed, while the Virginians, with the exception of their captain, had none killed and but three wounded.

Steubenville in 1846.—Steubenville is on the Ohio river, 22 miles above Wheeling, 36 below Pittsburg and 147 east by north from Columbus. It derives its name from a fort, called Fort Steuben, erected on its site as early as 1789. It stood on High street, near the site of the female seminary. It was built of block houses connected by palisade fences, and was dismantled at the time of Wayne's victory, previous to which it had been garrisoned by United States infantry, under the command of Col. Beatty, father of the Rev. Dr. Beatty, of Steubenville. On the opposite side of the river then stood a blockhouse.

The town was laid out in 1798, by Bezaleel Wells and the Hon. James Ross, of Pennsylvania, from whom Ross county, in this State, derived its name. Mr. Ross, who has attained high honor, is yet living; but Mr. Wells died poor, after having been at one time considered the most wealthy person in Eastern Ohio. On the 14th of February, 1805, the town was incorporated and the following officers appointed: David Hull, president; John Ward, recorder; David Hog, Zacheus A. Beatty, Benj. Hough, Thos. Vincents, John England, Martin Andrews and Abm. Cazier, trustees; Samuel Hunter, treasurer; Matthew Adams, assessor; Charles Maxwell, collector, and Anthony Beck, town marshal.

Steubenville is situated upon a handsome and elevated plain, in the midst of beautiful scenery. The country adjacent is rich and highly cultivated, affording the finest soil for wheat and sheep. Messrs. Bezaleel Wells and Dickerson introduced the merino sheep at an early day, and established in the town, in 1814, a woollen manufactory, which laid the foundation for the extensive manufactures of Steubenville contains about 30 mercantile stores, 2 printing offices (1) daily newspaper), 1 Episcopal, 2 Presbyterian, 3 Methodist, 1 Catholic, 1 Baptist, 1 Associate Reformed, 1 New Jerusalem and 1 church for persons of color, 1 bank, 5 woollen, 1 paper, 1 cotton and 2 glass manufactories, 1 iron foundry and numerous other manufacturing and mechanical establishments. In the vicinity are 7 copperas manufactories. From 800 to 1,000 hands are employed in these various establishments, and over a million bushels of coal annually consumed, which is obtained from inexhaustible coal-beds in the vicinity at 3 cents per bushel. The town is very thriving and rapidly increasing. Its population in 1810 was 800; in 1820, 2,479; in 1830, 2,964; in 1840, 4,247, and in 1847 about 7,000.

Much attention is given to the cause of education in Steubenville. There are five public and four select schools, a male academy and a female seminary. The male institution, called "Grove academy," is flourishing. It is under the charge of the Rev. John W. Scott, has three teachers and eighty scholars. The female seminary is pleasantly situated on the bank of the Ohio, commanding an extensive view of the river and the surrounding bills. It is under the charge of the Rev. Charles C. Beatty, D. D., superintendent, and Mrs. Hetty E. Beatty, principal. It was first established in the spring of 1829, and now receives only scholars over twelve years of age. It is in a very high degree flourishing, having a widely extended reputation. The establishment cost nearly \$40,000, employs from ten to twelve teachers and usually has 150 pupils, the full number which it can accommodate.—Old Edition.

The Steubenville Seminary, which the year of its foundation had but seven pupils, and at the time of the issue of our first edition 150, had gone on increasing its educational facilities, so that it has since had 250 pupils in one year, has graduated over 4,500, and at a reunion, held in 1873, more than 700 alumni were present.

In 1856 Dr. and Mrs. A. M. Reid succeeded Dr. and Mrs. Beatty, and in

STEUBENVILLE FROM THE WEST VIRGINIA SHORE.

1863 they in turn were succeeded by Dr. and Mrs. J. W. Wightman, the present principals.

This school is remarkable for its age, its widespread educational, moral and religious influence. It has sent missionaries to all quarters of the globe, many of whom are still engaged in the good work.

The coal mines at Steubenville are among the deepest in the State, Rush Run Shaft being 261 feet; Mingo Shaft 250 feet, and the Market street shaft 225 feet

The Perils of the Coal Miner, who works down deep in the bowels of the earth, are such that those engaged in coal-mining become imbued with a spirit of heroism and self-sacrifice that finds strong expression in times of danger. The greatest peril of the miner is that caused by the explosion of fire-damp, a highly combustible and explosive gas generated by the coal. Notwithstanding the precautions taken to avoid them, these explosions are constantly occurring in mining regions, with more or less loss of life, under the most horrifying conditions.

Thus it was at the rolling mill shaft at Steubenville, about 7 o'clock on the morning of June 5, 1865, when the surrounding neighborhood was startled by a loud rumbling noise, the rattling of windows and the visible shaking of the ground.

The miners were on a strike at the time, and but nine men were in the mine; of these Thomas Sweeny and Patrick Burke escaped with but slightinjury; Frederick Hazeler was seriously injured but recovered. Wm. Cowan was fatally burned and a few days later died of his injuries; John Douglas, James Riley, James Cowan, Wm. Millhizer and Lynch were killed.

On the morning of the 23d of February, 1868, the large building known as Wallace factory, located near the shaft of the "High Shaft" mine at Steubenville, was discovered on fire. It became a question of great moment if it were possible to save the building over the coal-mine from destruction. There were at this time about one hundred men and boys in the mine who must be got out ere the building burned or be lost. Some of them were not only 225 feet underground, but three-quarters of a mile away from the bottom of the shaft. Under the direction of Superintendent James H. Blinn, volunteers fought heroically to save the building, while others entered the mine to warn the miners of the danger. Wm. Dixon and Hugh Sutherin, track layers in the mine, did noble service at imminent risk of losing their lives. The hoisting cages were kept running at their highest speed until all the miners were at last safe above ground. An instance of filial devotion displayed on this occasion is related by Mr. Wm. Smithwaite, from whose writings this article is abridged.

A miner, John Stewart, who was crippled by an accident in a mine in Scotland many years before, was working with his son William in one of the farthest workings of the mine, when they received notice of the danger. They immediately started for the shaft, but their progress was so slow, that prospect of their arriving there in time was very discouraging. The son assisted the father's feeble steps, being passed on the way by men and boys hurrying to escape, who urged them to hasten, telling them again and again of their danger. This increased their excitement, hindering rather than assisting them; the poor old crippled father, losing all courage, sank down by the way, giving up all hope and resigning himself to his fate urged his son to leave him and seek his own safety. "I am auld an crippled, Willie, and of nae account in the warl; nae worth ony sacrifice; gang awa an save yoursel or we'll baith perish. You are young and strang an may have mony years tae live; gang awa, Willie, an save yoursel; I canna coom." "I wanna le you, fayther. Coom, I'll help you alang, and we'll baith get out," was the reply.

After repeated efforts the old man was induced to try again, but again sank down in despair, and in most piteous accents in his broad Scotch dialect urged his son to leave him and seek his own safety. Paying no attention to the old man's importunities, William would again with encouraging words and earnest pleadings get the old man up and make a little more progress towards the shaft.

Finally, after much toil and persistence, they both reached the shaft and were hoisted out in safety.

REMINISCENCES OF EARLY MANUFACTURES OF SOUTHEASTERN OHIO.

The following very valuable article was written for this work by the venerable WILLIAM C. HOWELLS, father of Wm. Dean Howells, the author. It was written and sent under the date of Jefferson, Ohio, December, 1887, when he was eighty years of age. In an accompanying letter, he wrote us: "I have endeavored to say enough to give the proper information, and to avoid saying anything

of which I did not feel reasonably certain; yet it is hardly to be expected that, after a lapse of seventy years, many errors will not have occurred:"

Quaker Enterprise.—My father emigrated from Brecknockshire in South Wales, in 1808, landing at Boston. I was then just one year old. He had acquired a thorough knowledge of the manufacture of woollen goods. In 1812 he was at Waterford, Loudon county, Va., having made his way to that point from Boston, when he made the acquaintance of a Quaker, Joseph Steer, who had a large flouring-mill and water-power on Short creek, about eighteen miles from Steubenville and four from Mount Pleasant. This was a Quaker settlement of considerable importance, and the wealth and influence of that locality were chiefly in their hands; and they were not excelled by any in all useful enterprises that tended to improve the then new and growing country. Along the little river of Short creek they had built flouring-mills, salt-works, and a paper-mill of no mean

Joseph Steer sought to supply a needed woollen manufactory, and he engaged my

father to put it in operation.

Passengers Transported by the Pound.—In the spring of 1813, as soon as the roads were in proper condition, my father engaged with one of the "Waggoners of the Alleghenies," for our passage from Waterford to Brownsville, Pa., which was the usual place of changing shipments from wagons to boats, on the way to Ohio. The wagons used in the transportation of goods on that route were large and heavy, drawn by teams of four, five, or six horses. They would hold and carry 5,000 to 9,000 pounds, and movers took passage in them as they would in boats for themselves and household effects. The wagon in which we travelled was one of the fivehorse class, owned and driven by one Thomas, not Mr. Birchard, who did not drink whisky or swear at his horses, which my mother regarded as virtues of high esteem. At this time he had loaded nearly full at Alexandria, and took us on to complete the cargo. I very well remember that mother, my sister, brother, and myself, were weighed at the time our goods were loaded on, and all charged for at so much per pound, though I forget at what price, if I ever knew. My father had a pony, which he rode in company with the two wagons that travelled together, for mutual help over bad places and steep hills, when they joined teams. The trip was necessarily a slow one, as twenty miles was a

long day's drive. *Keel Boat Travel.*—Arriving at Brownsville, we gladly stopped to rest and wait for a boat. We happened upon a new flat boat, which was being floated to Pittsburg, in which we found unbounded room, after the cramped journey in the wagon. At Pittsburg we changed to what was then called a keel boat; a kind of barge about the size of a canal boat. In it we soon floated the eighty miles to Warrenton, at the mouth of Short

creek, then a thriving village, and an important point for building flat boats, and loading them with flour and other produce for the New Orleans market. Three miles up the creek brought us to our destination, and we took our position as Ohioans seventy-five

years ago.

Difficulties of New Manufacturing Enter-prises.—The destruction of Mr. Steer's flouring-mill deranged his plans as to manufacturing; and the woollen mill was limited to machinery adapted to country custom, carding and spinning machine, fulling-mill, etc., in a small way. Though a child, I very well remember that this new business was started under very great difficulties. Many of the parts of the machines had to be made by local mechanics. For the spinning "jenny," a blacksmith forged the spindles, and finished them with grindstone and files; while a tinsmith, a cabinetmaker, a turner, and one or two ingenious general workers made the other My father superintended the job; made the drawings, etc.; and in due time, before winter set in, the little factory was in operation.

Early Manufactures of Southeastern Ohio.

-My father moved his family into Steubenville in 1816, when I had just entered upon my tenth year. I was a rather forward boy, and especially interested in manufacturing and mechanical work, of which I had a good conception for one of my years, so that now I have a good recollection of what I then saw. When recurring to that time—say August, 1818, and onward for a few years—I am rather surprised at the variety, as well as extent, of manufactures in which the people of Southeastern Ohio and the adjacent parts of Virginia and Pennsylvania were engaged. The town of Steubenville, whose inhabitants then numbered about 2,000, was a centre of these operations that was typical in its way of the whole. The chief manufacture of the place was woollen cloths, carried on by a company, formed about 1812, on a more extensive scale than any in the State, or west of the Allegheny mountains, at that

An Enterprising Pioneer.—The leading man in this enterprise was Hon. Bezaleel Wells, who was the original proprietor of the town, which was laid out in 1797, and who represented the county in the first Constitutional Convention in 1802, and who really spent his life and fortune in developing that part of the State. Mr. Wells associated with him in this undertaking several men of capital and enterprise, among whom were James Ross, of Pittsburg; William Dickinson, of Steubenville; and a Mr. Patterson, of whom tradition said that, after great anxiety to see this factory in operation, he died simultaneously with the starting of the engine. My father having been engaged as wool-grader in the concern till 1826, I had an opportunity of observing, and was familiar with its general work.

Losses Through Improvements in Machinery.—About 1818 another firm was organized, of which the late Judge and Senator Tappan was a member, that was known as B. Wells & Co., which continued until about 1827, when the business passed into other hands. It was for a time managed by Mr. Wolcott, of Akron, the father of the late Judge Wolcott, who changed the style of the product to a less expensive kind, and made it

pay its way for a time.

It was successful in the manufacture of great quantities of good cloth, and cheapening the cost to consumers, who were largely the people of the State, and making a market for good wool; besides introducing greatly improved brands of sheep. As a profit to those who invested money, it must have been one of the worst of failures. The original cost was necessarily very great; while the introduction of new machinery and new styles of working every year absorbed a great part of the profits. I well remember, when very young, being impressed with the terrible losses that were evident to me, in the discarded machinery that filled every vacant spot of the ground and buildings—the result of changes that came in constant succession from year to year. This was not the result of dishonesty or very bad management. It seemed to have come of the crowding growth of improvements, which often made it economy to cast aside a machine of real value. To this may be added successive fires, panics, and money depressions following the war of 1812. This factory and its various buildings occupied about ten acres, near the west end of Main street, a little east of the two factories afterwards built by James and Ebenezer Walface

The establishment of Messrs. Wallace, started under better auspices and in better times, succeeded, and has done well. The Wallaces, availing themselves of a valuable vein of coal underlying the town, some twenty-five years ago sunk a shaft to it, which not only supplied them with fuel but became

a source of material profit.

Cotton Cloth Factories.—About the time of the commencement of the old woollen factory, another company put in operation a steam flouring-mill and cotton factory in a small way, both in adjoining buildings and propelled by the same engine, on the bank of the river at the foot of Main street. The cotton department was confined to carding and spinning only, producing yarns used in home-made linseys, carpets, and satinette warps, etc. It was discontinued about 1821. Soon after this date two cotton mills, on quite an extensive scale, were built; both of which prospered permanently in the manufacture of yarns and unbleached cotton cloths.

Early Paper Mills.—At an early day the manufacture of paper was commenced in many places in the State, that seemed to do well, and made a full supply for the wants of the country, with the various kinds then in

use. There were mills at or near Cincinnati, Lebanon, Hamilton, Chillicothe, Columbus, Zanesville, Mount Pleasant, and Steubenville. Of course, they all made paper by the old hand-process, that had been in use from time immemorial, and was good enough for the world until the Fourdrinier process was introduced; and these Western mills made a great deal of superior, fine paper. In 1816 the Mount Pleasant mill made the paper for the notes of the Bank of Mount Pleasant. The Steubenville mill, as I remember, had two rag-engines and three or four mouldingvats, and employed forty or fifty men and women—many more than are now employed in the mill with its ten-times increased power of production. This mill was propelled by a large low-pressure engine, as were the flour and cotton mills and the woollen factory. The business was carried on by John B. Bayless & Co., who sold their paper at prices not much higher than it was sold thirty or forty years ago. I judge from the price of foolscap, writing paper, that we used at school. which cost twenty-five cents a quire for a good article, not ruled. This mill was on the river bank, near where the Pen Handle Railroad crosses.

On the river bank, a short distance below, there was an iron foundry, operated by Martin Phillips. Connected with this, Adam Wise had a machine shop, where much of the machinery of the factory and mills of the vicinity was made or repaired. Mr. Wise also made the first plows of the country with

iron mould-boards.

Extinct Trades.—On Main street, near Third, James Watt did a lively business as wheelwright, which meant the making of hand-spinning wheels for wool and flax, reels, etc., which trade is now extinct, and the wheels and reels that were to be found in every farmer's house in nearly constant use. are now retired to garrets or collections of bric-a-brac.

Another extinct trade was carried on by Daniel Kilgour, at the corner of Main and Fourth streets, which was the making of cutnails by hand, but gave way to nail-making machines about 1825.

Next door to this was the watch and clock-making shop of Alexander Paxton, where he repaired watches and made brass eight-day

clocks to order.

Measured for a "Roaram."—At the time I speak of, hats were made in shops as shoemaking and tailoring were done. Then, if a man or boy wanted a hat, it was bespoken, always two weeks in advance. As old boys well remember, the hatter measured his head and fitted him accordingly. The hats were made of wool or fur, or both mixed—the body of wool with the nap of fur, called a 'roaram,' a name well suited to the appearance of the hat. Fine hats were made with fur bodies and a nap of beaver or otter, These were really nice hats, and were worth the six to ten dollars they cost. Wool hats cost about a dollar, and a "roaram" \$2.50 or \$3. In that day the stiffening of hats

with gum-shellac was not in use, glue being used instead of water-proof gum; and when overtaken with rain the hats would weaken down and bring the wearer to a "due sense of his unworthiness," for they would become flabby and the nap stick to them till they shone like a junk bottle after they became dry, besides "going to seed," as it was called. This made the hat an object of tender care, and led the wearer to carry in reserve an oiled silk or gingham covering, to be put on as required. There were three hatters in town—Messrs. Hull, Odbert and Hoagland, each of whom helped me to a crown, as needed.

Mr. McFetridge, whose trade is now also obsolete, made weavers' reeds, of reed-cane, to supply the many looms that were to be found in the farmers' houses all through the

country.

Of general trades, there were the usual variety. I remember one earthenware pottery, three tanneries, carried on by Brice Viers, Samuel Williams and Hans Wilson; six or seven shoe-shops and a like number of tailors, and one gunsmith, James Leaf.

An old paper that I have fixes the number

of merchants' stores at twenty-seven, and of taverns at sixteen.

Early Schools and Churches.—In the winter of 1816–17 there were two schools of the same order as our common schools, maintained by private subscription, as all schools then were, at \$2.50 a scholar per quarter. One of these schools, at which I was a pupil, was taught by Rev. James B. Finley, and continued until it was overshadowed by the well-known school of Rev. Dr. Beatty.

At the beginning of 1817 there were three

At the beginning of 1817 there were three places of religious worship, where services were regularly held every Sunday: one Presbyterian, with Rev. Mr. Hoagland as pastor; one United Presbyterian, Rev. Mr. Buchanan as pastor, and a Methodist Episcopal Church, forming a part of the Steubenville Circuit, with Rev. James B. Finley as presiding elder for the quarterly meeting district, the extent of which would astonish many of his brethren of this day. He lived in Steubenville, whence he made his four journeys on horseback, each year visiting, as extreme points, Zanesville, Norwalk, Cleveland and Warren, Ohio; Beaver and Erie, Pa.; and Fredonia, N. Y.

TRAVELLING NOTES.

Steubenville was named in a spirit of patriotism, from Baron von de Steuben, the drill master of the soldiers of the Revolution. He taught them to bring their muskets to the order by three motions in the slow style of the tactics of that day. He lies buried alone in the depths of a forest in Oneida county, New York, and in 1840 I walked twenty miles for the sole purpose of sketching his grave.

Steubenville is well situated, the best river town, steamboat men say, of any town on the Ohio, and because on the second plateau, and thus above the highest floods. The scenery around is impressive. In its rear high hills rise rounding in majestic curves. Opposite, close up to the West Virginia shore, is a steep wooded bluff, some 600 or more feet in height, its upper part an overhanging precipitous cliff. Down the river the view is expansive with bounding hills and never-returning waters. One may well term this as the gateway to the charming scenery of the Upper Ohio.

A Sort of Lubberland.—The city has an old-time look—little or no ornate architecture—but there is comfort everywhere. It is similar in its social aspects and appearance to Marietta and Chillicothe. The country around laughs in its fatness—nobody starves. Going into a restaurant for dinner, there was placed before me on a side table some nineteen dishes—1. Roast beef, very tender, Ohio grown. 2. Excellent coffee. 3 and 4. Cucumbers and onions. 5. Corn. 6. Asparagus in milk. 7. String beans. 8. Cabbage, boiled. 9. Tomatoes, stewed with toast. 10. Rhubarb. 11. Potatoes warmed in milk. 12. Cold bread, butter. 13. Warm biscuit. 14 and 15. Rhubarb and cherry pie. 16. Ice cream. 17, 18 and 19. Vanilla and chocolate, with strawberries—and for all this but twenty-five cents charge. On my tour over Ohio forty years ago no such variety was anywhere seen, and not once a napkin at a meal, and eatable butter almost never—but no

charge for smelling. In no one thing has there been a greater improvement than in food. Lubberland seems to be heaving in sight for this people, and yet they don't all

seem happy.

The track of the Cincinnati & Pittsburg Railroad runs on the river bank in front of Steubenville. The first person I met on my arrival to welcome me was Mr. J. J. Robinson, the station agent, at whose residence I called on an errand. His house stands with its rear to the rail track and river, near by the station. His home lot is 120 feet broad and 180 deep. The house, on an elevation fifteen feet above the lawn, occupies the farther end and fronts on a street. A line of Lombardy poplars, 120 feet in length and twelve feet apart, stands as sentinels on the river front of the lot. They were set out in 1878, being then saplings but two inches in diameter and ten feet high; yet in 1884 they had attained a height of sixty feet, which he cut off

Davison Fillson, Photo.

BOYHOOD HOME OF STANTON.

From the old edition of 1846.

FEMALE SEMINARY, STEUBENVILLE.

twenty feet from the top. Now (1886) they are forty-five feet in height, in luxurious foliage. On V.I.P 321 I speak on the subject of the poplar more fully. Around some of the home lots in the upper part of the town are very long lines of poplars hundreds of feet in length, making a very imposing appearance. I know nothing of the kind equalling it. The easy swaying of the top of the poplars in the wind and the glinting lights on their branches are pleasing. But it is a solemn tree—does for graveyards and melancholy blue states of the mind.

A Lesson in Ornithology.—Mr. Robinson's house has a veranda eighty feet in length on the second story facing the river. As he took me from the sentinel poplars across the lawn, through the shrubbery, grape vines and blooming roses to the veranda he said: "Come; I want you to see my birds." At that moment a peacock spread his tail at my feet and gave an infernal screech—"Look! admire my tail!" "That," said he, "is better than any watch-dog or policeman that can be got. Nothing can enter my yard at night but he sounds the alarm. He is ever faithful. Unlike a watchman, he never falls asleep on his post, and, unlike a dog, can never be seduced from duty."

Taking me on to the veranda, there in fifteen cages were nineteen birds chirping their joy. Among them English black-birds, golden oriole, canaries, mocking bird, Irish lark, Irish thrush, cat-bird and red-bird—nearly all foreign birds. The Irish lark has a voice of a peculiar rollicking nature. "Soars up in the air," said Mrs. Robinson, a black-eyed lady, with a merry laugh.

One canary was sitting on its nest. It was her third brood. I got within a foot of the little creature as she was sitting there so happy and comfortable. She cocked up her little eye, as much as to say: "Oh, you get out. You are nothing but a man. You can know nothing of a mother's joy." Mrs. R. told me that the canary lays from four to five eggs, and that fourteen days after the laying of the first egg a bird is hatched, and then after that one daily. If it is a male bird it is surely a singer and will sing fourteen days from its birth. Canaries are weaned in from fifteen to twenty-one days.

Just at that moment a train went thundering by, when the peacock gave a screech. He always does, and they pass every half hour;

yells at every child's laugh and spreads his tail ad libitum. At night he perches on a flat board nailed on top of a post, close by the back door, and performs sentinel duty, at every noise sending forth a screech.

Suffering Bennie Shaw.—While here I sketched a cottage, the once home of the long-suffering but happy Bennie Shaw, who was deaf and dumb, very near-sighted and paralyzed. It stands in a nook between two other buildings on a business street in Steubenville. I called there and had an interview with his mother, a sad-appearing woman, to learn the history of her boy. When he was eleven years of age he was taken sick, and, becoming paralyzed, lay on his back until he died, at the age of thirty-seven, November 2, 1884. During that entire period only his head and chest grew, his body below remaining as in childhood. The cottage in which he lived and the room in which he was confined were very small, the latter with only one window which looked upon a little garden wherein grew flowers. He was very near-sighted, could use but one arm, could not lift himself in bed nor turn his head, and yet on the wall were numerous pictures in watercolors of flowers, birds and other objects which he painted mostly from copies and quite handsomely. And how he was enabled to do them at all seemed almost incredible. His mother thus described it to me, first showing me a board ten by twelve inches: "We," said she, "tacked the paper on this board. He laid on his back in his cot by the window, the board resting on his chest. He held the top of the board with his two little fingers. With the other three fingers he painted. Owing to his near-sightedness he was obliged to bring the board within four inches of his face. He could not paint all over the board except by turning it around, so it was often wrong side up. As he could not turn his head, he had a mirror, which magnified and reflected the flowers in the garden which he studied and painted. was always a wonder to me how he was able to paint, and so beautifully, and when I asked him how he did it his answer always was, and with a smile, 'God helps me. He loves me.'" His little room was a holy spot. His presence made it an atmosphere of love, and when any strangers came in he always wanted to know if they loved God and enjoyed him as he did.

Several days passed in Steubenville enabled me to gather from some old gentlemen some amusing reminiscences upon its historical characters, as Edwin Stanton, Senator Tappan, Thomas Cole, etc. One of these was Mr. James Gallagher, a tall, wiry gentleman, with some hesitation in his speech but none in his brains, who came here, in 1816, from Philadelphia, when a lad of ten years. He said.

Anecdotes of Ben Tappan.—I knew Ben Tappan well. He was very sharp. He had a large house-dog, which one day strolled into the shop of one Peters, a butcher, and seizing a nice roast of beef made off with it. Peters, on discovering whose dog it was, called upon Tappan, and put the question to him: "If a neighbor's dog enters my shop and steals meat, is he not legally held in payment?" "Certainly he is," rejoined Tappan. "Your dog," continued Peters," has this very

morning stolen seventy-five cents worth of meat from me, and I have come for the money." "Not so fast, Mr. Peters," replied Tappan; "I don't give legal advice without compensation. As you are a neighbor, I won't be hard upon you. My charge to you in this case is \$2.00. You must therefore pay me the difference, \$1.25, and we will call it square."

BEN TAPPAN was a most audacious man, and I have no doubt his example had much to do with the formation of the character of Edwin Stanton when he, a youth, became his partner. In olden times our Common Pleas court consisted of a president judge for each judicial district, and three associate justices for each county in which the court was held. The presence of three constituted a quorum. At a court held here a Mr. Anderson, a very worthy man, was one of the judges. He lived three miles out of town, and was wont to come to court on horseback with his saddle-bags, with his own dinner in one bag and oats for his horse in the other. After a certain noon recess Anderson failed to appear in time. Tappan, who was naturally impatient, time. Tappan, who was naturally impatient, arose to address the court, when Judge Hallock interrupted him: "Brother Tappan, there is not a quorum; you will have to wait for Judge Anderson." "Are his saddle-bags under the bench?" "Yes." "Then," rejoined Tappan, "I'll go on with my plea; they will do just as well." And he did.

Soon Anderson came in, and heard the balance of the plea. It is to be inferred its ance of the plea. It is to be inferred its opening was in due time communicated to him by the saddle-bags.

The Stanton family were from North Carolina, and originally Quakers. They fell under the influence of the itinerating Methodists, and their house became a favorite stopping-place for itinerants. Edwin was of an emotional nature, and, when a lad, was converted and joined them; eventually he "backslid," but always had a great respect for religion. We went to school together, he nine years younger. He was somewhat lax in getting his lessons, especially in arithmetic, which he disliked, and often came to me for assistance. He was an enterprising lad, and established a circulating library, a nice collection, the only one in town, and it was well patronized. I drew from his library Plutarch's "Lives," Akenside's "Pleasures of the Imagination," Campbell's "Poems," and other old-style books of that day.

Edwin went as a clerk at about the age of thirteen with Mr. James Turnbull, who kept books for sale, and was with him for several years. Mr. Turnbull is now living here at the age of ninety-two, and is the only survivor of the war of 1812 in this region of Ohio. Edwin was reading so constantly that he somewhat neglected his duties as a salesman; he was a great reader, and largely self-taught. Turnbull thought highly of him as a boy.

In his early career as a lawyer the people, more especially us old Whigs, regarded him as unscrupulous. The family were Whigs, and he was brought up in that faith, but he

joined the Democrats, they being especially strong in this county. This was under the influence, I believe, of old Ben Tappan. This change we thought was not from political ambition, but for the legal business the association would bring him. He was a grand talker; not as logical as some, but his forte was his perfect self-poise and his indomitable bulldog courage and tenacity. Though the heavens fell, he would never let up; it was push through or die. His mind acted as a flash, and he never lost his balance, never flinched at a surprise; but with a bound would make a forward spring with a point for the emergency sharp as a bayonet; all his knowledge was always at hand.

On looking at Stanton's war record, the gigantic strength of character he exhibited, the value of his labors, and his absorbing devotion to his country, which finally broke him down and put him into his grave, I cannot but feel a great respect for his memory. He left the office poor and broken down. When he died, as a reward for his herculean labors and great services to his country, Congress voted his widow a year's salary as judge. The friends of Stanton think, and justly think, that Grant in his Memoirs failed to do him justice. He was naturally of a kindly nature, fond of children, and exceedingly generous to his poor relations; indeed, to all

who had any claim upon him.

I knew Thomas Cole, the celebrated landscape painter, well. He was born in England, and was regarded as a bright, intelligent young man. There was quite a colony of English and Germans, who came here to work in the paper-mill and woollen factory, which were established here in the war period. Among the English were the Colefamily; Dr. Ackerly, afterwards the noted New York surgeon; Wm. Watkins, a wool stapler, who soon returned to England and gained distinction as a miniature painter; painted a portrait of Queen Victoria on ivory. He had taken lessons from Cole. Then there was old Joe Howells, grandfather of Howells, the novelist. Cole's father had charge of the manufacture of the wall-paper, and Tom worked at it, stamping the colors with diagram blocks. Tom came here about 1820; did not stay very long, but went to Zanesville and elsewhere, and engaged in painting portraits. His skill displayed in painting scenery for theatres first brought Cole into notice in New York. The paper-mill was established about 1812–1813. It stood on the river-bank, on the site of the present Hartje paper-mill. The paper was all made by hand in the olden style. The pulp was water-soaked in vats, dipped out with sieves, and spread out on blocks on felt,

in alternate sheets of felt and pulp. The sheets were generally foolscap size. The sheets were then hung up to dry in a large drying-house, with open-air slats. It sold for twenty-five cents a quire of twenty-four sheets, but for a single sheet the price was one cent. A bright boy one day went into Mr. Turnbull's store and said, "I want twenty-four sheets of paper," and he supplied him at that rate, whereby the boy saved a cent.

Copperas Works.—About the year 1820 copperas works were established here by Bezaliel Wells, and was for a time a thriving industry. The material was obtained from the coal banks, and manufactured in a rude way by a process of washing, boiling, and crystallizing. The industry, at first lucrative, became overdone, from the abundance of the stock. Copperas is now manufactured differently; but for some purposes the old kind is the best. The works were on top of the hill, at the Red House farm, back of the town. Wells' chemist was a North Prus-

sian, by the name of Kolb. He rigged up a huge grindstone for some purpose, but was a better chemist than mechanic; couldn't make things work; got mad, and started the grindstone a rolling down hill; and it didn't stop until he got it to the bottom. Then he had to pay Christian Bougher a dollar to get it back.

Thespian Society.—These Germans and English working-people established a Thespian Society, and gave theatrical entertainments in an old brick stable for a theatre, and Tom Cole painted the scenery. Kolb was active, and so was another German, Christian Orth, a blue-dyer in the factory. One evening, in the midst of a play wherein a thunder-storm was represented, a vivid flash of lightning lit up the scene, whereupon the audience were convulsed with laughter, by the voice of Kolb from behind the scenes calling out, in his rough German accent, "Now, Orth, hurry up mit yer thunder!" which, by the way, was produced by rolling cannon balls on the floor.

The photographer is one of our best modern acquisitions. He is generally poor in his purse, but then he is, personally, a rich blessing. We should thank the Lord for him. While our daily bread feeds our bodies, his labors feed the soul; help preserve memories of the precious now dead or far away. His business got a great start in the war era, when the soldier boys, in marching away, proudly clad in the panoply of Uncle Sam's warriors, largely left their portraits behind, and carried away those of their loves to the camp and the battle-field.

Steubenville rejoices in the possession of one photographer, who has been taking the faces of the people here for thirty years, until he has grown gray in the service. He has lived to picture babes in the arms of parents, whose pictures he had made when they themselves began life's march in the ranks of the light infantry. This gentleman lives in rooms adjoining his gallery, and his son and daughter work with him; and there, for a pet, is Pearly, a French poodle, with white curly hair, soft as lamb's wool, who is ever ready to sneeze, "by request." He has an honored pedigree. His name is Davison Filson, a descendant of the Davison Filson whose son, John Filson, a surveyor, was the very man, an hundred years ago, who laid out the city of Cincinnati and named it Losantiville.

This John was a pedagogue, and author of a history of Kentucky. One day, shortly after his survey, he set out alone to explore the solitudes of the Miami woods, and that was the last ever known of him. His fate is yet a mystery. It is supposed he was killed by the Indians. One verse of Venable's simple ballad, "John Filson," tells all that anybody knows:

"Deep in the wild and solemn woods, Unknown to white man's track, John Filson went one autumn day, But never more came back."

The Six Hundred Dead.—Upon the walls of Mr. Filson's gallery, in a large frame, 36 × 30 inches, is a picture consisting of 600 photographs of prominent citizens of the town, all of whom, with but few exceptions, were taken by him, and all of whom are now dead. The sight of this vast concourse of

adults—men and women from early manhood and womanhood to extreme old age, most of them looking upon you as in life—affects one with solemn sensations akin to those which we could imagine if they should collectively rise from their graves and appear as in life. The faces are largely those of mature and thoughtful people, upon whom the cares and duties of human life, with its solemn responsibilities, have left their weighty impress. One can but feel awed in their presence, and the mind goes instinctively beyond the portals of the grave to the unknown world to which each of that mighty concourse has vanished from sight forever.

Among these are the faces of people whose history is imperishable. The central head is that of EDWIN M. STANTON, the last pertrait of him, taken but a few months before his death. It is a massive head of great power, and the expression of the face is one of sadness and suffering. It shows he was

worn out with labors and anxieties. In a lower corner is the head of BEZALIEL WELLS, founder of the town, and that of his wife. They are from oil paintings, and are fine faces of marked character. The head of JAMES HUNTER, the first child born on the soil, appears as a very old man with a strong face and long gray locks, combed behind his ears. Near the portrait of Stanton is the beautiful face and head of Colonel George McCook (see Vol. I., p. 365), as he was in his prime; also the heads of Major-General DANIEL McCook, killed at Peach Tree Orchard, and General ROBERT L. McCOOK, murdered by guerillas. On the extreme right is the head of Judge HUMPHREY HOWE LEAVITT, once a citizen of this town, later a citizen of Cincinnati, where, on the bench, in his capacity of District Judge of the United States Supreme Court, he sat on the case of Clement L. Vallandigham. He was long an honored citizen of Cincinnati, and an old neighbor and a personal friend, and it did me good to look upon his kindly, benignant face among the six hundred. He was an old-style gentleman, a Presbyterian in faith, very modest and quiet, and simple in speech and manner; had but a few words; was a godly, dignified man. We had marked time together in a company of the Home Guards, called the "Silver Grays"—because all the members were over forty-five years of agewhen Cincinnati was threatened by Kirby I missed his presence when we crossed the river to meet the foe. Like myself; I suppose, he did not ache to kill anybody.

Here are the heads of Benjamin Tappan, Thomas L. Jewett, Rev. C. C. Beatty, Rev. George Buchanan—who here preached for forty years in the United Presbyterian Church —with numerous other local celebrities. Among these, on his couch of suffering, is the recumbent form of little Bennie Shaw. the only portrait where more than the head and bust are shown. Heads of manly vigor and womanly virtue look down upon you as when among these earthly scenes, and they all preach to you—these six hundred dead. I felt it with inexpressible awe, for only a few hours before, while in an abstracted state of mind, a train of cars was slowly, silently backing through a narrow alley upon me, and I only escaped by the fraction of a second from being crushed under the remorseless

From the grave to the gay is the story of life. The sun carries the morning on her

wings and night flees at her coming.

An Easy Talker.—As I sat gazing upon the faces of those six hundred dead, impressed by their, as I felt, living presence, an old gentleman, large, fleshy, with rotund visage, rosy cheeks and smiling eyes, came in by invitation of Mr. Filson to tell me of the olden time; and this he did with an ease and deliberation of speech that was charming With him every sentence, as a printer would say, was wide-spaced, as if with em-quadrats, and every word the exact word for the place

it was put; and there were no "doublets" nor "outs" anywhere in his speech. This was Francis Asbury Wells, son of Bezaliel Wells, who laid out the town. As his name indicates, his parents were Methodists, and so named him after the renowned Bishop

Asbury.
"From an old book," said he, "I find it was August 25, 1797, that my father, after laying out the town, sold the first lots.
They were 60×180 feet, and sold for from \$60 to \$180 per lot. About the year 1819 the first steamboat was built here, and named from him 'Bezaliel Wells'—the boys called it 'Beelzebub.' It had brick chimneys, and they were built by Ambrose Shaw; they were not finished when she started on her first trip, which was for Pittsburg. Mr. Shaw finished them between here and Brown's island, seven miles north.

"My father, with others, in 1814 built the first woollen factory, I believe, west of the mountains. I have here [showing it to me] a silver medal presented in 1824 to Wells & Co. by the Franklin Institute of Philadelphia, as a 'reward of skill and ingenuity. This was in consequence of their having sent a piece of broadcloth to them on exhibition.

Memento of the Harrison Campaign.—Mr. Wells showed to me a memento of the Harrison campaign of 1840. It was a brass button, with a plough in front, a log-cabin in the centre, and a barrel of hard cider in one corner. "During that campaign," said he, "I wore a Kentucky jeans suit buttoned with these buttons, and with my brother and others I manufactured a kind called Tippe-cance jeans—a sort of gray mixed. We sent suits both to General Harrison and Henry Clay."

When Lafayette visited this country, in 1825, he came up the Ohio from Cincinnati, and it was expected would stop here. My father got his woollen factory in order, intending to show it to him and give him a big reception here. He was sadly disap-pointed, for, owing to the low stage of water, Lafayette could get no farther than Wheeling, twenty-two miles below, and so went by stage to Pittsburg, where father went to see him.

On meeting Lafayette he conversed with him upon the subject of raising wool in Jefferson county, and the trouble they had of raising sheep owing to the depredations of dogs. Lafayette told him that in France they had a breed of shepherd-dogs, very large, of great sagacity, which were used in driving and protecting their flocks. "Old a country as France is, and strange as you may think it," said Lafayette, "our mountains are infested with wolves which commit depredations upon our sheep. I will send you a pair for breeding." In due time they came, and were quite prolific. They were a noble species, white with generally golden-hued spots; resembled the English mastiff, and were found extremely useful, but in time run out by mongrel associates.

One of them one day followed my brother

EDWIN M. STANTON.

Alexander to market when a large, ferocious bull-dog, encouraged by his master, attacked him. The butchers formed a ring around them expecting the bull-dog to conquer. He had seized the shepherd-dog by the throat. The skin there was tough, and so loose that the other was enabled to twist his head around and grasp the bull's head, and soon

the bones were heard to crack. The master of the bull then interfered. "No," said the others, "we formed a ring to see fair play; you set him on and now we will see it out. And they did. The shepherd-dog had got his spunk up, and they heard the crunching of the bones, and quickly the bull-dog yielded up the ghost.

I conclude these notes with some more reminiscences of the early days of Edwin Stanton, from Mr. John McCracken. Nothing is too small to narrate that illustrates the characteristics of that great man.

I was a schoolmate with the Stanton boys, Edwin and his younger brother, Darwin, and lived opposite. The boys had for pets, which they kept in their house, some black and garter-snakes. They would bring the snakes out, sit on their doorstep and let them crawl over them. I joined them and let them crawl over me. I was then about thirteen, Darwin the same and Edwin sixteen.

The Stanton homestead was on the west side of Third street, between Market and Washington streets. Opposite their house was Isaac Jenkinson's hotel, the principal hotel of the town. In the rear was a noble grove. There under the trees I have seen General Jackson and Henry Clay take

I was very intimate with Stanton. A most famous case in which he was engaged was

wherein the firm of Gano, Thomas & Talbot, pork dealers, was sued on a claim involving an immense sum. Stanton travelled all over the country, east and west, for evidence. He argued the case from early morning until evening; looked fairly black in the face; was so tired. In the evening the case was given to the jury. I was sitting on the steps when Stanton came out and called to me. He wanted me to walk with him: said his mind was so excited he could not sleep, and I walked the streets until about six in the morning. When the jury came in the verdict was for Stanton. Stanton studied law with D. L. Collier. I remember on the day he was admitted to the bar hearing Collier say he was as capable of practising as he or any other member of the bar. Stanton was a very hard student and very muscular.

STEUBENVILLE, the county-seat of Jefferson, is situated on the right bank of the Ohio river, 68 miles below Pittsburg and 400 miles above Cincin-The average altitude of the city is a little over 700 feet above tide water, surrounded by hills rising several hundred feet higher. The city lies well above the river with a general slope toward it, giving a fine natural drainage. It is $43\frac{1}{2}$ miles west of Pittsburg and 150 miles east of Columbus, on the P. C. & St. L. R. R., which crosses the Ohio river at this point. It is also on the C. & P. R. R. The surrounding country abounds in coal and natural gas, with which the city is supplied for manufacturing and other purposes. County Officers: Auditor, William F. Simeral; Clerk, Andrew S. Buckingham; Commissioners, John Underwood, David Simpson, Jacob P. Markle; Coroner, James M. Starr; Infirmary Directors, Eli Fetrow, Thomas Nixon, Charles Barrett; Probate Judge, John A. Mansfield; Prosecuting Attorney, Henry Gregg; Recorder, Jacob Hull; Sheriff, John G. Burns; Surveyor, Samuel Huston; Treasurer, Hugh S. Coble. City Officers: Henry Opperman, Mayor; James Reynolds, Clerk; Wm. McD. Miller, Solicitor; James Beans, Street Commissioner; Wm. M. Scott, Marshal. Newspapers: Gazette, Democrat, McFadden & Hunter, editors and publishers; Germania, German Independent, Max Gescheider, editor and publisher; Herald, Republican, P. B. Coon, editor and publisher; Sunday Life, Independent, A. W. Beach, editor and publisher; Ohio Press, Independent Republican, W. R. Allison, editor; Saturday News, Independent, Frank Stokes, editor and publisher. Churches: 1 Congregational, 1 Methodist Protestant, 1 Christian, 1 American Methodist Episcopal, 2 Methodist Episcopal, 1 Episcopal, 2 Catholic, 1 Baptist, 1 Presbyterian and 2 Lutheran. Banks: Commercial, Sherrard, Mooney & Co.; Miners & Mechanics, Jno. H. Hawkins, president, J. W. Cookson, cashier; Steubenville National, R. L. Brownlee, president, Charles Gallagher, cashier; Union Deposit, Wm. A. Walden, president, Horatio G. Garrett, cashier.

Manufactures and Employees.—Hartje Brothers, glazed wrapping paper, 25

hands; Ohio Valley Clay Co., glass melting pots, 38; Jefferson Iron Works, iron and nails, 540; Pearl Mills, flour and feed, 6; Sumner Glass Co., bottles, 140; Gill Brothers & Co., lamp chimneys, etc., 470; Riverside Iron Works, pig-iron, 95; James Means & Co., foundry work, etc., 30; H. J. Betty & Sons, table glassware, 670; Steubenville Steam Laundry, laundrying, 10; Electric Light and Power Co., electric light, 4; Humphry Glass Co., glass novelties, 30; Steubenville Pottery Co., decorated ware, etc., 175; Cyrus Massie, doors, sash, etc., 9; Caswell & Pearce, furniture, 35; W. L. Sharp & Son, stoves, mantles, etc., 55; Robinson, Irwin & Co., machinery, 5; Robert Hyde, doors, sash, etc., 6; L. Anderson & Sons, doors, sash, etc., 15; William McDowell, stairs and stair railings, 4.—State Report, 1888. Population in 1880, 12,092. School census, 1888, 4,382; Henry N. Mertz, school superintendent. Capital invested in industrial establishments, \$2,215,600. Value of annual product, \$3,007,000. Census, 1890, 13,363.

BIOGRAPHY.

EDWIN McMasters Stanton was born in Steubenville, December 19, 1814. His boyhood home, of which we give a picture, is yet standing on Third street. This was not his birthplace. By the records his father bought this house when Edwin was three years old, and moved into it. Through Mrs. Wolcott, a sister now living, we learn he was born on Market street, in a house of which only the rear is now standing. It was in the house shown that when a boy he had a museum of butterflies, bugs and other curiosities he had collected.

His father, a physician, died in Edwin's boyhood. He entered Kenyon College in 1831, but left two years later to study law, and was admitted to the bar in 1836, beginning practice in Cadiz. He returned to Steubenville in 1839, was Supreme Court Reporter in 1842–5, preparing vols. XI., XII. and XIII. of the Ohio Reports. Removed to Pittsburg in 1848, and in 1857 to Washington. He was engaged by the government in many important land cases. December 20, 1860, he was appointed Attorney-General by President Buchanan to fill the unexpired term of Jeremiah S. Black, who had been appointed Secretary of State. He was called to the head of the War Department by President Lincoln on the retirement of Simon Cameron, January 15, 1862.

Mr. Stanton was originally a Democrat of the Jackson school, and until Van Buren's defeat in the Baltimore Convention in 1844 took an active part in political affairs in his locality. He favored the Wilmot proviso to exclude slavery from territory acquired by the war with Mexico, and sympathized with the Free Soil movement headed by Martin Van Buren. He was an anti-slavery man, but his opposition to that institution was qualified by his views of the qualifications imposed by the Federal Constitution.

While a member of Mr. Buchanan's Cabinet he took a firm stand for the Union, and at a Cabinet meeting, when John B. Floyd, then Secretary of War, demanded the withdrawal of the United States from the forts in Charleston harbor, he indignantly declared that the surrender of Fort Sumter would, in his opinion, be a crime equal in atrocity to that of Arnold, and that all who participated should be hung like Andre.

After the assassination of President Lincoln Secretary Stanton took sides against the new President, Andrew Johnson, in the controversy between him and the Republican party. Johnson demanded his resignation, which he refused; the President then suspended him, but he was restored to office by the Senate. The President then informed the Senate that he had removed Secretary Stanton, but the Senate denied his authority to

do this, and Stanton refused to surrender the office

After Mr. Stanton's retirement from office he resumed the practice of law. President Grant appointed him a Justice of the Supreme Court on December 20, 1869, and he was confirmed by the Senate, but died four days later, worn out by his herculean labors for his country. Of Stanton it has been well said: "He was the GIANT of the great war, who more than any other trampled out the rebellion—that more and more as the ages run will history develop this fact." President Lincoln was a politician, statesman and philanthropist, and Gen. Grant was embodied military business, but the mighty public will was concentrated in Stanton, and he brushed aside the failures and pretenders, and the speculators and sentimentalists, and not only gave Grant, Sherman and Sheridan, and those who came to

the front when the deadly work was done, a chance, but thrust into their hands the resources of the country, and more than or-

ganized victory.

He cared nothing for men, everything for the cause of the Union. That he should have made swarms of enemies was of course inevitable; as inevitable as that his full merits should be but slowly recognized. For Stanton was a patriot of so firm and indomitable a character that his purity and single-mindedness belittled and humiliated the crowd of greedy egotists who pushed to the doors of the treasury, and the same qualities even obscured the greatness of all but the greatest of his contemporaries. When the

names of Lincoln and Grant have been written there is no other that deserves to be linked with that of Stanton. He was a heaven-sent minister, if ever there was one. Carnot, the organizer of battles, was less to France in the crisis of the Revolution than our War Secretary was to the salvation of the Union. So just, so pure, so incorruptible, so patriotic was he that it seems almost a work of supererogation to attempt the defence of his memory against the base aspersions of his enemies who "with his darkness durst affront this light." His was a soul which could afford to disregard the spite of men, having taken for its standard from the beginning the judgment of God."

BENJAMIN TAPPAN was born in Northampton, Mass., May 25, 1773, and died in Steubenville, April 12, 1857. He was the son of Benjamin Tappan, a Congregational pastor, and Sarah Holmes, the great-niece of Benjamin Franklin. The original family name was Topham. The Tappans were largely clergymen and educated men. Benjamin Tappan received a publicschool education, and was apprenticed to learn copper-plate engraving and printing. Subsequently he studied law and was admitted to the bar, and began practice in 1799 at Steubenville; was elected to the Legislature in 1803; aide to Gen. William Wadsworth in the war of 1812; after which he served for seven years as President Judge of the Fifth Ohio Circuit. President Jackson appointed him Judge for the District of Ohio in 1833. From December, 1839, to March, 1845, he served in the United States Senate, as a Dem-

BENJAMIN TAPPAN.

ocrat. He was an active leader of his party, but afterward joined in the Free-Soil movement at its inception. Judge Tappan published "Cases Decided in the Court of Common Pleas," with an appendix (Steubenville, 1831).

His brother, Arthur Tappan, was the distinguished Abolitionist and philanthropist, President of the American Anti-Slavery Society, founder of the American Tract Society and Oberlin College. A son of Benjamin, Eli T. Tappan, LL. D., was from 1868 to 1875 President of Gambier. Later he received the appointment, under Gov. Foraker, of School Commissioner for Ohio, and died in office 1889, much lamented; he was a man of superior ability and usefulness.

Judge Tappan was widely known for his drollery and wit and anti-slavery sentiments.

HUMPHREY Howe Leavitt was born in Suffield, Conn., June 18, 1796, and died in Springfield, Ohio, in March, 1873. His father removed to Ohio in 1800. He was admitted to the bar in 1816, and settled at Cadiz, but later removed to Steubenville, where he was prosecuting attorney, and successively representative and senator in the Ohio Legislature in 1825–6–7. He was elected as a Jackson Democrat to Congress in 1830, and resigned in 1834 to accept the appointment of President Jackson as Judge of the United States Court for the District of Ohio,

which office he held for nearly forty years. Before the war, in 1858, in a charge to a jury in a fugitive slave case, he said: "Christian charity was not the meaning or intent of the fugitive slave law, and it would not therefore answer as a defence for violating the law." He was an authority on patent laws, and during the civil war decided the Vallandigham case, which Mr. Lincoln said was worth three victories. He was a greatly influential member of the Presbyterian Church, and sat as a delegate during eleven sessions of the General Assembly.

In his manners he was simple, unostentatious and with that quiet dignity and modesty that is ever weighty. We never heard him laugh aloud, but his smile was a carrying power. As our neighbor in Cincinnati, we felt as though he was one of those characters that adorned humanity, a much venerated person. He once told us that it was one of the enigmas of his life, how it was that he was given for a middle name the name of "Howe." We were sorry we could not aid him to its solution, but glad that such a man

had it to help give it respect.

JAMES COLLIER was, we believe, a native of Connecticut, born in 1789; an officer at the battle of Queenstown in the war of 1812, after which he settled in Steubenville; became eminent as a lawyer; was, with Thomas Ewing and John Brough, of the High Commission on the part of Ohio that settled the disputed boundary line between Ohio and Virginia; in 1849 was appointed United States Collector for California, and went overland, escorted by a small company of dragoons, fighting his way through hostile Indians. On his arrival, being the only government officer there, he for some time acted as Military Governor. He died at Steubenville, February 2, 1873, aged 84 years. He was a contributor of valuable facts for our first edition.

Judge John C. Wright was, we think, at one period a partner with Collier; at any rate, was contemporaneous with him in the practice of law here. In about 1848 he ed-

ited the Cincinnati Gazette.

Col. JOHN MILLER, an eminent officer of the war of 1812, was from Steubenville. He commanded the gallant sortie from Fort Meigs, May 5, 1813, driving the British from their batteries. He edited the Western Herald at Steubenville, both before and after the war. He eventually removed to Missouri, of which he was elected Governor. From 1837 to 1843 he represented it in Congress. He died at Florissant, Mo., March 18, 1846. ("Western Reserve Historical Society Tracts,"

THOMAS L. JEWETT was born in Maryland about 1810, and was a lawyer in Steubenville at one time a judge. When he became interested in the construction of the Pan Handle Railroad was elected its president, and eventually became a conspicuous railroad manager. As Virginia was unwilling to grant a charter for a connecting line across her territory for the Penn. Central Railroad, Judge Jewett sought the interposition of the General Government. He died in 1875.

HUGH J. JEWETT, of Zanesville, the emi-

nent railroad president and politician, was a

younger brother.

THOMAS COLE was born in England in 1801. His father emigrated to Steubenville, where the son resided until 1825, when he removed to New York city. He became famous as one of the best American land-scape painters, particularly of autumn scenes. He was a warm friend of the poet Bryant, who delivered a memorial address in New York city after his death, which occurred at Catskill, N. Y., February 11, 1848. (See page 463.)

JAMES ALEXANDER WILSON McDonald was born in Steubenville, August 25, 1824. In 1844 he removed to St. Louis and while employed in business during the day studied art at night. His first production in marble was a bust of John H. Benton in 1854. Eleven years later he settled in New York city, where several of his works adorn the public parks. He also paints portraits and landscapes in oils, lectures on art and science and

writes criticisms on art and artists.

STEPHEN MASON MERRILL was born in Jefferson county, September 16, 1825. In 1864 he was a travelling preacher in the Methodist Episcopal Church, four years later became editor of the Western Christian Advocate, and in 1872 was consecrated bishop. He received the degrees of D. D. and LL. D., and has published a number of valuable

religious works. WILLIAM PITTENGER was born in Knoxville, Jefferson county, January 31, 1840; is the historian and one of the participants in that daring enterprise of the civil war known as Andrew's raid. After the war he became a clergyman in the Methodist Episcopal Church, and since 1878 he has been a professor in the National School of Elocution and Oratory in Philadelphia. He is also the author of "Oratory, Sacred and Secular" (Phila., 1881), and "Extempore Speech"

A few miles north of the Jefferson county line, near Hanoverton, in Columbiana county, was born, October 4, 1841, the eminent scientist, Prof. THOMAS CORWIN MENDENHALL. From childhood he showed a fondness for the study of mathematics and natural philosophy and acquired by himself a knowledge of those branches of physics in which he has since excelled. He has been twice a Professor in the Ohio State University, resided a number of years in Japan as professor of physics in the University of Tokio; in 1884 became Professor in the United States Signal Service; in 1886 President of Rose Polytechnic Institute, Terre Haute, Ind. He gave the first public lectures on science in Japan to popular audiences. In 1889 was appointed by President Harrison Superintendent of the United States Coast and Geodetic Survey. Beside many scientific papers he has published A Century of Electricity.

A Scientist's Witticism.—We once heard in Pike's Opera House, Cincinnati, Proctor, the famous lecturer on astronomy, to illustrate the distance of the sun from us, quote this wit-

ticism of Mendenhall's, which naturally brought down the house.

Professor Mendenhall, of the Ohio State University, said he, has stated that if an infant to-day, attracted by the brightness of the sun, should attempt to reach it by thrusting forth its hand and it should travel toward it at the rate of a thousand miles an hour and thus finally reach it and burn its fingers, that young one would then have been dead more than a hundred years!

Toronto is on the Ohio river and the C. & P. R. R., eight miles north of Steubenville. It is located in the centre of the great fire-clay industry of Eastern Ohio, there being in this section a half dozen large manufactories engaged in making sewer-pipe, a total of nearly a thousand men being thus employed. Newspaper: *Tribune*, Independent Republican, Frank Stokes, editor and publisher. Churches: 1 Presbyterian, 1 United Presbyterian, 1 Methodist Episcopal, 1 Methodist Protestant, and 1 Catholic.

Manufactures and Employees.—Franey's Sons & Co., sewer pipe, etc., 55; Great Western Fire Clay Co., sewer pipe, etc., 75; Pennsylvania Manufacturing, Mining and Supply Co., sewer pipe, etc., 55; Bowers & Custer, flour and feed, 3; Myers & McFerren, doors, sash, etc., 8; Medcalf, Cooper & Goodlin, doors, sash, etc., 12.—Ohio State Report, 1888. Population about 2,000. Capital invested in manufacturing establishments, \$98,000. Value of annual product, \$110,000.—Ohio Labor Statistics, 1888.

RICHMOND is 11 miles west of Steubenville, on the proposed line of the Lake Erie, Alliance and Southern Railroad. It is surrounded by an agricultural region and noted for fruits, especially fine plums. A skirmish between United States forces and John Morgan's raiders took place near Two Ridge Church, three miles east of here. This is the seat of Richmond College, Rev. S. C. Faris, president. Newspaper: Radiator, Independent, J. B. Sprague, editor. Churches: 1 Methodist Episcopal, 1 Presbyterian and 1 United Presbyterian. Population, 1880, 491.

ELLIOTTSVILLE (P. O. Calumet) is on the Ohio river and C. & P. R. R., 11 miles north of Steubenville, where are situated the extensive sewer-pipe works of E. Connor and the Calumet Fire Clay Company.

Mt. Pleasant is 20 miles southwest of Steubenville. Churches: 1 Baptist, 1 Methodist Protestant, 1 Friends, 1 Methodist Episcopal, 1 Presbyterian. Bank: First National, R. W. Chambers, president, I. K. Ratcliff, cashier. Population, 1880, 693. School census, 1888, 281; Wm. M. White, school superintendent.

IRONDALE, 9 miles southwest of Steubenville, on the P. C. & St. L. R. R. Churches: 1 Methodist Episcopal and 1 Presbyterian. Population in 1880, 399.

SMITHFIELD is 14 miles southwest of Steubenville. Newspaper: Times, Independent, Herbert Harrison, editor and publisher. Bank: First National, C. D. Kaminsky, president, Wm. Vermillion, cashier. Population, 1880, 559. School census, 1888, 196.

BRILLIANT, P.O. La Grange, is 7 miles south of Steubenville, on the C. & P. R. R. and Ohio river. Population about 1,000.

NEW ALEXANDRIA is 4 miles southwest of Steubenville. Population in 1880, 175.

BLOOMFIELD, P. O. Bloomingdale, is 18 miles west of Steubenville, on the P. C. & St. L. R. R. Population, 1880, 175. School census, 1888, 67. Newspaper: *Bloomfield Correspondent*, Independent, C. T. Athearn, editor and publisher.

MINGO JUNCTION is on the Ohio river, 3 miles below Steubenville, at the crossing of the P. C. & St. L. and C. & P. R. R. It is a famed historical point. It has some manufacturing establishments one Methodist church and a population of about 700.

KNOX.

KNOX COUNTY was named from Gen. Henry Knox, a native of Boston, General in the war of the Revolution, and Secretary of War in Washington's administration. It was formed from Fairfield, March 1, 1808. The north and east parts are hilly; the central, west and south parts, undulating or level. The bottom lands of the streams are very rich, particularly those of Vernon river, which stream affords abundance of water-power.

Area about 540 square miles. In 1887 the acres cultivated were 1,141,915; in pasture, 119,622; woodland, 55,262; lying waste, 714; produced in wheat, 452,889 bushels; rye, 3,736; buckwheat, 1,397; oats, 410,960; barley, 263; corn, 1,038,560; broom-corn, 4,425 pounds brush; meadow hay, 33,228 tons; clover-seed, 5,291 bushels; flax-seed, 5,321; potatoes, 59,562; tobacco, 475 pounds; butter, 503,720; cheese, 200; sorghum, 436 gallons; maple syrup, 14,832; honey, 3,463 pounds; eggs, 550,061 dozen; grapes, 19,620 pounds; wine, 57 gallons; sweet potatoes, 76 bushels; apples, 9,915; peaches, 13,479; pears, 685; wool, 772,829 pounds; milch cows owned, 5,831. School census, 1888, 7,897; teachers, 283. Miles of railroad track, 73.

Population of Knox in 1820 was 8,326; 1830, 17,125; 1840, 19,584; 1860, 27,735; 1880, 27,431; of whom 22,437 were born in Ohio, 1,581 in Pennsylvania, 438 in Virginia, 404 in New York, 123 in Indiana, 32 in Kentucky, 467 in England and Wales, 378 in Ireland, 182 in German Empire, 44 in British America, 24 in Scotland, and 19 in France. Census, 1890, 27,600.

The early settlers of the county were mainly from the Middle States, with some of New England origin. In 1805 Mount Vernon was laid out, and named by the proprietors of the soil, who were Joseph Walker, Thomas B. Paterson and Benjamin Butler, from the seat of Washington. At this time the county was

thinly settled. Two years after, the principal settlers were, as far as their names are recollected, the Rileys, Darlings, Shriplins, Butlers, Kritchfields, Walkers, Dials, Logues, and De Witts, on Vernon river. In other parts of the county, the Hurds, Beams, Hunts and Dimick, Kerr, Ayres, Dalrymple, Houck, Hilliard, the Youngs, Mitchells, Bryants, Knights and Walkers. In the spring of 1807 there were only three families living on the plat of Mount Vernon, viz.: Benjamin Butler, tavern-keeper, from Pennsylvania, Peter Coyle and James Craig. The early settlers of the village were, beside those named, Joseph and James Walker, Michael Click, David and William Petigrue, Samuel Kratzer, Gilman Bryant, and Rev. James Smith, who came in 1808, and was the first Methodist clergyman.

When the settlers first came, there were two wells, only a few rods apart, on the south bank of Vernon river, on the edge of the town, the origin of which remains unknown. They were built of neatly hammered stone, laid in regular masonry, and had the appearance of being overgrown with moss. Near by was a salt lick, at which the Indians had been accustomed to encamp. Almost immediately after the first settlement, all traces of the wells were obliterated, as was supposed, by the Indians. A similar well was later brought to light, a mile and a half distant, by the plow of Philip Cosner, while plowing in a newly cleared piece of forest land. It was covered with poles and earth, and was about thirty

feet deep.

In the spring of 1807 Gilman Bryant opened the first store in Mount Vernon, in a small sycamore cabin, in the western part of the town. A hewed-log and shingle-roofed building stood on the northeast corner of Wood and Main streets; it was the first tavern, and was kept by Benjamin Butler. The first frame building was put up in 1809, and is now (1846) standing on lot 138 Main street. The old court-house, erected about 1810, opposite the present court-house, on the public square, was the first brick building; it was two stories high and thirty-six feet square. The first brick building was erected in the spring of 1815, by Gilman Bryant, now standing next to and south of his present residence. The first church, the Old-School Presbyterian (now down), was built about 1817. It was of brick, forty feet square, and one story high; the first pastor was the Rev. James Scott. The first licensed preacher in the county was the Rev. William Thrift, a Baptist, from Loudon county, Va., who came in 1807, and travelled about from house to house. The first crops raised in the county were corn and They were grown on the bottom lands, which were the first cleared; those lands were too rich for wheat, making sick wheat, so termed, because when made into bread, it had the effect of an emetic, and produced feelings similar to sea-sickness.

At an early day the Indians, in great numbers, came to Mount Vernon to trade. They encamped on the river bank and brought large quantities of furs and cranberries to dispose of for goods. The whites of the present day might take some beneficial hints from their method of trading at the store in this place. They walked in deliberately and seated themselves, upon which the merchant presented each with a small piece of tobacco. Having lighted their pipes, they returned the residue to their pouches. These were made of a whole mink-skin, dressed with the hair on, with a slit cut in the throat as an opening. In it they kept, also, some kinnickinnick bark, or sumach, which they always smoked with their tobacco, in the proportion of about three of the former to one of the latter. After smoking and talking a while together, one only at a time arose, went to the counter, and taking up a yardstick, pointed to the first article he desired, and inquired the price. The questions were in this manner; "How many buck-skins for a shirt-pattern?" or "cloth for leggings?" etc.; according to their skin currency.

A muskrat skin was equal to a quarter of a dollar; a raccoon-skin, a third of a dollar; a doe-skin, half a dollar, and a buck-skin, "the

almighty dollar." The Indian, learning the price of an article, paid for it by picking out and handing over the skins, before pro-

ceeding to purchase the second, when he repeated the process, and so on through the whole, paying for everything as he went on, and never waiting for that purpose until he had finished. While the first Indian was trading, the others looked uninterruptedly on, and when he was through, another took his place, and so on, in rotation, until all had traded. No one desired to trade before his turn, and all observed a proper decorum, and never attempted to "beat down," but, if dissatisfied with the price, passed on to the next article. They were cautious not to trade while intoxicated; but usually preserved some of their skins to buy liquor, and end their visit with a frolic.

The early settlers in the town all felt as one family. If one got a piece of fresh meat, he shared it with his neighbors, and when a person was sick, all sympathized. At night, they met in each other's cabins, to talk, dance, and take a social glass. There was no distinction of party, for it was a social democracy. At their weddings, a puncheon table, formed like a bench, without a cloth, was covered with refreshments. These were plain and simple: wild turkeys, that had been gobbling about in the woods, were stewed and eaten with a relish; corn, that had grown on the river flats, made into "pone" served as wedding cake; while metheglin and whiskey, the only articles probably not indigenous, were the beverages that washed them down. Their plates were either of wood or pewter, perhaps both, and no two alike; their knives frequently butcher knives, and their forks often of wood. A dance was the finale of their festivities. They made merry on the puncheon floor to the music of the fiddle. Cotillions were unknown, while jigs, four-handed reels, the double shuffle and break down "were all the

After Mount Vernon was laid out, the settlers from the region roundabout were accustomed to come into town on Saturdays, to clear the stumps out of the streets. Early in the afternoon they quitted work, and grew jolly over a large kettle of "stew." This was made as follows: First, a huge kettle, of gallons' capacity, was placed upon the ground, resting upon three stones, and a fire kindled under it. In it was put two or three buckets of water, a few pounds of maple sugar, a few ounces of allspice, which had been pounded in a rag, a pound of butter, and, finally, two or three gallons of whiskey. When boiled, the stew was taken off, a circle was formed around, and the men helped themselves liberally, with tin cups, to the liquor, told hunting stories, wrestled, ran, hopped and jumped, engaged in foot races, shot at mark for goods or tobacco purchased at the store, and occasionally enlivened the scene by a fight.

Upon the organization of the county, there was a spirit of rivalry as to which should be the county-seat, Mount Vernon or Clinton, a

town laid out a mile and a half north, by Samuel Smith—then a place of the most population, now among the "things that The commissioners appointed to locate the seat of justice first entered Mount Vernon, and were received with the best cheer, at the log tavern of Mr. Butler. To impress them with an idea of the public spirit of the place, the people were very busy at the moment of their entrance and during their stay, at work, all with their coats off, grubbing the streets. As they left for Clinton, all quitted their labor, not "of love;" and some rowdies, who dwelt in cabins scattered round about in the woods, away from the town, left "the crowd," and stealing ahead of the commissioners, arrived at Clinton first. On the arrival of the others at that place, these fellows pretended to be in a state not conformable to temperance principles, ran against the commissioners, and by their rude and boisterous conduct, so disgusted the worthy officials as to the apparent morals of the inhabitants of Clinton, that they returned and made known their determination that Mount Vernon should be the favorite spot. That night there were great rejoicings in town. Bonfires were kindled, stew made and drank, and live trees split with gunpowder.

The first settler north of Mount Vernon was Nathaniel M. Young, from Pennsylvania, who, in 1803, built a cabin on the south fork of Vernon river, three miles west of Fredericktown. Mr. Young and his neighbors being much troubled with wolves, got together and made a written agreement to give nine bushels of corn for every wolf's scalp. In the winter of 1805-6 Mr. Young, John Lewis and James Bryant caught forty-one wolves, in steel traps and pens. Wolf-pens were about six feet long, four wide and three high, formed like a huge square box, of small logs, and floored with puncheons. The lid, also of puncheons, was very heavy, and moved by an axle at one end, made of a small, round that the transfer of the form the state of the sta stick. The trap was set by a figure four, with any kind of meat except that of wolf's, the animals being fonder of any other than their own. On gnawing the meat, the lid fell and enclosed the unamiable native. Often to have sport for the dogs, they pulled out the legs of a wolf through the crevices of the logs, hamstrung, and then let him loose, upon which the dogs sprang upon him, while he, crippled by the operation, made but an ineffectual resistance. In the adjoining county of Delaware, a man, somewhat advanced in years, went into a wolf-trap to render the adjustment of the spring more delicate, when the trap sprung upon him, and, knocking him flat on his face, securely caught him as was ever any of the wolf species. He was unable to lift up the lid, and several miles from any house. There he lay all one day and night, and would have perished had not a passing hunter heard his groans and relieved him from his peril.

PUBLIC SQUARE, MOUNT VERNON.

F. S. Crowell, Photo , Mount Vernon, 1887.

PUBLIC SQUARE, MOUNT VERNON.

northeast of Columbus. It is beautifully situated on ground slightly ascending from Vernon river. The town is compactly and substantially built, and some of the dwellings elegant. Main, the principal business street, is about a mile in length, on which are many brick blocks, three stories in height. The view was taken in this street, at the southern extremity of the public square, looking north. On the left is shown the market and court-house; on the right the Episcopal church, an elegant stone edifice, and in the centre the tower of the Old-School Presbyterian church and the jail. This flourishing town contains two Presbyterian, two Methodist, one Baptist, one Lutheran, one Catholic and one Episcopal church; twenty dry-goods, six grocery, two hardware, three apothecary and two book-stores; one fulling, four grist and five saw-mills; three newspaper printing-offices, and had, in 1840, 2,363 inhabitants, and has now over 3,000. The rail-road, constructing from Sandusky City to Columbus, will connect this place with those.—Old Edition.

Mount Vernon, county-seat of Knox, is forty miles northeast of Columbus, on the Kokosing river, the C. A. & C. and S. M. & N. Railroads. The Magnetic Springs, a noted health resort, is about two miles north of the city. County Officers: Auditor, Curtis W. McKee; Clerk, Hugh Neal; Commissioners, Stephen Craig, Samuel T. Vannatta, W. D. Foote; Coroner, Samuel R. Stofer; Infirmary Directors, James O. McArtor, William H. Wright, John C. Hammond; Probate Judge, John M. Critchfield; Prosecuting Attorney, William L. McElroy; Recorder, Dwight E. Sapp; Sheriff, John G. Stevenson; Surveyor, John McCrory; Treasurer, William H. Ralston. City Officers: Mayor, W. B. Brown; Clerk, P. B. Chase; Solicitor, C. A. Merriman; Engineer, D. C. Lewis; Treasurer, W. B. Dunbar; Street Commissioner, W. B. Henderson; Marshal, Robert Blythe; Clerk Board of Health, M. M. Murphy. Newspapers: Tribune, Republican, John W. Critchfield, editor; Democratic Banner, Democratic, L. Harper, editor and proprietor; Republican, Republican, C. F. and W. F. Baldwin, editors; Knox County Democrat, Democratic, William A. Silcott, proprietor. Churches: one Congregational, one Methodist, one Methodist Protestant, one Presbyterian, one Catholic, one Episcopalian, one Methodist Episcopal, one Colored Methodist Episcopal, one Baptist and one Colored Baptist. Banks: First National, C. Delano, president, Fred. D. Sturges, cashier; Knox County Savings, G. A. Jones, president, Samuel H. Israel, cashier; Knox National, Henry L. Curtis, president, John M. Ewalt, cashier.

Manufactures and Employees.—C. A. & C. R. R. Shops, railroad repairs, 125 hands; E. L. Black, plows and castings, 4; the Cooper Manufacturing Co., engines and saw-mills, 45; Mount Vernon Bridge Co., iron bridges, 100; Kokosing Mills, flour, etc., 20; Eagle Mills, flour; S. H. Jackson, carriages and buggies; Mount Vernon Linseed Oil Co.; C. & G. Cooper, saw-mills, etc., 190; Mount Vernon Steam Laundry, laundrying, 10.—State Report, 1888. Population, 1880, 5,249. School census, 1888, 1,100; J. A. Shawan, school superintendent (and from 1883 to 1889, when he was given the same position in Columbus). Capital invested in industrial establishments, \$1,009,150; value of annual product, \$1,326,700.—Ohio Labor Statistics, 1887. Census, 1890, 6,027.

The first jury trial in Knox county was in May, 1808; it was that of the State of Ohio vs. William Hedrick; William Wilson, of Licking county, presiding. Judgment was rendered against the prisoner on four charges of theft. Besides fines and imprisonment, it was ordered that the "prisoner be whipped on his naked back." This was one of the few instances in the history of Ohio in which this barbarous mode of punishment was legally inflicted. Its degrading and brutalizing effect, both on the victim and the public, is apparent in the following account from Norton's spicy "History of Knox County."

The judgment of castigation was executed upon the public square of Mount Vernon, presence of all the people. Silas Brown was

the sheriff, and it fell to his lot as such to serve the "legal process" upon the body of William Hedrick. There was a small, leaning, hickory tree upon the east side of the public square, between the present Norton building (now occupied by Dr. Israel Green, druggist) and High street, and a little south of where the jail was afterwards built, and this tree bent in such a way that a man could walk around under it. To this delectable spot the culprit was taken, and his hands stretched up over his head and tied to the tree, and the stripes were applied by the sheriff to his naked back. He was struck forty times with a heavy, rawhide whip.

The first few blows with the rawhide were across the kidneys. Mr. Bryant, one of the bystanders, at once called out to the sheriff to

whip him elsewhere; that was no place to whip a man; he should strike higher up; and the rest of the lashes were applied across the shoulders.

The criminal sobbed and cried piteously, and when released went off weeping and groaning. In many places the skin was cut and broken, and the blood oozed out, making a pitiable spectacle. And yet, such was the feeling against him, that few seemed to sympathize with the scourged. As he started off he said to the spectators: "You should not blame me for this, for it was not my fault." Bob Walker replied: "No, you wouldn't have stood up and been whipped that way, if you could have helped it." At this prompt retort to Hedrick's explanation, or apology, the crowd laughed uproariously.

Gambier in 1846.—Five miles east of Mount Vernon, on a beautiful, healthy, and elevated ridge, encompassed on three sides by the Vernon river, is the village of Gambier, so named from Lord Gambier, and widely known as the seat of Kenyon College. This town, exclusive of the college, contains about 200 inhabitants. It was laid out under the auspices of the venerable Bishop Chase, in July, 1826, in the centre of a 4,000-acre tract, belonging to Kenyon College. This institution was then founded, with funds obtained by Bishop Chase in England, and named after Lord Kenyon, one of its principal benefactors. It was first chartered as a theological seminary. It is richly endowed, having 8,000 acres of land, and its property is valued at \$100,000. The college proper has about fifty students; the theological seminary about twenty; the senior grammar school about twenty, and Milnor Hall, an institute for boys, about twenty-five. In the various libraries are near 10,000 volumes.

The main college building is romantically situated. You enter a gate into a large area: in the foreground is a large, grassy, cleared plat of several acres, on the right of which stands Rosse Chapel, an elegant Grecian structure; on the left and below, is the beautiful Vernon valley, bounded by forest-clad hills, over which the eye passes in the perspective for miles and miles, until the blue of distant hills and sky meet and blend in one. Through the centre of the grassy plat passes a footpath, which, at a distance of 200 yards, continues its straight line in a narrow opening through a forest, and terminates at the college, about one-third of a mile distant, the spire of which rises darkly above the green foliage, like that of an ancient abbey, while the main building is mostly concealed. The whole scene, the graceful, cheerful architecture of the chapel, on the right, the valley on the left, the pleasant, grassy green in front, the forest beyond, with the sombre, half-concealed building in the distance, give

an ever-enduring impression. Standing at the gate, with the back to the college, the scene changes: a broad avenue terminates at the distance of half a mile, at the head of which, in a commanding position, faces Bexley Hall, a building appropriated to the the-ological seminary. It is a large, elegant, and highly-ornamented Gothic structure, of a light color, with battlements and turrets, standing boldly relieved against the blue sky, except its lower portion, where it is concealed by the shrubbery of a spacious yard in front. To the left, and near the hall, an imposing residence, late occupied by Bishop McIlvaine, faces the avenue. Away off to the right, among the trees, is Milnor Hall, and scattered about in various directions, near and far, private dwellings, offices and various structures, some plain and others adorned, some in full view and others partly hidden by the undulations of the ground, trees and shrubbery.—Old Edition.

THE CAREER OF KENYON.

Since the foregoing was published, important changes have taken place at Gambier. Now it has railroad facilities by the C. A. & C. Railroad; new and beautiful buildings have been erected, and now connected with it are Kenyon Military Academy and "Harcourt Place Seminary for Young Ladies and Girls." Kenyon has many warm friends among her distinguished alumni. Ex-President

KENYON COLLEGE. 1846.

BISHOP CHASE AND WIFE.

Hayes wrote that, with the exception of the four years spent in the Union army, no other period of his life, in cherished recollections, could be compared with it. Edwin M. Stanton, the great War Secretary, was accustomed to say: "If I am anything, I owe it to Gambier College."

When Bishop McIlvaine succeeded Bishop Chase in the presidency of Kenyon College, the affairs of the institution were in a critical condition, owing to the accumulation of debt, and his timely aid and able government, in which he was assisted by Dr. William Sparrow, the first vice-president, were invaluable. Bishop McIlvaine's duties were divided

between the college and his diocese; but Dr. Sparrow gave to Kenyon his full and undivided strength. Under these two strong men the institution flourished and its educational

influence was widespread.

"The expenses of living in Gambier in rly days were very small. The annual early days were very small. charges were: for instruction, \$30; for board at the college table, \$40; room rent in a room with a stove, \$4; room rent in a room with fire-place, \$6. For theological students and sons of clergymen the total charge was \$50.

The college formed a large landed estate, and kept a hotel and shops, mills and stores. One looks curiously to-day at its inventory of goods—pots, pans, pails, tubs, saucers, spoons, white dimity bed-curtains, mixed all

up with oxen, cows and vinegar.

An early college publication advertises, "Cash will be given at the seminary store for hats and old shoes suitable for making coffee.' It also chronicles an "Awful Catastrophe.— Died, very suddenly, on Wednesday last, seventeen interesting hogs, of sore throat, endeared to the students by their unassuming manners, gentlemanly deportment, and a life devoted to the public service. The funeral of each of them will be attended every day until the end, in the dining-hall.'

Those were the days when the boys were required "to sweep their own rooms, make their own beds and fires, bring their own water, black their own boots—if they ever were blacked—and take an occasional turn at grubbing in the fields or working on the roads." The discipline was somewhat strict and the toil perhaps severe, but the few pleasures that were allowed were thoroughly We read of a sophomore who was commanded to the room of a professor, and severely beaten with a rod. For the first time in his life a Mississippi freshman received bodily chastisement, and even Dr. Sparrow, the vice-president, took care to see that it was well laid on.

In 1840 Bishop McIlvaine was succeeded in the presidency of Kenyon by Major D. B. Douglass, LL. D., but remained at the head of the theological seminary. Succeeding Major Douglass in the presidency came Rev. Dr. H. A. Bronson; later came Lorin Andrews, LL. D., the first Ohio volunteer to the Union army (see vol. i., page 253). His successors were Charles Short, LL. D. (1863-67), James Kent Stone, A. M. (1867-68), Eli T. Tappan, LL. D. (1868–75), William B. Bodine, D. D., the present incumbent.

Gambier is greatly indebted to Bishop G. T. Bedell, ex-president of the theological seminary, who, by his ardent and faithful endeavors, secured contributions amounting in all to nearly \$200,000.

For her present measure of prosperity, if not, indeed, for her very existence, the one man to whom-after Bishop Chase-Kenyon College is most indebted is the Rev. M. T. C. Wing, D. D. For a third of a century, in addition to the duties of his professorship, he carried on his strong shoulders the financial burdens of the college. He struggled through deep waters, but he bravely tri-umphed. Bishop McIlvaine testified "to

his eminent faithfulness, wisdom, self-devo-

tion, patience and constancy in most trying circumstances.

In all her requisites for admission, and in the course of study, Kenyon does not materially differ from the leading colleges of the Eastern States. She aims to give a thorough liberal education, and believes in the value of hard mental discipline. She also believes in right religious influences, and labors to afford them, pursuing steadily "the true, the beautiful, the good.

Among the most eminent of the sons of Kenyon are ex-President R. B. Hayes, Edwin M. Stanton, David Davis, Henry Winter

Davis, Stanley Matthews, David Turpie, M. M. Granger, Frank H. Hurd, R. E. Trowbridge and Wm. G. LeDuc.

The "Church of the Holy Spirit," the college chapel at Kenyon, is said to be "the most beautiful church in this country." The funds for its erection were given by members funds for its erection were given by members of the Church of the Ascension, New York, as a tribute of appreciation for their former rector, Bishop Bedell.

Mr. Geo. A. Benedict, editor of the Cleve-land *Herald*, has written of it: "The crowning glory of the Church of the Holy Spirit is its teachings in every window, in all its carvings, in its illuminated wall-texts, in its ceilings, and in its everything. That church is a biblical study. It is cheerful; there is nothing the least gloomy about it, and the most irreverent intuitively would take off his hat when he entered it, for it is the beauty of holiness."

BIOGRAPHY.

PHILANDER CHASE was born in Cornish, N. H., December 14, 1775; died at Jubilee College, Ill., September 20, 1852. Graduated at Dartmouth in 1795. Ordained priest in the Episcopal church, November 10, 1799. Was occupied in missionary labor in Western New York and later at New Orleans, being

the first Protestant minister in the State of Louisiana.

In 1811 became rector of Christ Church, Hartford, Conn., and in 1817 went to Ohio, where "he began a work for the church in Ohio, and in truth of the whole West, such as no other man then living would have attempted, or probably would have accomplished."

He took charge of the academy at Worthington, organized several parishes, three of which he assumed the rectorship of himself. He was elected bishop and consecrated at Philadelphia, February 11, 1819. It was about this time that Salmon P. Chase, his nephew, became a member of his family.

He began his work with rare earnestness. For several years it was necessary for him to gain his support as a tiller of the soil, as his ministrations did not yield pecuniary return sufficient to pay his postage. The need of helpers in his work, who should be Western men inured to hardships, turned his mind toward the founding of a college for the training of such helpers. He went to England to raise the funds to endow such an institution. Great opposition and many obstacles were overcome by him both in America and England.

An anecdote describes his first experience in London: One day Dr. Dow, of New Orleans, called on Mr. Butterworth, Wilberforce's particular friend, when in the course of conversation the latter said: "So you are from America. Dr. Dow? Were you acquainted with Bishop Chase?" "Yes; he was my pastor in New Orleans, and I his physician and friend." "Tell me about him; there must be something singular in him or he would not be neglected as he is in England." "Singular! I never knew anything singular in him but his emancipating his yellow slave, and that, I should suppose, would not injure him here in England."

This story made Butterworth Bishop Chase's friend, and through him he became the hero of the hour; subscriptions poured in upon him until \$30,000 were realized. Lord Gambier, Lord Kenyon, Sir Thomas Ackland, Lady Rosse, and Hannah More helped him.

Returning to Ohio, he purchased 8000 acres in Knox county and founded Kenyon College and Gambier Theological Seminary. He was determined that the school should be located in the country. "Put your seminary," he said, "on your own domain; be owners of the soil on which you dwell, and let the tenure of every lease and deed depend on the express condition that nothing detrimental to the morals and studies of youth be allowed on the premises."

Bishop Chase occupied the office of president of the college, performing a prodigious amount of labor, making every obstacle give way before his indomitable will and persistent industry. In all his labors he was ably seconded by his efficient wife and helpmate. "Mrs. Chase entered with her whole soul into her husband's plans. She was a lady perfectly at home in all the arts and minutiæ

of housewifery; as happy in darning stockings for the boys as in entertaining visitors in the parlor, in making a bargain with a farmer in his rough boots and hunting blouse as in completing a purchase from an intelligent and accomplished merchant, and as perfectly at home doing business with the world about her, and in keeping the multifarious accounts of her increasing household as in presiding at her dinner table, or dispensing courtesy in her drawing-room."

September 9, 1831, Bishop Chase resigned the presidency of the college and the episcopate of Ohio, on account of differences that had arisen between himself and his clergy. He entered upon missionary work in Michigan, and in 1835 was chosen Bishop of Illinois, when he again visited England, raised \$10,-000, and in 1838 founded Jubilee College at Robin's Nest, Ill. A friend described him as follows: "In height he was six feet and over; the span of his chest was nearly, if not quite, equal to his height, and with that noble trunk his limbs were in full and admirable proportion. In a crowd his giant figure, in front or back, excited, wherever he moved, universal attention. Large and heavy in stature as he was, he was remarkably light and graceful in his movements, and, when not ruffled with opposition or displeasure, exceedingly agreeable, polished and finished in his Toward those who betrayed hauteur manner. in their deportment with him, or whom he suspected as actuated by such a spirit, or who positively differed with him as to his policy and especially toward those whom he looked upon as his enemies, he was generally distant and overbearing, and sometimes, when of-fended, perhaps morose. In his bearing toward them his noble countenance was always heavy and lowering, and his deportment frigid and unmistakably repulsive; but in his general intercourse, and always with his particular and intimate friends, his address and social qualities were polished, delightful and captivating; his countenance was sunlight, his manner warm and genial as balmy May, and his deportment winning to a degree rare among even remarkably commanding and popular men.

His published works were, "A Plea for the West" (1826); "The Star in the West, or Kenyon College" (1828); "Defence of Kenyon College" (1831); and "Reminiscences: an Autobiography, comprising a History of the Principal Events in the Author's Life to 1847" (2 vols., New York, 1848).

CHARLES PETTIT McILVAINE, son of Joseph McIlvaine, U. S. Senator from New Jersey, was born in Burlington, N. J., January 18, 1799; graduated at Princeton in 1816; was made priest in the Episcopal church, March 20, 1821. He was five years rector of Christ Church, Georgetown, D. C. In 1825 was appointed chaplain and professor of ethics at West Point. Settled over St. Ann's Church, Brooklyn, in 1827; four years later was chosen professor in the University of the City of New York. Was elected Bishop of Ohio

and consecrated in New York, October 31, 1832. Before settling in Ohio Bishop McIlvaine raised among his friends in eastern cities nearly \$30,000 for Kenyon College and the theological seminary at Gambier, of which institutions he became president.

He received the degrees of D. D. from

CHARLES PETTIT MCILVAINE.

Princeton and Brown in 1832, D. C. L. from Oxford in 1853, and LL. D. from Cambridge in 1858.

During the war he was a member of the Sanitary Commission and on a visit to England at this period he was of great service to the United States government in creating favorable sentiment for the Union. As Bishop of Ohio and President of Kenyon College he was a great power in the development of religion, morals and education.

"Born in the same year in which George Washington died, he bore a close resemblance to the Father of his Country, both in appearance and character. He looked a king among men; he was great, also, as a thinker and orator."

The first by-law under his administration at Kenyon is characteristic: "It shall be the duty of every student of the college and grammar-school on meeting or passing the president or vice-president, any professor, or other officer of the institution, to salute him by touching the hat, or uncovering the head, and it is equally required of each officer to return the salutation."

Bishop McIlvaine died in Florence, Italy, March 13, 1873, while abroad for his health. He was the author of many valuable religious works. His "Lectures on the Evidences of Christianity" (New York, 1832) has had very extensive circulation.

The Hon. Columbus Delano was born in Shoreham, Vt., June 5, 1809; removed to Mount Vernon in 1817; was admitted to the bar in 1831. He was eminently successful as an advocate and criminal lawyer. In 1847 he lacked but two votes for nomination for Governor: was a delegate to the Convention that nominated Lincoln and Hamlin in 1860; also chairman of the Ohio delegation in the Baltimore Convention that nominated Lin-coln and Johnson in 1864. He was appointed State Commissary-General of Ohio in 1861, and filled the office with great acceptance. He was a member of the Ohio House of Representatives in 1863, and a member of Congress in 1844, 1864 and 1866. In March, 1869, he was appointed by President Grant Commissioner of Internal Revenue, and very greatly improved the organization of that bureau. In 1870 he succeeded Jacob D. Cox as Secretary of the Interior, and resigned in 1875. The honorary degree of LL.D. was conferred on him by Kenyon College, and he was one of the trustees of that institution.

COLUMBUS DELANO.

in connection with which he endowed a grammar school called Delano Hall.

He has been prominently identified with the agricultural and wool interests of Ohio; is President of the National Wool-Growers' Association, and is an able and indefatigable advocate for the protection of domestic wool from foreign competition.

George Washington Morgan was born in Washington county, Pa., September 20, 1820. In 1836 he left college to enlist in the regular Texan army, from which he retired with the rank of captain, and in 1841 entered the United States Military Academy. In 1843 he removed to Mount Vernon, and began the practice of law there in 1845.

He was colonel in the Mexican war and brevetted brigadier-general for gallantry at Contreras and Churubusco. While in Mexico, several of his command were murdered by guerillas, and in one case two young soldiers were killed, and their hearts and other parts of their person hung upon bushes by the roadside. Colonel Morgan thereupon caused to be seized and held as hostages a

GEN. G. W. MORGAN.

number of wealthy Mexican citizens, and gave notice that for every American soldier killed, otherwise than in fair fight, he would hang one of these Mexicans. No more murders occurred.

In 1856 Morgan was appointed United States Consul to Marseilles, and in 1858 Minister to Portugal; returning to the United States in 1861 to enter the army as brigadiergeneral of volunteers, ander Gen. Don Carlos Buell

In March, 1862, he was assigned command of the Seventh Division of the Army of Ohio. He was afterwards assigned to the Thirteenth Army Corps, and commanded at the capture of Fort Hindman, Ark. He resigned from the army in 1863, owing to failing health.

In 1865 he was the defeated Democratic candidate for Governor of Ohio; was elected to Congress in 1866, but supplanted in 1868 by Columbus Delano, who contested his seat. He was the Democratic candidate for Speaker when Blaine was first elected to that office. He was again elected to Congress in 1869, serving till 1873; was a delegate-at-large to the National Democratic Convention at St. Louis in 1876.

LECKY HARPER was born in Ireland, 1815. His parents emigrated to the United States in 1820, and settled in Washington, D. C., where his father shortly died, and the self-sacrificing mother exerted all her faculties to the rearing and education of her four children, with whom she removed to Ohio in 1826.

Mr. Harper early entered into journalism, at Steubenville. In 1837 he edited the American Union. Later he studied law and was admitted to the Pittsburg bar while editing the Pittsburger. He removed to Cadiz. O., and then returned to Pittsburg, where, as editor of the Post, his vigorous support of the ten-hour labor law brought him prominently into notice as a supporter of the rights of humanity. In 1853 he removed to Mount Vernon and purchased the Democratic Banner, which he has since ably conducted and edited.

Mr. Harper has served as President of the Ohio Editorial Association, and was elected as a Democrat to the State Senate in 1879. He is one of the oldest editors in the State, still in the harness, with force and vigor.

WILLIAM WINDOM was born in Belmont county, of Quaker parentage. His parents removed to Middlebury township, and his boyhood days were spent on a farm. Apprenticed to a tailor, he was a failure in that trade, and then made a success at law in the office of Judge R. C. Hurd, of Mount Vernon. While studying law, he sometimes lectured on temperance, and on one occasion he was threatened by a mob if he attempted to speak. He went to the hall, laid a pistol on the speaker's stand, and delivered the lecture without interference. In 1855 he removed to Winona, Minn., and from there was sent to the United States Senate.

FRANK HUNT HURD was born in Mount Vernon, December 25, 1841; graduated at Kenyon College in 1858. He studied law, was elected Prosecuting Attorney in 1863, and State Senator in 1866. In 1867 he removed to Toledo, and was elected to Congress as a Democrat in 1874; served one term and was defeated for re-election in 1876; was re-elected in 1878 and 1882, but defeated in 1880 and 1886. Mr. Hurd is widely known as an earnest advocate of free-trade doctrines. He is the author of "Ohio Criminal Code of Procedure," and other law works.

FREDERICKTOWN, laid out in 1807 by John Kerr, is seven miles northwest of Mount Vernon, on the B. & O. Railroad. Newspaper: Free Press, independent, W. E. Edwards, M. D., editor. Churches: one Presbyterian, one Methodist, one Baptist. Bank: Daniel Struble. Industries are creamery, bell-foundry, planing-mill and sealing-wax factory of Cumming & Hosack, and carriage factory of Stephens & Hagerty. Population in 1880, 850. School census, 1888, 266; C. W. Durbin, school superintendent. Capital invested in industrial establishments,

\$56,200; value of annual product, \$67,600.—Ohio Labor Statistics, 1888. Vernon river, on which it is situated, furnishes considerable water-power. On the middle branch of that stream, near the village, are some ancient fortifications and mounds.

CENTREBURG is fourteen miles southwest of Mount Vernon, at the crossing of the C. A. & C. and T. & O. C. Railroads. Newspaper: Gazette, independent, E. N. Gunsaulus, editor. Churches: one Methodist Episcopal, one Cumberland Presbyterian, one Christian, one Free-Will Baptist. Bank: Centreburg (Daniel Paul). It is an important point for the shipment of grain, and here are the extensive tile-works of T. E. Landrum & Co. Population, 1880, 400. School census, 1888, 185. Capital invested in industrial establishments, \$69,100; value of annual product, \$70,800.—Ohio Labor Statistics, 1887.

Martinsburg is eleven miles southeast of Mount Vernon. Churches: one Presbyterian, one Baptist, one Methodist, one Disciples. School census, 1888,

124.

Gambier, the seat of Kenyon College, is five miles east of Mount Vernon, on the C. A. & C. Railroad. Population, 1880, 576.

DANVILLE is fifteen miles northeast of Mount Vernon, on the C. A. & C. Railroad. Newspaper: *Knox County Independent*, independent, W. M. Kinsley, editor and publisher. Bank: Danville (Wolfe & Sons), Albert J. Wolfe, cashier. School census, 1888, 210.
